P R E F A C E .

To Americans—and perhaps to many more than Americans—among the events of the year 1901 the death of President McKinley was at once the most significant and sorrowful. The present volume contains a sketch of his wonderful career from his boyhood to the sudden termination of his presidency. It also contains a sketch of the life of his successor in the chief magistracy, together with a full-page portrait. Other events of importance and interest to Americans are duly recorded in the articles “Congress,” “United States,” “Philippine Islands,” “Hawaii,” “Porto Rico,” and those on the various States of the Union. The most gigantic transaction that ever took place in the financial and industrial world is that of the formation of the great Steel Corporation, the story of which is told in the “Financial Review of 1901.” Two industries, perhaps developed to a greater extent in our country than in any other, are described and illustrated under the titles “Printing” and “Wire-Making”; while nearly all the industries of this Western World were abundantly set forth in the “Pan-American Exposition at Buffalo,” of which the reader will here find a good description, beautifully illustrated. While the typical American is thus accumulating money more rapidly than any other man on earth, he is also showing that he knows how to dispose of it so as to benefit his fellow mortals as well as himself. For proof of this, let the reader turn to the article “Gifts and Bequests,” where he will find an itemized account of more than a hundred million dollars given to philanthropic and educational causes in our country in the year that is here recorded. The cause of popular education as it progresses year by year may be studied under the head of Education in the several articles on the States, and in such other articles as those of “Libraries” and the “Fine Arts.”

Court decisions that affect the constitutionality or interpretation of statutes are recorded under the head of Supreme Court in the article “United States,” and also under Decisions in the State articles. The financial condition of the States and the nation may also be seen by reference to the articles just mentioned. The subject of irrigation, now most important in giving fertility to arid lands and increasing the food-crops of the world, as it progresses year by year, may be studied by looking at the articles on the Western States.

Governmental, insurrectionary, and industrial movements in the various countries of the world are recorded in the articles on those countries, some of which are of special interest as a part of the history of the first year of our century. The change of sovereign in Great Britain, the continued war in South Africa, the beginning of peaceable settlement in China, and the federation of the Australian provinces are among the most notable of these.

The volume contains, as usual, an article on each of the great religious denominations, together with articles on such of the smaller ones as have recorded and pub-

lished statistics; and from these the growth of religious life and missionary enterprise may be studied to advantage.

In the articles "Archeology," "Astronomy," "Chemistry," "Metallurgy," and "Physiology" these sciences are recorded in their latest developments; but perhaps the most wonderful result of science this year is to be found under the head of "Medicine," where the experiments proving that malaria and yellow fever are communicated to human beings through mosquitoes are fully set forth.

Among the special articles are one on the comparatively new industry of "Automobiles," illustrated, with their latest developments; one on artistic "Bookbinding," also illustrated; one on the new enterprise of "Rural Free Mail Delivery"; and one on the recent events in "Yachting."

The death roll of the year is unusually long, and contains many names familiar to our readers. Among the authors we have lost are William E. Channing, Joseph Cook, Ignatius Donnelly, John Fiske, Edward H. House, John G. Nicolay, Charles Nordhoff, Mary A. Townsend, Walter Besant, Robert Buchanan, Mandell Creighton, Félix Gras, Hugh R. Haweis, John Cordy Jeaffreson, Cosmo Monkhouse, Frederic W. H. Myers, Paul Silvestre, and Charlotte M. Yonge; among the actors, Louis Aldrich, James A. Herne, Fanny Morant, Roland Reed, James B. Roberts, Edmond Got, James H. Mapleson, Harry Monkhouse, and Osmond Tearle; among the artists, Jane H. Hammond, James M. Hart, Adolf R. Kraus, Edward Moran, Julian Scott, James E. Taylor, Edward Ford, and Kate Greenaway; among the clergymen, Maltbie D. Babcock, Frédéric Denison, John Jacob Esher, Justin D. Fulton, John Jasper, Thomas N. Lenihan, Abram N. Littlejohn, William McDonald, and Henry B. Whipple; among the educators, Herbert B. Adams, John Thomas Duffield, Robert Graham, Richmond Mayo-Smith, Frederick A. Muhlenberg, Truman H. Safford, and Joseph Henry Thayer; among the explorers, Édouard Foa and Adolf Nordenskiöld; among the inventors, William F. Coston, Elisha Gray, David S. Holman, Thaddeus Hyatt, George Kellogg, and Lorenzo W. Kimball; among the legislators, Charles A. Boutelle, James W. Bradbury, James A. Kyle, Cornelius R. Parsons, Hiram R. Revels, and William J. Sewell; among the philanthropists, Elizabeth D. Gillespie, Margaret E. Crocker, Mrs. Egbert Guernsey, Tom Mosby, Henry V. A. Parsell, William A. Passavant, and Elizabeth Hanbury; among the publishers, G. W. Carleton, Patrick Donahoe, Alexander C. McClurg, and Lewis A. Roberts; among the scientists, Clarence King, Joseph Le Conte, Henry A. Rowland, Charles A. Schott, William J. Youmans, George M. Dawson, Rudolf Koenig, and Eleanor Ormerod; among the statesmen, William M. Evarts, Benjamin Harrison, the Duke de Broglie, Francesco Crispi, Prince Hohenlohe-Schillingsfürst, Marthinas Pretorius, and Li-Hung-Chang; among the soldiers, Daniel Butterfield, George W. Getty, John P. Hatch, James S. Negley, Robert Nugent, Fitz John Porter, Benjamin M. Prentiss, and Joseph Gurko; among the naval officers, Francis M. Bunce, John Irwin, Richard P. Leary, Thomas S. Phelps, and Francis A. Roe; among the composers and dramatists, Edmond Audran, Paul Barbier, Pierre Benoit, and Giuseppe Verdi.

The celebration of the two hundredth anniversary of Yale University is recorded, with a full-page portrait of the new president of that institution, Arthur Twining Hadley. There is also a full-page portrait of Li-Hung-Chang, the famous Chinese statesman, and full-page illustrations of the Pan-American Exposition, the New York subway, and the yacht races. The volume closes with a complete index.

CONTRIBUTORS.

Among the Contributors to this Volume of the Annual Cyclopædia are the following:

Oscar Fay Adams,

Author of A Dictionary of American Authors, etc.

BESANT, WALTER,
BUCHANAN, ROBERT,
CREIGHTON, MANDELL,
HELLMUTH, ISAAC,
STUBBS, WILLIAM,
WESTCOTT, BROOKE FOSS,
YONGE, CHARLOTTE MARY,
and other articles.

Frank M. Ashley,

THE ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, an empire in eastern Africa, known also as Ethiopia. The ruler, whose title is Negus Negusti, meaning King of Kings, is Menelek II, formerly King of Shoa, who succeeded Johannes II. The Italians, who furnished him arms with which he defeated rival claimants of the throne, obtained the treaty of Ucciali on May 2, 1889, under which they claimed a protectorate over all Abyssinia as well as sovereignty in the territories north of Tigre and inland from Massowah which before they were occupied by Italy were dependencies of Abyssinia. Menelek denied the protectorate, and on March 1, 1896, his troops routed at Adowa an Italian army that invaded Tigre and Amhara. Through the mediation of Russia a new treaty was signed on Oct. 26, 1896, by which Italy renounced the protectorate over Abyssinia and Menelek recognized as Italian territory all the country north of the Mareb, Balesa, and Muna rivers.

The area of Abyssinia, including Tigre and Lasta in the north, Amhara and Gojam in the center, and Shoa in the south, with Gallaland and parts of the Somali country and undefined regions in the south and west, is between 150,000 and 250,000 square miles. The population under the rule of the Negus is estimated at 3,500,000. Abyssinia and Great Britain both claim the region north of British East Africa in which Lake Rudolf is situated, extending as far south as 2° of north latitude, and the western territories to the banks of the White Nile are also claimed by Abyssinia. The Negus has a regular army of about 150,000 troops and can command the services of the irregular troops and tribal levies of his vassals. The active troops consist partly of trained soldiers armed with Vetterli, Gras, Snyder, and Remington rifles, and partly of men armed with native weapons who have lands given to them to pay for their services. The cavalry are recruited among the Wollo Gallas. The Negus has imported 500,000 repeating rifles of the latest pattern.

The Abyssinians, who have been Christians of the Alexandrian rite since the fourth century, raise cattle, sheep, and goats, practising agriculture but little. Coffee and cotton grow wild. The vine and the date-palm thrive. The sugar-cane and barley, millet, and wheat are grown for domestic consumption. Hides and skins, coffee, wax, gums, dyes, medicinal plants, and civet are exported. Gold from the Wallega country and ivory are royal monopolies. American, some Indian, and small quantities of English cotton goods are imported, the American unbleached cottons constituting half of the total imports, which include also woollens, matches, cutlery, etc. Mene-

lek's capital is Adis Abeba, which has a permanent population of 50,000 and a floating population of 30,000. The currency of the country is the Maria Theresa dollar and a new one coined by Menelek having the same size and value. Coins representing a half, a quarter, an eighth, and a twentieth of a dollar have been minted, and are in circulation, although at first the people regarded them with distrust. Previously the only medium of exchange of less value than a dollar was the amule, which was three pounds of salt, worth 60 cents. In 1880 the whole foreign trade of the country did not exceed \$80,000 in value. Now the imports into Harar alone, the chief commercial town, are \$2,800,000 a year, and the exports \$1,400,000. This trade passes through Jibute, Abyssinia possessing no seaport. This French town, though but a few years old, has 12,000 inhabitants, of whom 1,000 are Europeans. It is the outlet of trade routes from various parts of Abyssinia. A railroad, 184 miles long, from Jibute to Harar, has been built with French capital. It was completed before the end of 1901, having been constructed in two years at a cost of \$6,000,000. The Italian railroad from Massowah will be extended into Tigre, giving to northern Abyssinia an outlet through that seaport. The victory of Menelek in the war with Italy stimulated the internal progress of Abyssinia and trade relations with the rest of the world, which have been facilitated by French enterprise at Jiboutil. The reconquest of the Egyptian Soudan by the British has given a fresh impetus to this rapid development. An Italian company in 1901 built a telegraph line from Massowah to Adis Abeba, Menelek's capital, which is connected by rail with Adis Halem.

The boundary between Abyssinia and the Italian colony of Erythrea has been settled by agreement. The boundaries separating Menelek's dominions from British East Africa in the south and from the Egyptian Soudan in the west have been the subject of protracted negotiations with Lieut.-Col. Harrington, the British political agent and consul-general at Adis Abeba. Count Leon-tieff, a Russian, who explored and occupied the equatorial province of Abyssinia for Menelek, was, early in 1901, appointed its governor and commander in chief of the forces to be raised there. He returned to this region that he had annexed or regained, taking with him a force of Arab and Soudanese soldiers and large quantities of weapons and military and hospital stores that came from Russia, and was joined on the march to Lake Rudolf by a regiment of Ethiopian soldiers raised and trained by Cossack officers during his former sojourn in that country, which he

had led victoriously against the enemies of Menelek in the region disputed by Great Britain. In 1900 King Menelek requested the co-operation of the British in suppressing a fanatical Mohammedan mollah who was disturbing the peace among the tribes on the borders of the British Somaliland protectorate and the Abyssinian dominions. A combined movement of British and Abyssinian troops was arranged. Haji Mohammed ben Abdullah, known as the Mad Mollah, an Ogaden Somali about thirty years old, educated as a wahad, or theologian, a disciple of the Sheikh Mohammed Saleh, the head of the mystic order of Tarika Mohamalia at Mecca, persuaded many of the Somalis that he was the incarnation of the prophet, appointed by the divine will to regenerate the people of his race and establish an independent kingdom. Having acquired much influence among the Ogaden and Dolbohanti tribes as a holy man who had made several pilgrimages to Mecca, he organized a body of dervishes who plundered other tribes on both sides of the border. When the mollah began to subjugate the Somalis of Abyssinia, while maintaining a conciliatory and submissive attitude toward Great Britain, the British at Berbera looked with favor upon the movement, which the French and Russians accused them of fostering. The British authorities were inclined to encourage the new sect in their own territory so long as its leader was simply a religious teacher, enjoining regularity in prayers and other rites, and while his influence was exerted to allay feuds among the tribes and he himself delivered up malefactors for punishment. The people of Berbera would not listen to the strict teachings of the new sect, which interdicted the use of the leaf *kat*, the favorite-intoxicant of the coast Somalis, but the tribes of the interior fell under the mollah's influence. At first he abstained from raiding antagonistic tribes in the British protectorate or interfering with the caravan trade, but after the Habba Unis joined him he sent a defiant message to Col. Hayes Sadler, the British consul-general at Berbera, and took up an attitude of hostility toward all those who had dealings with the British authorities, denouncing the British Government and all who acknowledged it as infidels. In the autumn of 1899 he advanced to Burao, 90 miles south of Berbera, with a force estimated at 2,000 horsemen and 3,000 spearmen, with 400 rifles among them. He burned the town of a section hostile to his religious teachings, and established himself in the plain, threatening Berbera itself, and gaining many adherents by his successes, which were attributed to miraculous power. The ignorant believed that he could turn bullets into water and hear all that was said about him in distant places. While the British were making preparations to crush his force with troops from India he retired in November, 1899, to the Dolbohanti. The British thereupon suspended their preparations. The local authorities urged immediate action, saying that the power of the mollah would grow rapidly if the expedition were deferred. The Imperial Government nevertheless deemed delay expedient in view of the state of affairs in other parts of the world. At Burao, Mohammed Abdullah proclaimed himself the true Mahdi, and announced that all Mohammedans who refused to join him were no true believers. He claimed to rule all central Somaliland, acknowledging no British authority excepting on the coast. His unchecked reprisals against tribes which were friendly to the English caused them to waver and to doubt the power of Great Britain to protect them. After looting far and

wide the tribes who still professed loyalty to Great Britain, and killing a powerful chief who warned him of the fate which awaited him at the hands of the British Government, he retreated to the country of the Ibrahim tribe of northern Ogaden, and from that base extended his influence among the tribes on the Abyssinian frontier, seizing the head men and cattle of the tribes that refused to join him. Ras Makonen, the Governor of Harar, sent an expedition of 1,500 men to put a stop to his depredations. Early in 1900 the mollah attacked the Abyssinians at their frontier post of Jig Jiga, but was repulsed with heavy loss. Then he returned to Ogaden and began to raid tribes friendly to the English and the nomadic Somalis who move with their herds back and forth between British and Abyssinian territory according to the state of the pasturage. The raids of his horsemen checked trade and peaceful industry and led to the joint Anglo-Abyssinian expedition, the plans for which were agreed upon in December, 1900. It was arranged that English officers should accompany the Abyssinian expedition and an Abyssinian officer be present with the British force, and that during the operations the frontier between Abyssinian and British territories should be regarded as non-existent. Col. Hayes Sadler set about the organization of a force of Somalis, which was not ready for operations till the end of March, 1901. The Somali frontier force, trained and commanded by Col. Swayne, consisted of 1,000 infantry, 400 mounted spearmen, and 100 camel sowars. The Abyssinians had 10,000 men under Ras Makonen assembled at Jig Jiga a month before the British were ready to act. They marched southeastward, and after a series of skirmishes in the Harradigit district, and the capture of the enemy's camp at Walwal, with great numbers of camels, sheep, and goats, they drove the mollah out of Ogaden, which they raided to avenge a defeat that they suffered five years before, when 6,000 Abyssinians fell in battle. They could not now remain long in this arid country, and fell back in order to reorganize their force in time for the combined movement with the British. They endured great privations, inasmuch as it was the dry season of the year, and the few wells had been closed by the mollah and were only reopened with difficulty. Many stragglers returned in a famished condition to Harar. The force encamped round the wells of Gerloguby, where they held their ground when attacked by the dervishes. They waited until the rains came to enable them to advance, with 8,000 troops accompanied by 25,000 followers and as many pack animals, across the desert 300 miles to the forest region of Dolbohanti in British territory where the mollah had taken refuge. The British force when able to take the field in May advanced from Burao in the direction of Dolbohanti. Ras Makonen had waited impatiently for the British, and was about to recall his troops from Ogaden, where they suffered greatly from disease and privation. When the British did move he organized a fresh force of picked Abyssinian warriors from Harar to relieve these exhausted troops, who were mostly Somalis led by the Gabri of Fi Taurari. The fresh Abyssinian expedition concentrated at Dagaha Mado, 150 miles south of Harar. It consisted of 10,000 men and horses, with a vast number of camp-followers and baggage animals, and was commanded by Abanabro, whose title was Kanyazmach, or commander of the right wing.

The British, when prepared to move from their advanced base, still delayed operations until they could obtain information as to the movements

of the Abyssinians. While the Somali field force was being organized and trained an Anglo-Indian expedition set out from Kismayu to punish the southern Ogaden Somalis for the murder of an English official (see EAST AFRICA). The influence of the Mad Mollah had penetrated to this remote quarter, and his complicity in this crime was suspected.

The Somalis are an intelligent, athletic, warlike race, supposed to be Gallas by descent, modified by a large admixture of Arab blood. Along the entire coast known as Somaliland they have pushed back the Gallas and gained the predominant position of controlling the outlets to the sea and possessing a monopoly of the trade from the interior. They are proud and conceited, and believe that if they were supplied with rifles as the Abyssinians have been they would become a powerful nation. Under European training they make excellent soldiers. The Mad Mollah professed friendship for the English until some of his adherents plundered a hunting expedition and captured many rifles which he was unwilling to restore. The Somali weapons are long-shafted spears with leaf-shaped heads, javelins which they throw with accuracy to a distance of 40 yards, and double-edged, sharp-pointed, curved swords. The army that Mohammed Abdullah had collected for the jihad or holy war that he proclaimed against Christianity was estimated at 40,000 men. He had obtained 3,000 rifles of various patterns, and was well supplied with ammunition. His cavalry numbered about 8,000, and were the most formidable part of the force, mounted as they were on the Somali horses, that can cover 75 miles without water.

When communication was established between the British and Abyssinian forces both advanced, the Abyssinians along the Fafan river after concentrating at Gabro, the British from Burao to Ber and El Dab, from which place the camel corps and mounted infantry made a rapid night march through the desert and on May 29 surprised the Madoba and Jama tribes, capturing 2,800 camels and 5,000 oxen and sheep that were intended as supplies for the mollah, whose scouts were encountered at Assura on June 2. The mollah meanwhile made a flank march and attempted to recapture the animals from the zareba at Somala, where he was repulsed by Capt. MacNeill, losing several hundred men. Col. Swayne, an officer possessing more knowledge of the Somalis and their ways than any other Englishman, and who had made an efficient force of his Somali recruits, equal in many respects to the best European soldiery, delivered an attack on the mollah's troops as they were returning to their camp at Yahel, taking them by surprise. When they turned, the camel corps and mounted troops pressed them and with hot rifle and mitrailleuse fire emptied many saddles. The mollah and his troops made good their escape, although pursued for 40 miles. On June 3 the Somalis made another attack on Capt. MacNeill's zareba with 3,000 cavalry and 2,000 spearmen, pressing on in close order and almost succeeding in their effort to penetrate the zareba in spite of the hail of rifle and Maxim balls that killed over 400 of their number, while on the British side only 10 men were killed and 9 wounded. The faith of the Somalis in the religious mission and supernatural powers of the mollah was broken by the result of these engagements. The Jamas, who had borne the brunt of the last fight, made their submission, and many of the Dolbohantis deserted to the British, who had trained men of their own kind to win victories when outnumbered a dozen to

one. The Abyssinian army arrived at Gerloguby on June 11 and aided in confining the mollah to the Dolbohanti country, whence he was driven into the country of the Mijertain Somalis, the last to join his standard. The Abyssinians were able to march 20 miles a day for any length of time, but when the food that they brought with them was exhausted they could not find subsistence for their great number in so poor a country. They attacked tribes that had submitted to the mollah, but in the end were compelled to return to their own country in a thoroughly exhausted condition. The force of Col. Swayne was capable of dealing with the mollah, whose prestige was destroyed, and whose army was reduced to about 2,000. Operating from Burao, the British force routed Abdullah on July 17 near Hassan Ughaz, and drove the remnant of his army into the Haud desert. The British force included a contingent of Indian troops, and the Somalis of Col. Swayne had been taught to shoot as well as European troops, whereas the rifles in the hands of the mollah's men were almost useless. Nevertheless they fought courageously and killed or wounded 2 British officers and 32 men, losing 70 killed and many wounded. The mollah's camp and live stock fell into the hands of the British, and he disappeared in the Mijertain country, his power and influence utterly destroyed.

AFGHANISTAN, a monarchy in central Asia, lying between Russian Turkestan and British India. The Ameer, Abdurrahman Khan, who was enthroned in 1880 by the British after they

HABIBULLAH KHAN,
AMEER OF AFGHANISTAN.

had occupied Cabul, the capital, and driven out Yakub Khan, son of Shere Ali, the preceding Ameer, died Oct. 3, 1901. Since 1880 the Indian Government has paid an annual subsidy — first 1,200,000 rupees and in 1893 increased to 1,800,000 rupees — to enable Abdurrahman to consolidate his kingdom and preserve a strong, united, and independent Afghanistan as a buffer state between India and the Russian dominions. The area is about 215,400 square miles, with 5,000,000 inhabitants. Every eighth man is drafted into the Ameer's army, which has a strength of over 60,000. The regular paid troops garrisoning Cabul, Herat, Candahar, and Afghan Turkestan numbers 37,000 infantry and 7,000 cavalry, with 360 pieces of artillery. Silks, sheepskin garments, carpets, fabrics of camels' and goats' hair, felts, and rosaries are manufactured. Fruits, including apples, pears, almonds, peaches, quinces, cherries, grapes, pomegranates, apricots, figs, and mulberries, are abundant and are exported in the preserved state. Asafetida, madder, and castor-oil are exported. Rice, millet, maize, wheat, barley, and legumes are cultivated. Copper, lead, iron, and gold are mined in primitive fashion, and in Badakshan lapis lazuli and precious stones are obtained. The imports of Cabul from India were

valued at Rx 294,605, and exports Rx 217,236; imports of Candahar were Rx 329,917, and exports Rx 263,884. The trade of Bokhara with Afghanistan amounts to about 4,000,000 rubles

ABDURRAHMAN KHAN,
LATE AMEER.

for imports, and for exports the same. The Ameer gave his attention not only to the military organization of his people for defense against either Russian or British aggression, but also to the economical development of the country. Under the direction of an English engineer canals and other irrigation works have been constructed. Forts have been built along the Oxus,

and heavy Krupp guns have been imported. The arsenal at Cabul turns out small arms in quantities, and smokeless powder.

ALABAMA. (See under UNITED STATES.)

ALASKA, a Territory of the United States, in the extreme northwestern part of the North American continent. It was ceded by Russia to the United States in a treaty concluded March 30 and proclaimed June 20, 1867, in consideration of the payment of \$7,200,000. Its gross area, according to the census of 1900, is 590,884 square miles. The main body of the Territory is bounded on the east by the one hundred and forty-first meridian west from Greenwich, on the north by the Arctic Ocean, on the west by Bering Sea and Bering Strait, and on the south by the Pacific Ocean. It includes also the Alaska peninsula and the Aleutian Islands, trending southwestward for more than 1,200 miles; and a strip, known as Southeast Alaska, 600 miles long, bounded on the south by Dixon Sound and Portland Channel, and on the east by the summit line of the mountains parallel to the coast; and where such a line is at a greater distance than 10 marine leagues (34½ statute miles), by a line drawn parallel to the windings of the coast, which shall never exceed 10 marine leagues therefrom. The position of the boundary of this southeastern extension is now a matter of dispute between Great Britain and the United States.

Government.—Alaska was without civil government from the time of its purchase till May 17, 1884, when it was made a "civil and judicial district." Although frequently designated as a Territory, it is not so legally. In the act referred to above it is expressly stated that "there shall be no legislative assembly in said district, nor shall any delegate be sent to Congress"; but in the same act it is referred to as the "Territory of Alaska." The original laws prohibited the importation, manufacture, and sale of intoxicating liquors, except for medical, mechanical, and scientific purposes; and although liquor was openly sold in Sitka, Juneau, Wrangel, and other cities, public sentiment was strongly against the sale of liquor to the Indians. In January, 1899, Congress passed an amendment providing for a high-license system in the Territory with a species of local option. Liquor dealers by its provisions are to pay a license of \$1,000 a year, and the consent of

a majority of the white citizens residing within two miles of a liquor-dealer's establishment must be obtained before a license can issue. All license fees are to be devoted to educational purposes in Alaska. The former prohibition is continued against the sale to Indians, minors, and habitual drunkards.

The new code of criminal procedure went into effect on July 1, 1899, and it has been of the greatest advantage to the Territory. It gives the court much more liberty in obtaining juries; has enabled the enforcement of the liquor regulations; and has made smuggling an unprofitable occupation. The only sections that have met with serious complaint are those relating to the taxation of businesses and trades. A Territorial convention met in Juneau in October, 1899, and submitted a memorial to Congress petitioning for two additional judges of the district court; for a delegate to Congress; for probate judges having, in addition to the usual probate powers, jurisdiction in certain civil and criminal cases; for commissioners having the jurisdiction of the justices of the peace and magistrates with like powers for incorporated cities and towns; for education of the white children of the district; for a civil code and a code of civil procedure; for amendments to the criminal code; for a general municipal incorporation law; for the extension to the district of homestead, timber and stone and coal land laws, with provisions for special individual surveys, and for modifications in the mineral-land laws to stop the wholesale appropriation by a few individuals of the public mineral lands.

Gov. Brady in his annual reports has specially urged the extension of the land laws, the adoption of a code of civil procedure, and the necessity for roads, telegraphs, and the erection of lighthouses upon dangerous points of the coast.

The temporary seat of government is at Sitka, formerly the Russian capital.

The following were the officials of the Territory in 1901: Governor, John G. Brady. United States Judges—Melville C. Brown, District No. 1, Juneau; Arthur H. Noyes, District No. 2, St. Michael; James Wickersham, District No. 3, Eagle City. United States Attorneys—Robert A. Friedrich, District No. 1; Joseph K. Wood; A. M. Post, Clerk, District No. 1, Joseph J. Rogers. United States Marshals—James M. Shoup, District No. 1; Cornelius L. Vawter, District No. 2; G. G. Perry, District No. 3. Commissioners—Edward de Groff, Sitka; Hiram H. Folsom, Juneau; F. P. Tustin, Fort Wrangel; L. R. Woodward, Unalaska; Philip Gallaher, Kadiak; C. A. Shelbrede, Skagway; W. J. Jones, Circle City; Charles H. Isham, Unga; Lenox B. Shepard, St. Michael; Sol Rapinsky, Haines Mission; J. P. Smith, Kechikan; L. R. Gillette, Douglas. Officers of Marine Barracks, Sitka—Capt. Joseph H. Pendleton, commanding, Lieut. George H. Mather, Surgeon Henry B. Fitts. Customs Officers—J. W. Ivey, Collector; Walton D. McNair, Special Deputy, Sitka; Deputy Collectors—F. E. Bronson, Sitka; John M. Tenney, Juneau; J. H. Causten, Wrangel; John R. Beegle, Kechikan; Claude B. Cannon, Kadiak; Frederick Sargent, Karluk; J. F. Sinnot, Unga; William Gauntlet, Unalaska; E. T. Hatch, St. Michael; Charles Smith, Circle City; G. A. Waggoner, White Pass; John Goodell, Orea; C. L. Andrews, Skagway; S. T. Penberthy, Homer; Matthew Bridge, Wharfinger, Sitka. Department of Agriculture—C. C. Georgeson, Special Agent; Superintendents—Fred E. Rader, Sitka; H. P. Nielson, Kenai; Isaac Jones, Bureau of Education—Sheldon Jackson, Agent; William Hamilton, Assistant Agent; W. A. Kelly,

Superintendent of Schools. Post-Office, Sitka—Mrs. A. M. Archangelsky, Postmaster. United States Land Office, Sitka—W. L. Dustin, Surveyor-General; John W. Dudley, Register; A. J. Apperson, Receiver; Clinton Gurnee, George W. Stowell, Clerks. Deputy Marshals—W. H. McNair (special), J. W. Snook, Sitka; W. A. Staley, Juneau; William D. Grant, Wrangell; John McElheny, Douglas island; Edward C. Hasey, Kadiak; Lewis L. Bowers, Unga; James C. Blaine, Unalaska; Josias M. Tanner, Skagway.

Population.—The native population belongs to two great stocks, the Eskimo and the Indian. The former inhabit some of the Aleutian Islands and the shores of Bering Sea and the Arctic Ocean; the latter occupy the interior and south-eastern portion of the Territory. The greater part of the Russians emigrated at the time of the transfer of Alaska to the United States. The development of the gold-fields of the Yukon basin and the Cape Nome district has brought a large increase in the white population in recent years. Where the natives have come into contact with the whites there are many half-breeds. The total population of the Territory according to the census of 1880 was 33,426; in 1890 it was 32,052. The census of 1900 was taken under much more favorable conditions than had been possible before, owing to the greatly increased facilities for communication, and to the energy and special knowledge of the agents in charge of the work. The total population was 63,592, an increase of 31,540, or 98.4 per cent., over that of 1890. This was distributed according to sex, race, and nativity as follows:

RACES.	Totals.	Male.	Female.
Whites, native-born.....	21,709	19,171	2,538
Whites, foreign-born.....	8,798	8,136	662
Natives *.....	29,536	15,048	14,488
Negroes.....	168	151	17
Chinese.....	3,116	3,113	3
Japanese.....	205	253	12
Totals.....	63,592	45,872	17,720

* Includes 2,449 persons of mixed parentage.

Classified according to school, militia, and voting ages, the distribution was as follows:

RACES.	SCHOOL AGE, 5-20 YRS.			Militia age, males 18-44.	Voting age, males over 21.
	Total.	Male.	Female.		
Whites.....	17,119	1,040	679	13,331	25,966
Indians, negroes, Chinese, and Japanese	9,689	5,009	4,680	6,372	11,990
Totals.....	11,408	6,049	5,359	19,703	37,956

Of the 78 settlements named in the census report, 37 have less than 200 inhabitants; 31 have more than 200, but less than 500; 6 have more than 500, but less than 1,000; and 4 only have more than 1,000—namely, Nome, with 12,486; Skagway, with 3,117; Juneau, with 1,864; and Sitka, with 1,396 inhabitants. Other important centers of white population are: Wrangle, 868; St. Michael, 857; Douglas, 825; Unalaska, 428; and Kadiak, 341.

Banking.—The only national bank in Alaska is the First National Bank of Juneau: Its condition, as reported to the Comptroller of the Currency at the close of business, July 15, 1901, was: Resources: loans and discounts, \$54,319.91; United States bonds, \$87,500; banking-house, furniture, and fixtures, \$2,480; due from other national banks, \$4,075; due from State banks and bankers, \$19,034.72; specie, \$37,207.60; other re-

sources, \$21,823.24; total resources, \$226,440.76. Liabilities: capital stock, \$50,000; surplus and undivided profits, \$3,069.79; individual deposits, \$105,125.60; United States deposits, \$36,726.97; deposits of United States disbursing officers, \$26,668.40; other liabilities, \$4,850; total liabilities, \$226,440.76. At the corresponding date in 1900 the total liabilities were \$169,840.85, distributed as follow: Capital stock, \$50,000; surplus and profits, \$1,964.88; individual deposits, \$64,710.22; deposits of United States disbursing officers, \$46,231.14; other liabilities, \$6,934.61. The resources: loans and discounts, \$53,457.21; United States bonds, \$62,500; due from banks, \$17,565.60; specie, \$20,245.30; other resources, \$16,072.

There are no official statistics for banks other than national. The American Bank Reporter for May, 1901, reports the following banks in operation in the Territory: Juneau: B. M. Behrends (private), capital \$50,000. Nome: Bank of Cape Nome (incorporated), capital \$200,000; Alaska Banking and Safe-Deposit Company (incorporated), capital \$75,000; First Bank of Nome (organizing). Skagway: Bank of Alaska (private), deposits \$20,000; Canadian Bank of Commerce (agency).

Commerce and Navigation.—Alaska forms a single customs district of the United States, with Sitka as its port of entry. The following are classed as supports of entry: Dyce, Eagle City, Wrangell, Mary Island, Juneau, Kadiak, Unalaska, Circle City, Cook Inlet (Homer), Orca, St. Michael Island, Skagway, Unga, Karluk, Kechikan. During the fiscal year ending June 30, 1900, 26 sailing vessels, of 5,235 tons, and 390 steam-vessels, of 207,645 tons, were entered by the district of Alaska, of which 5 sailing vessels, of 3,037 tons, and 237 steam-vessels, of 143,082 tons, were American; during the same period 26 sailing vessels, of 3,511 tons, and 317 steam-vessels, of 151,893 tons, were cleared, of which 5 sailing vessels, of 2,012 tons, and 170 steam-vessels, of 94,388 tons, were American.

The total exports for the fiscal year ending June 30, 1900, were valued at \$566,347, and the imports at \$385,317. The exports for the nine months ending September, 1901, were valued at \$1,881,627; the imports at \$390,225. These figures are for the foreign commerce alone, and do not include the values of merchandise shipped to and from ports of the United States.

Mineral Resources.—Although coal, copper, silver, cinnabar, lead, tin, arsenic, antimony, manganese, corundum, petroleum, slate, clay, and many varieties of building stone are reported in paying quantities, gold is the only mineral that has received the serious attention of the miners. The gold is mined chiefly by placers; but several quartz-mills are building, and some in successful operation, notably the great three-hundred-stamp gold-mill, the largest in the world, at the Treadwell mines, near Juneau. The great centers of the placer gold-mining industry are the Yukon valley and Cape Nome. Some coal has been taken out at Tyonek, on Cook Inlet, for use on a small local steamer, and at the agency of the Alaska Commercial Company, and an English company is making an attempt toward the development of the surface indications of petroleum near Cape Yakutat, Cape Martin, and Kachewak Bay.

The output of precious metals from Alaska in 1899 was estimated by the Director of the Mint to be: Gold, 264,104 fine ounces, value \$5,459,500; silver, 140,100 fine ounces, value \$181,540; total value, \$5,640,640. The value of the gold output in 1900, by the same estimate, was \$8,171,000. These figures are for Alaskan territory alone, and

do not include the output of the rich Klondike mines in British Columbia. Alaska imported \$9,137,608 of this Canadian gold in the nine months ending with September, 1901, against \$13,115,389 in a similar period in 1900. The gold-dust receipts at the Seattle Assay Office for the year up to Sept. 30, 1901, from all Alaska and Klondike districts, amounted to more than \$25,000,000, and the total receipts for the three years this office has been in operation exceed \$50,000,000. The last steamers sailed from Nome on Oct. 24, 1901, bringing out more than \$1,000,000 in treasure, and the lakes and the Yukon river were expected to keep open for traffic out of the Klondike till the middle of November.

While, the mines of the Klondike have come up to the estimates made last spring of the probable output, Nome has been disappointing, although the yield is in excess of \$6,000,000. The estimates for Nome made last spring were \$10,000,000, but by reason of the late and unfavorable season, causing the ground to remain frozen until July 10, the output was cut nearly one-half. Interviews with many well-known miners who have returned to spend the winter confirm all the statements regarding the disadvantages and discouragements in nearly all the Nome districts and camps this season.

The year has been a prosperous one for Dawson, and the frontier mining-camp has rapidly blossomed into a handsome capital city, with all the modern conveniences, beautiful homes, and well-graded thoroughfares. Many men who have dug fortunes out of the earth are staying in the city and spending money in building it up. While the placers have proved rich and predictions have been made that they will hold good for ten years more with extensive hydraulic plants to operate them, additional attention has been given this season to quartz-mining, and several hundred locations have been made in the Dawson district. These properties will be prospected and developed this winter, and the winter diggings that were neglected last season will also be made to contribute to the wealth of the country this winter. The first gold stamp-mill ever built on the Yukon is under construction near Dawson, and it will operate on ore that gives gold values of \$20 a ton. There has been everything to encourage business men and miners in the Klondike region this year.

Fisheries.—Cod, halibut, and herring have long been the food of the natives, and are now being taken in paying quantities by vessels from San Francisco and Puget Sound; but while Alaska possesses what are probably the greatest cod-fishing banks in the world, estimated to be 125,000 square miles in extent, salmon canning is the only great fishing industry. The first canneries were erected in 1878, and the industry now has between \$11,000,000 and \$12,000,000 invested in buildings, machinery, tackle, boats, and steam-vessels. The total pack in 1898 was 974,601 cases, 20,518 barrels, and 4,300 half-barrels; total value, \$3,544,128. The estimated pack in 1899 was 1,000,000 cases and 15,000 barrels, and for 1900, 1,250,000 cases. Until 1899 there were no laws or rules regulating the location of these canneries or the manner in which the fish should be taken; each canning company built where it pleased, and the slaughter of fish went on without let or hindrance. On the best streams, as the Karluk, Kadiak island, many canneries have been built close together, and there is the sharpest rivalry as to which shall put up the largest pack. In consequence the rivers and inlets are being rapidly depleted, and an industry now yielding more than \$3,000,000 annually is threatened with extinction.

The pack at Karluk river in 1894 was 229,284 cases, in 1896 226,428 cases, and in 1897 154,262 cases. In 1898 the pack had dropped to 60,000 cases, and in 1899 to 40,000 cases. A hatchery has been for several years maintained by the Alaska Packers' Association, but so far there is little sign of replenishment. In speaking of the decline, Capt. Jefferson F. Moser, of the United States Fish Commission steamship Albatross, says: "The output of salmon for a single year in 1897 was about 43,000,000 cans, so one does not wonder that the streams of Alaska are becoming depleted. This depletion, already serious, is caused not by overfishing alone, but by 'barriecading,' a process instituted before the acquisition of Alaska by the United States, a means whereby the fish are actually prevented from ascending the streams to spawn and are compelled to remain practically impounded in the lower waters, awaiting the pleasure of the packers. Although this practise is punishable by a heavy fine and imprisonment, the laws are not enforced." The new code of 1899 made it necessary for the packers to erect hatcheries after Jan. 1, 1901. This was strenuously opposed by the packers and fishermen, as were the following sections, placing restraints on illegal taking of the fish:

"It is forbidden to lay any seine, gill, or other net within 100 yards of the mouth, on either side, or immediately abreast of the mouth, of any river or stream, whereby, in the setting or hauling of said seine, gill, or other net, it may drift wholly or partially across and operate to close the mouth of said river or stream."

"Traps, whether 'fixed or stationary obstructions' (built on piles or webbing) or constructed of webbing and boats and susceptible of removal from place to place, are declared to be obstructions which 'impede the ascent of salmon to their spawning grounds,' and their use is hereby forbidden."

Sealing.—Not including a few sealskins brought directly into San Francisco from the north, the total catch in the Arctic in 1901 was 24,127, most of the skins going to Victoria, the rendezvous of the sealing schooners. The Bering Sea catch was 10,314, the Copper island catch 3,838, the coast catch 8,985, and the approximate Indian catch 1,000 skins. The world's catch of fur sealskins for the year 1901 is approximately 54,000 skins.

Timber.—The whole coast of Alaska, including the islands from 54° 40' to the eastern part of Kadiak island, is covered with timber to the snow-line of the mountains. Hemlock and spruce prevail, but in places there is the yellow or Sitka cedar, and upon Prince of Wales island the red cedar attains large size. Young timber springs up very rapidly, and the great amount of rain falling upon the ground carpeted with moss that holds the water like a sponge, preserves this great timber from destruction by fire. Forests of *conifera* exist along the rivers of the interior, the Yukon, Tanana, and Koyukuk, trees on the latter stream attaining a size of two feet in diameter. The Government has not put these lands on the salable lists, and every man who builds a fire to cook a meal or builds a house to cover his head is a trespasser on this great timber reserve. The early disposal of these timber tracts is a matter of great concern to the people, for they would at once enter into the lumbering business, and in the near future could build up a very profitable trade with Japan and China. The great facilities for water transportation will make the southeastern coast very desirable for lumber shipments.

According to the report of the Governor of Alaska, there were 12 small mills operating in southeastern Alaska in 1899. These only manufactured lumber for use in the Territory. The prices charged in Sitka were: Rough lumber, \$13 a thousand; flooring and rustic, \$20 a thousand; selected boat lumber, \$25 a thousand; and clear cedar, \$50 a thousand. Most of the lumber and timbers used in the great mining enterprises and in the rapid building up of Dyea and Skagway, and in the construction of the White Pass Railway, were imported from Puget Sound. Nearly all the timber taken in southeastern Alaska has been put in the water by hand loggers, and has hardly ever been more than 300 feet from salt water.

During the year many men who went prospecting upon the Koyukuk, Tanana, and other Yukon tributaries, and who were reduced to their last dollar, found that they could maintain themselves by cutting cord-wood to supply the steamboats. They obtained \$7 and \$8 a cord, and some offered their wood at \$5 a cord on the last trips of the steamers. This they did without molestation from the Government officials except in one or two instances. The wood was cut chiefly from dead trees, and it was far better to use it on the steamboats than to let it rot on the ground.

Military, Railways, Telegraphs, etc.—Alaska was erected into a separate military department in January, 1900, and placed under the command of Col. George M. Randall, of the Eighth United States Infantry. The headquarters of the department was at St. Michael, where the military reservation embraces the territory included in a circle described by a hundred-mile radius from the flagstaff at that place as a center. Troops are also stationed at Fort Wrangel, Skagway, Prince William Sound, Cook Inlet, Cape Nome, St. Michael, Fort Gibbon, Rampart, Circle, and Fort Egbert, near Eagle City. The Department of Alaska was discontinued, Sept. 15, 1901, by an order issued July 25, and merged into the Department of Columbia, Gen. Randall, with his personal and departmental staff proceeding to Vancouver Barracks to take command of the latter department.

In Skagway, Juneau, and Douglas companies of militia have been organized, and in 1899 Mr. F. D. Kelsey, of Juneau, a member of the Alaska bar, who is experienced as an officer of the National Guard of Oregon, was appointed adjutant-general with the rank of colonel.

Major Francis Greene, of the signal corps, is in charge of the construction of the military telegraph line from Nome and St. Michael, via Eaton and Nulato, to Eagle City, in the Upper Yukon valley. At Eagle the line will connect with another to Valdez, on Prince William Sound, and with the Canadian line via Dawson to Skagway. Between Nome and St. Michael a cable has been laid and is in successful operation. The laying of the cable from Juneau to Skagway, the first link in the system that is to connect Seattle and Skagway, was completed in November, 1901.

With Col. P. H. Ray, for two years in charge of the meteorological station at Port Barrow and afterward in command of the troops on the Yukon, originated the plan for a road into central and northern Alaska by way of Valdez and Eagle City.

The progress on these important works is indicated by the following reports, the first from the annual report of Gen. A. W. Greely, chief signal officer of the United States army, issued in October, 1901, and the second from the annual report of Gen. George M. Randall, commanding the Department of Alaska:

"It is not generally understood that the Alaska telegraph systems, while placing all the Alaskan posts in connection with the commanding general of the department when completed, would not afford means of communication with any other part of the world. To increase the value of the Alaskan system, the chief signal officer of the army conferred with the authorities of the Canadian Government at Toronto with a view to the extension of the existing Canadian telegraph lines and the establishment of cooperation in telegraphic work between the Alaskan and Canadian systems.

"The Canadian Government courteously placed in conference with the chief signal officer of the army Mr. J. B. Charleson, assistant superintendent of public works in the Yukon district, who was charged with the extension of the Canadian telegraph line from Quesnelle to Atlin. The Canadian authorities had the longer line to construct, but they performed their work with such expedition that, on May 5, 1901, the telegraph line was completed between Dawson and Fort Egbert, thus bringing the upper part of American territory on the Upper Yukon in direct telegraphic communication with Skagway, whence by steamer news could reach Washington, or any other part of the world, in four days under ordinary conditions. On Sept. 24, 1901, telegraphic communication was established between Fort Egbert and the Upper Yukon region, via United States military telegraph and Canadian land lines, and messages were exchanged between the commanding officers at Fort Egbert, Skagway, and the authorities in Washington."

"The total length of telegraph-line constructed up to date aggregates about 400 miles. The work is being pushed along the Yukon river above Nulato, and by the close of navigation in September it is hoped that there will be telegraphic communication between this point (St. Michael) and Fort Gibbon, a distance by the line of 420 miles.

"The work upon the 'transalaskan military road' under Capt. W. R. Abercrombie, Second Infantry, acting engineer officer of the department, was prosecuted with energy and under trying conditions. The latest information from Capt. Abercrombie is to the effect that the crossing of the Tanana will be reached by next November."

The report of Capt. Bingham, chief quartermaster under Gen. Randall, shows an expenditure during the year for army transportation of \$185,744.74; for barracks and quarters, \$49,233.28; regular supplies, \$4,517.20. Capt. Abercrombie expended for military roads and bridges \$63,840.

The only railway in operation in the Territory is the short Yukon and White Pass Railway, opened for traffic between Skagway and Lake Bennett, over the White pass, in July, 1899. In the days of the Klondike craze in 1897 it was a difficult task and took many days to get over this pass with an animal and pack, and some men and many animals perished in the attempt. The transportation of freight cost as much as 40 cents a pound. Now the trip across is one of comfort and pleasure, and freight is carried for 3 cents a pound. The laying of this line presented many engineering difficulties, especially for the first 20 miles. The scenery is magnificent, and the trip is now added to the tourist routes. The road connects at Lake Bennett with boats for Dawson and the Yukon valley.

Several routes for an "all-American road" into the interior of Alaska have been suggested, chief of which are the Valdez-Eagle route following the line of the new military road, and a line from

Cook Inlet to the Tanana through valleys of the Sushitna and Cantwell rivers. George H. Eldridge, of the United States Geological Survey, who was in charge of a party that made a sur-

"The desirable features of such a route are: (1) That the southern terminus be on water open the year round; (2) that the country traversed yield a large amount of farm-produce for those

who may dwell in the interior and less agricultural portions of the Territory. The Sushitna-Cantwell route affords both these conditions, and is the only one that does. Moreover, the route is remarkably direct, both to the Birch creek and Klondike mining regions and to the confluence of the two great navigable rivers of the interior, the Yukon and the Tanana, a point that, from its position, is regarded by many as of prime importance in the future growth and development of the interior.

"Cook Inlet, in the winter season, is packed with floating ice as far south as the east and west forelands, a condition that has proved a barrier to navigation for four or five months each year. South of these points the ice is said to be less aggressive and navigation possible, though perhaps a little impeded. Off the shores of Redoubt Bay the charts indicate a depth of water of 10 fathoms, and the coast has protection from the north, as at Tyonek, where, with less water, an excellent harbor is afforded during the summer. This locality, therefore—without actual investigation—would seem to afford a suitable location for the southern terminal of a railway line to the interior.

"The second of the desirable features—that the country traversed shall afford a supply of agricultural and farm produce equal to its own de-

mands and to those of the interior—will likely be realized if settlement is attempted, for the possibilities of this region are most encouraging to the farmer seeking a new home. Moreover, so far as at present known, this is the only area of such capabilities along the entire southern coast of Alaska. In other portions the great extent of arable valley lands is wanting, or the region, where open and level, has too great an altitude for the growing of grains and vegetables. A railway in the Sushitna valley might have tributary to it many thousand farms from which to draw its traffic. Besides farm-produce there would be carried a heavy tonnage of manufactured products, including machinery. The amount of return freight would, however, be considerably smaller than that passing inward.

"A feature of the Sushitna-Cantwell route that should not be overlooked is its picturesqueness.

THE WHITE PASS BEFORE THE RAILROAD WAS BUILT.

vey of the latter route in 1898, reports as follows upon its advantages for opening up railway communication with the interior: "Nowhere along the route of travel was an obstacle encountered that would prevent the construction of pack-trail, wagon road, or railway. Grades for the latter could easily be found, the streams could be bridged at slight expense, and timber abounds either along the route or in close proximity to it. That the Sushitna-Cantwell valleys afford a feasible railway route to the interior of Alaska is beyond dispute, yet in any undertaking in this direction the winter snows must not be lost sight of. They would surely entail heavy operating expenses for at least five months in the year, if, indeed, they would not altogether prevent traffic. In the Sushitna valley the average depth of snow is said to be 4 feet; in the mountains it is, of course, much greater.

The route would lie at the very foot of Mount McKinley, would pass through one of the grandest ranges on the North American continent, and in the valley on either side of the divide would afford ever-changing views, equal to those along the most attractive routes in the United States. Many routes have been found into the interior available for pack-trails or wagon roads, but for a railroad none seems to be so desirable as the Sushitna valley."

Agriculture.—With Norway, Scotland, and Ireland to prove the contrary, it often has been asserted that grain and vegetables can not be grown in Alaska. Baranof cleared 15 kitchen gardens in 1805 and ripened barley and potatoes, and common vegetables, as has been done every year since. Fine grasses spring naturally on any clearing; wild timothy and coarser grasses grow three and four feet high, and clover thrives well. Vancouver found the natives cultivating potatoes and a kind of tobacco, and each family had its plantations in sheltered nooks where they sowed their tubers like grain, and gathered them the next winter or spring. There were gardens on either side of the stockades at Sitka that provided fresh vegetables, and hothouse frames secured the Russians many delicacies. In United States days the residents have successfully raised radishes, lettuce, carrots, onions, cauliflower, cabbage, peas, turnips, beets, parsnips, and celery; and single potatoes have weighed 1 pound 5 ounces. Vegetables are raised every year at the Yukon missions and trading posts, and the city of Dawson, British Columbia, is abundantly supplied with fresh vegetables from its own gardens. Small quantities of hay have been cured in southeastern Alaska since 1805, and recent experiments have successfully demonstrated the value of the native grasses as ensilage.

It has been shown that the vegetables raised in Alaska are an important factor in maintaining the health of the mining communities. With these considerations in view the United States Department of Agriculture has established experiment stations at Sitka (headquarters) and Kenai, on Cook Inlet, and has surveyed and set apart for experimental purposes large tracts of land at Fort Yukon and Rampart in the Yukon valley. The work is carried on in the same manner as in the experiment stations in the States, where it is the usual practice to test the different varieties of plants first on small plots. The experiments so far made

have consisted largely in growing different varieties of cereals, forage plants, flax, and vegetables. Experiments in storing ensilage and in making hay from native grasses have been tried with success. Much information regarding agricultural conditions in different parts of Alaska has been obtained through circulars of inquiry and the visits of agents to the different localities. Seeds have been distributed, and in many instances reports have been received upon the results obtained from them; and the correction of the acidity of new land with lime has been successfully accomplished. Sufficient evidence has been obtained to show definitely that a considerable variety of vegetables can be successfully grown in different parts of Alaska. It has also been shown that in southeastern Alaska and in Cook Inlet oats, barley, buckwheat, and spring wheat will mature with careful culture; and that

CUTTING GRADE FOR RAILROAD IN THE WHITE PASS.

the failure of former attempts to grow crops has been due to the natural acidity of the soil and improper drainage. When these difficulties have been removed by proper treatment the land is fertile and productive. Of the practical conclusions

from these results, the Secretary of Agriculture writes, supplementing the fourth annual report (1900) of the work in the Territory: "If our investigations should do nothing more than establish on a sound basis the growing of vegetables in little gardens about the cottages of miners and fishermen in Alaska they will make an adequate return for the funds expended on them. But there is a fair prospect that they will do much more than this. There are large areas on the western peninsula, in Cook Inlet, and on the islands which are naturally adapted to the growing of live stock. The fact that a considerable number of domestic animals have already been maintained in this region would seem to show that an animal industry might be developed there. The department will attempt to find out under what conditions this can best be done.

"The growing of grain and other forage crops on a large scale in this region and in the interior is still problematical. The experiments which the department has thus far conducted have been very largely made with reference to the determination of general agricultural possibilities of the Territory. The growing to maturity of such plants as wheat and oats in any region, even in small quantities, furnishes an excellent indication of the climatic and soil conditions of that region with reference to its agricultural possibilities, for we know quite definitely what is required for the maturing of such plants.

- "In southern Alaska, which is the only part of Alaska seen by most tourists, the forests cover most of the land. The natural meadows, which occur in considerable numbers, are usually of quite limited extent, and for the most part escape the notice of visitors pursuing the ordinary lines of travel. The clearing of land for agricultural purposes in this region will necessarily be expensive, and will only be done as lumbering takes away the trees and increase of population makes a demand for agricultural products. In most respects this region does not differ materially from that of Puget Sound. It is probable that ultimately it will become the home of a considerable population, part of whom will engage in agriculture; the growing of such crops as oats, barley, potatoes, buckwheat, turnips, and other vegetables, together with dairying, will become important industries, and it is probable that flax will be largely grown for its fiber here, as it will be in western Washington and Oregon.

"For a considerable period our operations will largely partake of the nature of an agricultural survey, to determine where agricultural operations may best be carried on by incoming settlers. By active work along the lines already marked out, it is believed that the experiment station in Alaska will prove an efficient aid in the development of the Territory, and will thus justify the expenditures for their maintenance.

"That Alaska will ultimately have a considerable permanent population there can be but little doubt. As we have shown in previous reports, Finland is the country which, on the whole, furnishes the best basis of comparison with Alaska as regards natural conditions. Finland supports a population of 2,500,000, and its agriculture has reached a high state of development. In 1895 Finland produced 38,174,083 bushels of barley, oats, and rye, of which 1,396,200 bushels of oats were exported. At the same time there were 300,650 horses, 2,398,183 cattle, 1,067,384 sheep, and 197,356 hogs. During the period from 1891 to 1895 there were annual exportations of about 22,750,000 pounds of butter, 400,000 pounds of cheese, and 400,000 gallons of milk, or a value of \$6,750,-

000 from dairy products alone. Very conservative estimates of the agricultural possibilities of Alaska indicate that agriculture may be regularly and successfully carried on over an area as large as that of Finland."

Statistics of an industry so largely in its infancy are of necessity very meager. The bulletin of the Census Department, prepared from statistics collected by special agents, published in connection with the census of 1900, reports 12 farms in the Territory. The total acreage was 159 acres, of which 104 acres were devoted to the cultivation of vegetables and hay, and the remainder used for pasturage. Of these farms 5 were under 3 acres (4 market-gardens and 1 raising poultry as well as vegetables); 3 had more than 3 and less than 10 acres; and 4 had more than 20 and less than 50 acres. The total value of the products of the farms of the first class was \$627 in 1899; of the second class, \$3,010; and of the third class, \$4,409. The total farm wealth of the Territory on June 1, 1900, was \$15,686, of which \$2,196 are invested in live stock, \$690 in implements and machinery, and \$12,800 represent the value of buildings and improvements (on 9 of the 12 farms). No land values are given, as no titles have been secured by the farmers, owing to the fact that no official survey has been made. These farms were all south of Kuskokwim river, in southeastern Alaska, and along the southern coast, including the Aleutian Islands. In this section there are two centers of agricultural activity, one on the southeastern coast in the vicinity of Juneau and Sitka, and the other in the southwest in the region about Cook Inlet and Kodiak island. The main expense incurred by the settlers in opening farms has been in the preparation of the soil for cultivation. This has been in some instances \$120 per acre. The least for which labor can be hired in the interior is \$5 a day, and the average will reach \$7.50 a day and board. At Sitka and Kenai the least that white labor can be hired for is \$2 a day. At the mines labor is paid from \$2 to \$2.50 a day and board.

The farm animals and poultry comprised 13 milch cows, value \$810; 5 oxen and other cattle, value \$505; 5 horses, value \$465; 10 swine, value \$100; 3 Eskimo dogs, value, \$150; and 176 chickens, value \$166. The relatively higher valuation of oxen than horses is explained by the statement that they are better adapted to farm work in Alaska, as they can be kept at less expense and are less susceptible to cold. The native grasses furnish abundant pasturage in the summer, and roots and ensilage take the place of natural forage in winter. This enumeration includes only the animals on farms, no enumeration having been made of cows, reindeer, pack dogs, and other live stock owned by the Indians or kept in towns and villages. On many of the small islands along the coast of the Alaskan peninsula, and notably on Sanak and Shumagen islands, cattle are very successfully raised. No detailed report was obtained of the number of cattle kept on these islands nor of those on Douglas island, near Juneau, where a number of cows are kept for dairy purposes. The unenumerated stock far exceeds in number and value that reported.

Of the total value of products—\$8,046—\$5,565 was from the sales of vegetables; \$1,340, hay and ensilage; \$179, chickens; \$360, eggs; \$310, calves; \$274, milk; and \$18, butter. The long periods of daylight, the comparatively high temperature, and the abundant rainfall, which mark the brief growing season, are highly favorable to the rapid growth and early maturity of nearly all kinds of

vegetables, for which there is an active demand and ready market in the large towns and mining-camps. The chief product in point of value was turnips, returning \$1,399; then followed potatoes, \$1,371; lettuce, \$790; carrots, \$850; radishes, \$708; beets, \$205; cabbage, \$141; celery, \$80; onions, \$10; peas, \$8; and rhubarb, \$3. There was very little of what could properly be called hay. Very little tame grass was grown; and the 4 silos, with a capacity of 130 tons, were chiefly filled with beach and other native grasses, which grow in great abundance. From the 13 cows reported, \$292 were realized from dairy products and \$310 from the sales of veal calves.

From the standpoint of income upon capital invested, poultry-raising in 1899 was relatively the most profitable branch of Alaskan agriculture. The stock on hand, June 1, 1900, consists of 176 fowls, valued at \$166. The total income was \$539 in 1899. Of this sum, \$330 were derived from eggs and \$179 from the sale of chickens. Eggs found a ready market at an average price of 43 cents per dozen, while the average amount received for fowls was \$1.01 each.

It is to be regretted that the special agents failed to secure reports concerning the farming operations of the Indians. The Thlingits, inhabiting the southern coast, and the Aleuts, on the Alaskan peninsula and neighboring islands, have made substantial beginnings in agriculture. Nearly every village of the natives on the southern coast has its community garden, and several individual gardens are found. Potatoes, cabbage, turnips, carrots, lettuce, radishes, and other vegetables of the hardier varieties are cultivated, potatoes being the principal crop. At Tyonek, in a recent favorable year, over 300 bushels of potatoes were raised. Some barley was grown on Kadiak island from seed furnished by the agricultural experiment stations. With that exception, no cereals have been successfully grown. Enough hay is usually gathered to feed the domestic animals through the winter. The wild grass is cut with sickles and hung on trees or poles to cure. The Indians understand the importance of fertilizing, and gather large quantities of kelp and seaweed for the purpose. Stock-raising is a very limited industry, although the number of domestic animals owned by the natives is greater than that reported for the farms. At Nenilchik they own over 30 head of neat cattle, each family having at least one cow. The cows are of hardy Russian stock, are small, and give but little milk. Near some villages contact with white men has taught the natives the use of improved farm utensils, but in other localities they till the land with staves and other crude implements. The missionaries are introducing modern tools among the Indians, and are instructing them in improved methods of agriculture. The establishment of agricultural experiment stations has been very beneficial, and gives promise of accomplishing still greater results.

Education.—The educational work of Alaska is under the direct supervision of the Rev. Sheldon Jackson, D. D., the United States general agent of education for Alaska. He is assisted by William Hamilton, the assistant agent of education for Alaska, and William A. Kelly, superintendent of schools for the southeastern district of Alaska. According to Dr. Jackson's report for the fiscal year ending June 30, 1900, 25 public schools were maintained, with 27 teachers and an enrolment of 1,753 pupils. In addition the department continued to pay the salaries of 5 teachers in the Sitka Industrial School, giving instruction in the branches of carpentering, domestic science, paint-

ing, tinsmithing, net-making, boat-building, and in the common English branches, the total number of pupils under instruction being 151. The following table shows the location of the public schools, the race under instruction, and the total enrolment and average monthly attendance for the school year extending from September, 1899, to May, 1900:

The congressional appropriations for education in Alaska have been as follow: First grant to establish schools, 1884, \$25,000; in 1886-'87, \$15,000; in 1887-'88, \$25,000; in 1888-'89, \$40,000; in 1889-'90, \$50,000; in 1890-'91, \$50,000; in 1891-'92, \$50,000; in 1892-'93, \$40,000; in 1893-'94, \$30,000; in 1894-'95, \$30,000; in 1895-'96, \$30,000; in 1896-'97, \$30,000; in 1897-'98, \$30,000; in 1898-'99, \$30,000; in 1899-1900, \$30,000. The appropriation for 1899-1900 was disbursed as follows: Salaries, \$22,921.13; supplies, \$3,203.76; fuel and lighting, \$1,246.96; repairs, \$816.42; rent, \$413.40; traveling expenses, \$372.50; freight, \$299.91; balance, \$725.92. The expense per capita of enrolment was \$17.45. The nature of the teaching in the native schools, aside from the industrial branches, upon which great stress is laid, and the ability and progress of the pupils, are perhaps best illustrated by notes from the field. S. R. Spriggs, the teacher at Port Barrow, says:

"The pupils could best be managed when grouped in three divisions, viz., primary, intermediate, and advanced. The primary department enrolled 27 males, 17 females; total, 44; the intermediate enrolled 13 males, 9 females; total, 22; while the advanced class enrolled 12 males, 4 females, 2 of the 12 males being adults.

"English was the fundamental course throughout the year, more time being given to it than to the other studies because, being the basis of teaching in all the other subjects, its importance was continually seen and felt. The advanced section used readers. The intermediate was drilled in words, sentences, also in spelling and reading, and the primary section was inducted in part into the alphabet and names of familiar objects, this to be used as a basis of future work in the teaching of English. Writing (copy-books) was enjoyed by nearly all the members of the two upper departments.

"Next in importance to English comes arith-

metic. For the advanced section this has meant the gaining of an insight as to what numbers really mean, facility in counting, translating their numerals into our simpler and elastic ones, addition, subtraction, a partial mastery of the multiplication tables and practise in their operation, both by multiplication and division. To this were added examples, practical and useful, to illustrate the usefulness of what had been acquired.

"The advanced section was also given lessons on the outlines of American history and also in drawing simple straight-line delineations. One or two lessons were given each week in physiology and hygiene to the three sections.

"One element omitted in the report is, that of ages. These it is impossible to obtain, the Eskimos having kept no record of years in the past; but on the average the primary class includes all those from about nine years down, the intermediate between nine and twelve, and the advanced from twelve to sixteen. The two adults reported were about twenty to twenty-two years of age."

P. H. D. Lerrigo, M. D., teacher at St. Lawrence island, writes:

"In mental ability the native children seem to compare favorably with those of more civilized countries. Some few are hopelessly dull, but the majority are capable of comprehending and retaining the subjects which engage the attention of white children of similar age. A few are remarkably bright and exhibit capability for mental

continued. The discipline was upon the whole well maintained and punishment not frequently necessary. Upon a few occasions dismissing the culprit from the schoolroom seemed to produce a sufficient moral effect. In June, after the school was closed for the year, during my absence from the village, some of the boys broke into the house and committed trifling pilfering, but took nothing of any great value. Upon this occasion I considered it necessary to take a little more vigorous action, and administered corporal punishment to the two leaders, after giving them a moral lecture upon the enormity of their misdeed. The parents came to me almost unanimously, apologizing for their children, some of them returning the stolen articles, some bringing payment for the things eaten, while others relieved me of the necessity of further action by thrashing their boys themselves."

In these schools the natives are Eskimos; but in those attended by the Indians the attendance is as regular, and the pupils seemingly as desirous of instruction and advancement. "The native children, if sent to school regularly, learn slowly but surely," in the words of another teacher. "Their faith in the white man is great, and for that reason it is easy to work among them. Irregular attendance and tardiness are due to home surroundings. The parents are often indifferent as to whether the children attend or not." The homes are without system, and the children are often tardy or must stay at home because some article of clothing is lost.

The bureau reports the appointment of a citizen of Nome as superintendent of schools for the Cape Nome district, with duties similar to those of the superintendent of schools in the Sitka district—namely, to visit the schools that from time to time may be established within his district, report on their condition, examine candidates for the position of teacher, and aid this bureau with suggestions and advice regarding the educational affairs of northwestern Alaska. This was made necessary by the great increase in population in the Cape Nome region through the immigration of miners with their families.

Owing to the friendly cooperation of the priests of the Russo-Greek churches throughout southwestern Alaska in urging the children of their parishioners to attend the public schools, the seating capacity of the school-buildings in that region was severely taxed. It was necessary to enlarge the school-building at Kadiak and to send additional teachers to that place and to Unalaska.

In several sections of Alaska the influx of white men has resulted in an increased interest in schools on the part of the adult native Alaskans. Realizing the advantages to be obtained by such a knowledge of the English language as will enable them to trade intelligently with the white men, they have made requests for night-schools. At Wood island it was possible to comply with such a request, and the result has been very satisfactory. At Gravina, Saxman, and Wrangell native Alaskans are efficient members of the local school committees.

In addition to the schools established by the

RESIDENCE OF REV. W. T. LOPP, CONGREGATIONAL MISSIONARY,
AT CAPE PRINCE OF WALES.

training to a very considerable extent. The great obstacles in their progress are irregularity in attendance and the lack of the gift of continuity. Their life involves nothing which is calculated to train them for continued mental application. Their work is such as requires physical strength and native acuteness for a little time, after which the strain is relaxed and they lapse into a condition of utter idleness until again required to put forth effort. Consequently their faculties for long-continued mental effort are undeveloped and the children are unable to follow an extended course of work with the facility of those who have come of more civilized stock. Limited by these drawbacks, however, they have during the past year made an appreciable advance in the use of English, in arithmetic, in geography, and in general knowledge.

"Precedent had accustomed the children to moderate talking during school hours, and as it did not interfere with the work, the custom was

United States Bureau, most of the missions to Alaska maintain schools teaching general and industrial branches. The Presbyterian Church supports 14 missions, the Sitka Hospital, and the Sitka Training-School; the Protestant Episcopal Church, 10 missions; the Moravians, 3; the Friends, 4; the Baptist Church, 1; the Methodist Episcopal Church, 1; the Congregational Church, 2; the Swedish Evangelical Mission Covenant, 3; the Roman Catholic Church, 5 and the Dawson Hospital; and the Orthodox Russo-Greek Church, 14.

The Sitka Training-School reports as follows: "Teachers, 9 (2 of whom are natives); pupils, boarding, 147; day, 4; total, 151. Salaries, \$6,818.73; current expenses, \$8,874.59; total, \$15,693.32. Received from tuition, \$297.10. During the year the Sitka Training-School for native boys and girls has been successfully conducted. The teachers are well qualified for the positions they occupy, and both in the class room and in the industrial departments the work is conscientiously and well done. The carpenter shop and boat-building shop are under the management of two competent mechanics who thoroughly understand their business. In these the young men are taught trades which will enable them to make for themselves an honest support in the future. The shoe shop, in which is manufactured every pair of shoes worn by the entire school, is under the direction of a native Alaskan, who learned his trade in this school. This shop brings in considerable income from work done for outside parties. The sewing classes, cooking classes, and science kitchen are all under the direction of trained instructors, who are preparing the girls to become good housewives. As a result, Sitka is turning out numbers of young men and young women who are not only well trained in the industrial arts, but are grounded in Christian principles."

The Sitka Hospital reports as follows: "Physician in charge and 2 nurses; in-patients, 179; out-patients, 1,751; total, 1,960. Salaries, \$1,830.34; current expenses, \$744; total, \$2,574.34. Receipts, \$191.90. Many operations have been performed, all of which have been successful. The Sitka Hospital is widely known, and many natives come from long distances to receive treatment therein. Much good is accomplished by the religious instruction which is imparted along with the help given to the body." These two institutions—the training-school and the hospital—are doing much toward the regeneration, education, and elevation of the native Alaskans."

Introduction of Domestic Reindeer.—To Dr. Sheldon Jackson and Captain M. A. Healy, of the U. S. revenue cutter Bear, is due the suggestion and development of the interesting and successful experiment of introducing reindeer into central and arctic Alaska, and the training of the natives into herdsmen by the instruction of skilled deer-men brought from Lapland for the purpose. When Dr. Jackson visited arctic Alaska in 1890 for the purpose of establishing schools he found the Eskimo population slowly dying off from starvation. For ages they and their fathers had secured a comfortable living from the products of the sea, principally the whale, the walrus, and the seal. These supplies had been supplemented by the fish and aquatic birds of their rivers, and the caribou that roamed in large herds over the inland tundra. But the whalers, entering the Arctic Ocean fifty years ago, have kept up a ceaseless warfare, killing hundreds and thousands annually and driving the remnant farther and farther north into the Arctic Ocean, where they are no longer in reach of the natives. The walrus,

a few years ago so numerous that their bellows were heard above the roar of the waves and the grinding and crashing of the ice-fields, have been so far exterminated for the sake of their ivory that the natives with difficulty procure a sufficient number of skins to cover their boats, and the flesh, on account of its rarity, has become a luxury. The canneries are on their streams, carrying the food out of the country, and by their wasteful methods destroying the future supply. And the hunter and the miner, with their breech-loading firearms, have killed off the caribou or have frightened them away to the remote and more inaccessible regions of the interior.

To have established schools among this starving people would have been of little service, and to feed them at the expense of the Government would pauperize and in the end as certainly destroy them. Some other method had to be devised, and this was suggested by the wild nomad tribes on the other side of Bering Straits, who had an un failing food supply in their large herds of domestic reindeer. To introduce the reindeer into America would afford the Eskimo as permanent a food supply as the cattle of the Western plains and the sheep of New Mexico and Arizona do the inhabitants of those sections. The vast territory of central and arctic Alaska is abundantly supplied with the long, fibrous white moss, which is the natural food of the reindeer. Taking the statistics of Norway and Sweden as a guide, arctic and subarctic Alaska, by a conservative estimate, can support 9,000,000 head of reindeer, furnishing a supply of food and clothing, and a means of transportation, to a population of 250,000. The reindeer is to the Eskimo what the bamboo is to the Chinaman: food, clothing, shelter, utensils, and transportation. Dr. Jackson's plan was to introduce the deer as a part of the system of industrial education; to establish industrial schools where the chief instruction should be the management and propagation of reindeer; to loan these in herds of 100 or less to the various missionary stations as industrial apparatus to be used in training the teachable and capable youth as herdsmen and teamsters, on condition that after three years the Government may take from the herd a number of deer in good condition equal to the original number furnished, the stations keeping the increase. This plan has since been extended to apply to capable native apprentices with satisfactory results, and at the stations as a reward for intelligent and persevering industry two deer are given at the end of the first year's apprenticeship, and five more at the end of the second year's, to develop gradually the sense of individual ownership of property—a sense which has never been developed in the tribal relation.

Dr. Jackson returned to Washington in November, 1890, and in his report to the Commissioner of Education emphasized the destitute condition of the Alaskan Eskimo and recommended the introduction of the domestic reindeer of Siberia. When the Fifty-first Congress failed to take action upon the bills brought before it in regard to the matter, Dr. Jackson, with the approval of the Commissioner of Education, issued an appeal to the friends of missionary education for a preliminary sum to begin the experiment at once, and \$2,146 were subscribed. Dr. Jackson thus tells the story of the work of the first years in his report for 1895:

"As the season had arrived for the usual visit of inspection and supervision of the schools in Alaska, in addition to my regular work for the schools I was authorized to commence the work of introducing domestic reindeer into Alaska. The

natives of Siberia who own the reindeer, knowing nothing of the use of money, an assortment of goods for the purpose of barter for the reindeer was procured from the funds so generously contributed by benevolent people.

"The Honorable Secretary of the Treasury issued instructions to Capt. Healy to furnish me every possible facility for the purchase and transportation of reindeer from Siberia to Alaska. The Honorable Secretary of State secured from the Russian Government instructions to their officers on the Siberian coast also to render what assistance they could, and on May 25, 1891, I again took passage on the revenue cutter Bear, Capt. Healy in command, for the coast of Siberia.

"The proposition to introduce domestic reindeer into Alaska had excited wide-spread and general interest. In the public discussions which arose with regard to the scheme, a sentiment was found in some circles that it was impracticable; that on account of the superstitions of the natives they would be unwilling to sell their stock alive; further, that the nature of the reindeer was such that he would not bear ship transportation, and also that, even if they could be purchased and safely transported, the native dogs on the Alaskan coast would destroy or the natives kill them for food. This feeling, which was held by many intelligent men, was asserted so strongly and positively that it was thought best the first season to make haste slowly, and instead of purchasing a large number of reindeer, to possibly die on shipboard or perhaps to be destroyed by the Alaskan dogs (thus at the very outset prejudicing the scheme), it was deemed wiser and safer to buy only a few. Therefore, in the time available from other educational duties during the season of 1891, I again carefully reviewed the ground and secured all possible additional information with regard to the reindeer, and, while delaying the actual establishment of a herd until another season, refuted the correctness of the objections that the natives will not sell and the deer will not bear transportation by actually buying and transporting them.

"The work was so new and untried that many things could only be found out by actual experience. The wild deer-men of Siberia are a very superstitious people, and need to be approached with great wisdom and tact. If a man should sell us deer and the following winter an epidemic break out in his herd, or some calamity befall his family, the shamans would make him believe that his misfortune was all due to the sale of the deer. The Siberian deer-men are a non-progressive people. They have lived for ages outside of the activities and progress of the world. As the fathers did, so continue to do their children. Now, they have never before been asked to sell their deer; it is a new thing to them, and they do not know what to make of it. They were suspicious of our designs. Another difficulty arises from the fact that they can not understand what we want with the reindeer. They have no knowledge of such a motive as doing good to others without pay. As a rule, the men with the largest herds, who can best afford to sell, are inland and difficult to reach. Then business selfishness comes in. The introduction of the reindeer on the American side may to some extent injuriously affect their trade in deerskins. From time immemorial they have been accustomed to take their skins to Alaska and exchange them for oil. To establish herds in Alaska will, they fear, ruin this business. Another difficulty experienced was the impossibility of securing a competent interpreter. A few of the natives of the Siberian coast have spent one or

more seasons on a whaler, and thus picked up a very little English. And upon this class we have been dependent in the past.

"However, notwithstanding all these difficulties and delays, Capt. Healy, with the Bear, coasted from 1,200 to 1,500 miles, calling at the various villages and holding conferences with the leading reindeer owners on the Siberian coast. Arrangements were made for the purchase of animals the following season. Then, to answer the question whether reindeer could be purchased and transported alive, I bought 16 head, kept them on shipboard for some three weeks, passing through a gale so severe that the ship had to 'lie to,' and finally landed them in good condition at Amaknak island, in the harbor of Unalaska.

"Upon my return to Washington city in the fall of 1891 the question was again urged upon the attention of Congress, and on the 17th of December, 1891, Hon. H. M. Teller introduced a bill (S. 1109) appropriating \$15,000, to be expended under the direction of the Secretary of the Interior, for the purpose of introducing and maintaining in the Territory of Alaska reindeer for domestic purposes. This bill was referred to the Committee on Agriculture and Forestry, Hon. Algernon S. Paddock, chairman. The committee took favorable action, and the bill was passed by the Senate on May 23, 1892. On the following day it was reported to the House of Representatives and referred to the Committee on Appropriations. A similar bill (H. R. 7764) was introduced into the House of Representatives by Hon. A. C. Durborow and referred to the Committee on Agriculture. On April 15 Hon. S. B. Alexander, of North Carolina, reported the bill to the House of Representatives with the approval of the Committee on Agriculture. The bill was placed on the calendar, but failed to pass the House.

"On the 2d of May, 1892, I started for my third summer's work on the coast of Siberia and arctic Alaska in the United States revenue cutter Bear, Capt. M. A. Healy commanding, and, upon the 29th of June following, selected in the northeast corner of Port Clarence (the nearest good harbor to Bering Straits on the American side) a suitable location for the establishment of an industrial school, the principal industry of which is the management and propagation of domestic reindeer. The institution is named the Teller Reindeer station. During the summer of 1892 I made five visits to Siberia, purchasing and transporting to Port Clarence 171 head of reindeer. I also superintended the erection of a large building for the offices and residence of the superintendent of the station, Mr. Miner W. Bruce, of Nebraska.

"Returning to Washington in the early winter, agitation was at once commenced before Congress, resulting in an appropriation by the Fifty-second Congress, second session (March 3, 1893), of \$6,000, to be expended under the direction of the Secretary of the Interior, for the purpose of introducing and maintaining in the Territory of Alaska reindeer for domestic purposes. The management of this fund was wisely laid upon the Commissioner of Education and was made a part of the school system of Alaska.

"At the expiration of his year's service Mr. Bruce resigned, and Mr. W. T. Lopp, of Indiana, was appointed superintendent.

"Siberian herders were employed at the beginning of the enterprise, not because they were considered the best, but because they were near by and were the only ones that could be had at the time. It was realized from the first that if the Alaskan Eskimo were to be taught the breeding and care of the reindeer, it was important that

they should have the benefit of the most intelligent instructors and of the best methods that were in use. By universal consent it is admitted that the Lapps of northern Europe, because of their superior intelligence (nearly all of them being able to read and write and some of them being acquainted with several languages), are much superior to the Samoyedes deer-men of northern Europe and Asia and the barbarous deer-men of northeastern Siberia. Intelligence applied to the raising of reindeer, just as to any other industry, produces the best results.

"Therefore, when in 1893 it was ascertained that the herd at Port Clarence had safely passed its first winter (thus assuring its permanence), I at once set about securing herders from Lapland. There being no public funds available to meet the expense of sending an agent to Norway in order to secure skilled Lapp herders, I had recourse again to the private benefactions of friends of the enterprise, and \$1,000 was contributed.

"Mr. William A. Kjellmann, of Madison, Wis., was selected as superintendent of the Teller Reindeer Station and sent to Lapland for herders. He sailed from New York city Feb. 21, and landed upon his return May 12, 1894, having with him 7 men, their wives and children, making 16 souls in all. This was the first colony of Lapps ever brought to the United States. They reached the Teller Reindeer Station safely on July 29, having traveled over 12,500 miles. Upon reaching the station Mr. Kjellmann took charge, relieving Mr. W. T. Lopp, who desired to return to the mission work at Cape Prince of Wales."

From these small and careful beginnings is growing up what promises to be one of the great industries of this great and resourceful district. The original purpose in 1890, to provide a new and more permanent food supply for the half-famishing Eskimo, has not been lost sight of. The Eskimos are a hardy and a docile race, their children learn readily in the schools, and they are to be a great factor in the development of the land. In the meantime, "the discovery of large and valuable gold deposits upon the streams of arctic and subarctic Alaska has made the introduction of reindeer a necessity for the white man as well as the Eskimo. Previous to the discovery of gold there was nothing to attract the white settler to that desolate region, but with the knowledge of valuable gold deposits thousands will there make their homes, and towns and villages are already springing into existence. But that vast region, with its perpetual frozen subsoil, is without agricultural resources. Groceries, breadstuffs, etc., must be procured from the outside. Steamers upon the Yukon can bring food to the mouths of the gold-bearing streams, but the mines are often many miles up these unnavigable streams. Already great difficulty is experienced in securing sufficient food by dog-train transportation and the packing of the natives. The miners need reindeer transportation.

"Again, the development of the mines and the growth of settlements upon streams hundreds of miles apart necessitates some method of speedy travel. A dog team on a long journey will make on an average from 15 to 25 miles a day, and in some sections can not make the trip at all, because they can not carry with them a sufficient supply of food for the dogs, and can procure none in the country through which they travel. To facilitate and render possible frequent and speedy communication between these isolated settlements and growing centers of American civilization, where the ordinary roads of the States have no existence and can not be maintained except at an

enormous expense, reindeer teams that require no beaten roads, and that at the close of a day's work can be turned loose to forage for themselves, are essential. The introduction of reindeer into Alaska makes possible the development of the mines and the support of a million miners.

EATON REINDEER STATION.

"The introduction of reindeer is opening up a vast commercial industry. Lapland, with 400,000 reindeer, supplies the grocery stores of northern Europe with smoked reindeer hams, 10 cents per pound; smoked tongues, at 10 cents each; dried hides, at \$1.25 to \$1.75 each; tanned hides, \$2 to \$3 each, and 23,000 carcasses to the butcher shops, in addition to what is consumed by the Lapps themselves. Fresh reindeer meat is considered a great delicacy. Russia exports it frozen, in carloads, to Germany. The Norwegian Preserving Company use large quantities of it for canning. The tanned skins (soft and with a beautiful yellow color) have a ready sale for military pantaloons, gloves, bookbinding, covering of chairs and sofas, bed pillows, etc. The hair is in great demand for the filling of life-saving apparatus (buoys, etc.), as it possesses a wonderful degree of buoyancy. The best existing glue is made of reindeer horns. On the same basis Alaska, with its capacity for 9,200,000 head of reindeer, can supply the markets of America with 500,000 carcasses of venison annually, together with tons of delicious hams and tongues, and the finest of leather."

There has been some opposition to the experiment, brought about in part by the failure to carry supplies to the Klondike in the winter of 1897-'98. The purchase of several hundred deer in Lapland and their shipment across the Atlantic and the continent, and by steamship again from Seattle to Haines mission, and the dying of a large percentage of them at that point before and after their transfer from the War Department to the Department of the Interior, has very little bearing upon the work as it is being carried out in northern and western Alaska.

At the very time that the cry of starvation was raised in the newspapers concerning the miners on the Klondike, another cry went up that a large number of whalers at Point Barrow were caught in the ice, and unless they got relief, many would starve to death before spring. Accordingly, the revenue cutter Bear was outfitted and sent off to give relief. She landed a party of three officers—Lieuts. Jarvis and Berthoff and Dr. Call. Un-

der conditions that try men's souls, they made their way from the spot where they were landed at Cape Vancouver, a long distance south of the Yukon river, around the margin of the coast, till they came to the missionary reindeer station at Port Clarence. Here Mr. W. T. Lopp and the native Eskimo Antisarlook, at the earnest entreaty of Lieut. Jarvis, turned over their herds of reindeer to him, amounting in all to 437 animals; and the natives not only parted with their animals, but volunteered to go with Lieut. Jarvis to drive them to Point Barrow. After several fearful weeks they reached that station and gave immediate relief to those hungry men and kept them alive until the ice-pack broke up. About 100 of these animals had to be slaughtered. The food that they afforded kept 200 men alive.

The annual appropriations for the work have been as follows: 1894, \$6,000; 1895, \$7,500; 1896, \$7,500; 1897, \$12,000; 1898, \$12,500; 1899, \$12,500; 1900, \$25,000; 1901, \$25,000.

The following table shows the annual increase, together with the number of deer imported since 1892:

ANIMALS.	1892.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.

* One hundred and eighty deer killed at Point Barrow for food, 66 lost or killed *en route*.

Of the 3,323 deer in Alaska in 1900, 644 were still in the possession of the Government, 1,184 belonged to the 6 mission stations, and 1,495 to 20 Eskimo apprentices. From 1892 to 1900, 997 reindeer were purchased in Siberia, and from these 3,342 fawns have been born in Alaska. In addition to the annual increase in numbers, Dr. Jackson emphatically states in his report that the fawns born in Alaska greatly excel in quality those born either in Lapland or Siberia. The reindeer are developing into larger and stronger animals than the Siberian deer, from which they came. The following shows the number, distribution, and ownership of the various herds in 1900: Point Barrow: Presbyterian Mission, 100; Ojello (Eskimo), 37; total, 137. Point Hope: Electoon (Eskimo), 50; Ahlook, 50; total, 100. Cape Prince of Wales: American Missionary Association, 526; Eskimos, 460; total, 986. Teller Reindeer Station: Government, 221; Norwegian Evangelical Lutheran Mission, 100; Tautook, 75; Sekeoglook, 75; Tatpan, 64; Dunnak, 50; estate of Wocksock, 75; total, 660. Cape Douglas: Mary Antisarlook, 400. Gambell, St. Lawrence island: Presbyterian Mission, 70. Golofnin Bay: Swedish Evangelical Mission, 147; Episcopal Mission, 69; Okitkon, 49; Constantine, 12; Toptok, 13; total, 290. Eaton Reindeer Station: Government, 423; Episcopal Mission, 80; Moses (Yukon native), 65; Martin Jacobsen (Eskimo), 20; total, 588. St. James Mission (Episcopal), 92. Total, 3,323.

Of the 63 herders and their families, making an aggregate of 113 Norwegians, Finns, and Laplanders brought out in 1898 in connection with the reindeer enterprise, 3 men have died; 12 men and their families, aggregating 24 people, have returned to Lapland, leaving 86 of the party still in this country. Of these 86, from 17 to 20 have made fortunes in the gold-mines since the expiration of their term of service with the Government. That

only 29 deer were imported from Siberia during the summer was due to two causes—first, that the Bear was able to make but one visit to that coast during the season, on account of the additional service imposed upon it by the rush of miners and others to Cape Nome; and second, that a great epidemic of la grippe, measles, and pneumonia swept the whole region and affected nearly the whole population, and although the Bear cruised hundreds of miles along the coast of Siberia, calling at the various camps of the reindeer men, it was unable to secure but the small number given above.

At nearly all of the herds many of the herders were sick, a number had died, and the people were in a discouraged and despondent condition, so that men could not be found to drive up and catch the deer and the owners were unwilling to sell.

This epidemic extended the whole length of the Aleutian Islands, along both the American and Asiatic shores of Bering Sea, to Cape Prince of Wales and into the arctic, along the Siberian coast beyond Cape Serdze Kamen, and up the

American side to Point Hope; also on the Lower Yukon river.

Reindeer Mail Service.—During the summer of 1899 the Second Assistant Postmaster-General gave to Mr. William A. Kjellmann, superintendent of reindeer in Alaska, as subcontractor, the carrying of the mail on route 78110. This route called for three round trips during the winter of 1899 and 1900 between St. Michael, Eaton, Golofnin, and Kotzebue, the latter place being north of the arctic circle. The Eaton station is on the direct winter route between Dawson, the Yukon valley, and Nome, and its station post-office is the distributing point for the mails going north to Kotzebue, south to St. Michael, west to Golofnin, Nome, Teller, and Cape Prince of Wales, and east to Yukon valley, Dawson, and the States. Mr. Kjellmann, being required to return to the States on account of sickness, gave the work into the hands of Mr. David Johnsen Elliott. Mr. Elliott employed Johan Peter Johannesen, a Lapp, as mail-carrier. The service was successfully performed with reindeer, each round trip being 1,240 miles through a wilderness without a road.

Early in the year the Post-Office Department concluded to give Nome a semimonthly service, and the contract was given Mr. William A. Kjellmann. Mr. Kjellmann being sick and in the States, instructions were sent to Dr. F. H. Gambell to take charge and see that the mail was sent through without delay. These instructions reached Eaton in February, 1900, and on the 1st of March the reindeer started from Eaton with the mail for Nome. Mr. S. Newman Sherzer was released from his duties as assistant superintendent at the station and appointed manager of the reindeer mail service to Nome. Five consecutive successful trips were made, four of them with reindeer and sleds. The five trips completed the winter contract. The round trips, a distance of 480

miles through a country without a road or trail, were made as follow: First trip, fourteen days; second trip, thirteen days; third trip, eleven and one-half days; fourth trip, eleven and one-half days; and fifth trip, fifteen days. The actual traveling time was from one to two days less than the foregoing figures, as a rest of twenty-four to thirty hours was taken at Nome and a shorter rest at Golofnin each way.

As the instructions for carrying the mail came suddenly and unexpectedly, there was no opportunity for preparing the route for relays of reindeer, but the same deer made the round trip.

At the request of Mr. N. V. Hendricks, subcontractor, on the route between Weare via Eaton and St. Michael, Superintendent Gambell furnished his mail-carriers with reindeer, pack-saddles, and sleds between St. Michael, Eaton, and Nulato, a distance of 180 to 200 miles each way.

The above routes aggregated between 6,000 and 7,000 miles that were successfully covered by the reindeer. The superintendent, in closing this part of his report, says: "Our success in carrying the mail was due to three conditions: First, the capability of the deer; second, the close attention given to the work by Mr. Sherzer; and, third, the expertness of the driver, Nils Klemetsen."

A contract was made with Superintendent Gambell for carrying the mail with reindeer during the winter of 1900-1901 between Eaton and Kotzebue, a distance of approximately 250 miles. The contract calls for two round trips during the winter.

There being an unusual number of prospectors in the country during the winter of 1899-1900, Mr. Lopp established a reindeer express between the mining-camps at York and Nome. As far as the deer were concerned the line was a success; but there being an insufficient amount of patronage to make it profitable, the line was discontinued after two round trips.

The deer were also used to a limited extent in the carrying of freight.

One of the most important events in the year's work was the placing of the first herd on St. Lawrence island, which Dr. Jackson thus graphically describes in his report:

"It had been in the plans of the department for two or three years to stock this large and important island with a herd of reindeer, but it had not been convenient to do so until the present season. Reaching the village, we met an unexpected difficulty. The people were so discouraged by the large number of deaths that they had lost all hope and ambition, and did not care whether they secured the reindeer or not, although in several preceding seasons when we visited them they had been begging and urging that deer should be placed upon their island. The temporary discouragement was so great that none could be found who were willing to become herders. Under the circumstances, nothing could be done but abandon the project of placing deer upon the island and return the deer to Teller Reindeer Station. During the night, however, some of the younger men of the village who had been off hunting returned, and finding that I had decided to take the deer away, they called a meeting of the more progressive men of the village and came to me with their earnest remonstrances against not landing the deer. When I informed them that it was a question of finding a number of young men who were willing to become apprentices and learn to manage deer, they at once offered their own sons. Consequently, on the afternoon of the 30th, 29 reindeer were landed on the island to the eastward of the village."

ANGLICAN CHURCHES. General Statistics.—The voluntary offerings of the Church of England for the year ended Easter, 1900, as tabulated and published in *The Times*, London, by Canon Burnside, the honorary editor of the Official Year-Book of the Church of England, were as follow:

I. Funds contributed to central and diocesan societies and institutions: 1, Home missions, £599,406 14s. 10d.; 2, foreign missions, £831,093 14s. 9d.; 3, educational work, £132,752 9s. 9d.; 4, the clergy (educational and charitable assistance), £180,515 4s. 8d.; 5, philanthropic work, £522,829 8s. 8d.; total, £2,266,597 12s. 8d.

II. Funds locally raised and locally administered: 1, For the parochial clergy, £822,878 0s. 2d.; 2, for elementary education, £1,119,760 11s. 3d.; 3, for general parochial purposes, £3,561,756 11s.; total, £5,504,395 2s. 5d. The total voluntary contributions thus amount to £7,770,992 15s. 1d.

The statement was regarded as comparing most favorably with that of the previous year, and as showing that up to the date of closing the accounts the claims of church work had more than held their own under the strain of the various national calls for generous assistance in other directions. A total increase was shown of £306,558, two-thirds of which belonged to the funds contributed to central and diocesan institutions, and one-third to the fund administered locally; but the increase in the former was the more marked, because those funds amount to £2,250,000, while the local funds come to £5,500,000. An examination of the figures in detail will show that the following interests advanced in the year under review, roughly, to the extent of the sums given in round numbers: Home missions, £50,000; foreign missions, £58,000; educational work, £13,000; philanthropic work (including a sum of £189,757 for nursing institutions, convalescent homes, and cottage hospitals), £94,000; the maintenance of parochial clergy, £24,000; and general parochial purposes, £139,000. Regret is expressed by the editor of the Year-Book that the two items in which a decrease is shown are the societies for assisting the poorer clergy and their families, £13,000, and the funds contributed for elementary education, £57,000; also that no way has been found to estimate the support given yearly by Church people to the Bible Society and other inter-denominational agencies.

The average income of the English beneficed clergy, as returned in the Official Year-Book, is £249 per benefice. The lowest average is in the diocese of Sodor and Man, £249. The highest is in the diocese of London, £420; the next highest in that of Liverpool, £341; and the next in that of Manchester, £357. The funds for the augmentation of benefices would amount to about £3 each if they were equally distributed.

By a parliamentary return made early in the year, it is shown that the total price of the advowsons sold under the Lord Chancellor's augmentation act from the time it came into operation, Aug. 15, 1892, to Dec. 6, 1900, was £234,859. The money has nearly all been invested with the ecclesiastical commissioners, but is under the control of the Lord Chancellor. The funds may be used to augment the income of benefices in the gift of the Lord Chancellor up to £400 a year. Since August, 1892, £2,086 had been distributed to 14 benefices in grants made to meet equivalent grants. A balance of £2,867 remained as yet unappropriated.

The total income of the Episcopal Church in Ireland for 1900 was £525,458. The investments in securities amounted to £7,627,424.

The Church Missionary Society.—The annual meeting of the Church Missionary Society was held in London, May 30, Sir John Kennaway, Bart., M. P., presiding. The report showed that the total receipts of the society from all sources had been £350,492. The ordinary and appropriated contributions had produced together the largest amount on record, excluding centenary funds, the sum being £313,000, or £9,000 more than in the previous year. The appropriated contributions had increased so rapidly that, after using £82,000 against the expenditure of the past year, £52,000 remained in hand, applicable to the current and future years. The centenary funds amounted altogether to £212,000, and enabled the committee to increase the society's working capital to £100,000, to wipe off the remaining mortgage on the Church Missionary House, and to add a new building to the Children's Home, as well as to cover a large part of the additional outlay in the missions caused by the increased number of missionaries in the past four years. The actual expenditure of the year had been £369,330, while the sums available for meeting it were so far deficient as to leave an adverse balance of £42,883. This had been partly met by applying £10,000 out of centenary funds and a sum of £21,000, known as the Butterfly fund, whereby it had been reduced to £11,883. The society had in the mission fields 558 stations, 9,156 workers, including 1,176 European missionaries (excluding medical missionaries), 84 medical missionaries, 7,896 native Christian workers, with 76,370 communicants and 281,584 native Christian adherents; while 19,083 persons had been baptized during the year. The society maintained 2,337 schools and seminaries, which had been attended during the year by 104,755 pupils and seminarists. In connection with the medical work, 11,887 in-patients and 747,839 out-patients had been treated. In China the mission had been spared the loss of European lives, and a few of the missionaries had been allowed to remain at their posts; while at stations from which the missionaries had been temporarily withdrawn, the work had been regularly carried on by Chinese clergy and teachers. In reference to the outbreaks of 1900 in China, the report said that "the Chinese nation, as a whole, no more deserves the hard words often spoken of it than do the missionaries. Not only are the people as a rule friendly, but even the officials have repeatedly shown kindness and courtesy to the foreigners, whose high motives they perfectly understand, particularly to the ladies. Few missionaries in the disturbed districts would have escaped the cruel fate decreed by the Empress-Dowager if several of the viceroys and mandarins had not risked their own heads to protect them." The number of Chinese converts had been considerable, including 627 baptized at the Fuh-Kien mission alone. In India the nascent churches were being led on to self-support, self-government, and self-extension. There was, however, a marked revival in the zeal of the devotees of the old religion, and the weaknesses of native Christians were at times the sorrow of the missionaries. At Khartoum the committee was anxiously awaiting the removal of the prohibition of missionary work. The number of new missionaries, especially of women, showed some falling off. Though clergy were wanted at home, yet, in comparison with the majority of mission stations, the most undermanned parish in England had a plethora of workers.

The report of medical work showed that during the year the number of beds in hospitals had increased from 1,484 to 1,613; of in-patients, from

11,400 to 11,887; and of out-patients, from 630,000 to 753,000. A medical training-house for ladies had been opened at Bermondsey. The income of the auxiliary had risen from £10,600 to 12,930, besides £2,737 brought forward and £3,797 from the Centenary fund. The expenditure had been £17,962, but the debt balance was only £484.

The General Committee of this society, at their meeting on July 9, resolved, in view of the somewhat embarrassed financial condition of the society, to make a scrupulous inquiry, and see whether the present income could be in any way better applied, and also to organize new endeavors to reach the untouched resources of Christian England.

The "Propagation Society."—The gross income of the Society for the Propagation of the Gospel from all sources had been £178,396, showing an excess of £42,000 over the total of the previous year; but the regular collections, subscriptions, and donations had fallen off by about £1,200. The bulk of the gross increase was constituted of special subscriptions for sufferers by famine in India and for the South African Church, and for the Bicentenary fund. Twenty-six offers had been received from men willing to work abroad, and 5 clergymen and 14 laymen had been accepted; while in the foreign field 45 clergymen, many of whom had been educated in the society's local colleges, had been placed on the list of missionaries.

The society had 761 ordained missionaries, including 12 bishops, 183 of whom were Asiatics or Africans; about 2,900 lay teachers, 3,200 students in its colleges, and 38,000 children in its schools in Asia and Africa.

A meeting for young people held in connection with the bicentenary of the society, March 9, was addressed by the Archbishop of Canterbury, the Rev. Roland Allen, of China, and the Bishop-designate of London.

At a meeting held in the Guildhall, London, Feb. 12, in celebration of the bicentenary of this society, the lord mayor presided, attending in state, and spoke of the extent of the work of the society. The Archbishop of Canterbury called attention to the agency of missionary enterprise in spreading religion and advancing civilization and commerce, and urged the duty of Englishmen to support it liberally. Lord Hugh Cecil, M. P., referred to the dangers, unknown to it in its early times, with which it was now beset, through efforts to make it the tool of political ambition. Resolutions were passed, recognizing "with devout and humble thankfulness to Almighty God" the measure of success which had been vouchsafed to the labors of the society, and invoking the divine blessing to continue the work, in which the society had been instrumental, in bringing about the spiritual federation of the Anglican communion throughout his Majesty's dominions.

At the closing meeting of the bicentenary celebration, held at Exeter Hall in June, the primate presiding, it was reported that the society had failed to raise the whole of the proposed amount of £250,000. Up to the present time only a little more than £50,000 had been paid into the fund. Of this sum, £30,000 were being devoted to South Africa. The closing sermons of the celebration were preached in St. Paul's Cathedral by the Archbishop of Canterbury and Canon Newbolt, and in Westminster Abbey by Dr. Alexander, Primate of Ireland.

Other Missionary Societies.—The Woman's Mission Association for the Promotion of Female Education in the Missions of the Society for

the Propagation of the Gospel returned an income of £10,672 and an expenditure of £10,483 for 1900.

The report of the Anglo-Continental Society, made at its annual meeting in June, represented that the number of Old Catholics in Austria had grown steadily during the year, although their priests had been refused recognition by the Government, and their meetings had been forbidden by the police. In Italy, while the spurious bishop-elect, the priest Don Miraglia, having obtained episcopal orders from M. René Vilatte, whose consecration was not recognized by the Anglican bishops, had assumed to exercise episcopal jurisdiction, the work of the real bishop-elect, Count Campello, was going on independently, with headquarters at Rome. In France, the number of priests who had left the Church of Rome in connection with M. Bourrier's movement had risen to about 350. The Bishop of Salisbury, speaking of the relations of the Greek and Anglican churches, said that something had already been attained in regard to burial rights, and arrangements concerning baptismal rites might follow; but he did not see any hope of intercommunion in the near future.

The report of the Jerusalem and the East Mission, made at the annual meeting, June 13, the Bishop of Salisbury presiding, represented that the income for the year ending with the month would be about £4,300, showing that the serious decline of the two previous years had been checked. The necessity of having a reserve fund of £1,000 or £1,500 was urged, since now Bishop Blyth, in the unique position of representing the Anglican communion in the mother city of the faith, was left with unfinished buildings and an insufficient staff. This did not give to the other churches in Jerusalem a true idea of Anglican zeal for missions. It was represented by speakers who had visited the mission that the bishop came constantly in contact with the Mohammedan officers, as well as with the Oriental and Roman branches of the Catholic Church. The cordiality shown by the Greek patriarch and priests toward the Anglican Church was very striking. Not only representatives of the Church Missionary Society were found in Bishop Blyth's house, but non-conformists, who were carrying on a great many branches of Christian work in the Holy Land, and the bishop seemed in very friendly touch with all of them.

At the annual meeting in behalf of the South African United Church, May 23, it was represented that the Society for the Propagation of the Gospel had decided to send out large assistance. While Anglican relations with the Dutch Reformed Church had always been friendly till the war, the hope of union had now been postponed. The natives, however, would be better disposed toward the English Church. The money furnished by the Propagation Society could not be touched till its allotment had been discussed by all the dioceses.

A reception given to missionary and colonial workers by the Archbishops of Canterbury and York on behalf of the United Boards of Missions, May 22, was attended by representatives of the Society for the Propagation of the Gospel, the Church Missionary Society, the Universities Mission to Central Africa, the South American Missionary Society, the Oxford Mission to Calcutta, the Delhi Mission, the London Jews' Society, the Church of England Zenana Mission, the Church of England members of the Bible Society, the Colonial and Continental Church Society, and many diocesan fund committees. The guests were

addressed by the Archbishops of Canterbury and York and the Bishop of London, and responses were made by the Archbishop of Cape Town and Mr. Eugene Stœck.

Other Societies.—The annual report of the Church Pastoral Aid Society showed that 1,200 parishes were now giving and 700 receiving assistance through its means. The year's grants numbered 1,001, for the maintenance of 744 curates, 152 lay agents, and 105 woman workers. The society's dual basis, supplying both clerical and lay pastoral aid, was becoming all the more valuable in consequence of the decrease in the supply of candidates for ordination. The total income for the year had been £72,117, including £17,593 in legacies, and a net increase of £4,101 in the grants. The expenditure had been £61,902.

The income of the Additional Curate's Society for 1900 was £37,034, a considerable falling off; while the expenditure was £58,240, and funds and legacies had to be drawn upon to make the accounts square. This expenditure had elicited an even larger sum, £59,213 having been locally raised to meet the grants. Grants were being made toward the stipends of 1,247 assistant clergy in 1,034 poor and populous parishes; and about 5,000 parishes were recognizing the privilege of helping in this work. Since its formation the society had paid £1,915,007 in grants, to meet which £1,636,769 had been locally raised; while sums of £11,985 and £42,150 respectively had been granted and locally raised to endow newly constituted districts. The allied Ordination Candidates' Exhibition fund had been able in the past year to distribute a larger sum than in any of the previous ten years, and 1901 had begun with 130 students on the list.

The Curates' Augmentation fund had received £14,931 during the year, of which £8,115 were paid in grants. The 176 curates benefited had served on an average twenty-seven years, but their average stipend was less than £130.

The Church of England Incorporated Society for Providing Homes for Waifs and Strays had received during the year £44,547 for the general fund, £26,980 for special funds, and £1,647 in loans, and had expended £69,770. It had, at the close of the year, 1,566 girls and 1,260 boys under its care.

The two hundred and forty-seventh anniversary of the corporation of the Sons of the Clergy was celebrated in London, May 8. The object of the corporation was defined by the Dean of Windsor to be to help necessitous clergymen, their widows and dependent relatives, of every diocese in England and Wales. In the past year more than £24,700 had been paid to those for whom the society existed, £15,000 alone going in pensions and grants to widows and aged single daughters of clergymen. The number assisted was 1,778. The corporation was by far the oldest, the largest, and the most comprehensive of the clergy charities.

The Church of England Scripture Readers' Association, it was represented at its fifty-seventh annual meeting in the Church House, Westminster, employs no reader who can not satisfy the committee as to his Scripture knowledge and his full acceptance of the plain teachings of the Prayer-Book and his loyal allegiance to the principles of the Reformation. The number of grants was now 123, and the parochial clergy testified to the intelligence, energy, and satisfactory results of the work done. During the year the readers had paid 430,400 visits and calls, of which 7,720 were to public houses, factories, and common lodging-houses; had presented 2,266 children for

baptism, and brought 2,070 to schools; had brought forward 490 persons for confirmation, induced 9,200 to attend service, and reported 13,840 cases to the clergy for relief; and had conducted or taken part in 21,520 services and meetings. The income, £12,071, showed an increase of £1,701, legacies having risen from £900 to £2,484. Grants had been received from the Bishop of London's and other diocesan funds, the parishes, and a number of companies.

The Church Historical Society was formed in 1894 to meet attacks on the historical position of the Church of England. The report issued in January, 1901, mentions courses of lectures that had been delivered during the past year at Liverpool, Wood-Green, Birmingham, Manchester, and Birkenhead, and the issue of a number of new publications. A course of twelve lectures on Typical English Churchmen was to be delivered in the spring of 1901 at St. Margaret's, Westminster, and at St. Alban's Abbey.

A Queen Victoria Memorial fund has been instituted by the council of the Church Army as a memorial of the sympathy shown by the late Queen with its work. It is intended to raise £6,000, to be devoted to such purposes as the provision and equipment of a home for inebriate women; the endowment of a Victorian evangelist and mission nurse for work in the poorest parishes; and the provision of a home of rest for mission workers.

Sunday-school Institute.—The annual report of the Church of England Sunday-school Institute, presented May 8, referred to a diminished attendance on Sunday-schools, which was attributed to a slackening fervor in church work and a growing interest in pleasure. The returns for 1899 had shown a net decrease of 7,000 scholars, though the number in the infant classes had increased by 10,000. The past year's returns showed decreases of nearly 10,000 infants and 1,027 boys, and an increase of 3,727 girls. The number of members of Bible classes had fallen from 470,000 to 454,000, and the number of teachers was smaller than a year previous. Training lessons or lectures had been given under the direction of the institute all over the country to thousands of teachers, of whom 519 entered for examination, and 404 obtained prizes or certificates. There were now in union with the institute 36 associations in London, 339 in other parts of the kingdom, and 20 in India and the colonies. The year's income had been £9,171 from sales and £1,530 from other sources.

The committee declared that no other organized church work could show such results as had been achieved by the Sunday-school in the last century. The Bishop of Exeter said he was glad the Bible stood first as the foundation of all the institute's teaching. It was right to teach the Prayer-Book and Church history, but it was absolutely essential that nothing should be put before the Bible.

Liberation Society.—The triennial Conference of the Society for the Liberation of Religion from the Patronage and Control of the State was held in London, April 30, Mr. J. Carvell Williams presiding. The report reviewed the public discussions of the past three years as related to the cause which the society was seeking to promote and the aspects of legislation that bore upon it. It claimed that, in spite of the most unfavorable conditions, the strength of the liberation party in Parliament had not been weakened by the elections of 1900. Of the 30 Welsh members of Parliament, all but 4 were pledged to support disestablishment. In Scotland, however, a majority of members were now opposed to disestablish-

ment, instead of supporting it. The demand for church reform and self-government was touched upon, and it was asserted as a significant fact that a large body of Churchmen were now at one with the society in desiring the liberation of religion from state control; but it was also intimated that these persons had yet to learn that such freedom could exist with the retention of state support. The income of the society for the past year had been £4,321, and the expenditure £4,159. The chairman of the meeting in his address, referring to a suggestion made by the Rev. Dr. Joseph Parker at the meeting of the Congregational Union that the Liberation Society should cooperate with the Free Church councils, said that they had offered to send deputations to meetings convened by those bodies; but while some of these councils regarded it as their duty to promote Free Church principles by openly advocating them, there were other councils which held that their action should be of a strictly religious character; and they regarded the promotion of disestablishment as political or semipolitical. Then some of the members of those councils belonged to churches which had not yet formed a pronounced opinion in favor of disestablishment, and they were unwilling to be placed in a false position by any combined action. Resolutions were passed opposing a Roman Catholic university for Ireland, to be created and endowed by the state; protesting against "a professedly national system of education which leaves a large part of the nation without any local control over the schools which it is called upon to support." Another resolution declared that "the conference gladly recognizes the desire for greater freedom now everywhere prevalent in the English Episcopal Church; together with an increasing conviction on the part of the members that as a spiritual institution it should be able to adapt itself to existing religious requirements. But so long as the Church has rights and privileges conferred upon it by the state, and is in possession of large national endowments, the conference feels bound to oppose all attempts to diminish the control of Parliament over Church affairs, or to alter its character as a national institution. It regards with great satisfaction the acknowledgment by a growing number of Episcopalians that their Church will not be entitled to enjoy the right of self-government possessed by nonconformist churches until it ceases to be established and endowed by the state." The meeting further protested against the "tithe rent-charge" scheme, relieving the clergy from payment of half the rates on tithes, and advised that the relief of clerical distress, if granted from national sources, should come from certain available funds, but expressed the opinion "that the adequate maintenance of the Church's ministers will be best secured by reliance upon the free-will offerings of those to whom they minister—now withheld because of the existence of large state endowments for ecclesiastical purposes." The proceedings at the annual meeting of the society included a number of addresses on subjects connected with its purposes.

At the autumnal meeting of the council of this society, in October, a resolution was passed expressing the opinion that "the time has arrived when new and more aggressive efforts should be made to produce a general conviction that only by means of disestablishment will the Church be enabled to correct admitted evils and the state be freed from obligations which it is now admitted to be unfitted to discharge." Another resolution condemned the establishment by law of the

Churches of England and Scotland as involving a violation of religious equality, depriving those Churches of the right of self-government, imposing on Parliament duties which it is incompetent to discharge, and as being hurtful to the religious and political interests of the nation.

The English Church Union.—The forty-second annual meeting of the English Church Union was held in London in June, Lord Halifax presiding. In his address the president referred to the extent to which progress in the Church during the past sixty years had been due to the rank and file rather than to the rulers of the Church. This would continue, and the extremists of to-day would be found to be the moderates of to-morrow. While the Church of England had not and could not forbid reservation and incense, the bishops ought to be obeyed if they made regulations as to the conditions under which the sacraments should be reserved. It was of no use to attempt church reform until the condition of lay franchise was fixed at communion at least twice a year. The speaker claimed that the period of shock and disintegration was past and the period of unification had come. Everywhere a desire appeared to come together and understand one another better. The anniversary sermon was preached by Dr. Sanday. The annual report represented that the financial position of the society had suffered by reason of the various public appeals of other kinds. The amount received in subscriptions had been £504 less in 1900 than in 1899. In 1893, when the membership was some thousands less than it was now, the subscriptions amounted to £101 more than in the year under review. The appeals for aid for the Defense fund brought in £2,282 between January, 1900, and April, 1901, and a sum of £800 was still needed for this purpose.

At a previous meeting of the union, held in March, Lord Halifax, being prevented by illness from attending, sent a letter, in which he drew attention to the importance of the distinction between the idea of the collective episcopate and, *a fortiori*, of any member of the episcopate, as an independent teacher above the Church, and the idea of the episcopate as an integral part of the body. The episcopate, he urged, could "only lawfully impose on the Church her own belief, or upon the individual the belief of the body of which he is a member." All the addresses at this meeting urged the necessity of diocesan synods to form the intermediate link between the parish synod and the convocation.

The Church Association.—At the autumnal meeting of the Church Association, held in Birmingham, Nov. 9, 1900, Mr. Andrew Lamb read a paper on The Urgent Need of Fresh Legislation to amend the Procedure of the Ecclesiastical Courts in the Matter of Ritual, in which he held that the present enactments were not efficacious. In the discussion which followed, suggestions were made that recourse should be had to lay tribunals under the act of Elizabeth, or to action for breach of civil contract. At a public meeting held in the evening it was resolved, "that, whereas the bishops have done nothing to enforce the laws of the Church of England as laid down by her Majesty's judges, but have fostered re-introduction of the mass and of the confessional by ordaining, licensing, inducting, and preferring clergymen bent on promoting the reunion of Christendom by adopting the usages of the most corrupt portion of the unreformed churches, it has now become the urgent duty of the electorate to safeguard the nation from the great social evils of priestly dominion."

At the spring conference of the Church Association and National Protestant League, held in Liverpool, May 16, Mr. Andrew S. Lamb, presiding, spoke in praise of the reformation settlement, and dwelt upon the importance of retaining the declaration against the mass. The Convocations bill was criticised as contemplating a formulated self-government, which would lead to disestablishment. Resolutions were passed at the public meeting condemning the "intrigues of Romanizing clergy, which endangered the civil, social, and religious liberties of the British nation"; commending the efforts of the Church Association to maintain the Protestant religion established by law; and protesting against the attempt of the Roman Catholics "to tamper with" the statutory declaration made by the Sovereign as being dangerous to the Protestant succession to the throne; and requesting the Protestant electors of the country to urge their representatives in Parliament to oppose strenuously any legislation which would interfere with the bill of rights as being mischievous and unconstitutional and fraught with great danger.

The abandonment of the bill amending the royal declaration was announced by Mr. Balfour in the House of Commons on Aug. 8.

At the annual meeting of the Ladies' League for the Defense of the Reformed Faith in the Church of England, Lord Llangattock presiding, a report was made that the membership had doubled, the present number of members being 4,443, in 29 branches. A sisters' home had been opened in Chelsea, and a large number of ladies had come to it. The words "and promotion" were ordered inserted after "defense" in the name of the society, so that its name will hereafter read "The Ladies' League for the Defense and Promotion of the Reformed Faith in the Church of England." The meeting pledged itself by resolution to support pure scriptural religion and worship, and to cultivate an earnest spiritual life.

Convocation of Canterbury.—At the meeting of the Convocation of Canterbury, Dec. 11, 1900, the Dean of Lincoln, preaching in Latin, referred to the terms of the writ which still summoned Convocation to consider not only Church matters proper, but the "welfare of the public good and the defense of the kingdom." Convocation no longer met to vote taxes, but to deal with the larger interests with which the Church should concern itself. It should be as a guide to the nation, inculcating patriotism and giving it a high ideal. On the subject of recent controversies in the Church of England, the speaker pleaded for a good feeling and temper on all sides, and for some constitutional means by which the Church as a whole might consult together and express its wishes. The great difficulty at the present moment was that the Church had got out of touch with the laity. Proper representation in the Church assembly of both clergy and laity was necessary to enable Parliament to know what the Church as a whole really wished, and also to restore harmony within the Church itself. Archdeacon Lightfoot was reelected prolocutor of the lower house.

The Convocation met for the first time in 1901, Feb. 15. The archbishop spoke in the upper house of his reception during the week at Lambeth, of a deputation on the bill for the reform of Convocation and the constitution of houses of laymen in connection therewith, and suggested, in view of what had taken place then, that the consideration of the bill in that house might be postponed. Perhaps, in the meantime, it might be possible to ascertain the views of the Government on the

matter. Addressing the House of Laymen on the same day, the archbishop, expressing the trust that before long the houses of laymen in both provinces might have legal recognition, said that it would be very important that the House of Laymen should be considered by the nation at large as really representing the laity, and consequently they must take care that whenever they proposed anything of that kind the franchise for the election of members of the House of Laymen should be wide enough to satisfy the whole of the laity as a body. In the lower house a resolution was passed, in view of the strong feeling known to exist in many quarters that there should be a representation of the laity duly authorized to coöperate with the convocations of the clergy, requesting the archbishop to direct the appointment of a committee of the lower house "to inquire into and report upon the methods of electing representatives of the laity and the nature of the authority assigned to them in other branches of the Anglican communion and all churches in communion with it." It was also made a part of the duty of the committee to inquire into the definition of "a lay member of the Church," adopted in various branches of the Anglican communion, both for purposes of voting and as a qualification for acting as a representative. A resolution adopted in the House of Laymen approved of some amendment of the constitution of the convocations and of joint sittings, and of consultative houses of laymen, but expressed the opinion that action should at present be confined to the former subject, and that a joint meeting of the houses of laymen of both provinces should be arranged for "to consider how and on what basis the representation of the laity might best be carried into effect. The upper house, by resolution, declared it expedient that diocesan organization, wherever practicable, should be established with a view to "providing for some help and instruction for deacons in preparation for the priesthood and the promotion of study and the maintenance of a high standard of life among those who have been ordained." A message was communicated to the houses from the episcopal administrator of the Old Catholic Church in Austria, expressing sympathy over the death of the Queen, and prayer for blessings upon the reign of King Edward VII. Another message, from the Patriarch of Constantinople, announced the election of Photius, Archbishop of Nazareth, to be Pope and Patriarch of Alexandria.

At the meeting of the Convocation, May 8, the bill for reform of Convocation as offered in Parliament by the Bishop of Rochester was presented by him and approved in the upper and lower houses. The bishop explained that he had been allowed in the preceding year to bring in a bill which provided for a possibility of reforming the existing convocations, the creation of a representative lay element, and the uniting to a certain extent of the two existing convocations. Since then it had been thought desirable to proceed with the first and third of these objects, postponing the second. The bill in its present form was entitled "The Convocations of the Clergy Bill," and confined itself to the two points mentioned. They wished Parliament to declare that the convocations had power, with the King's assent, to amend by canon the constitution of the Convocation and the representation of the clergy, and also to provide for the joint sittings of the two convocations. The speaker desired to reiterate the fact that it was not their will, but only under pressure of circumstances, that the committee brought forward their proposal for the re-

form of the clerical body without associating with it the proposals for the constitution of a representative lay house. They commended the bill to both houses as a necessary step to the end they had in view—of giving the Church more power in exerting the energies of its life in a free and wholesome manner. The archbishop thought the bill might be carried through Parliament without very great difficulty. It was comparatively a very small measure. It did not propose to add to the power of Convocation in the slightest degree. It did not give them the right of doing anything which they had not already. It enabled the clergy to enter more thoroughly into the action of Convocation by being more thoroughly represented. The constitution of the lower house of Convocation had never been handled by any act of Parliament, and a declaratory act, therefore, was the proper method of enabling the clergy to express their opinion upon their own proper business more effectually than they could now. The resolutions provisionally passed at the previous session of Convocation with reference to the supply and training of candidates for holy orders were taken up and passed in the upper house. During the discussion of them, the Bishop of London mentioned five hindrances which he thought stood in the way of men's seeking ordination. They were non-realization of the objectiveness of the call, the unsettlement of men's minds, the attractions of the Indian civil service, the poverty of the clergy, and the lack of encouragement given at home and at school to men to come forward for ordination. In the lower house a committee was appointed to consider the causes of clerical poverty among both the beneficed and the unbeneficed clergy, together with the objects of existing clerical charities and the principles on which the managers act in making grants; and to inquire into and report upon the methods adopted by existing institutions and associations for increasing permanently the incomes of poor benefices. Reports of the Committee on Ecclesiastical Courts, embodying resolutions of the joint meeting of the two convocations in July, 1900, and of the Committee on "Ecclesiastical Dilapidations," advising further consideration of the subject, were adopted. In the House of Laymen resolutions were passed condemning exercise of pressure upon young people to make auricular confession; directing inquiry into the religious privileges of members of the Church of England in workhouses, lunatic asylums, and houses of industry; and approving the use of the Revised Version of the Bible at the lecterns in public services when it is desired and is not open to well-founded objection—the term "use" being understood to mean "the occasional employment of lessons from the Revised Version when for the interest of more accurate translation it is desirable."

At the meeting of the Convocation, July 2, the Bishop of Rochester presented the report of the joint Committee on Ecclesiastical Courts. It urged the strengthening of the diocesan and provincial courts, that they might dispose, as courts of first instance, and in such a way that the decision should not be merely the individual decision of a single judge, bishop, or archbishop, but should have a more representative character, and so be more likely to commend itself to the judgment of the litigants on either side. Resolutions were agreed to by the upper house to the effect "that it is desirable (a) to strengthen the constitution of the diocesan and provincial courts; (b) that complaints concerning ritual or doctrine should, if the promotion of the suit be approved by the bishop, be tried by the diocesan court in

the first instance; (c) that if an appeal be carried to the provincial court, it should there be heard before a court constituted as hereinafter proposed." The resolutions further embodied recommendations concerning the constitution of the diocesan courts and the provincial Court of Appeal, with a provision that in all cases arising in the diocese of the archbishop the archbishop of the other province shall take his place in the Court of Appeal. These resolutions were concurred in by the lower house, except the one concerning the constitution of the provincial Court of Appeal, which the archbishop was requested to refer to the joint committee. Resolutions were adopted contemplating a national system of elementary education, working according to principles which were set forth, to take the place of the present system, to be administered by authorities representing and acting over large areas, embracing one or more administrative centers. In the lower house the proceedings at the confirmation of the election of bishops were considered, especially with reference to the hearing of objections. The resolution adopted by the house advised: "1. That no objection should be received that has not been communicated to the vicar-general in writing at least seven days beforehand, and allowed by him to be presented as an objection in due form of law. 2. That a copy of the schedule of objection should be sent at the same time to the bishop-elect and to the dean of the chapter by whom he was elected. 3. That the schedule of objection should be read aloud in court by an officer of the court, who should then similarly read such reply, if any, as the bishop-elect or the dean and chapter shall have sent in writing to the vicar-general. 4. That the vicar-general shall, at his discretion, use the power of prerogation to another place not consecrated." A resolution was passed expressing the earnest hope of the house that the Government would see its way to include the financial relief of voluntary schools as an integral feature in its forthcoming measure of educational reform. The resolutions of the joint committee on the accession service were agreed to in both houses. The House of Laymen took up the consideration of the report of the joint committee of the late houses of laymen of the two provinces on the representation of the laity, which had been sent down to the house by the archbishop in February preceding. No conclusion was reached.

The two houses were invited to assemble in form of a committee (July 3 and 4) to meet the Convocation coming in the same form from the northern province for the discussion of the questions of the future of voluntary schools, the course to be taken by the convocations in regard to the convocations of the clergy bill, and ecclesiastical dilapidations.

Convocation of York.—At the meeting of the Convocation of York, Dec. 11, 1900, Chancellor Elpin was unanimously elected prolocutor of the lower house for the fourth time. Addressing the house, he said that he would specially recommend to its consideration the question of the lay franchise, because it was quite certain that if any greater measure of self-government was to be accorded to the Church, it could be obtained only on the representative system.

At the meeting of the Convocation, Feb. 21 and 22, the lower house, in the discussion of a motion approving the Convocation bill then before Parliament, adopted an amendment approving of the participation of the laity in Church affairs, and requesting the president to commend the working out of the problem to the House of Laymen.

At the session of May 8 and 9, a resolution of Feb. 6, 1898, declaring that the present procedure at the confirmation of the election of bishops needs to be amended, and requesting the archbishops to consult upon the subject, was reaffirmed by the upper house. The draft bill entitled *Convocations of Clergy Bill* was approved. The House of Laymen adopted a resolution, concerning the report of the joint committee of the houses of Canterbury and York on lay representation, concerning the constitution of the primary electoral divisions in any scheme for lay representation, to which was added a clause defining the qualifications of electors. A resolution was passed in favor of the maintenance of the existing Book of Common Prayer, "subject, however, to such alterations and modifications as from time to time may be approved by the House of Laymen and sanctioned by Parliament." The house expressed approval of the recommendation of the lower house for a retranslation of the Athanasian Creed, but deferred expressing any opinion as to the compulsory or optional use of the creed.

The House of Convocation met July 2 to consider the form of the revised accession service. The service as submitted was unanimously agreed to by the lower house.

Convocations of Clergy Bill.—The preamble to the convocations of clergy bill relates that the convocations are desirous of amending their constitution and their representative system, and of obtaining power to sit as one body, but that doubts have arisen as to their power to make these changes without the authority of Parliament. The first clause enacts that, notwithstanding any doubts arising by reason of 25 Henry VIII, chapter xix, the convocations may have powers with the royal assent and license to make, promulgate, and execute the necessary canons for the above purposes. Clause 2 directs that if the bishops and clergy of the convocations lay before the King in Council a scheme for the union and joint sittings of the two houses, the Council may issue an order confirming the scheme, and this order "shall have effect as if it were enacted in this act." Otherwise the bill does not add to the powers of the Convocation.

Qualifications of Laymen.—The committee of Convocation that was appointed to inquire as to the methods of self-government at work in the various Anglican churches outside of England and Wales, and especially with respect to their franchise and to matters of doctrine and of ritual in which doctrine is involved, have published a report embracing particulars concerning all the churches referred to in the resolution, and information in regard to more than one hundred sees. In a general review of the position of laymen in the parish and in the synods as illustrated in the tables appended to the report, it is shown that if a man is a communicant he is at once admitted to the congregational franchise, and in certain dioceses no others are admitted. If not a communicant he makes a declaration of church membership; but no church accepts the declaration unless it is supported by guarantees which vary in different places. Mere payments for secular purposes are nowhere accepted as a qualification for ecclesiastical privileges. Women are admitted to the franchise in more than half of the American dioceses and in a third of the colonial; also in the Established and the Episcopal Churches of Scotland. Parochial administration, the committee report, contemplates normally vestries or parish councils restricted to matters of finance, congregational registers, etc.; but never includes power

to regulate worship, or goes behind a "presentment" in case of alleged irregularities in the conduct of divine service. The election to diocesan synods is made directly or mediately from the congregations; election to provincial or general synods by the lay members of diocesan synods. The proportion of lay to clerical members varies from that of the Episcopal Church in Ireland, where the laity are two to one, to that of the Established Church of Scotland, where they are barely as many as the presbyters. Considerable variation in the same respect exists as well in the colonies. But what is possible in Scotland, Ireland, the colonies, and the United States, is, the report sets forth, not necessarily possible in England, where every Englishman may in some sense claim that the national Church is his own church, even if he is, as a matter of fact, for the most part absent from its worship.

Deputation to the Archbishops.—A large deputation waited upon the Archbishops of Canterbury and York, Feb. 13, on behalf of the draft of the bill recommended by the two convocations for their reform and the organization of houses of laymen in connection with them. The Bishop of Rochester, who introduced the deputation, explained that Sir Richard Jebb (not being able to be present) had written a letter in favor of an autonomy which should not be inconsistent with establishment; speaking then of the objects which the bill was intended to promote, he said that the existing machinery of the Church was virtually that of mediæval and preformed times, and took no account of modern conditions—among those conditions being a large body of educated clergy in close touch with life in all classes of the population. Such men were most sensitive to their responsibilities. The present organization did not take account of a highly trained body of laity. Then there was the enormous alteration in Parliament during the past three centuries. Parliament itself recognized its unsuitableness, and its interference was most undesirable. In the present proposal no attitude was assumed antagonistic to the rights of Parliament. But in the life of the legislature the principle of devolution was regarded as an indispensable element. They were only asking for a certain measure of devolution. There were no disguise, no ephemeral motives, no party spirit in the minds of the promoters of the bill. It sought to proceed on the line of concentration, viz., how to reform convocation and to associate laymen, and to obtain parliamentary sanction for the scheme. Sir John Kennaway represented that the movement pleaded as its justification the amazing growth of the Church in the nineteenth century. The problems to be confronted were to secure that representative bodies of the clergy and laity should have the authority of a living voice and some power of self-government. While it was hopeless to ask Parliament to consider a scheme of self-government, it was purposed to ask for further power from the houses; and Parliament again would be able to approve or disapprove. In every step Parliament would have power to intervene. There was already the precedent of the Established Church of Scotland, in which was embodied all the principle for which they contended. Bishop Barry spoke from his own actual experience in a colonial bishopric of the working in the colonies of full synodical government, with clergy and laity cooperating. Chancellor P. V. Smith, dealing with the form of the bill, said that in seeking autonomy, its framers had proceeded by adopting existing, rather than creating new conditions. They did not ask that powers in excess of the

existing powers of convocation should be conferred on the new bodies. But when satisfactory bodies had been created, Parliament should be approached and asked for definite powers. The Archbishop of Canterbury, replying to the representations of these speakers, said he had no doubt that it would add to the force and efficiency of the Church if it was intrusted in some effective manner with more ample power of governing itself. He could very heartily support the proposition to empower the convocations to reform themselves, and likewise the general principle that a house of laymen ought to be formed. But the formation for the purpose of perfecting real legislation of the two convocations into a single synod—they still reserving their separate functions for ordinary convocation work—was of even more importance than the formation of a house of laymen. The weak point was the proposed method of forming the house of laymen. The speaker doubted whether Parliament would quite consent to pass a bill in which the formation of a house of laymen was left so entirely in clerical hands, but thought it almost certain that they would insert some provisions definitely indicating what they considered to be a proper definition of a lay constituent of the Church of England. For himself, he would prefer a house of laymen which was not simply the offspring of a body of clergy. "I feel that their independence would be a real gain to the Church, and that the sense of independence would depend upon their being formed not upon lines laid down by the bishops and clergy, but upon lines which more exactly represent their own minds. I have stated the two things which I care about most: First, the formation of a single synod to bind the whole Church into one, leaving to each of the separate convocations the business of its own province; then the houses of laymen, without which we shall never have self-government. But we must be careful how we press anything upon Parliament which will in any way damage in the eyes of the people of England the independence of those houses of laymen when formed." The Archbishop of York agreed with the Archbishop of Canterbury that a house of laymen constituted by the convocations would not be likely to command the confidence of the people generally. "We should deal with the laity," he continued, "not as persons who are taking a particular interest in Church matters or occupy a certain position, but as baptismal members of the body of Christ. We need to keep continually before our minds that we are not giving them a privilege, but calling them to the proper exercise of a right as members of the Church. . . . But it is necessary to ask this question: Granted that you have reformed convocation and your house of laymen, what is the law they are going to administer? What is its basis? It is not the basis of what is called Catholic tradition or evangelical tradition. It must be the law of the Church of England itself as it was reformed three centuries ago. Unless we make that perfectly clear it will be a long time before we obtain such a measure. But . . . if we are large-hearted enough and courageous and not too anxious to keep this body of laymen within a Church limit; if we are not too timid about giving the franchise to those who may seem to stand aloof from the Church, but are still to be reckoned members of the Church; if we remember that the Church is a national Church, and that the nation as a nation has something to say about it, and will not be dictated to by ecclesiastics, we may entertain some hopes of the success of our legitimate claims upon the national Parliament."

The Ritualistic Crisis.—The bishops of the Church of England, Jan. 20, issued a letter to the clergy emphasizing the great and urgent need of united action in order to improve the "unexampled opportunities opening before the whole of Christendom with the dawn of the new century." In view of these opportunities, any causes, it was said, would be the more keenly felt which would tend to lessen the Church's forces to grapple with them.

"Circumstances have given special prominence to certain points in the present condition of our Church which cause very grave anxiety in those to whom by God's appointment the government of it is intrusted. We inherit a form of government which has come down to us from apostolic times. The duty of guiding the Church is intrusted to the bishops, and we can not escape the responsibility. All antiquity is united in teaching that this burden is laid upon them, and if any doctrine can be called Catholic it is that the bishops have a right to call on all the clergy to follow the godly admonitions and submit themselves to the godly judgments of those who are set over them in the Lord. Those who refuse such obedience are practically setting up a form of government which is distinctly not episcopal, and they can not claim that they are guided by Catholic principles or are treading in Catholic paths. In matters of ritual, the regulation of which is expressly committed to the bishop by the Book of Common Prayer, the refusal of a clergyman to obey the solemn admonition of his bishop is a grave offense—still more grave when the refusal sets aside the judgment of the bishops as a body. We therefore put before you that we as a body uphold the duty of submitting to the decisions of the archbishops given on questions referred to them in accordance with the direction in the Book of Common Prayer. We acknowledge thankfully the very general recognition of this duty which has been conscientiously given by the clergy at large. But this has unfortunately not been universal. Brethren, you are well aware of the mischief that must necessarily follow on disregard of the essential principle of all true government. The great work which our Lord has committed to the whole Church, and especially to our own branch of it, preaching the Gospel to the whole world, demands all our energy, and is seriously imperiled if we can not give to it our united force. We entreat you to use all your influence to persuade those—we are thankful to know that they are few in number—who are regardless of our authority, to return to that obedience which alone can expect the blessing of God.

"We recognize the pressing need of various measures of reform to enable the Church to do her work more efficiently, but all real progress in that direction is seriously hindered so long as, even in a few instances, submission to authority is refused. Most of all will this hinder the fulfillment of any hope or desire of obtaining for the Church such a real measure of self-government as would enable us to supply what may be lacking in our system, or to remove any stumbling-blocks out of the way."

Round Table Conference.—The report of the proceedings of the Round Table Conference on ritual, held at the palace of the Bishop of London in October, 1900 (see *Annual Cyclopædia* for 1900, page 20), was officially published in February. The book has an introduction by the late Bishop of London (Dr. Creighton), who said that his desire in promoting the conference was "to bring together various phases of theological opinion, as represented by theologians whose train-

ing enabled them to talk a common language." Preliminary to the opening of the conference, written statements of opinion on its subject were invited by the bishop from each of its fifteen members. Among these expressions was one by Dr. Sanday suggesting an appeal to antiquity as a common ground, and defining antiquity as what was prior to A. D. 451. The Doctrine of the Holy Communion was the subject set for first consideration, after which it was intended to discuss the question of Its Expression in Ritual. The sessions were, however, mainly taken up with the former aspect of the general topic, so that the chairman, the Rev. Dr. Wace, at the close of the proceedings expressed his regret that it "had not been found possible to discuss in principle some important questions of ritual, such as adoration and reservation, and the position of the minister, whether eastward or otherwise." A favorable vote was given provisionally at the beginning of the conference to a suggestion by Canon Gore, for the adoption, as expressing its unanimous conviction, of a statement of Hooker (*Ecclesiastical Polity*, Book V, chap. lxvii, sec. 7), with the supplementary statement, also from Hooker, that "the grace which we have by the holy eucharist doth not begin, but continues life," but it failed of final adoption. A thesis by the Rev. N. Dimock was discussed, setting forth that "in use the consecrated elements are effectual signs for the purpose of the ordinance, seals of donation, and so truly exhibitive proxies of the things signified, whose names they bear in the delivery, which are thus verily and indeed taken and received by the faithful, being really present for the manducation of faith—*cui præsentia sunt omnia præterita*." Canon Newbold proposed the statement that "while the bread and wine retain their natural substance, an addition is made to them, by virtue of which the body and blood of Christ are present really and truly." Three statements were finally adopted. The first, by Prof. Moule, affirmed in its essential points that our Lord is present at our communions, mysteriously, yet absolutely as an object of faith, not on, but at the table; that we should worship him thus present, and revere the bread and the wine "as his equivalent signs of his once sacrificed flesh and blood"; but that Holy Scripture does not give us reason to believe "any especial attachment of his presence to the sacred signs, albeit called his body and his blood by reason of their equivalence as divine tokens." The second statement adopted was by Lord Halifax, alleging that the bread and wine by virtue of our Lord's institution become sacramentally the body and blood of Christ, while in the natural order they remain what they were before; that the holy eucharist is the memorial of the Lord's death, Christ being the real Consecrator, giving his body and blood, "mystically represented and exhibited under the aspect of death"; the presence being not corporeal, but sacramental only; spiritual, after the manner of a spirit. The third statement, offered by Canon Gore, is that "the bread which is of the earth receiving the invocation of God is no longer common bread, but eucharist, made up of two realities, an earthly and a heavenly," there being sacramental identification of Jesus Christ with the bread and wine.

The Bishop of London was requested by the meeting of his diocesan conference in June to call a second Round Table Conference to be held in the autumn of 1901.

Reunion.—A meeting held in the Council Chamber in Salisbury, in the cause of Christian union, Feb. 12, was the result of meetings of rep-

representatives of the different religious bodies in the city held at the beginning of the year, at which a basis for cooperation between nonconformists and Church people was laid in a resolution "that it is the duty of Christians who may be separated by ecclesiastical division to unite when circumstances permit (a) to promote spiritual edification and a healthier and more friendly relationship; and (b) for the furtherance of practical cooperation in matters which affect the moral well-being of the civil community in which they live." The mayor presided, and the addresses were made by ministers of the Established, Free Methodist, Congregational, and Baptist Churches. The Bishop of Salisbury, in closing the meeting, said that while he was not there at present with any definite plan for reunion, such movements ought to tend in that direction ultimately. He believed that the whole counsel of God in this matter would not be revealed to any portion of the people, however large, while it was separated in spirit from the rest; but when the different parts were brought into touch and moral and spiritual harmony by such meetings as this and by similar action elsewhere, they might expect an outpouring of the spirit of wisdom and understanding, as well as of holiness and joy, upon the whole Church, which would lead it to a reunion.

The Church Congress.—The Church Congress met at Brighton, Oct. 1 to 4. The opening sermon by Bishop Welldon, of Calcutta, read, in his absence on account of illness, by the Vicar of Brighton, embodied an appeal to the Church to face the question of reconstruction of religious belief. The Bishop of London preached at a second place of meeting in favor of cultivating unity rather than struggling after an impossible uniformity. The opening address to the congress was by the Bishop of Chichester, who likewise put forth unity rather than uniformity as the object to be sought. The subjects discussed were: Church Autonomy, how exercised by Established and Non-Established Churches, and how it should be exercised in the Church of England, Regard being had to the Restoration of the Church's Synods and to the Convocation Bill of 1900; Authority in the Church of England; The Reformation Settlement—the Appeal to Antiquity as a Principle of the English Reformation of Present-Day Application—the Standard of Catholicity with Reference to Doctrine and Ceremonial; The Empire with Reference to Church Work—the Victorian Era at Home, in India, and the Colonies, and the Possibilities and Dangers of the New Century. Other subjects related to the Church and the schools; temperance and temperance legislation; the Church in relation to journalism, literature, the drama, and art; covetousness as exhibited in commerce, employment, and the excitement of chance; the baptismal vow; social reform with regard to the housing of the poor; Hooliganism; Prayer-Book enrichment and supplementary services; the work of the Church in the army; the cause of and remedy for abstention from divine service; the virtues of faith, hope, and love; assessment and taxation of clerical incomes; difficulties of country churches contrasted with those in towns; bells, belfries, and bell-ringers; and music as an aid to devotion in the services of the Church. The concluding service of the congress was held in Chichester Cathedral, where the Bishop of Exeter preached. For twenty years the sessions of the congress have been followed by a Christian Conference at which men of all denominations have been given opportunity to compare their views.

At the Christian Conference following the present congress, the subjects of religious indifference and moral apathy were discussed.

The Australian Synod.—The Provincial Synod, meeting in Sydney, New South Wales, in August, adopted a resolution hailing with devout thankfulness the announcement of the union of the Presbyterian Churches in the commonwealth, and the contemplated union of the Methodist Churches, as indications of an approach to Christian unity. It also, declaring itself "profoundly conscious of the evils of disunion, and believing that the unity of the Church is agreeable to the will of God," urgently prayed the Australian bench of bishops to consider the whole question of Christian unity, and to approach the various Christian communions with an invitation to their leaders for united prayer and deliberation on the subject. The synod also considered a number of social questions, and passed resolutions expressing its mind on various questions, such as those of lotteries, gambling, street solicitation, the suppression of immorality, and Sunday rest for the police.

ARCHEOLOGY. American.—The American Museum of Natural History has undertaken the exploration, under the direction of Prof. Frederick W. Putnam, of former Indian sites about New York city. One of the objects of the exploration is to prepare a map showing the various towns, camp sites, and burial places, and, so far as possible, to trace out the historical Indian villages. Another purpose is to bring together the domestic utensils, weapons, implements, and ornaments of the different tribes who lived in the region, and to make models of rock shelters and earthworks, so as to present as full a history as possible of the old Indian life in New York. Old Indian sites on Staten Island, Long Island, and Pelham Park, near Westchester, and at Croton have been explored, and considerable material has been secured from shell-heaps, village sites, and burial places. Pottery vessels, implements of stone and bone, pipes, and other pieces of native work, arrow points, ornaments of brass obtained during the early contact with white settlers, a number of Indian skeletons, and the bones of animals, including those of the Indian dog, have been secured. Numerous village sites, shell-heaps, rock shelters, and earth embankments have been described, photographed, and located on a map.

Other work described in the report of this institution for 1900 includes the continued exploration by Mr. Marshall H. Saville of the ruins of Mitla, Yucatan, and its vicinity, with successful scientific results and the discovery of many important facts relating to the architecture of the buildings. Several cruciform structures were found, the walls of which were in several instances as elaborately ornamented with mosaic work as those of the great palaces.

In his explorations of ancient tombs in the vicinity of Lake Titicaca, Mr. Adolphe Baudelier found many trephined skulls, together with specimens of pottery and other objects from tombs and village sites. By the large additions thus obtained, the museum's collection, showing different forms of trephining practised by the prehistoric Indians of Peru and Bolivia, is made one of great importance.

In continuance of his explorations of the glacial gravel and other deposits of the Delaware Valley, N. J., in behalf of the American Museum of Natural History and under the patronage of Dr. F. G. Hyde, Mr. Ernest Volk has found a number of specimens of the handiwork of man under such conditions as show that they are of

great antiquity, and that they were contemporaneous with the formation of certain of these deposits. The evidence thus secured during many years of research has made it impossible, according to the report of the museum, "for any one familiar with the facts to doubt that man was living at the time of the deposit of these formations in the valley." Mr. Volk has secured remains of several human skeletons which were found at such great depths and under such conditions as to prove their very considerable antiquity. He also obtained a large number of objects relating to the early Indian occupation of the valley.

A village site on Long Island, discovered by Mr. Harrington and thoroughly examined, yielded specimens of pottery, stone implements, and other objects, and several skeletons.

During a summer excursion in 1900 the curator of the museum, Prof. F. W. Putnam, visited New Mexico in connection with the work in anthropological measurements, etc., of Mr. E. T. P. Hyde, and for the purpose of making a comparative survey of the ruins on the mesas and in the cañons in reference to their contemporaneity and their greater or less antiquity.

Archeological Institute of America.—The annual report of the Archeological Institute of America, published in February, gave the number of members as 900, the largest number in the history of the society, and the year's income as \$8,002. A balance remained in the treasury of \$1,874, the principal part of which was pledged to publishing the results of the Argive excavations. Nineteen institutions had promised support to the American school in Palestine, for the opening of which sufficient means had now been secured; and the director, Prof. Torrey, was at Constantinople waiting for authority to go on with it. The school at Athens had been attended by 15 students. The Charles Eliot Norton fellowship, founded at Harvard University during the year for a scholar in some special subject at the school in Athens, yielded \$600 a year. The school at Rome had been attended by 24 students, 9 of them women. A board of 7 trustees for the care of its finances had been constituted. It had suffered a shrinkage in income, and was straitened.

The Saginaw Valley, Michigan.—Mr. Harlan I. Smith is publishing a paper serially in the *American Anthropologist* embodying a summary of the archeology of the Saginaw valley, Michigan. The evidences, he says, on the extensive village sites and in the burial places, mounds, and other remains along the streams, suggest that the conditions of life in prehistoric times were similar to those which existed when the Indians were first met by the whites. His paper aims primarily to summarize all the available data with reference to every source of information; to publish original manuscript and other material not generally accessible; to include all clues and rumors, however vague, which might lead to further knowledge, and to classify all, in order that the summary may serve as a field library for ready reference in acquiring and recording further data on the subject. The author's personal contribution is based on observations and a collection begun in 1883—which was made in explorations that dealt chiefly with surface evidences.

Ruins near Flagstaff, Arizona.—The results of cursory examinations of the ruins near Flagstaff, Arizona, made in 1890, are published by J. Walter Fewkes in the *American Anthropologist*, July-September, 1900, in a preliminary paper, it being the author's intention to resume and con-

tinue his exploration. The three types of Arizonian ruins, denominated caveate rooms, cliff houses, and pueblos, were all found to be well represented. The caveate rooms are burrowed in lava, generally in the top or sides of cinder-cones. The cliff houses, situated in Walnut Cañon, are small but typical. The pueblos occur in well-preserved ruins near Little Walnut river, and are built of lava, sandstone, and limestone blocks. Only a few of the ancient habitations dotting the country about Flagstaff are noted in the author's preliminary account, but some of these are described in full, with details concerning the arrangement and character of the rooms. The caveate rooms are excavated in lava or volcanic breccia, and may be described as caveate rooms with vertical entrances and caveate rooms with lateral entrances. The former are well illustrated by the "old caves" one mile east of Flagstaff; the latter by the "new caves" twelve miles east of the same place, and by caveate rooms one half mile west of Turkey Tanks. The two types are similar, and the former inhabitants were apparently of about the same culture. The fragments of pottery seen about the entrances to these caves are identical with those found near the pueblo ruins in the neighborhood. It is inferred that the cave inhabitants burrowed in the lava as the most practical means of constructing dwellings which the region afforded. Free walls were found in combination with the caves, but they presented special distinctive characteristics. The builders simply used available building material and took advantage of geological conditions. An arrangement in tiers was observed in some of the "new caves" near Turkey Tanks. In some of these caveate rooms a combination of stone walls and excavated chambers was observed, the lateral separation of the rooms having been made by a plastered wall of small boulders brought from the bottom of the adjacent depression. Walls seem also to have formerly existed in front of the entrances to the caves, but they have for the most part fallen. The pueblo ruins near Black Falls, on the Little Colorado river, are as a rule cubical, with rectangular rooms of one or more stories. Curved walls are rare, although in some instances the shape of the ruin follows the curvature of the mesa on which it stands. The structures were built of sandstone and lava, and the two varieties are found in close proximity. The sites of some of these pueblos are unusually high. It is not uncommon to find an entire mesa top covered with rooms or surmounted by a wall perpendicular to the escarpment. The ground-floor rooms had no external entrances, but where there were several chambers side by side they communicated with each other by doorways. The highest walls of the pueblos are as a rule on the north and east sides—an arrangement which secured a sunny exposure. One-story rooms at the base of the mesa, called basal rooms, are found in most of the ruins. They are now covered by rubbish, but were once protected by the overhanging edge of the mesa. They suggest cliff houses, and may be a survival of them. The walls of a building called the citadel are made of blocks of lava and sandstone, covering the top of a truncated elevation, and are arranged about a central court or plaza. In a cemetery near one of the groups of dwellings the graves were oval, commodious cysts made of slabs of stone set on end and covered with other stones. The upright stones were cemented together with adobe. In one of them were the remains of a woman, lying upon her side. Near the body was a decorated food bowl, within which were a smaller bowl, a decorated vase, and

a smaller food bowl. On the arm was an armlet of pectunculus shell. A remnant of a wooden prayer-stick, painted green, lay on the breast. The square ear pendants were of lignite covered with a turquoise mosaic surrounding a central stone. Four pieces of black and white pottery with geometric ornamentation were in the grave. While the author regards the racial and clan kinship of the former occupants of these pueblos as somewhat problematical, he thinks that they were quite likely kin to the Hopi.

The Cliff-Dwellings.—The Colorado Federation of Women's Clubs and the Colorado Cliff-Dwellers' Association, represented by Mrs. Gilbert McClurg, with the sanction of the Government of the United States, have obtained from Ignacio, chief of the Weeminuche Utes, the lease of the tract containing the Mesa Verde cliff-dwellings, for the purpose of setting it aside as a park. These Mesa Verde cliff-dwellings, which were explored by Mrs. McClurg in 1881-'82, after their first discovery and examination a few years before by United States officers, cover an area 20 miles long and 8 miles wide. The houses are usually about 100 feet below the top crags, and sometimes 1,000 feet from the bottom of the cañon, seemingly stuck on the side of the sand-stone wall and overhung by masses of rock. They are built and joined to the rock with remarkable skill, and are reached only by the most difficult paths. They number 400, some being in ruins and some in excellent preservation. One, called the Cliff Palace, contains 350 rooms.

Mounds in South Dakota.—Excavations in a mound in Brown County, South Dakota, brought to light the bones of 9 persons, of some of which only the skulls were found, while of others bones enough were left to show that the persons were very tall. Beside the bones of one child was the skeleton of a dog. Stone pipes found near the bones were different from others that had been recovered from the Indian mounds of the region. They were not made of the red pipe-stone commonly used, but of a very hard material, and instead of having an opening at the side for the stem, had a hole in the bottom. The earth of which the mound was made appears to have been dug up and brought from a distance of 10 or 12 rods.

Ruins in Salt River Valley, Arizona.—Work has been begun in the exploration of the extensive ruins in the Salt River valley, a few miles east of Phoenix, Arizona. They consist of a large pile, about 25 feet high, 100 feet wide, and 200 feet long, surrounded by lesser mounds extending half a mile northward, and toward the river in a southerly direction. The structures appear to have been of adobe, by the weathering of the more exposed parts of which other parts have been protected against decay. Where thus protected, the walls are from 12 to 18 inches in thickness. Some of the smaller mounds have been dug into and skeletons and various implements have been extracted from them; but the principal mound, where work is now begun, has been protected by the Arizona Antiquarian Society, which has sought to prevent haphazard excavation.

British.—The estimates of the age of Stonehenge vary widely. Mr. E. A. Maskelyne fixes its date at from 900 to 1,000 years B. C., while W. M. Flinders Petrie dates it as from 500 to 900 A. D. The earliest definite mention of it is in the thirteenth century, by Henry of Huntington, who speaks of it under the name of "Stonenges" as the second wonder of England. An account by Hecataeus, of the sixth century B. C., of the ceremonies performed by the Hyperboreans of an

island off the coast of Gaul in a circular temple of Apollo, is thought possibly to refer to it, and if so would be favorable to the earlier date. The results of recent researches also tend to confirm this date. Sir Edmund Antrobus, owner of the estate, has been making some excavations in co-operation with certain archeological associations, with a view to strengthening the positions of the stones. During this work a large number of stone-age implements and some "sarsen" and syenite chippings have been found. The discoveries are interpreted as indicating that the monument dates back to the stone age, and that the stones were partly, if not wholly, dressed on the spot. The tools found consist of hammers and axes, and some of them are remarkably well formed. They are the first stone implements that have been found in the immediate vicinity of Stonehenge, although "sarsen" stone chippings and bronze tools had been found in some of the barrows of the district.

Among the articles shown in the annual exhibition of objects recovered during the past season's excavations at Silchester, special mention is made of a large and well-preserved padlock, and an example of the farrier's tool known in France as a "butoir," and corresponding to the old farrier's "butress." There were also parts of cooking utensils, several bucket handles, many carpenter's tools, some ingeniously fashioned candlesticks, and many well-shaped vessels in variously colored wares; numerous specimens of colored wall plaster, and a section of pavement combining the *opus sectile* with the *opus tessellatum*.

In a summary of the work done during 1900 in the investigation of Roman Britain, published in the *Athenæum* of Jan. 5, 1901, Mr. F. Hamfield speaks of three of the sites examined in 1899—Widspool, Melandra, and Ribchester—as having been left almost untouched, while Richborough, Cardiff, and Gelligaer had taken their place. Explorations of Silchester, Caerwent, and Hadrian's wall had gone forward, and the Scottish Society of Antiquaries had completed Camelton and begun Lyne. At Silchester the neighborhood of the north gate had been examined, and more substantial advance had been made in uncovering the whole of the 100 acres which lie within the ancient walls, the total excavation of the site being the chief point aimed at. Among the more remarkable finds in the ruins were tools (including some monstrous padlocks and a shoe-maker's stand) and a wooden ladder in a well. At Caerwent the work had been continued in the southwestern quarter of the Romano-British town, and two inscribed fragments had been turned up. Very little had been added to our knowledge of Romano-British villas, but several sites had been indicated. The fort at Richborough had yielded a fragment of an inscription and a silver ingot, stamped. Roman work had been discovered and examined at Cardiff and at Gelligaer, 14 miles north, and minor finds were mentioned. The work on Hadrian's wall had yielded interesting results. The camp at Lyne, near Peebles, had been partly excavated, and appeared to have been at some time a definite Roman fort.

French.—At the meeting of the French Sociétés Savantes, held at Nancy in April, M. Bletcher, professor at Nancy, presented the results of his studies of the remains of primitive mills, mortars, and pestles found in the region. They date from before the Romans, or even the iron age. The porphyry of which they are made is not found in the country, and must have been brought

in the ordinary way of commercial exchange from a considerable distance.

Scandinavian.—A book on the Kitchen Middens of the Stone Age in Denmark, published in Copenhagen, contains the contributions of seven scholars who have been making studies of these deposits during the past eight years, investigating the subject from the points of view of botany, geology, zoology, as well as of archeology. In these papers the theory is confirmed that the middens are representative of the stone age in all its periods but the latest. They are all near the water-line, and consist chiefly of oyster shells cast there after eating, with remnants of other articles of food. Remains of the dog are found there as the only domestic animal of the people to whom they appertained. Two of them contained human skeletons, sometimes in rude stone coffins. Great numbers of articles in stone and clay taken from them have been de-

An inscription found during the excavations at the Forum in 1900 seemed to identify the ruins under the Church of Santa Maria Liberatrice as those of Santa Maria Antiqua. When the former church was torn down, the ruins of another were found a little behind it, in such a position that while Santa Maria Liberatrice stood outside the Palatine, the newly excavated church, that of Santa Maria Antiqua, is inside it, with its entrances facing the Forum. "As we go through the grand portal to read the new inscription," says Mr. William J. D. Croke in the Catholic Standard and Times, "we observe Christian and pagan coffins—the latter will have been adapted to Christian burial—bones and skulls, broken earthenware of all kinds, a profusion of marble of varied sorts and colors, broken capitals and painted pillars, all on the ground. Still standing are high and noble walls, decorated all over with Christian paintings; the perfect form of a Chris-

TERRA COTTA VASES FOR HOLDING GRAIN, EXHUMED AT VILLA FASANELLA.

posited in the museum. Remains of cooking places have been found, but none of dwellings. Remains of several extinct animals and birds were among the contents of the middens. The papers contain full information concerning the species of trees that flourished during the period of the middens, based on examination of the charcoal.

Roman.—At Bosco Reale, at the foot of Mount Vesuvius, private excavations are conducted by the Deputy di Prisco, owner of the Villa Fasanella, under his own villa and upon an adjoining property. A Roman villa has been discovered, which is adorned with "beautiful and very interesting" frescoes, in a state of preservation described as "superb," and of a style of picture which has not been found before in a Pompeian house. The drawings are of houses of several stories, and views which, barring defects in perspective, were the work of good artists.

tian basilica, the remains of the sanctuary, the apse entire, the very altar steps, the most sacred symbols in the apse. Had the history of early medieval Christian painting been unknown, it could have been made up by an inspection of this Christian Pompeii." Among the paintings are many of the Virgin, and a Crucifixion is especially spoken of. On a slab of eight sides in the ambo or sacred enclosure are two inscriptions, one of which reads, "*Johannes servus scæ Mariæ*," which is translated, "John, the Servant of our Lady," while the translation given of the other is "The Gift of John, the Servant of the Mother of God." The Greek crosses preceding the inscriptions and their general style are paralleled in the inscriptions of Pope John VIII in the crypt of St. Peter's. The Liber Pontificalis relates that this Pope John (A.D. 705-707) decorated the basilica of the Mother of God with paintings.

Climbing a winding staircase leading from this church toward the south, the explorer reaches, on a lofty eminence, the palace of Caligula, the northernmost projection of the palaces of the Cæsars, which appears to have become a papal palace under Pope John. These discoveries go far to confirm De Rossi's theory of a general dedication of pagan edifices in this region, or a supplanting of them, by Christian structures.

Greecian.—In a critical discussion of certain Greek masterpieces recently discovered, Dr. Charles Waldstein pronounces a bronze Hermes which was found in the sea off Cerigo to be a work of Praxiteles or his school; a wrestler in marble, of the same find, to be strikingly like a Parthenon metope now destroyed, but known through a drawing by Jacques Carrey, in workmanship of the Rhodian or Pergamene schools and Lysippan in type; a bronze statue found near Pompeii which was at first regarded as an original by Polyclitos to belong rather to the archæistic revival of Pasiteles; while he characterizes the charioteer which was excavated at Delphi and the Hermes from Cerigo as "the finest ancient Greek bronzes in existence."

Cretan.—In the continued exploration of the ruins at Cnossus by Mr. Arthur J. Evans during the season of 1900-1901 the palace proved to be far more extensive than he had supposed. In the eastern quarter, three flights of stone stairs, one below the other, had been discovered, leading down to a columnar hall with walls rising about twenty feet. The staircase was flanked above and below by a breastwork showing the sockets of the original wooden columns, so that with this double tier of colonnades the hall (which seems to have been partly hypethral) must have presented somewhat the appearance of an Italian Renaissance palace. Even at Pompeii no such staircases one over the other had yet been brought to light. Among the individual finds were a magnificent draught-board of ivory plated with gold; crystal plaques backed by silver and blue enamel; and the lid of an alabastron finely engraved with the name and divine titles of Khyan, the Hyksos king, whose monuments are rare in Egypt itself. Other objects suggested connection with Arabia and Babylonia. A further store of inscribed tablets was found, as well as additional wall-paintings, besides fragments of human figures in painted stucco relief. The modeling of the limbs and muscles and the minute delineation of the veins in these figures seemed to Mr. Evans more in keeping with the spirit of the Italian Renaissance than with classical antiquity. One male head wore a crown having a succession of fleur-de-lis, with an upright one in the center.

The tradition that Crete had a hundred cities is regarded by Mr. D. G. Hogarth, in view of the discoveries that have recently been made, as proving not altogether vain. Remains of primitive settlements, too considerable to have been mere villages, are coming to light, he says, at far more points of the Cretan coast than bear a name in classical atlases. There are half a dozen such in a part only of the eastern half isle. So far as searched at present, these towns show little or no sign of having continued into the historic period. Their civilization was blotted out with the Mycænæan domination. The succeeding class of remains is found for the most part higher up inland, on difficult heights or in remote gorges. "The coastal plains were secure no longer. An age of seafaring and communication between ancient seats of luxurious life had given way to one of local and jejune development. But why and how we may only guess."

While Cnossus is and must always be the chief center of archeological and artistic interest in Crete, it has suffered so greatly by spoliation that its remains exist in an imperfect and dilapidated state, so the practised eye of the scientific student is necessary to convey an adequate comprehension of their meaning; while there are other ruins in more retired parts of the island which, although originally less sumptuous and elaborate, having escaped the destruction which has fallen upon the ancient capital, give more edification to the ordinary visitor. Such a site is described by Mr. D. C. Hogarth as having been explored by him at Phæstos, on the south side of the island, where the ruin covers a promontory of the rock. The palace is contained in a large rectangle, very plainly to be made out, and although taking the place of an earlier structure, is defined as being of one character and period—"that of the acme of the Mycænæan age in Greece." Seen from a terrace on the northern approach, the ruin is distinguished into three main quarters. On the left, a broad stairway descends to a spacious paved court containing an altar and tiers of stone seats built up against the rock, as if to hold an assembly. The main building flanks this court on the east, and, being raised high above it, is entered by a flight of steps described as "truly majestic," and extending the full width of the pillared hall at their head. The entrance without is on the opposite side, where a second and larger paved court extends to the brink of the precipice. From this court entrance is given to the pillared vestibule and main hall, and also to a double rank of galleries and a maze of small chambers to southward which form the third quarter. The walls and doors of this great court are well preserved, and a comprehensive view of the various blocks is easily obtained, suggesting their uses. "Here were the living and sleeping rooms of men, there of women. Their common hall of assembly occupies half of another side; the store galleries for the produce of the plain fill the other half. In the chambers to the south they bathed, worshiped, and lodged their retainers and their beasts." The structures were made of an excellent limestone, which has retained its sharp and square outlines, while the gypsums of Cnossus have crumbled, so that they give a more convincing general impression; but Phæstos is far inferior in details to Cnossus. "The elaborate friezes, the sculptured frescoes, and the delicate plaster relief of Cnossus were never here. . . . The noble shell was decorated only in the rudest manner." The objects found are of inferior interest; and of the things which give the relics of Cnossus such rare importance, none have been found.

Explorations have been made in the eastern end of the island, in hope of discovering remains of the Eteocretans. A second inscription, in a non-Greek language but Greek script, has been found at Phæstos, containing more words than the former one, broken and imperfect; but nothing has come to light in the primitive script.

Excavations at Gorynia, on the Gulf of Mirabello, under the direction of an American lady, Miss Harriet A. Boyd, of the American School at Athens, have laid bare what Mr. Hogarth speaks of as the most perfect example yet discovered of a small Mycænæan town, uncontaminated with later remains. Two narrow and tortuous paved streets have been laid bare, here and there ascending by flights of steps, on both sides of which houses of stone with party walls of brick are preserved to a considerable height. These two streets converge toward a large building of fine masonry,

on the highest point of the knoll. While almost everything in precious metal has vanished from these buildings, numerous weapons, tools, and vessels of bronze remain in them. Among the many clay vessels are complete specimens of types previously inferred from fragments only; and among the chambers is one the objects and symbols in which indicate that it was a small shrine.

Miss Boyd has given an account before the Archeological Institute of America of her exploration in May, 1900, of the site of Kavousi, on the lower end of the narrow isthmus that connects Sitia with the coast of Crete. The discoveries, made on spots bearing characteristic names, are a chieftain's house of thirteen rooms, with a necropolis of small tholos tombs in the neighborhood; the walls, visible above the ground, of a building called the citadel; a beehive tomb; and a group of three sets of walls representing three periods of construction. The articles found in these ruins consisted mostly of domestic utensils, pottery with designs in the geometrical style, and animal figures in terra cotta. A thin bronze plate was found in the beehive tomb, engraved in a well-executed design of Oriental motive and Grecian style. The field of the design was divided into bands after the Oriental fashion, and filled with sphinxes having back-turned helmeted heads, griffins with outstretched necks, and a recurring combination of a man with one or two lions rampant. Individual expression was given to each figure.

At Zakro, Mr. Hogarth found remains, though not in large quantity, which he characterizes as illustrating all the immense interval between the Neolithic and Hellenic ages. While most of the remains in the plain of Lower Zakro belong to the close of the Mycenaean age, discarded vessels in clay and stone belonging to a previous epoch were found filling a pit in the limestone rock. Vases in a delicate painted fabric of the same type as the "Kamâres" ware of mid-Crete occurred here. The caves about the plain had been used for sepulture in an age verging on the Neolithic. The native objects from all these sources were mixed with elements of outside origin, "parallel to things Cypriote and Egyptian." The houses of the town, with party walls of brick, but true Cyclopean outer walls, were of great size, one containing more than 20 chambers, and yielding more than 70 vases, besides many fragments and objects in silver, bronze, and stone. In one building, which belonged to a large group of connected blocks, were found two inscribed tablets in primitive script, a deposit of bronze implements and vases, and hundreds of impressions of lost signets, lying in a heap as if once contained in a box, and representing 150 separate types—so well preserved that it has been possible to take casts of them for study in England.

The general result of east Cretan exploration thus far is summarized by Mr. Hogarth as seeming likely to establish the fact that the Pan-Aegean civilization which it is agreed to call Mycenaean was foreign in that part of the island; and that the native civilization, existing before and coincident with it, was much ruder, and perhaps of a different character from that of mid-Crete.

Egyptian.—The continued excavations at Abydos among the tombs of the first Egyptian dynasties during the winter of 1900-1901 yielded results of no less interest than those of the previous year; and in March Prof. Petrie could say that "we are now able to trace out the regular development of the civilization during

some four hundred years, from the time when writing was but rarely used, and then only in a rude and pictorial stage, down to the common use of delicately figured hieroglyphics, indistinguishable from those in use for thousands of years later. We have now in our hands the beautifully wrought jewelry and gold work, the minutely engraved ivories, the toilet objects of Menes, the founder of the monarchy, and his successor, fashioned more than sixty-five hundred years ago." Nearly thirty inscriptions and labels of Menes and his predecessors in stone and ivory had been recovered, from which were certainly learned the names of three kings—Narmer, Ka, and a name written with a fish sign. Among the works of Menes were parts of four ebony tablets with figures and inscriptions, one apparently showing a human sacrifice, and a massive strip of gold of unknown use, with the name of Menes (Aha) upon it. The forearm of the queen of Zer, the suc-

FALSE FRINGE AND PLAITED LOCKS,
FROM THE TOMB OF ZER.

cessor of Menes, had been broken off by the first plunderers of the tomb and laid in a hole in the wall; and was found still in its wrappings, with four splendid bracelets intact. One of these bracelets consisted of a series of figures of the royal hawk perched on the tomb, 13 figures in chased gold alternating with 14 carved in turquoise. The second bracelet was of spiral beads of gold and lazuli in three groups. The third bracelet was of four groups of hourglass beads, amethyst between gold, with connections of gold and turquoise. The fourth had a center piece of gold copied from the rosette seed of a plant, with amethyst and turquoise beads and bands of braided gold wire. "This brilliant and exquisitely finished group of jewelry," says Prof. Petrie, "shows what a high level was already attained at the beginning of the first dynasty. It is two thousand years older than the jewelry of Dashur, the oldest yet known, and it has the great advantage of being carefully examined as found, and restructuring in its exact arrangement." Forty inscribed pieces of ivory and stone, and two lions carved in ivory, of King Zer, were found; also the great royal tombstone was recovered in pieces and rejoined. About 60 private tombstones gave the names in use in the royal household, "many formed from the goddess Neith, but not one from Isis." A dozen inscribed ivories of King Den, the fifth of the first dynasty, were found, including the handle of the royal measuring cord. Also an impress of a beautiful royal seal, showing the

king wrestling with a hippopotamus and spearing a crocodile. About 20 private tombstones of this reign have also been recovered, with much elaborately carved slate and bows and arrows. The tomb of Perabsen, of the second dynasty, yielded a large tombstone of the king carved in syenite, and the names of his three predecessors—Hotep-ahau, Ra-Neb, and Neteron, the same as they are given on the small granite statue No. 1, at the Cairo Museum—carved on stone bowls. Perabsen appears, therefore, to have been the fourth king of the dynasty, and his successor was probably Kha-sekhemmi, whose tomb has been mostly cleared. From it were recovered the royal scepter, formed of cylinders of sard held together by a copper rod in the axis, and with gold bands at intervals; of which 28 inches in length remain, while the lower end is lost; also 7 stone vases with gold covers fastened on with twisted gold wire, 2 gold bracelets, 20 copper dishes, dozens of copper models of tools, copper axes, fruit-knives, and a perfect dish of diorite.

The rise and development of Egyptian civilization and art have been more fully treated by Prof. Petrie in lectures on those subjects at the Royal Institution and before the Society of Arts. From considerations based upon the rate of deposition of the mud in the Nile valley, the author concludes that the end of paleolithic man and the beginning of civilization in that region can not have taken place earlier than about 7000 B.C., for previous to that period the valley was a rocky gorge, and only wild beasts and a population of hunters could have existed where there was no possibility of agriculture. Evidence has been found that paleolithic man was in the country down to a period when the Nile was nearly as low as it is now. No attempt is made to estimate how long he might have been there before that. A scale of sequences has been drawn up from a comparison of the contents of tombs and rubbish heaps, especially of the pottery, comprising fifty periods, to which it is possible to refer the objects found. By this means it has

A BRACELET FROM THE ARM OF THE QUEEN OF ZER-TA,
4700 B. C.

been possible to carry the research with tolerable exactness during the period hitherto regarded as mythical. The oldest graves known in Egypt are those of a settled pastoral people, and yield pottery and small quantities of copper. No trace of the potter's wheel appeared in the whole prehistoric period. The first steps in art were seen in white clay paintings on red pottery vases—usually figures of goats, but sometimes of larger animals and human beings. The ivory and bone carvings of the heads of camels were singular and ingenious, and belonged to the earlier period. The carving of slate palettes in animal forms began at its best in almost the earliest graves, and then underwent continued degradation. A bust of a man about half through the prehistoric age shows

the type of these peoples, with the forehead high, the head pointed, and the general character closely like that of the Libyo-Amorites. The second civilization of the prehistoric age, as Prof. Petrie defined it (from 6000 B.C. to 5000 B.C.), was distinguished by high mechanical skill shown in the marvelous working in flint, which was unequaled by any later race in its regularity and perfect control. A like skill was shown in the regular forms of the stone vases, and in the pottery. Copper was increasing in use, and the forms of tools were being evolved. The connection of this second civilization with the East was hinted at by the use of forehead pendants and probably face veils, as with the Arabs, and by the introduction of amulets, unknown before, which are Semitic rather than Libyan. The worship of these people seems to have been that of the serpent, of which several coiled images are known. The games have been preserved in some tombs; among them a game of ninepins; one with four lions and a hare; and games with balls and counters. Certain paintings show that the people used large ships; and the foreign pottery imported shows that they had intercourse with the rest of the Mediterranean. Carved slate palettes are among the most important early monuments, or down to the time of Narmer, who was just before Menes. The animals represented upon them are interpreted as emblems of tribes. In some instances towns are pictured as attacked by these animals, some of which are striking picks into the walls. Another slate shows a long procession of warriors bearing different weapons. A slate, evidently one of the latest of the series, assigned to the time of King Narmer, presents the conventional grouping of king and captive, already established in the same form which lasted down to the Roman dominion. The reverse shows that the united force of Egypt was composed of three very different races—the long-haired, the bearded, and the usual shaven Egyptian of late times. The triumph they celebrate is over a bearded people, who wore bulls' skins and horns on the head. A strong contrast was presented between prehistoric and dynastic art. The former was at its best far inferior to the rough work of the later people, while in mechanical ability the later people showed no marked improvement, and in some respects, as in flint work, they never reached the prehistoric level. The first line of writing is on the tablets of the offerings at the funeral of Mena. During the reigns before his, no continuous inscriptions have been found, and signs are only used sparingly to explain figures and scenes. By his time most of the conventions were established, and under his successor, Zer, the final crystallization of art took place, and no essential change occurred till its final decay, five thousand years later. In the reign of King Zer the facility of design in a definite school became complete; and the seated figures of the king and the outline of the royal hawk differ from all later works only by a severe dignity, which was rapidly lost afterward. The technical ability shown in the manufacture of the jewelry lately discovered has never been exceeded since. The linen of that age, as compared with modern fine cambrie, shows a finer thread and a closer warp. The earliest statuary we have is of this age, and shows a high proficiency and completeness of design which prove that we have yet to recover many earlier stages. These arts suffered decline afterward.

The assignment of the four kings whom Prof. Petrie calls predynastic, or of the "O dynasty," as he designates it, to a period before Menes, has not been accepted without question. M. Foucart

has sought, in a communication to the Académie des Inscriptions, to show on linguistic grounds that one of the number, Narmer, was really that Boethos whom Manetho makes the first king of the second dynasty. The reviewer in the *Athenæum* of Prof. Petrie's book on *The Royal Tombs of the Earliest Dynasties*, referring to some points

the beginning of the pyramid age. North of this, its superstructure rising in steps and similar in design to the pyramid of his predecessor, is the tomb of the king whose name seems to read Hen-khet. This tomb also had been plundered, but the head and remains of the king, with much of the tomb furniture and some scraps of the jewels, were recovered. Mr. Garstang, from several considerations, regards it as probable that both of these kings belong to the hitherto unrepresented third dynasty of Egyptian history; but it is not immediately possible to identify the names with

those on the traditional lists. He is of the opinion likewise that the tombs are near the site of historic This.

Explorations of the pyramids near Sakkarah, where excavations were carried on between 1881 and 1886, have been resumed by Prof. G. Maspero, who will give special attention to the chapels, enclosures, etc., attached to each pyramid. Some successful work has been done at the pyramid of Unas, against great difficulties from the deep accumulation of rubbish, in the course of which a grave of a person named Samnofu, intact, and several mummy pits of the

THE OLDEST CONTINUOUS LINE OF HIEROGLYPHS EXTANT.

of doubt in the identifications by Prof. Petrie, observes that "it would seem to be wiser to treat the identification of Aha with Menes as not yet proved."

Mr. John Garstang, of the Egyptian Research Account, reported, May 5, the completion of the excavation of the tombs of Neter-Kha, known as the builder of the step pyramid at Sakkarah, and of his successor, whose name is read Hen-khet. The tombs are situated westward from Girga, and the superstructure of the larger tomb is visible in cool weather from the farther side of the Nile. The original approach to the chamber of this tomb is from the top by a stairway which descends, making several turns, to the depth of about 60 feet below the level of the desert. This passage was stopped, after the burial of the king, by single large stones placed at intervals in it. Plunderers had, however, found their way into it, and carried off the treasure, but left many relics of archeological value; and it was by following their tracks that the explorers gained an entrance. The entrances to the 18 chambers were strewed, so that it was very difficult to pass at once from one to another, with hundreds of vessels of alabaster, bowls of diorite, breccia, and other stones, and jars that had been filled with wine and offerings. The impressed sealings recorded several chief officers and stewards of the king, with one of Perabsen, whom he apparently succeeded; and two of the royal mother, Rap-n-Maat. The official title of the king is recorded as "King of Upper and Lower Egypt, Uniter of the two Egypts, Neter-Khe, the Golden (a w b)." The Horus name is the same. To the east of the tomb were several mastabas of this king's chief servants. The plans of these tombs, though they were coeval, provide in themselves a remarkable sequence. They link the type prevailing in the earliest times with this large tomb, foreshadowing the taste for massive grandeur that prevailed at

Saitic period, have been found. In the mummy pit of Psammetik the walls of the funereal chamber are covered with texts from the ancient collection of magic formulas.

The results of three seasons of surveys and making drawings and tracings and copying inscriptions in one of the tombs on the west side of the Nile, opposite Thebes, have been published by Mr. Percy E. Newberry in the *Life of Rekhma Ra*, Vizier of Upper Egypt, offering an important record of bureaucratic life in the time of the eighteenth dynasty. The vizier (Zat) was descended from a family of officials, his uncle, grandfather, and great-grandfather having held the same positions, and other relatives other offices of state. He is supposed to have been born during the reign of Hatasu, and was brought up "a priest of the goddess Maat, the goddess of law." Besides occupying the post of vizier, he was "governor of Thebes," "chief justice," "steward of Amen," and "regulator of all the art works of Amen" in Karnak. The scene depicting his life as vizier shows the court as a long building attached to the temple of Amen, open at one end and supported by two rows of columns, with a dais at the upper end, on which the vizier sat. An inscription describes him as "the vizier governor of Thebes and the southern towns in the divan of the vizier." He is depicted as wearing his judicial robes, and having in front of him the *ken* mat, a sign of the highest judicial office. The "superintendent of the court" stands on his right, and the "guardian of those coming in" on his left; a collection of forty rolls of the law, "the books of knowledge," containing former decided cases, is before him; the jury of "the members of the council of the southern tens and the scribes and reporters stand in two rows on each side of him; and the porters and "two swift messengers" are at the doors. Another picture represents the vizier on his way to the court in the morning,

with many poor people crowding round him, and the accompanying inscription reads: "The going forth through the land in the early morning to grant the daily favors and listen to the words of the people, without showing any distinction between small and great." The "keeper of the seal" was associated with the vizier in his state duties, and the two together visited the palace every day to pay their respects to the king. A list is given of the Government officers who had to report to the vizier. He seems to have had supervision of the inland revenue and home office, of the boards of trade and agriculture, the "regulation of canals" and of "the duties of steersmen and pilots on the Nile," of the workmen attached to the Temple of Karnak, of the duties of the minister of the fine arts, etc. In two large scenes depicting the collection and inspection of taxes, the commodities subject to duty are enumerated and accurately pictured, a very noticeable feature of the representation being that of the beads or ring money of gold paid as tithes. Each portion of the taxes is brought in by a deputation consisting of the mayor, the registrar, the surveyor, and the scribe. Among the articles are "500 pigeons," baskets, and coils of rope. As minister of the fine arts, the vizier had the duty "of inspecting all the handicrafts and teaching each man his duty according to the manner of all occupations." Every detail of the work of gold and silver smiths, cabinet-makers, sculptors, and bronze workers is depicted.

The tomb of Tehuti, who made the decorations of the great temples of Karnak and of Deir-el-Bahari, is near that of Rekh-ma-Ra, and was explored by the Marquis of Northampton in 1898. This artist was skilled in massive and in delicate work, having both executed the great bronze and electrum gates of Karnak, and fabricated the collars and necklaces of the favorites of the king.

The Egypt Exploration Fund has published the first part of the description of the tomb of Ptah-hetep, and his son Aukh-hetep, of the fifth dynasty, at Sakkara, with careful plans and drawings by Mr. N. de G. Davies. The tomb is a very large one, with many chambers and corridors, and has the walls decorated with hunting scenes and representations of the pastoral life of the nobles of the period, and of sports and pastimes. The reproductions of decorative work in these paintings are mentioned as being especially interesting, and as bearing evidence that Egyptian decorative art derived its inspiration from textile work.

A book on Greek Ostraka from Egypt and Nubia, published by Prof. U. Welchen, contains 1,624 inscriptions from clay tablets in Greek, Arabic, etc., brought from Egypt and preserved in the Berlin, Paris, London, Rome, and Turin collections and in various private libraries. These inscriptions shed light on life in Egypt from B. C. 300 to A. D. 700. The Jews appear from them to have been in charge of most of the tax collections in Egypt. The name Jairus, mentioned in the New Testament, occurs in them. Heathen priests are called elders.

A large number of papyri, including the oldest known texts of Plato, Aristotle, Herodotus, Demosthenes, Xenophon, Euclid, the Iliad, the Odyssey, etc., have been presented recently to American universities and museums by the Egypt Exploration Fund. Among these are the oldest extant text of St. Matthew, which becomes the property of the University of Pennsylvania, and a text of St. Paul that of Harvard University. The papyri treat of legal, medical, social, and business matters of almost every kind. A number of

antiquities, largely from Abydos, were also distributed.

Among the papyri from the Fayum identified by the explorers and translators of the Græco-Roman branch of the Egypt Exploration Fund is a copy of the romance *The Loves of Chæreas and Callirhoe*, by Chariton. It was found, together with documents dated in the reigns of Commodus and Caracalla, and the handwriting corresponds with that of this period, not later than the second century, A. D. It is inferred that a book to be known then at a village in the Fayum must have been written at a much earlier period; while in the uncertainty respecting Chariton's date, the dictionaries have assumed that he flourished not earlier than the fifth century. The text, according to the Rev. W. C. Winslow, American representative of the Egypt Exploration Fund, tends to confirm the authority of the Florentine text of this work of the thirteenth century; "and the general result may be said to prove that the copies of the classics made at Byzantium—perhaps a thousand years after Greek literature had a place in Western Europe—were of a remarkably uncorrupted text."

The work of the Ernst Sieglin Expedition at Alexandria has been carried on by the architects August Thiersch and Ernst Flechter, and the archeologists, Alfred Schiff and Herrmann Thiersch. The Herren Thiersch, father and son, have been mainly occupied with the remains of the Serapæum, the foundations of which were partially discovered and laid bare by Giuseppe Botti. Results have been obtained which will considerably modify earlier speculations. An unexpected find was the discovery of two magnificent subterranean burial places (in the quarters Sabbari and Kom-es-Schugafa) richly adorned with wall-paintings. Some sculptured reliefs discovered in the same place are said to give "a new impression of Alexandrian art."

Palestine.—A room in the Government school, just inside of Herod's gate at Jerusalem, has been set aside as a museum for the objects found in the excavations of the Palestine Exploration Fund, and the articles have been numbered and catalogued. In one of the cases are 101 examples of pre-Israelite pottery, and in another 184 specimens of Seleucidæan ware. Besides these are pottery figurines, gems, tablets, scarabs, and objects of bronze, iron, bone, stone, and glass, and a collection of coins. Although small, this museum is unique in that it contains the only full collection from which the history of Palestinian pottery may be studied from pre-Israelite to Roman times.

A mosaic, described as a work of art of high order, found in March in the grounds of a Jewish colony northward of the city of Jerusalem, near the Damascus Gate, is of heathen design. It bears figures of Orpheus playing the harp, with Pan and a centaur beneath him. A frame or border around this group is composed of ornamentally entwined branches enclosing other figures. Beneath this are two women around whom is an inscription in Greek letters—"Theodosia" and "Georgia." This is the second mosaic that has been found within a few years in this neighborhood; but others, among which is the map of Palestine, from Madeba, have been found on the other side of the Jordan.

When, sixteen years ago, the Didache was subjected to critical analysis, scholars surmised that the first part of it had been a separate work. They recognized in it the treatise to which patristic writers often alluded as *The Two Ways*. This work has recently been discovered, and has

been edited by Dr. Schleiermacher, and published under the title *Doctrina XII Apostolorum una cum antiqua Versione Latina prius partis de Duabus Viis*. The manuscript is of the eleventh century, and suggests that the original may have been of pre-Christian-Jewish origin, adapted to the uses of the composer of the *Didache*.

At Tel Sandahannah, the explorations of the Palestine Exploration Fund, under Dr. F. J. Bliss, have resulted in the discovery of figures and tablets which are regarded by the Orientalists who have examined them as connected with the practice of witchcraft. Sixteen nude figurines in lead of men and women having their hands and feet bound in complicated fetters and writhing in agony, supposed by Dr. Bliss to represent captives, are pronounced by M. Clermont-Ganneau to stand for persons against whom incantations were directed. About 50 small stone tablets in the Greek inscriptions are decided by Prof. Sayce to be magical charms and incantations. In their explanations the authors refer to the practice in the old magic of making a figure in wax (or in the other soft and readily melting substance, lead) of the person to be bewitched, and melting it before the fire or piercing it with needles or pins.

Babylonian and Assyrian.—Three important discoveries in Babylon are announced in a pamphlet by Friedrich Delitzsch, Feb. 1, 1901: 1. The location of the Marduk temple, Esagila, described by Herodotus and referred to frequently in Babylonian inscriptions, under the mound known as Amram. 2. The great procession street which was rebuilt by Nebuchadnezzar and named Aiburshabu, of the pavement of which slabs of limestone have been found bearing the inscription, "Nebuchadnezzar, King of Babylon, son of Nabopolassar, am I. The street of Babylon I have paved gloriously for the procession of the god Marduk, the great god, with tablets of limestone. O Lord Marduk, grant everlasting life!" The determination of the position of this street has also led to the determination of the position of the wall, Imgur-Bel, the great inner wall of Babylon. The third discovery is that of the temple E-neach, the sanctuary of the goddess Ninmach, the giver of fertility. It is in the ruin mound of Kasr, about the center of the Babylonian complex of ruin mounds.

The inscription on an obelisk which was erected as a boundary stone or "landmark," discovered at Susa, is cited by Mr. W. St. Chad Boscawen as illustrating a highly civilized state of society existing in Chaldea in an extremely remote antiquity. The monument bears engraved upon it the title deeds of estates purchased by a certain Manishtusa or Manishturba, king of the city of Kish, one of the oldest city kingdoms of Chaldea; which show that a system was already established of relations between the king and his tenants, with fixed stipulations as to payments, provision of food, etc. The date of the deeds is estimated to be about 4500 B. C.

Below the remains of the structures of Sargon and Naramsin found by Prof. H. V. Hilprecht at Nippur and already mentioned in the *Annual Cyclopædia*, the excavators went through 31 feet of *débris*, representing a period of which we have as yet no knowledge. Antiquities were found belonging to that period which indicated that the arts had then already reached a high development. Writing was in an advanced stage; and the workmanship displayed in the carving of some of the vases could well bear comparison with the best efforts of later art. The relics found here indicate, as a whole, to use the words of Prof. Hilprecht, "that behind Sargon I and Naramsin

there lies a long and uninterrupted chain of development covering thousands of years; and that these two powerful rulers of the fourth millennium before Christ, far from leading us back to the dawn of civilization, are at the best but two prominent figures from a middle chapter of the history of Babylonia." Notices have been found of about twelve kings who reigned before Sargon.

An account of the educational system of the ancient Babylonians as revealed by certain tablets which are apparently of the nature of students' exercise books, has been contributed to the *Society of Biblical Archeology* by Mr. T. G. Pinches. In the system of study thus indicated as followed by young students were found the single wedge corresponding to the "pothooks and hangers" of modern days, lists of characters, extracts from bilingual lists and syllabaries, practice in writing names of men and countries, together with titles of officials, phrases used in trade documents, and extracts from legends, which seem to have furnished, as it were, the finish to a certain course of study. Other scribes wrote out, as practice, extracts from various bilingual lists—wooden objects, lists of plants, vessels, etc., preceded by an extract from an incantation and perhaps from a list of temples. Mr. Pinches had succeeded in identifying one of the tablets written out by an ancient Babylonian student and found that it was part of an incantation invoking the aid of the god Ea to restore to health a person suffering from some disorder. The tablet contained some curious and interesting expressions, particularly in that part of it called the Prayer of Life. The afflicted man was to be relieved by the food which was placed near his head, so that he might live and his foot might "stand on the ground of life." He was the son of his god, an expression connected by the late George Bertin with the "sons of God" of Gen. vi, 2, which he regarded as explaining the biblical passage referred to. This man, therefore, being one of the faithful, the eye which looked at him ill was seemingly to be cast down. (This part of the tablet is defective.)

From the enormous number of baked-clay tablets and fragments from the ruins of Nineveh and Babylon preserved in the British Museum, a selection is to be made, under the authority of the trustees of that institution, of all the texts relating to legends concerning the creation of the world and the mythical origins and deeds of some of the earliest and most famous kings of Mesopotamia, with a view to their publication in a collected edition. Since George Smith in 1876 called attention to resemblances between parts of these legends and some passages in the early chapters of Genesis, several renderings of them have appeared in English, French, and German, and much attention has been given to the study of them in America. The text used by Mr. Smith in his work, after his death lost sight of for twenty-five years, and only recently identified, will be published for the first time in this collection.

Mashonaland.—Dr. Carl Peters has been for the last two years, or since 1899, when previous accounts of his work were published, exploring the country between Zambesi and Sabi (Zambesia or Mashonaland), and reports that he has been able to ascertain that all the ancient ruins about the eastern border of Mashonaland apparently belong to the same class of civilization. He has everywhere found the same type of ruins, with the cyclopean wall as the typical form of house-building; while in some parts whole cities of these buildings are easily found. Artificial water furrows are still existent in parts of the region. Not only are all old workings on gold mines generally

found in the neighborhood of these ruins, but Dr. Peters discovered during the summer of 1901 a series of ancient copper mines along the eastern bank of the upper Sabi. From all the evidence discovered in the explorations, from the occurrence of symbols of phallus worship from the Zambesi down to the Sabi, and from other results, the author is led to believe that the ancient conquerors belonged to a Semitic race; and that the repeated appearance of the names of Mas-sapa, Unsapa, Rusapi, Sabi, etc., makes it highly probable that they were Sabeans, a race very nearly related to the Phenicians of the Mediterranean. Thus the views of Theodore Bent and other explorers before Dr. Peters are confirmed. Two stones with old inscriptions, not yet deciphered, have been found in Manicaland.

Arabian.—In a discussion of the age of the south Arabian Minean kingdom, Otto Weber agrees in general with Glaser and Hommel as to the antiquity of the inscriptions, and endeavors to prove that the kingdom antedated that of the Sabeans, reaching its highest point of prosperity about 1000 B.C. At this time the Mineans had the commerce of southern Arabia in their hands, while by means of a colony in the northern part of Arabia, Musri, frequently confounded in the Bible with Egypt, they were in close commercial intercourse with Mesopotamia. The author believes that the Minean inscriptions carry us back at least as far as 1200 B.C. It follows, of course, that the Minean alphabet was developed much earlier. The Minean kingdom lasted till about 600 B.C., when it was overthrown by the Sabeans. The same subject is discussed by Lidzbarski (*Ephemeris für Semitische Epigraphik*) from the epigraphic point of view. This author, in opposition to Hommel, who supposed the Minean script to be the parent of the Phenician, reaches the conclusion that the south Arabian script was derived directly from the north Semitic or Phenician, and that the oldest specimens of it can not antedate 800 B.C. Discussing the forms of the letters of the Siloam inscription at Jerusalem, Lidzbarski concludes, on epigraphical grounds, that it is very ancient, as was at first supposed, and not of the Herodian period, as has recently been claimed.

Chinese Turkestan.—Discoveries of manuscripts and other ancient inscribed documents made by Dr. M. A. Stein, of the Indian Educational Service, in Chinese Turkestan, promise to be of considerable importance for the history of that part of central Asia. Both the languages and the alphabets of the documents are, for the most part, Indian in character, but examples of Chinese are not wanting, as well as of some non-Aryan language which has not yet been identified. The manuscripts found at Dandin-Ulig, Sven Hedin's Ancient City of Taklamakan, were chiefly written in the alphabet known as Central Asian Brahmi, and seem to represent a period extending from about the fifth to the eighth century of the Christian era. Excavations made farther to the east of the desert, in the district once watered by the river Nya, which now loses itself in the sands, have brought to light, among other interesting objects, hundreds of wooden tablets inscribed with Kharoshti characters and often dated in years of the reigning sovereign. Both the language and the alphabet of these tablets are those of the Indo-Scythian princes of the first century A.D.; and it seems probable that the ancient civilization of the district was overwhelmed by the sand at that period. Only a general account of Dr. Stein's work has yet been received.

ARGENTINE REPUBLIC, a federal republic in South America. The legislative power is vested in the national Congress, consisting of a Senate of 30 members, 2 from each province and from the federal district, and a House of Deputies containing 133 members elected for four years by the people directly. The President is elected for six years by electoral colleges having twice the number of members in each province that there are of Senators and Deputies combined. The President is Julio A. Roca, elected in 1898. The Vice-President, whose function is to preside over the Senate, is Norberto Quirno Costa. The Cabinet at the beginning of 1901 contained the following members: Secretary of the Interior, Dr. Felipe Yofre; Secretary of Foreign and Ecclesiastical Affairs, Dr. Amancio Alcorta; Secretary of Finance, Dr. Osvaldo Magnasco; Secretary of War, Col. Pablo Ricchieri; Secretary of the Navy, Commodore Martin Rivadavia; Secretary of Agriculture, Dr. Martin Garcia Merou; Secretary of Public Works, Dr. Emilio Civit.

Area and Population.—The republic is divided into 14 provinces and 9 territories having a total area of 1,319,247 square miles, and a population in 1895 of 4,094,911, estimated to have increased in 1899 to 4,569,000. Buenos Ayres, the capital, had 806,613 inhabitants in 1900. The number of immigrants in 1899 was 111,083, including 53,295 Italians, 19,732 Spaniards, 2,449 French, 1,686 Russians, 950 Austrians, 732 Germans, 477 English, and 344 Swiss; emigration, 62,241. The foreign residents in 1895 numbered 886,895, of whom 492,636 were Italians, 198,685 Spaniards, 94,098 French, 21,788 British, 17,143 Germans, 14,789 Swiss, 12,803 Austro-Hungarians, 2,269 Portuguese, and 32,184 of other nationalities. There were 105,000 immigrants in 1900.

Finances.—The revenue in 1899 was \$45,676,189 in gold and \$61,419,990 in paper, and the expenditure was \$30,860,817 in gold and \$103,887,458 in paper. The revenue in 1900 was estimated at \$45,981,735 in gold and \$67,122,000 in paper, and expenditure at \$32,946,813 in gold and \$95,447,513 in paper. The budget estimate of revenue for 1901 was \$37,991,000 in gold and \$62,300,000 in paper. Of the gold revenue \$28,000,000 come from import duties, \$2,800,000 from export duties, \$2,645,000 from port and navigation dues, \$460,000 from consular fees and fines, and \$4,086,000 from debt service. Of the revenue collected in paper \$15,000,000 come from the spirit duty, \$11,300,000 from the tobacco duty, \$8,500,000 from duties on wine, sugar, and matches, \$1,600,000 from duties on beer and other articles, \$5,300,000 from sanitary works, \$1,800,000 from the land tax, \$8,400,000 from stamps and licenses, \$4,900,000 from posts and telegraphs, \$540,000 from land sales and leases, \$3,570,000 from railroads, and \$1,390,000 from other sources. The expenditures for 1901 were estimated at \$25,981,543 in gold, of which \$283,941 were for foreign affairs, \$24,487,214 for debt, \$10,388 for the navy, and \$1,200,000 for extraordinary and unforeseen expenses; and at \$88,399,249 in paper, of which \$16,938,096 were for the Interior Department and Congress, \$1,257,840 for foreign and ecclesiastical affairs, \$7,826,636 for financial administration, \$11,977,250 for debt, \$11,685,938 for justice and education, \$13,223,370 for the army, \$9,529,764 for the navy, \$1,438,220 for agriculture, \$6,599,765 for public works, \$3,458,370 for pensions, and \$4,464,000 for extraordinary expenses.

The debt on June 30, 1900, amounted to £87,575,508, including £6,345,000 of bonds held by the Government. Of the total £45,738,708 were national loans, £31,891,657 provincial and other

loans assumed by the Central Government, and £9,945,143 cedulas. All the provincial debts have been exchanged for 4½-per-cent. national bonds.

The provincial and municipal budgets added to the national budget make a total expenditure estimated in 1897 at \$193,846,534.

The Army and Navy.—The regular army is recruited by voluntary enlistment. If the recruits are not sufficient the law of Nov. 23, 1895, gives power to the Government to draw men by lot, who are obliged to serve four years unless they furnish substitutes. Another class is composed of conscripts who are drawn for one year and trained for sixty days or longer, according to the needs of the service. Besides these all male citizens between the ages of eighteen and forty-five belong to the National Guard, divided into the active, reserve, and territorial sections, and numbering about 472,000 men altogether. The active army in time of peace consists of 12 regiments of infantry, 1 battalion of mountain troops, 11 regiments of cavalry, 4 regiments of field artillery, 2 regiments of mountain artillery, 1 regiment of engineers, 1 brigade of pontonniers, 1 brigade of sappers and miners, 1 brigade of railroad troops, and 1 brigade of telegraphists. The infantry is armed with Mauser rifles of 7.65 caliber, with 5 cartridges in the magazine; the cavalry, with carbines of the same system; the artillery, with 7.5 Krupp rapid-firing guns. The peace strength in 1900 was 1,340 officers and 7,279 men.

The fleet in 1900 consisted of an armored coast-guard, Almirante Brown, of 4,200 tons; 4 armored cruisers, built between 1896 and 1899—General San Martin, Pueyrredon, Belgrano, and Garibaldi, of 6,000 to 7,000 tons; 4 armored gunboats of various dates; 4 small protected cruisers; 7 unarmored first-class gunboats; 2 avisos; 2 school-ships; 6 destroyers constructed in 1896; and 12 first-class and 15 second-class torpedo-boats.

Commerce and Production.—The value of imports in 1899 was \$116,851,000. The principal articles imported were cotton cloths of the value of \$18,319,000; iron manufactures, \$18,077,000; woollens, \$8,252,000; bagging and sail-cloth, \$6,682,000; coal, \$6,536,000; wood, \$6,008,000; wine, \$5,732,000; yerba-maté, \$3,863,000; chemicals and drugs, \$3,343,000; paper, \$1,919,000. The total value of exports was \$184,918,000. The principal articles were wool of the value of \$72,284,000; cereals, \$59,919,000; hides, \$25,629,000; animals, \$9,028,000; meat and meat products, \$5,904,000; tallow, \$2,206,000. The commerce was distributed among different countries as follows:

COUNTRIES.	Imports.	Exports.
Great Britain.....	\$43,671,000	\$21,722,000
France.....	10,908,000	41,447,000
Germany.....	12,980,000	29,434,000
Belgium.....	9,710,000	24,438,000
United States.....	15,467,000	6,668,000
Italy.....	13,780,000	4,927,000
Brazil.....	4,806,000	7,042,000
Spain.....	3,198,000	2,785,000
Uruguay.....	507,000	3,481,000
Paraguay.....	1,372,000	178,000
Chile.....	142,000	360,000
Bolivia.....	58,000	332,000
Other countries.....	450,000	41,784,000
Total.....	\$116,851,000	\$184,918,000

The exports of live cattle in 1899 were 312,150 head; of live sheep, 543,458; of frozen beef, 9,079 tons; of frozen mutton, 56,827 tons; of jerked beef, 19,164 tons; of wool, 237,111 tons; of butter, 2,594,891 pounds; of wheat, 1,713,429 tons; of corn, 1,116,276 tons; of linseed, 217,713 tons; of

hay, 105,598 tons. In 1900 the exports of cattle declined to 150,550, sheep to 198,102; exports of frozen beef were 24,590 tons, of jerked beef 16,449 tons, and of frozen mutton 56,412 tons. The wool exports fell off to 101,113 tons. The exports of butter were 2,322,662 pounds. The shipments of wheat were 1,929,676 tons; of corn, 223,357 tons; of linseed, 223,257 tons; of hay, 102,836 tons. The decline in the exports of live cattle was due to the fact that the ports of the United Kingdom were closed to animals from the Argentine Republic during the last eight months of the year on account of the foot-and-mouth disease. In the summer of 1901 the Argentine Government announced that the disease no longer existed in any part of the republic. Imports of sheep into Great Britain were interdicted for the same cause, but the sheep-growing industry was already declining rapidly, as is indicated by the decrease in the wool exports. The exportation of jerked beef to Spanish-American countries has dwindled with the rise of the trade in frozen beef. The butter trade with Great Britain, in spite of the slight decrease in the exports, is likely to expand, because the Australian butter with which the Argentine product competes must travel twice the distance. The exports of wheat and corn from the Argentine Republic are so uncertain and variable that they exercise a disturbing influence on the world's markets. The exports of wheat in 1898 were 645,161 tons, and in 1897 only 101,845 tons. The corn exports in 1898 were 717,105 tons. The total value of imports in 1900 was \$113,485,069, and of exports \$154,600,412. Of the imports in this year 34 per cent. came from Great Britain, 15 per cent. from Germany, 13 per cent. from Italy, 12 per cent. from the United States, 9.5 per cent. from France, and 16.5 per cent. from other countries. Of the exports 15.5 per cent. went to Great Britain, 13 per cent. to Germany, 12 per cent. to France, 11.5 per cent. to Belgium, and 48 per cent. to other countries.

Navigation.—The number of vessels entered at Argentine ports during 1899 was 10,148, of 6,939,567 tons, of which 3,319, of 646,518 tons, were sailing vessels, and 6,829, of 6,293,049 tons, were steamers.

Railroads, Posts, Telegraphs.—The length of railroads in operation in 1900 was 10,595 miles. The capital expenditure was \$526,616,661 in gold. The cost of the national lines was \$56,331,063; of guaranteed lines, \$113,311,995; of provincial lines, \$83,859,062; of private lines, \$257,141,178. The gross receipts in 1898 were \$41,394,169 in gold; expenses, \$19,117,118. The number of passengers carried in 1900 was 17,813,712; tons of freight, 12,725,657.

The post-office in 1898 carried 181,821,945 pieces of mail-matter in the internal and 34,630,224 in the international service; receipts were 7,318,989 francs; expenses, including telegraphs, 12,141,810 francs.

The telegraphs in 1900 had a length of 27,584 miles, with 58,656 miles of wire. The Government lines were 12,174 miles in length; provincial lines, 3,530 miles; railroad telegraphs, 10,190 miles; private lines, 1,690 miles; messages in 1897, 5,296,184.

Political Affairs.—The political situation in 1901 was dominated by the financial difficulties that have disturbed and partially checked the prosperous development of this productive country for many years. The commercial conditions were easier than they had been for three or four years, and the export trade was increasing when the Government brought forward a plan for the unification of the foreign debt that excited intense

the Argentine Cabinet. A change in the Cabinet took place on March 21, when Capt. Onofre Betze was appointed Minister of Marine and Ezequiel Ramos Mejia Minister of Agriculture. When Congress assembled on May 3 the President stated in his message that the accounts for the preceding year practically balanced, the revenue having been \$65,500,000 in gold and the expenditure only \$200,000 in excess. The conversion fund amounted to \$8,500,000, and would reach \$15,000,000 by the end of the year. The unification project was announced, having for its chief object a reduction of the service of the floating debt. The resulting improvement in Government finances was expected to lead to more immigration and colonization. The bill was presented to Congress on June 11. It authorized the issue of gold consols up to the amount of \$435,000,000, bearing 4 per cent. interest and redeemable in fifty years, the annual rate of amortization being one-half of 1 per cent. These were intended for the conversion of all or part of the existing debts whenever such conversion would benefit the Government. The new loan would be secured on the customs revenue, the Department of Customs having to deposit daily eight-tenths of 1 per cent. of its receipts for every \$5,000,000 of bonds issued. The Senate gave its approval to the plan. In the Finance Commission of the House of Representatives it obtained a majority of a single vote. When the debate began the Opposition press and the hostile politicians stirred up wide-spread alarm. Students held excited meetings and smashed the windows of the Government newspaper organs. On July 3 they stoned the house of the President and assailed ex-President Pellegrini. Shots were exchanged with the police, who were unable to cope with the disturbance. Both houses of Congress having given consent, a state of siege was proclaimed on July 4 for six months. On July 5 the President sent a message to Congress withdrawing the unification bill. The Minister of Finance resigned, and Dr. Marco Avellaneda was appointed to the office on June 10. The popular excitement having subsided when its cause was removed, at the end of July the state of siege was abolished. Further Cabinet changes were the appointment of Señor Seru as Minister of Public Instruction and Justice on July 11, and of Dr. W. Escalante as Minister of Agriculture on July 17. The new Minister of Finance stated that, although the pressure of the external and internal floating debt made the condition of the treasury difficult, the revenue collected greatly exceeded the estimates, and the budget would close with a surplus. The Government was unwilling to repeal the conversion law, and would increase the conversion fund, which would not be diverted to any other use unless Chile compelled the Argentine Republic to purchase more war vessels in order to preserve its naval superiority, the fund being available for war purposes. The Patagonian boundary dispute between the Argentine Republic and Chile had been referred to arbitration. Pending the decision it was proposed by the Argentine Government that both nations should cease augmenting their war material. Chile agreed to this, but after the election of a new President in Chile the victorious party proposed to acquire a new battle-ship and two cruisers. The Argentine Government was determined in that case to make a like addition to its own navy, but after some correspondence the agreement for the maintenance of the naval *status quo* was renewed. A bill for emission of more paper money failed.

ASTRONOMICAL PROGRESS IN 1900-1901. The advancement of astronomy in these two years has been progressive and satisfactory in all its branches. More especially is this true in its stellar, spectroscopic, and photographic departments. They furnish a record of progress and discovery that has not been equaled in a decade.

Eros.—The problem of the Sun's distance, which has baffled astronomers for two thousand years, has lately come close upon a solution. The most surprising thing about it is that it has been accomplished by a process never before dreamed of. The Earth's distance from the Sun being the base line by which the distances, magnitudes, velocities, etc., of all celestial objects are measured (except those of the Moon), it follows that its distance should be determined with mathematical exactness. Heretofore the only process known to ascertain the Sun's distance with any prospect of exactness was by the transits of Venus across the Sun's face. By her transit of June 3, 1769, the Sun's distance was computed to be 95,000,000 miles. By her transits in 1874 and 1882 the distance was reduced to 93,000,000, and by the new process to 92,850,000. This reduction of the Sun's distance has reduced the assumed distances and magnitudes of all the heavenly bodies except the Moon. These transits, however, occur at irregular periods, and therefore are not often available. They occur as follow: Once in eight years, then in one hundred and five and a half, then again in eight, then in one hundred and twenty-one and a half, then in eight, and one hundred and five and a half, and so on forever. The next will take place June 8, 2004, after an interval of one hundred and twenty-one and a half years. They always happen in December and June; the last was on Dec. 6, 1882.

On Aug. 13, 1898, Witt, of Berlin, discovered an asteroid, or planetoid, or minor planet (as they are variously called), revolving round the Sun, as do all the 465 now known that are between Mars and Jupiter. This one, however, which received the name Eros, revolves between the Earth and Mars, and can approach nearer the Earth than any heavenly body except the Moon. When it is in perihelion while the Earth is in aphelion, and rising when the Sun is setting, of course it will be on the meridian at midnight, and can approach the Earth within 35,000,000 miles. These favorable conditions are not often simultaneously fulfilled. They would have been, however, had the discovery been made four years earlier. The next will take place in 1930. But there was quite a favorable opposition in December, 1900; so near, in fact, as to allow the determination of its parallax. The nearer a planet approaches the Earth, the greater will be its parallax, and if this is exactly ascertained, Kepler's third law gives the distance of the Earth from the Sun, and from the other planets also. The distance from the Earth to this little speck of a world (supposed to be but 18 miles in diameter), when nearest, is 0.15 in terms of the Earth's distance from the Sun, while Venus in transit is 0.27, or almost twice as far.

Kepler's third law is: "The squares of the periodic times of the planets' revolution round the Sun are proportional to the cubes of their mean distances from him." In the latter part of December, 1900, the little planet was so near that two observers, one in New York and the other in California, obtained measurable angles, which gave its distance from the Earth's center, and so the great problem was solved without going to remote countries to observe the transits of Venus. As the little planet was as near the Earth as it

will be until 1930, astronomers are waiting with commendable patience for its next nearest approach, when the grand problem will be solved.

The twentieth century was inaugurated by astronomical incidents and an amount of discussion rarely if ever equaled. Allusion is made to the variation in the light of the asteroid Eros, and the sudden outburst of a new first-magnitude star in the constellation Perseus. The variability of many stars and comets is well established; but that a dark planet which shines by reflected sunlight should vary in brilliance is a mystery too deep for solution. More than 465 little planets have been discovered revolving round the Sun between Mars and Jupiter, and Eros is the only one in which variation in light has been certainly detected, except their periodical variation by change in distance from the Earth and the Sun. When the novelty was first announced, it was ascribed to chance, or more probably to error of observation. Three different theories have been advanced to account for it, viz., (1) that the little planet is double, the components revolving round each other parallel to our line of sight, as do many of the double stars that alternately occult each other; (2) that two asteroids may have collided and adhered to each other, forming an object resembling a dumb-bell. If this object rotated in $5^h 16^m$, the light changes could be explained; (3) this supposes that the little planet, only about 18 miles in diameter, has on its surface two bright and two dark spots, at or near its equator, its rotation on its axis presenting to the Earth alternately its bright and dark spots. The first and second theories are the only ones that appear tenable. The most plausible, and the one that explains what is observed, is that periodically it is occulted by something that cuts off a portion of its light, the phenomenon being visible from the Earth only when the rotatory motion of the occulting object is parallel, or nearly so, to our line of sight. This not only explains the cause of the variation, but also its beginning and cessation. If, as Prof. Pickering remarks, "the variation is caused by its rotation, it is possible, from measures of its light, to determine the time of rotation and the direction of its axis in space. The fact that its successive maxima and minima are of unequal intensity, and that the intervals between them are of variable length, would seem to discountenance the first hypothesis—that the two sides are unequally dark. The variability of the light of the planet is shown by the trails on plates taken in 1893 and 1894, and particularly so on those taken in 1896. In February, 1901, the range of variability amounted to two magnitudes, and on May 6 it was inappreciable." Prof. Wendell, of Harvard Observatory, argues that "if the variations were caused by markings on the surface, it could scarcely have sunk to zero so suddenly." In 1903 the asteroid will again be in opposition and situated as when its light mutations were first observed.

Double, Triple, and Binary Stars.—To the naked eye all the stars are single, but when examined with modern telescopes several thousand are found to be double or triple. It is possible for a star to appear double when one component happens to be almost exactly behind the other. If no motion of revolution around each other is detected after years of observation, they are called "optically double stars." But such instances are not common. If a motion of revolution of the pair is detected, they are called "physically double," or "binaries," and of these there are two kinds, telescopic and spectroscopic. Several thousand telescopic binaries have been discovered.

In Vol. I (1900) of the publications of the Yerkes Observatory, at Williams Bay, Wis., is a catalogue of 1,290 double stars discovered and micrometrically measured by the greatest living double-star discoverer, Prof. Sherburne W. Burnham, F. R. A. S., whose work was recognized by the Royal Astronomical Society of England when it awarded him its gold medal in 1894.

In a catalogue recently issued, 2,000 are published, all southern pairs. Prof. Aitkin, of Lick Observatory, Mount Hamilton, Cal., publishes a list of 62 pairs lately discovered with the 12-inch telescope at that observatory, all having been reobserved with the 36-inch, and compared with Burnham's list. The list is a continuation of a previous list of double stars discovered there.

Generally the telescopic binaries are of long periods, but how long never has been ascertained. One of long period is Castor, generally considered to be at least one thousand years. Both components are self-luminous suns like ours. At least 30 telescopic binaries are known to have periods of less than one hundred years. The five shortest are Kappa Pegasi, 11.12 years; Delta Equulei, 11.43 years; Xi Sagittarii, 18.85 years; Rho Argus, 22 years; and 85 Pegasi, 24 years. One of the most interesting of the double stars is Sirius, the dog-star, remarkable as having been pronounced a binary years before it was discovered to be one, by its vibratory motion—a striking instance of the refinements of modern astronomical observations. A very interesting triple star is Gamma Andromeda, a bright star that has a double companion revolving around it; period unknown.

Until recent times there was no way of ascertaining whether there might not be others, too close to be divided by the telescope. The principles involved in the phenomena observed in the resolution of spectroscopic binaries needs some preliminary explanation. Should a spectroscopic be pointed to a star, it gives a spectrum resembling a piece of a rainbow, crossed by many dark lines. If a photograph of the lines be taken, and after a time another, and the lines do not agree exactly, it indicates that they are formed from two stars instead of from one only. It also indicates that the stars are revolving around each other in a plane parallel to the line of sight. This is called a spectroscopic binary. Of course, when one is approaching our solar system, the other will be receding from it. The waves of light from the receding star being longer, its lines are all moved slightly toward the red end of the spectrum, while the lines from the approaching star are displaced a like amount toward the violet, causing them alternately to appear narrow, broad, and double at equal periods of time, which, when ascertained, gives the period of their revolution around each other. They are too near to be divided by any telescope, hence the periods of spectroscopic binary stars are much shorter than those visually seen by the telescope. This department of astronomy is not new. In 1889 Miss Maury, of Harvard College Observatory, while examining some Harvard celestial photographs, found that the lines in the spectrum of Zeta Ursa Majoris close up and separate once in fifty-two days, thus indicating that a complete revolution is made in one hundred and four days. Prof. Campbell, director of Lick Observatory, announces that he has found, by spectroscopic methods, that the pole-star (Alpha Ursa Minoris) is a spectroscopic binary, consisting of three suns belonging to a single system, which revolve round each other, the brightest of which is, as everybody knows, visible to the naked eye. What causes this star to be the most wonderful

of all its components is the shortness of the period of revolution, only four days. As we do not know how far apart the components are, their linear velocity in miles can not be ascertained, but it must be enormous.

More than twenty discoveries like that mentioned above have been made at the Lick Observatory, but this surpasses them all, not even excepting that of Capella, another spectroscopic binary lately discovered. One significance of this announcement is, that Prof. Campbell has also discovered that the pole-star recedes from and approaches the Earth at a velocity of about 5 miles a second. In two days it increases to 8.7 miles, and then gradually decreases during the next two days to 5 miles. He concludes that the visible star is revolving round a dark and invisible body, in an orbit not greatly different from the size of our Moon's orbit round the Earth, once in four days, surpassing in speed everything known except light and electricity. From the shifting of the spectral lines toward the violet it is supposed that the entire triple system of Polaris is approaching the earth at the rate of 15 miles a second.

Mrs. Fleming, of Harvard College Observatory, has discovered Zeta Centauri to be a spectroscopic binary, and Miss Cameron has lately found Pi Scorpii to be one, by the shifting to and fro of the lines in their spectra. Herr Belopolsky calls the attention of spectroscopists to the star Iota Pegasi, whose motion in the line of sight seems to show a variation in a period as short as one day, surpassing in this element all other spectroscopic binaries. The spectrum resembles that of the dog-star, with heavy hydrogen lines and narrow lines of iron.

A noteworthy result in the work of the past year is that a great number of stars are found to have variable velocity, thus indicating beyond doubt that they are spectroscopic trinarities. From a list of 40 the following are transcribed, being mostly of short period:

	Period.
Alpha Virginis.....	4.013 days.
Alpha 1 Scorpii.....	1.46 day.
Alpha 1 Geminorum.....	2.93 days.
Eta Pegasi.....	2.25 "
Delta Leonis.....	1.92 "
Mu Scorpii (shortest known).....	1.458 "
Omega Leonis.....	14.25 "
Alpha Aurigæ.....	104 "
Kappa Pegasi.....	6 days. One component of Burnham's binary. Dark companion.

In the *Astrophysical Journal* for January, 1901, Prof. Campbell publishes a list of 6 with specially large motions in the line of sight, 3 of which have motions of 62 miles a second. Included in the list is the well-known parallax and proper-motion star Mu Cassiopeia, with a velocity of 61 miles a second. Assuming for the parallax 0.275, and for the proper motion 3.95" a year, the star's velocity at right angles to the line of sight would be 41 miles a second, about a third of which, however, should be ascribed to the motion of the solar system in space. It is perhaps worth noting that this star, being one of the nearer stars and exceptionally rapid in its motion, should also be one of the first to show a change in brightness due to changing distance. A short computation from the figures given shows that the change in its distance should make it brighter by a tenth of a magnitude in about two thousand years, or a full magnitude in twenty thousand years.

The New Star in Perseus.—Another wonder has recently appeared in the sky, which has been watched with intense interest by every astronomer in the northern hemisphere, and enough has been

written on the subject to fill a dozen large volumes. Not since the writer's remembrance has any unexpected astronomical phenomenon occurred that has taken so deep a hold on the popular as well as the scientific mind. It was discovered Feb. 21, 1901, at 14^h 40^m Greenwich mean time, by Rev. Dr. Anderson, who watches the heavens for variable and temporary stars. It was then of the 2.7 magnitude, which at seven o'clock on the 22d had increased to 0.3 of a magnitude brighter than the first-magnitude star Aldebaran. At 8^h 10^m it was 0.2 brighter than Capella, a much brighter star than Aldebaran, almost equaling Sirius, the brightest of all the stars, commonly called the dog-star. It appeared in the Constellation Perseus, in right ascension 3^h 24^m 24.12^s, declination north 43° 33' 39.51" for epoch 1900.0. On Oct. 18, 1894, a photograph was taken of the region with the 24-inch Bruce photo-telescope at Harvard College Observatory, with an exposure of fifteen minutes, which showed stars down to the 12½ magnitude, but revealed no star at the place of the new star. Another photograph of the same region was taken on Feb. 19, 1901, with the Cook lens, revealing stars down to the seventh magnitude, with an exposure of sixty-six minutes, and it showed not a trace of the new star. The last photograph was taken only two days before its visual discovery. Only twenty-eight hours before its discovery by Dr. Anderson, Mr. Stanley Williams photographed the same region, when the star, if it existed, must have been as faint as of 12½ magnitude, so that in twenty-eight hours it must have increased in brightness 100,000 times. At its maximum it was the brightest temporary star that history records, except the celebrated Tycho Brahe's star of 1572, which was visible to the naked eye at noonday.

In the past thirty years a dozen *novæ*, as they are called by astronomers, have suddenly appeared, but none were equal to this in the brilliance and color and extent of its fluctuations, the latter being a characteristic feature of them all. The line must be sharply drawn between temporary and variable stars described elsewhere, as the two phenomena are entirely dissimilar. Many theories have been advanced to account for their sudden increase in brightness and anomalous behavior while visible—such as collision of star with star, star with a planet to some other star, star with a nebula, star with a meteoric stream, star with an asteroid, and asteroid with an asteroid; but all appear untenable. It seems strange that no one has suggested the collision of a star with a comet, which to the writer's mind seems the most plausible, not only to account for its sudden increase in brightness, but also for fluctuations in brilliance and final extinction in a few weeks or months. All comets are of enormous size; that of 1811 was the largest object on which the eye of man has ever rested, being 1,250,000 miles in diameter, in comparison with which our Sun is a dwarf; its tail was nearly 1,000,000 miles in diameter and 50,000,000 miles in length. Should a star enter the coma of such a comet, its light would gradually increase to its maximum on its arrival at its nucleus, and gradually diminish as they all do. On the other hand, should a star collide with a star, both would in a moment be converted into a white-hot liquid, if not a gas, and the increase of light would be at its maximum in an instant instead of gradually, as observed, and would require thousands of years to cool below bright luminosity. Should such a comet fall into our Sun, the effect would be appalling, and the inhabitants of a planet belonging to some other sun would be spectators of

a temporary star, as we lately have been. The phenomena outlined above would also be observed should the star pass through a gaseous nebula instead of a comet. On Feb. 24, at noon, the *nova* reached its maximum of brightness, and then began to decline. From 3.6 magnitude on March 18, the star fell to 5.2 the next day, or 1.6 magnitude in twenty-four hours. The *nova* now flashed up again and was 3.6 on March 20, and then decreased to 5.5 on the 22d; and the next day it had again risen to 3.7, and thus it fluctuated. Spectroscopically it presented several features never before observed in any temporary star. Its spectrum in many respects resembles that of other temporary stars that have appeared in the past fifteen years, being not quite continuous, but crossed by broad hydrogen and helium lines, each consisting of a bright component toward the red end, and a dark component toward the violet end. It is a striking spectrum even with a small spectroscope, the bright C line in particular being quite conspicuous, but the D line less prominent. In the past fourteen years, or since the general application of photography to astronomy, eight new stars are known to have appeared—viz., Nova Persei in 1887; Nova Aurigæ in 1891; Nova Normæ in 1893; Nova Carinæ in 1895; Nova Centauri in 1895; Nova Sagittarii in 1898; Nova Aquillæ in 1899; and Nova Persei in 1901. The second and last of these, which were much brighter than the others, were both discovered by Dr. Anderson. All the others were found by Mrs. Fleming from an examination of the Draper Memorial Photographs. The helium and hydrogen lines of the last were persistent, but during its bright career its spectrum exhibited three distinct phases of change. At first the general appearance of the photographic spectrum resembled that of the Orion type, and was very unlike that of other new stars in which the bright lines were the most conspicuous. On some occasions the spectra of temporary stars change to that of a gaseous nebula. Nova Auriga had a double spectrum of lines and bands. The displacement of the lines toward the red indicated a velocity from us, in the line of sight, of 500 miles a second; while the bands, by their displacement toward the violet, showed a rapid motion toward us, as if the star, moving from us, had plunged into some nebulous object moving toward us, causing the double spectrum. Nova Auriga was visible in November, 1901, as a faint nebulous star. The temporary star of 1885 appeared exactly in the center of the great nebula in Andromeda, one of the six nebulae visible to the naked eye, but whether it in any way was connected with the nebula is unknown.

Prof. T. E. Espin calls attention to the anomalous fact that from right ascension xix hours to xxi hours, there are 13 planetary nebulae, and in all the other xxii hours there are but 11, and in this small portion of the sky nearly all the new stars have appeared.

Star Trails.—Owing to the rotation of the Earth from west to east, all the stars appear to make a daily revolution around the sky from east to west. If, therefore, a photograph camera be accurately pointed to any star, and exactly held on the guiding cross of spider threads in the pointer, the plate will show every star a point,

and every moving object a trail, the length of which will depend on the length of time of exposure and its velocity. On the other hand, should the camera be held on the moving object, all the stars will likewise leave trails on the plate, their lengths depending on their polar distance and time of exposure. If the moving object be examined by a telescope, it will be found to be an asteroid, a comet, a satellite, or a planet.

Formerly the asteroids were searched for by the telescope, and a long watch was kept up to detect motion of anything in the field. They are now searched for by the trail process, which results in the frequent discovery of new ones. Since 1900 twelve new minor planets have been discovered, which are numbered from 452 to 466 inclusive. Those designated FB, FO, FR, and FT were found, on computing their orbits, to be identical.

Solar Motion in Space, or Solar Apex.—Among the marvels of astronomy is the well-established fact that the Sun, like a mighty locomotive, is traveling toward the stars in a certain region of the sky, as determined by the spectroscope, hauling the entire solar system at the rate of 8 to 12 miles a second. Whether it be moving in a straight line or an orbital curve is unknown. It is the opinion of many that its path is orbital, and that the cluster called the seven stars, or Pleiades, is the center around which it is revolving, in a period of millions of years. Behind the area occupied by them the photographic plate, with a long exposure, depicts the existence of 2,326 stars. The point toward which the solar system is moving (in our age) is in right ascension 18^h 36^m, declination north 19° 58'; or, in the constellation Hercules, nearly 19 degrees south of Alpha Lyra or Vega. These deductions are by Prof. W. W. Campbell, director of Lick Observatory. In the January number of the *Astrophysical Journal* he describes his method of procedure. His results have been obtained by measuring the velocity of recession or approach of certain se-

lected stars by means of the spectroscope. He has, in all, employed 280 stars in his most recent research, and, as a final result, he finds that the point in the heavens toward which he supposes the solar system to be travelling is as given above. This is about 15 degrees south of the solar apex as calculated by Prof. Simon Newcomb.

Mars.—Astronomers have been too intensely occupied with the new star and the variation of Eros in brilliance to devote much attention to Mars. But the newspapers have not been backward in publishing "messages from Mars," a sensational and misleading title. What Prof. Douglas saw, and what he announced, was a cloud lighted up by the setting sun, which was visible

for seventy minutes. It was truly a message from Mars, but not from its inhabitants. The so-called discovery of canals comes in the same category. The illustrations herewith, especially the second, are the most accurate of the photographic delineations of the so-called canals that have been made. Fig. 1 was taken by Prof. E. A. Douglas, of the Lowell Observatory, Flagstaff, Ariz., Feb. 20, 1901; power, 500; exposure, thirty-six minutes. Fig. 2 was taken by Prof. Lowell, the director, June 5, 1901; power, 371; exposure, sixteen minutes. Both show the north polar snow cap. No cause worth recording has been assigned for the long hairlike lines. They can not be clouds, but the other markings may be. Both views show, as Prof. Lowell says, "the Mare Acidatum, also the changes in the canals during the interval," and also changes in the snow cap. As regards the habitability of Mars, no one doubts. It seems improbable, however, that of all the eight planets, the Earth alone should be the home of sentient beings. And the same may be said of the planetary worlds that revolve around the countless millions of other suns.

Jupiter.—The planet Jupiter affords many examples of the marvelous, proving true the trite saying, "The astonished astronomer has nearly outgrown his ability to be astonished." This giant planet has lately been well situated for observation, being on the meridian at midnight, and has been the target for bombardment by the telescope, spectroscope, and the photo-camera. Abundant evidence appears that Jupiter, from its immense size, has not yet emerged, as our world has, from his liquidity by heat, being still a white-hot world. One new feature lately observed is the existence of faint lines, somewhat resembling the

At this writing they have again appeared. No cause has been suggested that bears the impress of probability, but it affords another strong argument in favor of the hypothesis that Jupiter is in a white-hot, semifluid condition.

Another curious feature of Jupiter's disk is his belts. Several are visible, even with small telescopes, on each side of his equator, extending entirely around the planet. They are probably clouds, assuming the beltlike form by the rapidity of his rotation, only $9^h 55^m$, coupled with his giant size, 274,000 miles in circumference.

The same stripes are easily seen on Saturn, and with some difficulty on Uranus. Recently they have been seen there with the great telescope at the Naval Observatory. They therefore seem to be a feature belonging exclusively to the four outer planets, as the four inner ones have none. They are so conspicuous on Jupiter that he is often called the striped planet.

The librations of some of the shadows of Jupiter's satellites, while transiting his disk, have, ever since the invention of the telescope, attracted much attention, and elicited not a little discussion among astronomers. To deal intelligently with the problem, more observations than it has yet received are necessary. About three years ago Mr. C. T. Whitmell predicted that Satellite III, when Jupiter was in quadrature, if transiting his disk equatorially, would be $6\frac{1}{2}$ times broader at the phase limb than at the other, and that its height would remain constant; but if the transit was not equatorial, the change in breadth would be less. Lately these predictions have been verified by observation by Mr. S. Bolton and others, whose results are in admirable agreement.

THE YERKES OBSERVATORY, WILLIAMS BAY, WISCONSIN.

so-called canals on Mars, crossing at various angles one of his equatorial belts. No cause has as yet been assigned for their existence there and not elsewhere. In 1869, 1880, and 1890 small black spots mottled his surface, which gave rise to the theory that the phenomenon is periodic.

Prof. Schaeberle, of Lick Observatory, also drew attention about the same time to the strange behavior of the shadows not only of this, but also of the other three.

On June 30, 1902, the Earth as seen from Jupiter will transit the Sun, as do Mercury and

Venus as seen from the Earth. During the transit Satellite I will cross the disk of Jupiter in a way that will occult its own shadow, which, owing to the penumbral fringe being larger than the satellite, will cause it to be seen as a ring around the satellite. As such a phenomenon is rare, it will be extensively observed, for it has never yet been seen by mortal eyes, nor can it be

being greatest in middle latitudes and less at the equator and the poles. This conclusion is derived from the observation of the relatively small cloudlike masses lying in the upper regions of the planet's atmosphere. It is very doubtful whether the red spot is to be considered as a cloudlike mass. It seems to lie in the deeper levels of the Jovian atmosphere, as is indicated by appear-

THE GREAT TELESCOPE OF THE YERKES OBSERVATORY.

except when the Earth is transiting his disk, which will not occur again in several hundred years.

Prof. Edward E. Barnard, the discoverer of Jupiter's fifth satellite, has in the past two years made it a study, and finds its orbit elliptical, like all the 21 moons in our system. This, the smallest member of our system except the asteroids, revolves around the planet in $11^h 57^m 22.64^s$. Not only do the planets revolve, but their orbits also do the same. The Earth's orbit makes a revolution once in 109,830 years, while that of the little moon under consideration completes its revolution in 4.9 months, or over 900 degrees a year, or 2.465 degrees a day. Seen from the little moon, Jupiter's disk would extend half-way from the horizon to the zenith. The solar system affords no other example of so rapid a motion or anything comparable to it.

When the great red spot or continent, which resembles a floating island, is observed for the purpose of determining the period of the planet's rotation on his axis, it is found that the period is subject to a regular change, causing a lengthening of its period. Of course the rotation period of the planet itself can not change, but must forever be a constant quantity. This oval red spot was discovered, or, rather, first noticed, in 1869, and since it has floated three-fourths around the planet from east to west, or the reverse of the planet's rotation. The spot has slowly increased in length since its discovery. The rotation period of Jupiter is not the same in different latitudes,

ances when it is near the borders of the planet. Small bright objects are often seen above it, and its surface is frequently veiled by a thin cloudlike screen. Prof. Bredichin, who has made this strange phenomenon a study for years, considers the brick-colored spot a solid mass, sliding over the liquid surface of the planet, among the lower layers of the vaporous atmosphere. It is very improbable that the spot is a sea of glowing lava, as many suppose, because of its color, but more likely a semisolid crust. The width of the spot is 8,000 and the length 30,000 miles.

A Nest of Nebulae.—One of the most remarkable discoveries made in recent years in astronomy was the depiction on a photograph plate covering a portion of the sky two minutes less than the disk of the Moon of 108 nebulae. The photograph was taken by Prof. Max Wolf, at the Heidelberg Observatory, with the Bruce photographic telescope. This astonishing cluster is in the constellation Coma Berenices, in a nebulous region due east of the star β , and preceding it by about thirteen minutes of time. Four or five of them occupy a larger space than the others, and show central condensations, and some are elongated; but the greater number are round and very small. We should call a single nebula small whose apparent size was equal to the Moon. The photograph was taken on March 4, 1901. This is another striking example of what celestial photography is accomplishing in regions from which the actinic rays have been speeding toward us with the velocity of light for thousands of years.

A Magnificent Bolide.—Since the last report but two fire-balls or bolides have appeared in any part of the world. They appear so unexpectedly and suddenly, and disappear so quickly, it is impossible to make observations of much value to determine their height above the Earth, or how and where they are formed, and if their paths are orbital or simply tangential to the Earth. One appears to have been of unusual brightness. From published accounts it appears that not since the famous one of 1860, which traveled the atmosphere from the Rocky Mountains to Nantucket, has one so interesting appeared. It was first seen in England, and was visible over a wide extent in Ireland, Wales, and the Isle of Man. Reports from 258 stations have been received, from which its height above the Earth at the beginning, middle, and end of its visible path has been computed, and also its velocity. The length of its path in England was 66 miles, height 68 miles, decreasing to 26 miles, velocity 11 miles a second. It appeared Oct. 21, 1900, at 8h 35m 25s. Many observers made the usual reports of a noise having been heard during its passage. Such sounds, however, are purely imaginary and impossible, for it was visible but a few seconds, and was at a height of 26 miles, so that before the sound could reach the observer the meteor must have disappeared at least two minutes. It is a very loud noise that can be heard 26 miles, especially if it is made in a medium as rare as our atmosphere is at a height of 26 miles. A singular circumstance connected with this phenomenon was that on the same evening 5 other fire-balls were seen, but none comparable to the one above described, and all from different radiants.

On the afternoon of Dec. 7, 1900, a fire-ball passed across Colorado and Wyoming, which is said to have rivaled the Sun in brightness. It appears to have burst near the northern boundary of Colorado, and horses and cattle were terribly frightened by it. It may have been entirely consumed, or fallen to the Earth as dust, or may have continued on its journey, and may still be rushing through space.

There appears to be no connection between bolides and shooting-stars, as many suppose. During the great star showers of Nov. 13, 1833, and a repetition of it on Nov. 14, 1866, both of which the writer witnessed, when countless thousands were visible from any one point, not a bolide was seen.

Asteroids.—A broad stripe of the heavens on each side of the ecliptic is tattooed with these little "pocket planets," as they are often called; all revolving round the Sun with as much dignity as the Earth; all in the same direction, west to east; and all very small, from 15 miles in diameter to Ceres, 477 miles. The smaller would be a world but 47 miles in circumference. When a new one is found it receives a provisional letter (as ES), and when ascertained not to be identical with any before known it receives a permanent number (as 446). It finally receives a name.

It is a great task to take care of so large a family (nearly 475), and astronomers now look with disfavor on their further discovery; but since the very faint Eros was found—which has an orbit so abnormal, and is going to solve the problem of the Sun's distance, having two-thirds of its orbit between the Earth and Mars, while the others are all between Mars and Jupiter—they look with more favor on the continued search.

The following numbers have recently received names, for the discovery of which Prof. Max Wolf, of Heidelberg, appears to have a monopoly:

Dr. Edward E. Barnard, with the micrometer of the 40-inch refracting telescope at Yerkes Observatory, has made many observations and measurements of the first four discovered asteroids—Ceres, Pallas, Juno, and Vesta. The first was discovered on the first day of the nineteenth century, Jan. 1, 1801. None but a practical astronomer can form the least conception of the difficulty of making such delicate measurements as these. He says "the values 0.095" and 0.263", from the measures of 1894, are as closely in agreement with previous results as can be expected; this is pleasing after having waited six years for a chance to measure them again."

These are the largest of all the minor planets. Following are the assumed diameters of the four: Ceres, 477 miles; Pallas, 304; Juno, 120; Vesta, 239 miles. These figures are the results of fifty-nine nights' work.

Comets.—Since last report, five comets have been discovered—viz., (a) (b) and (c) in 1900, and (a) and Encke's in 1901. Comet (c) of 1900 was discovered by Giacobini, and adds another to the constantly increasing list of comets of short period. It was not large or bright, but it was visible for a long time, which enabled astronomers to determine that its period is approximately seven years.

The first comet of the twentieth century—(a) of 1901—has in brightness, and in several other respects, surpassed all comets since the famous one of 1882. Unfortunately, it was so placed and its direction of motion was such that it was seen at but two Northern observatories—by Prof. E. L. Larkin, director of the Mount Lowe Observatory, Echo Mountain, southern California, and by Prof. Campbell, of Lick Observatory. Prof. Larkin says it "was observed for thirty-four minutes on May 17, and thirty-six minutes on the 18th, when it disappeared behind the peaks of the Tejuanga, a spur of the San Gabriel mountains. On the last date it was well seen, but it had become very much fainter. Its tail was very broad in proportion to its length, which was only one degree. Its motion was rapid, and no trace of it could be seen on the 19th, 20th, or 21st. No time was available to secure its spectrum." Its orbit elements indicate it to be an ellipse of long period. It was discovered by Mr. A. Hills, at the Cape of Good Hope, and by Mr. Tattersall, of West Australia, on the morning of April 23, at which time it was near perihelion and very bright, with a tail or tails about 10 degrees in length. Its period is estimated at 1,143 years.

Encke's comet has the shortest period of any,

only 3.3 years. Those of the shortest are called Jovian comets, because when at their aphelia they are at or near the orbit of Jupiter. Of this class there are 22. Similarly Saturn has 3, Uranus 4, and Neptune 6. The present status of these periodicities is doubtless due to the attraction of those giant planets. The first recorded appearance of Encke's comet was in 1786. On a subsequent return to perihelion it was rediscovered by Caroline Herschel, and in 1818 it was again seen, without raising a suspicion that it was the same comet. Collecting the observations made in 1818, Encke attempted to compute an orbit for it, on the supposition that it was a parabola or an hyperbola, but failed, as it seemed to be not only an ellipse, but one of only three and a quarter years. As the time for another return drew near, he computed a finding ephemeris for it for 1822, and it kept its appointment to within a few days; but unfortunately it was visible only in the southern heavens, and was seen by only a single person. Since then it has not been missed at a single return. It is sometimes seen with a short bushy tail, but generally it is tailless, appearing like a faint circular hazy disk. It is sometimes visible to the naked eye. One anomalous feature of the motion of this comet is that its period is regularly shortening at the rate of about two hours at every return. The cause of this retardation is unknown. It is usually, and with some reason, ascribed to its encounter with something, no one knows what, called a resisting medium, that pervades all planetary spaces and may be of infinite extent. If this theory be true, the same influence will ultimately cause all the planets to fall into the sun.

Brorsen's comet, due at perihelion in January last, escaped detection, as is often the case with short-period comets. Denning's comet also escaped detection.

Astronomical Photography.—The popular as well as the scientific world view with astonishment the advancement in this new department of astronomy. The rapid plates take to a great extent the place of the human eye. Daily and hourly, in some part of the world, the Sun is photographed, thus recording the number, size, and position of his spots and pores and faculae. The constellations are likewise photographed, brought to view, by long exposure, stars too faint for any visual telescope to see, and clusters and nebulae whose light left them hundreds and thousands of years ago. Dr. Roberts, of England, who ranks high as a celestial photographer, has recently published a volume of his photographs of various objects, such as the Sun, Moon, comets, clusters, the Milky Way, and double and triple stars, which is very valuable. A more wonderful or interesting story has seldom been presented to the world than the marvelous revelations of what the great Crossley 3-foot photographic telescope at Lick Observatory has done in celestial photography, as manipulated by the late Prof. Keeler. His photographs of the ring nebula in Lyra, the annular nebula in Cygnus, the famous cluster of stars 13 Messier in Hercules, the great nebula in Andromeda, and many other interesting objects, reveal much that was formerly unknown. Happening to expose one of Dr. Swift's faint nebula, he found that it was spiral. A comparison of these photographs with those to be taken centuries hence may decide many questions.

At Harvard Observatory, in the last two and a half years, 10,000 photographs have been taken. By an exhaustive examination of the plates it was found that the famous asteroid Eros, now attracting so much attention, appears on 15 charts taken

before it was discovered by Witt, and on 5 spectrum plates between October, 1893, and May, 1894, and on 6 plates in 1896. On one of the plates 8 asteroids were depicted, and on another 46 new nebulae were counted. Prof. Keeler discovered 7 new nebulae on a photograph plate that had been exposed to the well-known nebula 51 Messier, all on one square degree. On a plate exposed four hours on one of Herschel's nebula in Andromeda, 36 new nebulae and nebulous stars were found, and on another 20. All these had escaped Sir William Herschel's eye and telescope. Besides the nebulae, there was often found a considerable number of objects which are probably nebulae so small that the resolving power of the great 36-inch telescope is insufficient to define their true character.

Dr. Isaac Roberts has found by photography a very remarkable nebula in Monoceros, which is well worthy of study. A black gap or hole is in the center, resembling a dark tunnel through which everything beyond is of inky blackness, in appearance totally unlike any other known nebula.

These citations are sufficient to show how photography, by long exposure and rapid plates, reveals objects far beyond the powers of any telescope. The Milky Way, that mighty Gulf Stream of stars, is made up of the silver light of hundreds of millions of suns, only a few of which will ever be visually seen by any telescope.

Astronomical Prizes.—The following astronomical prizes since the last report have been awarded to astronomers for meritorious work in its several departments:

The Laland prize, of a silver medal and 540 francs, was awarded by the French Academy of Sciences to M. Giacobini, of the Nice Observatory, for the discovery of comets (a), Jan. 31, 1900, and (c) of Dec. 20, 1901.

The Damoiseau prize was awarded to J. von Hepperger, Professor of Astronomy at Graz, for investigations into the motions of Biela's comet at its separation into two separate comets at its return in 1846, resulting in the production of the two Andromeda star showers of Nov. 26 and 27.

The Valtz prize was given to Abbe Verechaffel, of the Abbazia Observatory, for extensive star-zone work.

The Janssen prize, a large gold medal, was awarded to Dr. Edward E. Barnard, now of Yerkes Observatory, for the discovery, in 1892, of Jupiter's fifth satellite.

The Gold Medal of the Royal Astronomical Society of England was bestowed on Prof. Edward C. Pickering, director of Harvard College Observatory for extensive astronomical research.

The same society presented a cash prize of 1,000 guineas to Sir William and Lady Huggins, for distinguished services to astronomy.

Beginning with 1823, the Royal Astronomical Society of London has, with a few exceptions, annually awarded a gold medal for conspicuous originality and research, in whatever country they might be shown; and the honor is heightened by the fact that occasionally it has voted to give no medal at all. For forty-two years no award was made outside of England and the Continent of Europe, and it was only in 1865 that the medal first came to this country, twenty years after the establishment of the first American observatory. The recipient was Prof. George P. Bond, director of Harvard Observatory, a son of Prof. William C. Bond, former director of the same observatory. Nine years later the same honor was conferred on an American astronomer, Prof. Simon Newcomb, of Washington, whose

work at the Naval Observatory, and also in the compilation of the Nautical Almanac, was remembered. The declared reason for its bestowal, however, was his tables of Neptune and Uranus and his contributions to mathematical astronomy. In more than fifty years, then, only two Americans received the society's medal. The contrast between this record and that of the next twenty-five years is sufficiently emphasized in the mere statement that, out of the 21 awards made in the quarter of a century ending with the present year, 8, or more than a third, have come to the United States, not including a special award, called the Hannah Jackson Gwilt Medal, given to Dr. Lewis Swift in 1897. When it is remembered that the other 15 were distributed in England, Germany, and France, the comparative accomplishment of this country in a science which is generally considered to be the most purely scientific of all, will be the more readily realized.

Women as Astronomers.—The recent publication of the Vassar College Observatory is one of peculiar interest. It gives a mass of valuable work that would do credit to any observatory where women never enter. The observers there have published a catalogue of stars within one degree of the north pole. Miss Caroline Furness has measured the distortions of the Helsingfors astro-photographic telescope deduced from photographic measures. Mary W. Whitney is the director of Vassar College Observatory, over which the late Maria Mitchell so long and ably presided, to whom the King of Denmark presented a gold medal for discovery of a comet. At the instance of Prof. Jacoby, of Columbia University, Miss Whitney procured a Repsold micrometer, which Miss Furness has employed in the measurement of twelve photograph plates of the north-polar sky, sent to Prof. Jacoby by Prof. Donner, of Helsingfors, in Finland, who took them. She pronounces Donner's plates to be entirely free from optical distortion.

Every astronomer in the world recognizes the valuable aid rendered to astronomy by Mrs. Fleming, long a valued assistant to Prof. E. C. Pickering at Harvard College Observatory, who has discovered many variable and some temporary stars. In one year she discovered 23 new variables, 15 of which showed bright hydrogen lines in their spectra.

Mme. Ceraski, of Moscow, has discovered many variable stars, some of them being of a distinct type. The first variable—21, 1900, Monocerotis—was discovered by her. By examining photograph plates she found the star in March, 1899, to be of $11\frac{1}{2}$ magnitude, but in March, 1900, it had risen to the ninth magnitude, and in October to 8.8.

Lady Huggins has devoted years of arduous labor to the advancement of astronomy, and her achievements were considered so valuable that she, jointly with her distinguished husband, Sir William Huggins, was recently presented by the Royal Astronomical Society with 1,000 guineas. Among others is Miss Agnes Clerke, who is noted as a writer on astronomical subjects.

AUSTRALASIA, one of the grand divisions of the globe, consisting of the continent of Australia and island colonies of Great Britain, with interjacent islands. With the exception of the Dutch and German portions of New Guinea, the German protectorates of the Bismarck Archipelago and the northern Solomon Islands, the French colony of New Caledonia, and some islands under native rule, chief of which are the New Hebrides, all the islands of Australasia belong to Great Britain. The six colonies of the Australian

Commonwealth and the colony of New Zealand are self-governing, each having its representative Legislature, with a responsible ministry, disposing of its own revenues and making its own laws under a charter granted by the British Parliament, subject to a certain reserved veto power of the Imperial Government. Important powers of legislation and taxation have now been delegated by the Australian colonies to the Federal Parliament, over which the imperial control is less authoritative than it has been over the individual colonies. The executive chief who represents the Crown and gives final sanction to legislation in the Federal Commonwealth is a Governor-General.

The Commonwealth of Australia.—The Federal Parliament consists of a Senate and a House of Representatives. Each of the six states forming the commonwealth sends 6 Senators to the Parliament, who are elected by the whole body of voters in the state. The term is six years, and half the Senate is renewed every third year. In case of a deadlock between the Senate and the House of Representatives the Senate must be dissolved and new Senators elected. The House of Representatives consists as nearly as may be of twice as many members as there are Senators, and the seats are apportioned among the colonies according to their population. The first Parliament has 75 representatives, of whom New South Wales sends 26, Victoria 23, Queensland 9, South Australia 7, Western Australia 5, and Tasmania 5, every colony being entitled to at least 5 seats. The term is three years unless the House of Representatives is dissolved by the Government before that time expires.

The Senators, as well as the members of the House of Representatives, are elected by the electors in each state who are qualified to vote for members of the lower house of the state Parliament, but plural voting is not allowed in Federal elections. A Senator or a member of the House of Representatives must be a British subject by birth, twenty-one years of age, or have been naturalized for five years, and must have been a resident of Australia for three years, the qualification being precisely the same as for an elector. The Senate does not have the power of initiating taxation or money bills, but may reject them or send messages to the other house suggesting amendments. Members of Parliament receive £400 a year, ministers not more than £12,000 for the whole Cabinet, the Governor-General £10,000. Ministers must be members of Parliament, or become elected within three months.

The Federal Parliament has power to legislate on matters relating to commerce, railroads, shipping, lighthouses, common finance, defense, postal, telegraph, and allied services, census and statistics, marriage and divorce, emigration and immigration, currency and banking, weights and measures, and conciliation and arbitration in labor disputes. The Governor-General has a Cabinet of 7 ministers, all of whom must be members of Parliament, or must secure election within three months after their appointment. The commonwealth, comprising the colonies of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania, designated the Original States, was proclaimed on Jan. 1, 1901, five colonies having expressed by a general vote of the people their desire to federate, and the British Parliament having on July 9, 1900, passed the act constituting the commonwealth. Western Australia voted to enter the federation in August, 1900.

The Earl of Hopetoun was appointed in November, 1900, to be the first Governor-General of

Australia, his functions beginning with the inauguration of the commonwealth on Jan. 1, 1901. John Adrian Louis Hope, the seventh Earl of Hopetoun, born Sept. 25, 1860, at the hereditary seat in Scotland, succeeded his father at the age

THE EARL OF HOPETOUN, GOVERNOR-GENERAL OF AUSTRALIA.

of thirteen, was educated at Eton, and passed at Sandhurst, but did not enter the army. He was whip in the House of Lords, lord in waiting to the Queen, lord high commissioner to the General Assembly of the Church of Scotland in 1887 and the two following years, and in 1889 was appointed Governor of Victoria to succeed Sir Henry Loch. Returning to England in 1895, he presided over the Institute of Naval Architects, succeeded Lord Lathom as Lord Chamberlain at the end of 1898, and received his appointment as the first Governor-General of Australia in November, 1900.

The first ministry was composed as follows: Prime Minister and Minister for External Affairs, E. Barton; Attorney-General, A. Deakin; Minister for Home Affairs, Sir W. J. Lyne; Treasurer, Sir George Turner; Minister of Trade and Commerce, C. C. Kingston; Minister of Defense, Sir John Forrest; Postmaster-General, J. G. Drake.

The Crown colony of Fiji is administered in accordance with native laws and customs, and its Governor is High Commissioner for the Western Pacific, intrusted with the supervision of British interests in the islands under native rule. British New Guinea is under the administration of a Lieutenant-Governor instructed by the British Colonial Secretary in agreement with the Australian colonial authorities. New Zealand has not joined the commonwealth.

Area and Population.—The area in square miles of the states forming the commonwealth, according to the latest surveys, and their population as estimated in 1899 are given in the following table:

ORIGINAL STATES.	Area.	Population.
New South Wales.....	310,367	1,356,650
Victoria.....	87,884	1,163,400
Queensland.....	668,497	512,604
South Australia.....	903,690	370,700
Western Australia.....	975,920	171,032
Tasmania.....	26,215	182,508
Total.....	2,972,573	3,756,894

The increase in the population of New South Wales in ten years was 274,830, and of this increase 17 per cent. was due to immigration and 83 per cent. to the excess of births over deaths. There were 233,233 children on the rolls of the state schools in 1899 and 149,439 in average attendance, with 60,159 in private schools. There were 449 Chinamen who left the colony in 1899 and only 36 arrived. The total number of immigrants was 77,634, and of emigrants 70,220. The population of Sydney, the capital, was esti-

mated in 1899 at 438,300. The total population of New South Wales in 1901 was 1,362,232.

The census of 1901 showed the population of Victoria to be 1,195,874. The urban population in 1899 was 56 per cent. of the total population, Melbourne, the capital, having 477,190 inhabitants in 1899, Ballarat 46,410, Bendigo 43,112, and Geelong 23,440. The population of Melbourne in 1901 was 493,956. The increase in the four towns in ten years was 12,303, and in the rural districts 43,166. The census of 1901 showed an increase in the population of the colony of only 55,469 in ten years, and this was almost entirely in females. The natural increase since 1891 was 180,000, showing that 125,000 persons had left the colony. The number of immigrants by sea in 1899 was 85,384, and of emigrants 86,948. Education is compulsory between the ages of six and thirteen, and in 1899 there were 1,892 state schools, with 4,808 teachers and 143,844 pupils in average attendance, being 60 per cent. of the number enrolled.

The census of 1901 made the population of Queensland 502,892. The population of Brisbane, the capital of Queensland, was estimated at the end of 1899 at 121,262, including suburbs, and there were 7 smaller towns with between 14,000 and 26,000 inhabitants. The number of immigrants in 1899 was 39,916, including 979 Chinese and 1,537 Pacific islanders; emigrants, 33,590, including 836 Chinese and 968 Pacific islanders. There were 888 elementary schools in the colony at the end of 1899, with 2,012 teachers and an average attendance of 63,133 pupils, while 11,389 attended 166 private schools.

Adelaide, the capital of South Australia, had 148,644 inhabitants at the end of 1899. The number of immigrants in 1899 was 33,634, and of emigrants 32,042. The census of 1901 showed an increase of 13 per cent. in population in ten years, compared with 14 per cent. in the previous decade. The urban population increased 22 per cent. and the rural population 7 per cent., reversing the process of the previous decade, in which the urban population decreased 6 per cent., while the rural population increased 7 per cent. Public lands are reserved to afford educational funds. In 1899 there were 284 regular and 393 provisional schools, and the number of scholars was 68,329.

The immigration into Tasmania in 1899 was 24,959, and emigration 20,805. The movement was mainly between Victoria and Tasmania.

The population of Western Australia on June 30, 1900, was estimated at 178,196, consisting of 116,401 males and 61,795 females. Perth, the capital, had 34,610 inhabitants, and Fremantle had about 16,000, which was more than the entire colony had in 1859, thirty years after its first settlement. The influx of gold-seekers from the other colonies and from over the sea has ceased. In 1899 there were 20,278 arrivals and 20,225 departures. The average school attendance in 1899 was 12,465 in 205 Government schools and 4,359 in 83 private schools.

The movement of population in the several states for 1899 was as follows:

COLONIES.	Marriages.	Births.	Deaths.	Excess of births.	Net immigration.
New South Wales..	9,275	34,461	15,901	20,560	7,414
Victoria	8,140	31,008	16,578	14,430	*1,564
Queensland.....	3,449	13,899	6,144	7,755	6,326
South Australia..	2,265	9,397	4,406	4,991	1,592
Western Australia.	5,174	2,324	2,850	53
Tasmania.....	1,147	4,674	2,214	2,470	4,154

* Net emigration.

Finances.—The revenue of the several Original States for 1899, their expenditure, and the state

of their debts on June 30, 1900, in New South Wales, Victoria, Queensland, South Australia, on June 30, 1899, in Western Australia, and on March 31, 1899, in Tasmania are shown in the following table:

COLONIES.	Revenue.	Expenditure.	Debt.
New South Wales.....	£9,973,736	£9,811,402	£65,332,993
Victoria.....	7,463,117	7,331,386	48,774,885
Queensland.....	4,588,207	4,540,418	34,348,414
South Australia.....	2,780,858	2,779,317	26,156,180
Western Australia.....	2,633,081	2,396,448	11,804,178
Tasmania.....	943,970	871,453	8,395,639

Of the revenue of New South Wales £2,617,313 were derived from taxation, £2,108,433 from lands, £5,031,709 from services, and £216,281 from other sources. Of the expenditure £2,049,220 were expended on railroads and tramways, £754,527 on the post-office and telegraphs, £2,310,271 to pay interest on the public debt, £27 for immigration, £726,498 for public instruction, and £3,970,859 for other public works and services. The average rate of interest on the public debt is 3.63 per cent., and since four-fifths of the debt was contracted for railroads, tramroads, telegraphs, water-works, and sewerage, which yielded a net return of 3.45 per cent., four-fifths of the interest on the whole public debt was earned by these public works, on which the capital expenditure had been £64,371,745, viz., £42,084,214 for railroads and tramroads, £1,127,740 for telegraphs and telephones, £9,327,913 for water-supply and sewerage, and £11,831,878 for other works. The public wealth at the end of 1898 was estimated at £169,705,000 and private wealth at £378,116,000; total, £547,821,000. The revenue for the year ending June 30, 1901, was £10,794,233.

The revenue collected in Victoria in 1899 was £7,396,944, of which £1,952,453 were derived from customs, £315,721 from excise, £108,745 from the land tax, £305,762 from the duties on estates of deceased persons, £17,735 from the duty on bank-notes, £162,500 from the stamp duty, £40,735 from tonnage and navigation dues, £182,154 from the income tax, £2,849,370 from railroads, £553,672 from posts and telegraphs, £408,652 from public lands, and £499,445 from other sources. The amount raised by taxation was £3,085,805. The total expenditure was £7,014,706, of which £220,199 were general expenditures, £313,055 pensions, £1,879,148 debt charges, £1,703,196 expenses of the railroads, £262,025 expenses of other public works, £520,824 expenses of posts and telegraphs, £67,186 for public lands, £605,875 for public instruction, £332,558 for charitable institutions, £162,526 for courts of justice, £307,848 for police and jails, £96,092 for customs and harbors, £137,524 for mining and agriculture, £197,585 for defense, and £209,065 for other purposes. The revenue of Victoria for the year ending June 30, 1901, was £8,087,264. Of the public debt of Victoria £37,210,611 were borrowed for railroads, £7,670,807 for water-works, £1,111,477 for school buildings, and £2,361,382 for other public works. The average rate of interest is 3.83 per cent. The local debts amount to £8,474,471.

Of the revenue of Queensland £1,461,690 came from customs, £148,423 from excise and export duties, £245,426 from stamps, £62,698 from licenses, £66,477 from the duty on dividends, £323,622 from pastoral leases, £295,121 from other rent and sales of land, £1,422,852 from railroads, and £309,471 from posts and telegraphs. Of the expenditures £1,339,149 went for interest on the debt, £103,935 for endowments to muni-

cipalities and divisions, £286,229 for public instruction, £168,157 for the Colonial Treasurer's department, £96,123 for public lands, £67,116 for agriculture, £947,191 for railroads, and £362,908 for posts and telegraphs. The expenditure out of loans was £1,182,668, of which £637,675 were for railroads, £40,459 for telegraphs, £57,222 for rivers and harbors, £266,710 for loans to local bodies, £54,490 for public buildings, and £18,511 for advances to sugar planters. The revenue for 1901 was estimated at £4,594,370, and expenditure at £4,571,738. The actual revenue was £4,327,300, and expenditure £4,571,600.

The revenue of South Australia is derived mainly from customs duties, internal revenue, railroads, posts, and telegraphs, and lands, and the main expenditure is for railroads and public works and interest on the debt, only about 10 per cent. being required for civil administration, justice, police, and defense. Over half the debt was contracted for the construction of railroads, water-works, and telegraphs. In the year ending June 30, 1901, the revenue of South Australia was £2,818,712.

In Western Australia £872,300, about a third of the total revenue, was derived from import duties, and the remainder from railroads, the postal service, mines, and leases of public lands. The interest on the public debt amounts to £439,825 and the sinking-fund to £377,161.

Of the revenue of Tasmania 58 per cent. is derived from customs duties and taxation, 32 per cent. from the railroad, postal, telegraph, and other services, and most of the remainder from rent and sale of public lands. Of the expenditure 36 per cent. goes for interest, 35 per cent. for public works, 10 per cent. for law and justice, 8 per cent. for general purposes, 6 per cent. for charitable institutions, and 5 per cent. for education and religion. A part of the territorial revenue is applied to the reduction of the debt. The revenue for 1900 was estimated at £1,040,107, and expenditure at £926,364. The earlier loans, obtained solely for the construction of public works, pay 4 per cent. interest. The latest loan bears 3½ per cent. interest nominally, and taking account of expenses and commissions the net rate is 3.62 per cent.

Commerce and Production.—The value of the foreign trade of the several states for 1899 is given in the following table:

COLONIES.	Imports.	Exports.
New South Wales.....	£25,594,315	£28,445,466
Victoria.....	17,952,894	18,567,780
Queensland.....	6,764,097	11,942,858
South Australia.....	6,884,368	8,388,396
Western Australia.....	4,473,532	6,985,642
Tasmania.....	1,769,324	2,577,475

The exports from the Australasian colonies, including New Zealand, which rose in value from £78,453,000 in 1898 to £88,845,000 in 1899, fell to £85,394,000 in 1900, the decrease being due to the fall in the value of the wool exports, which declined in value £6,465,000, while gold increased £1,218,000 and all other exports £1,218,000. The total value of imports increased from £68,537,000 in 1898 to £72,178,000 in 1899 and £79,631,000 in 1900.

Of the total area of New South Wales only 2,440,968 acres were cropped in 1900. About a fourth of the total area is covered with forests. The Government had alienated 46,856,577 acres and leased 128,034,958 acres. Land can be obtained by conditional purchase or on a conditional lease with the privilege of purchase, at the fixed price of £1 an acre for not less than 40 or more

than 640 acres in the eastern and for a maximum of 2,560 acres in the central division; or in the central division 1,280 acres may be taken as a homestead selection, or 10,240 acres of grazing land as a settlement lease on payment of annual rent and on condition of continuous residence, without which condition the price is £2 an acre for the maximum of 320 acres. Special areas may be reserved by the Government in any one of the three divisions, to be sold for a minimum price of £1 10s. for the maximum of 320 acres in the eastern division, and 640 acres in the central and western divisions; and town and suburban lots may be sold at auction with an upset price of £8 for the former and £2 10s. for the latter. In the western division the Government may lease land for pastoral purposes under various forms and conditions. The production of wheat in New South Wales in 1900 was 13,604,166 bushels; of corn, 5,976,022 bushels; of tobacco, 6,641 hundredweight; of sugar-cane, 170,509 tons; of wine, 739,668 gallons; of brandy, 9,624 gallons; of oranges and other fruit, 3,652 tons. There were 36,213,514 sheep, 1,967,081 cattle, 482,200 horses, and 239,973 pigs on Jan. 1, 1900. The Government timber reserves have an area of 5,946,355 acres. The quantity of timber sawn in 1897 was 175,168,000 square feet. The production of gold in 1899 was 496,196 ounces, value £1,751,815, making a total of £47,546,013 since the opening of the first mines in 1851. The quantity of native silver obtained in 1899 was 692,036 ounces, value £76,913; of silver-lead ore and metal, 444,627 tons, value £1,993,744; the value of copper, £395,451. From its discovery in 1858 there was £5,019,480 worth of copper produced, and since tin was found in 1872 the production of this metal had a value of £6,382,538. The number of persons employed in 1899 in smelting silver, tin, and copper ores in 42 furnaces was 46,159, and in manufactures 55,646 were employed. The coal raised in 1899 was 4,597,028 tons, of the value of £1,325,799.

The exports of home produce from New South Wales in 1899 were £19,221,854, and of foreign produce £9,223,612. The quantity of wool exported was 240,019,494 pounds, valued at £11,738,607. The value of tallow exported was £510,861; of hides and skins, £1,035,905; of leather, £439,429; of preserved and frozen meat, £588,935; of coal, £1,005,794; of gold coin, £3,489,286. The imports from other Australasian colonies in 1899 were £12,113,402; from Great Britain, £8,211,351; from other British possessions, £929,780; from the United States, £2,219,319; from other countries, £2,120,463; exports to Australasian colonies, £9,524,267; to Great Britain, £8,992,480; to other British possessions, £1,451,671; to the United States, £2,392,281; to other countries, £6,084,767. The overland imports were £3,464,320, and overland exports £4,961,495 in value. The mineral resources of New South Wales include coal, of which 5,507,497 tons were raised in 1900. Coal is exported to the other colonies, and was to Asia before the development of the Indian and Japanese mines.

The area under crops in Victoria in 1900 was 3,820,000 acres, producing 15,238,000 bushels of wheat, 6,116,000 bushels of oats, and 1,466,000 bushels of barley. There were 854,500 ounces of gold raised in 1899, valued at £3,418,000, the total value previously obtained since 1851 having been £250,738,820. There were 30,640 miners employed in the gold-fields and 60,070 operatives in the factories. The value of wool imported in 1899 was £2,351,059; of woollen manufactures, £609,689; of cotton manufactures, £985,931; of sugar and

molasses, £683,711; of live stock, £787,216; of iron and steel, £843,509; of timber, £441,298; of tea, £335,942; of hides and skins, £335,889; of silk manufactures, £334,637; of coal, £276,137; of oils, £245,152; of all other articles, £9,739,714. The exports of gold were £4,386,719; of wool, £5,701,410; of grain and flour, £1,643,463; of butter, £1,404,830; of frozen meat, £368,262; of hides and skins, £505,167; of leather and harness, £331,157; of live animals, £352,137; of sugar and molasses, £154,970; of clothing, £149,800; of tallow, £141,334; of reexport of tea, £160,939; all other exports, £3,267,602. Of the total imports of Victoria in 1899 the United Kingdom furnished the value of £5,990,027; Australasian colonies, £8,440,458; India, £340,435; Ceylon, £159,728; Canada, £19,378; other British possessions, £216,314; the United States, £883,472; Germany, £578,298; France, £199,849; Belgium, £122,236; Sweden and Norway, £107,833; Java and the Philippine Islands, £59,116; China, £56,844; all other countries, £159,646. Of the total exports the United Kingdom received £51,648,150; Australasian colonies, £5,209,300; India, £2,459,506; Ceylon, £109,298; Canada, £45; other British possessions, £1,431,166; France, £1,482,637; Germany, £767,537; Belgium, £612,569; the United States £235,021; Java and the Philippine Islands, £14,315; China, £481; other foreign countries, £597,764. The quantity of wool exported in 1899 was 121,877,604 pounds, nearly half of which came from other colonies. Victoria contains large lignite and coal deposits which have begun to be available recently through the extension of the railroads. The output of 250,000 tons in 1900 can be increased to any extent. The kinds of Australian coal discovered down to the present have not been of high quality, but in 1901 the Government geologist of Queensland reported the discovery of enormous beds of anthracite that are equal to the best quality of steam coal found anywhere. Of the imports into Queensland in 1899 the value of £2,905,437 came from Great Britain, £2,997,883 from Australasian colonies, £198,880 from other British possessions, £332,346 from the United States, and £329,551 from other countries. Of the exports £4,272,952 went to Great Britain, £7,027,367 to Australasian colonies, £222,301 to other British possessions, and £420,238 to foreign countries. The export of gold was £2,613,511 in value; of copper, £22,551; of silver, £46,552; of wool, £3,390,779; of sugar, £1,163,010; of hides and skins, £700,303; of tin, £80,959; of frozen meat, £851,635; of salted and preserved meat, £427,108; of meat extract, £215,209; of tallow, £468,829; of green fruit, £93,291; of pearl shells, £137,873. The imports of woven goods and clothing were £1,549,251 in value; of metal goods and metals, £956,916.

In South Australia less than 1½ per cent. of the land has been sold by the Government, but 11 per cent. has been leased to 538 tenants for pastoral purposes. The cultivated area in 1900 was 3,081,846 acres, of which 1,821,137 acres were under wheat and 34,915 acres were in orchards and vineyards. The yield of wheat in 1899 was 8,453,135 bushels; of wine, 1,080,772 gallons, 504,065 of which were exported. The number of horses in 1899 was 168,695; of cattle, 275,794; of sheep, 5,667,283. The value of mineral products exported was £453,020. The export of copper ore was £24,682; of copper, £406,208; of wool, £1,511,693; of wheat, £422,439; of wheat flour, £338,820. Of the total imports £2,040,430 came from Great Britain, £3,839,330 from Australian colonies, £217,055 from other British possessions, £364,801 from the United States, and £422,742 from

other countries. Of the total exports £2,805,787 went to Great Britain, £3,637,878 to Australian colonies, £517,823 to other British possessions, £247 to the United States, and £1,426,661 to foreign countries. The wheat crop of 1901 was 11,263,143 bushels, an increase of about 3,000,000 bushels in the yield of 1900.

In Western Australia there were 186,396 acres under crops in 1899, less than a three-thousandth part of the surface of the colony, but still showing a rapid increase in agriculture. Wheat and hay are the main crops. The area already sold to settlers was 6,478,949 acres. There were 2,609 leases of gold-mines, which gave employment to 16,080 men, while 4,920 were employed in washing gold. The gold production for 1899 was 1,643,877 ounces, valued at £6,246,732. The production of 27 copper-mines was 1,991 tons, valued at £41,452; of 103 tin-mines, 308 tons, valued at £23,163. There were 23 leases of lead and copper-mines and 71 leases of coal-mines. The export of gold in 1899 was 1,434,570 ounces, valued at £5,451,368. In the northern and northeastern parts of the colony are about 20,000,000 acres of good grazing lands along the stream beds. The live stock on Jan. 1, 1900, consisted of 65,817 horses, 296,267 cattle, and 2,273,246 sheep. The export of pearl shell in 1899 was £90,647 in value; of pearls, about £20,000; of sandalwood, £29,719; of timber, £553,198; of wool, £423,296; of skins, £61,998. Of the total imports Great Britain supplied the value of £1,550,029, Australasian colonies £2,312,357, other British possessions £163,190, the United States £203,777, other countries £244,179. Of the exports Great Britain took £3,774,247, Australasian colonies £2,937,574, other British possessions £191,554, the United States £78, and other countries £82,189. Western Australia is the source of the most valuable of the hardwoods that are used for submarine construction, street pavements, etc. The jarrah and karri woods are regarded as unrivalled for piles, bridges, and railroad ties, and streets paved with jarrah have stood heavy traffic for many years. Karri, though less durable under water and not so easily wrought, is more valuable for bridges and floors, and equally good for street blocks. Efforts have been made to have these woods and the various kinds of eucalyptus and other woods found in the virgin forests of this and other colonies adopted in Great Britain for street pavements and various structural purposes instead of timber imported from America.

Over one-fourth of the area of Tasmania has been sold or granted to settlers. There were 225,126 acres under farm crops in 1900, while 288,777 acres were sown to grass and 13,172 acres were orchard. The yield of wheat was 1,101,303 bushels; of oats, 1,148,160 bushels; of hay, 51,123 tons; of hops, 589,793 pounds. The exportation of apples and other fruits is very large. The live stock in 1900 comprised 31,189 horses, 160,204 cattle, 1,672,068 sheep, and 74,451 pigs. The colony contains rich deposits of tin, copper, galena, and iron ores, and coal. The alluvial deposits of gold have been worked out, but there are gold-mines, producing the value of £205,936 in 1899, when the silver export was £208,869 and that of copper ore £761,880. The quantity of silver and copper ores raised was 417,866 tons, valued at £1,633,724. The value of the tin export in 1899 was £281,947, making a total of £6,961,249 exported from the beginning of mining. The production of the coal-mines was 43,113 tons, value £17,008. The export of wool in 1899 was £357,757 in value; of silver and silver ore, £208,869; of timber and bark, £70,584; of hops,

£13,555; of fruit, fresh and preserved, £244,143. The imports of textiles were valued at £380,175; hardware, £106,353; sugar, £104,490; machinery, £98,720. Of the total imports the value of £501,120 came from Great Britain, £799,907 from Victoria, £275,414 from New South Wales, £158,099 from other British colonies, and £50,405 from foreign countries. Of the total value of exports £1,039,640 went to Great Britain, £391,602 to Victoria, £701,524 to New South Wales, £117,232 to other British colonies, and £327,477 to foreign countries.

Navigation.—The number of vessels entered at the ports of New South Wales during 1899 was 3,219, of 3,468,591 tons, of which 2,908, of 2,977,097 tons, were British or colonial and 311, of 491,494 tons, were foreign; cleared, 3,199, of 3,526,960 tons, of which 2,877, of 3,036,277 tons, were British or colonial and 322, of 490,683 tons, were foreign. The merchant fleet of the colony consisted on June 30, 1899, of 502 sailing vessels, of 55,554 tons, and 498 steamers, of 67,193 tons.

The number of vessels entered at Victorian ports was 2,024, of 2,662,792 tons, of which 393, of 1,009,272 tons, were British, and 1,321, of 1,218,480 tons, were colonial; cleared, 2,031, of 2,678,663 tons, of which 411, of 1,063,142 tons, were British, and 1,284, of 1,079,507 tons, were colonial. The merchant shipping comprised 233 sailing vessels, of 37,837 tons, and 148 steamers, of 60,964 tons.

At the ports of Queensland 662 vessels in the foreign trade, of 730,450 tons, were entered and 630, of 733,613 tons, were cleared during 1899. In the coasting trade 6,692 vessels, of 3,896,597 tons, were entered and 6,588, of 3,527,266 tons, were cleared. The shipping of the colony consisted of 144 sailing vessels, of 9,928 tons, and 90 steamers, of 12,867 tons.

There were 1,020 vessels, of 1,708,556 tons, entered and 1,025, of 1,720,810 tons, cleared at South Australian ports during 1899. The merchant shipping of the colony consisted of 227 sailing vessels, of 22,421 tons, and 108 steamers, of 28,445 tons.

At West Australian ports 685 vessels, of 1,333,052 tons, were entered in 1899, and 668, of 1,305,596 tons, were cleared. The colonial shipping consisted of 135 sailing vessels, of 6,653 tons, and 30 steamers, of 5,442 tons.

The number of vessels entered in Tasmania during 1899 was 797, of 662,757 tons; cleared, 755, of 655,358 tons. The shipping belonging to the colony consisted of 156 sailing vessels, of 8,894 tons, and 44 steamers, of 6,485 tons.

Railroads, Posts, and Telegraphs.—The railroads of New South Wales on June 30, 1900, had a total length of 2,896 miles, of which 2,811 were built by the Government at a cost of £38,477,269. The gross receipts in 1900 were £3,163,572; working expenses, £1,769,520, being 55.93 per cent. of the receipts. The Government tramways had a length of 71 miles, built at a cost of £1,924,720, and earning £409,724 in the year, less £341,127 for working expenses.

The state railroads of Victoria had a total length on June 30, 1899, of 3,160 miles, built at a cost of £38,974,410, of which £2,908,121 was provided out of the revenue and the rest was borrowed. The gross receipts in 1899 were £2,873,729, and expenses were £1,797,726, being 62.6 per cent. of the receipts. The net income was equal to 2.77 per cent. of the cost of construction, or 2.98 per cent. of the borrowed capital, on which the average rate of interest is 3.8 per cent. There were 45,805,043 passengers and 2,779,748 tons of freight carried in 1899.

There were 2,800 miles of railroads in operation

in Queensland at the beginning of 1900, nearly all the property of the Government, which had expended £19,110,725 in their construction. The gross earnings in 1900 were £1,373,076, and the operating expenses £844,101.

The railroads of South Australia at the end of 1899 had a total length of 1,883 miles, including 146 miles in the Northern Territory.

There were 1,850 miles of railroads in operation in Western Australia on June 30, 1900, including 495 miles of private railroads.

The railroads of Tasmania had a length of 547 miles in 1899.

The postal traffic of New South Wales in 1899 was 75,318,608 letters, 1,408,140 postal cards, 46,806,560 newspapers, 13,986,590 packets and book parcels, 654,474 parcels, 421,085 money-orders, for £1,436,927, and postal notes for £449,948.

The postal revenue of Victoria, including receipts from telegraphs and telephones, was £555,650, and expenses were £491,686.

The Queensland post-office handled 21,181,287 letters, 11,633,266 papers, 5,779,013 packets, and 268,895 parcels in 1899; revenue, £200,726.

The number of letters that passed through the post-office in South Australia was 19,765,396 in 1899; packets, 1,531,400; newspapers, 8,937,040.

In Western Australia 12,629,554 letters, 343,999 postal cards, 6,287,018 papers, and 3,015,995 packets were sent through the post-office in 1899. The postal and telegraph expenses were £230,700.

The postal traffic of Tasmania in 1899 was 9,748,055 letters, 1,811,344 packets, 6,293,018 papers, and 288,558 postal cards; receipts, £78,055; expenses of posts and telegraphs, £78,094.

The telegraphs of New South Wales on Jan. 1, 1900, had a length of 13,663 miles, with 35,630 miles of wire, constructed at a cost of £1,051,987. The number of messages in 1899 was 3,112,063; gross receipts, £475,438; net revenue, £168,758.

The length of telegraph lines in Victoria on June 30, 1899, was 6,747 miles, with 15,125 miles of wire. The number of messages in 1898 was 1,889,488. There were 13,591 miles of telephone wire.

The telegraph lines of Queensland at the close of 1899 had a length of 10,202 miles, with 18,968 miles of wire. The number of despatches sent during the year was 1,208,489, and 201,562 external despatches were received; receipts, £98,074; expenses of telegraphs and post-office, £347,713.

The South Australian telegraph lines had a length of 5,691 miles in 1899, including telephones, with 16,937 miles of wire.

The telegraphs of Western Australia had a length of 5,941 miles, with 8,749 miles of wire, on Jan. 1, 1900. The number of messages in 1899 was 1,136,513; net receipts, £79,716.

The telegraphs of Tasmania had in 1900 a length of 2,004 miles, with 3,252 miles of wire, including 428 miles of cable; number of messages, 250,958; length of telephones, 815 miles; total receipts, £23,897.

Defense.—The military forces in the colonies in 1899 numbered 31,861 men of all ranks, including 1,859 British regulars, 12,447 militia, and 17,555 volunteers and reserves. In New South Wales there were 835 regulars, 4,395 militia, and 4,756 volunteers and reserves; in Victoria, 393 regulars, 3,404 militia, and 2,102 volunteers and reserves; in Queensland, 287 regulars, 2,999 militia, and 7,417 volunteers and reserves; in South Australia, 30 regulars, 700 militia, and 661 volunteers and reserves; in Western Australia, 35 regulars and 730 militia; in Tasmania, 29 regulars, 219 militia, and 1,788 volunteers and reserves; in New Zea-

land, 250 regulars and 4,117 volunteers and reserves. Sir John Forrest, in June, 1901, reported the defense forces of Australia at 61,233 men and 15,000 cadets.

The sum appropriated for defense in New South Wales in 1900 was £280,058, including £31,897 of permanent expenditure from loans, but excluding £158,748 for the military contingent in South Africa. Victoria spent £197,585 in 1899; Queensland, £36,065 in 1900; Western Australia, £22,789 in 1899; Tasmania, £13,394. The contingents furnished by the Australasian colonies to aid Great Britain in the Boer war had a total strength of 8,360 men. New South Wales sent 1,378 regulars and 1,280 bushmen, with 2,546 horses; Victoria, 521 regulars and 905 bushmen, with 1,608 horses; Queensland, 417 regulars and 707 bushmen, with 1,361 horses; South Australia, 245 regulars and 330 bushmen, with 548 horses; Western Australia, 233 regulars and 243 bushmen, with 522 horses; Tasmania, 127 regulars and 188 bushmen, with 192 horses; New Zealand, 1,274 regulars and 523 bushmen, with 2,660 horses. In the Chinese operations there participated 260 men from New South Wales and 200 from Victoria and a gunboat from South Australia.

The naval force in the colonies of Australasia in 1900 consisted of 5 deck-protected cruisers and 2 torpedo gunboats of the royal navy, 2 of the cruisers being in reserve; 1 old monitor, 5 torpedo-boats, and two unarmored gunboats belonging to Victoria; 2 torpedo-boats in New South Wales; 1 cruiser and 1 auxiliary steamer in South Australia; 1 gunboat in Western Australia; 2 gunboats and 2 destroyers in Queensland; 1 torpedo-boat in Tasmania; and 4 torpedo-boats and 4 auxiliary steamers in New Zealand. The crews in New South Wales numbered 579; in Victoria, 309; in Queensland, 740; in South Australia, 162; in Tasmania, 39; in New Zealand, 1,004; total, 2,833 men. The British squadron on the Australian station, with headquarters at Sydney, numbered 9 vessels. A fleet of 5 fast cruisers of 2,575 tons displacement—the Katoomba, Tauranga, Ringarooma, Mildura, and Wallaroo—and 2 torpedo gunboats of 735 tons—the Boomerang and Karakatta—was equipped for service in the Australian seas under an agreement made with the Imperial Government in 1887, according to which the colonies which entered into the arrangement pay 5 per cent. interest on the cost of the vessels and the expenses of maintenance, the latter not to exceed £91,000 a year. The charge on the colonies in 1900 was £126,000, of which New South Wales contributed £38,130, Victoria £32,699, Queensland £13,559, South Australia £10,419, Western Australia £4,807, Tasmania £5,124, and New Zealand £21,262. These vessels are now obsolete, and some new arrangement will be made with the commonwealth. The cost of additional naval forces in 1900 was £95,300, of which £60,300 came from the imperial exchequer. Fortifications have been erected by the colonies to protect their principal harbors, and all have shared in the expense of building naval strongholds at King George Sound and Thursday island. Rear-Admiral Beaumont, commander-in-chief of the British fleet on the Australian station, advised the Commonwealth Government against the creation of naval reserves, considering the system by which the Imperial Government provides ships and men to be more effective and economical. Two first-class and 4 second-class cruisers, with 2 cruisers in reserve, are the force recommended to be maintained by the Federal Government.

The Federal Parliament.—The Earl of Hopton, Dec. 19, 1900, a few days after his arrival,

sent for the Premier of New South Wales, and commissioned him to form the first Federal ministry. Sir William J. Lyne, whose selection astonished and displeased the people of his own and of the other colonies because he had been the chief opponent of federation in the form that was adopted, and who had been chosen simply as a matter of constitutional usage and official eti-

tariff, in which revenue would be the secondary consideration, and the first would be to secure Australian manufacturers from the competition of imported goods. The ministers were all protectionists in their antecedents, but they indicated in their speeches that the Government would favor the intermediate policy of a low revenue-producing tariff, with reasonable protection for

certain selected industries that could not be continued without such aid. The electors were divided into low - tariffists and high - tariffists, two parties only. In the result 21 Senators and 35 Representatives were elected who favored low tariff, and 15 Senators and 40 Representatives who had declared themselves for high tariff. The Prime Minister, leader of the high - tariff party, claimed a working majority over the low - tariffists, whose leader was G. H. Reid, chief of the free-traders of New South Wales, his own state, who won over him a victory in the elections, which was less disconcerting and less dangerous to the compromise that he hoped to effect in tar-

THE GENERAL POST-OFFICE, MELBOURNE.

quette, being the actual Premier of the senior colony, returned his commission on Dec. 22, on the ground that he could not form an acceptable ministry that would be sufficiently representative of Australia, and advised the Governor-General to send for Mr. Barton, who was the acknowledged leader of the federation movement. This he did, and Mr. Barton promptly undertook the task. The State Premiers and ex-Premiers whom Sir William Lyne had asked to join the Cabinet refused to accept his leadership, demanding that Mr. Barton should form the ministry. They willingly accepted office under the latter, although he had never been a Premier. The commonwealth was inaugurated with ceremony at Sydney on Jan. 1, 1901. The death of Sir James Dickson, the first Postmaster-General, left a vacancy that was filled on Jan. 25, 1901, by the appointment of James G. Drake, of Queensland. The postal, telegraph, and telephone services of the states were transferred to the commonwealth on March 1. The elections to the Senate and House of Representatives of the first Federal Parliament were held on March 29 in New South Wales, Victoria, Tasmania, and Western Australia, and on March 30 in South Australia and Queensland. The electoral campaign was earnestly contested on the question of the tariff. There were three fiscal policies presented to the electors: tariff for revenue purposes only, or free trade, on the English model; low tariff, or a scale of duties adapted to produce the greatest amount of revenue, except in the case of industries that had been created and fostered by high protective duties, as in Victoria, which should enjoy such moderate protection as would preserve them from extinction; and high

iff legislation than the greater victory of his troublesome allies, the extreme protectionists of Victoria. In Queensland the election hinged less on the tariff than on the question of the abolition of Kanaka contract labor, which Mr. Barton had raised incautiously by declaring for a white Australia. The Labor party of Queensland, which asserts that sugar can be cultivated with white labor, took up the cry and won a victory at the polls for protection against black labor as well as for high tariff, although Mr. Barton had tempered his first declarations by saying that the abolition of Kanaka labor should only be accomplished gradually, out of consideration for the great interests involved. The Labor party in the various states was represented in the Federal Parliament by 8 Senators and 16 Representatives. The states elected the Senators by the block system, every voter being required to vote on one ticket for 6 separate candidates in the field. By this system a party controlling a majority of the voters in any state, such as the Labor party of Victoria, has the power of naming the entire representation of the state in the Senate. This was not done in any instance. Queensland, by a special provision of the Constitution act, had the right to make laws dividing the state into senatorial divisions, but did not avail itself of the privilege. The Constitution allows states to vote for Representatives on a single ticket, and this course was taken by Tasmania and South Australia, while the other states were divided into electoral districts. Tasmania adopted in both senatorial elections and those for members of the House of Representatives the Hare system of proportional representation

which was already in force in local elections. At the first meeting of the Federal Cabinet, on April 11, the suggestion of Mr. Chamberlain that Boer prisoners should be sent to Tasmania was rejected.

The first Australian Parliament was declared open at Melbourne on May 9 by the Duke of Cornwall, who was present as the King's High Commissioner. The Governor-General on May 10 outlined the proposed legislation. Parliament had to constitute a high court with extensive appellate jurisdiction; to create an interstate commission for regulating affairs between the states relating to trade and commerce, and especially in relation to railroads, with wide powers of judicial administration, so as to secure the interests of each state consistent with those of the commonwealth; and to pass a public service bill. The Government was taking steps to secure territory for the Federal capital in a location that was suitable in climate, accessibility, and natural beauty. Among the measures to be brought before Parliament were bills for restricting Asiatic immigration, for the diminution and gradual abolition of the introduction of labor from the South Sea islands, for conciliation and arbitration in cases of industrial disputes extending beyond the limits of any one state, for uniformity in the patent laws, and for granting a uniform franchise in all Federal elections by the adoption of adult suffrage. The question of old-age pensions would have to be postponed in view of present financial conditions. Subjects requiring legislation were banking, Federal elections, navigation, shipping, and quarantine. Consideration was being given to the best means of taking over, converting, renewing, and consolidating the public debts of the states. Regarding the tariff, the ministers considered inadmissible any policy tending to destroy the industries which the existing state tariffs had established, and that a tariff giving fair consideration to this factor must necessarily operate protectively as well as for the production of revenue. In regard to the relations of the commonwealth with the islands of the Pacific, the ministers had taken such steps as seemed prudent without embarrassing the international relations of the Imperial Government. A railroad connecting the eastern states with Western Australia was being studied, and it was hoped that the project was feasible. A railroad to the north would also become a matter of importance, and a proposal made by the Government of South Australia for the surrender of the Northern Territory was under consideration. Steps would be taken as soon as practicable for the judicious strengthening of the defenses of the commonwealth, with the avoidance of extravagant expenditure and the fullest reasonable reliance upon the citizen soldiery. The services of an able and distinguished officer would be secured for the supreme command. Postal and telegraph rates would shortly be assimilated, and as soon as financial conditions permitted, universal penny postage would be introduced. Interstate free trade would be established simultaneously with the imposition of the Federal tariff. In the debate on the address the Queensland members brought up the question of colored labor, and their amendment requiring the immediate stoppage of the importation of Kanakas was rejected. There were about 9,000 of these Polynesians in the commonwealth, all employed on the sugar plantations. The question of excluding such laborers not only affected the important sugar industry, but was complicated with that of the relations of Australia to the islands of the Pacific. Some members recommended that Australia should declare

an exclusive interest in all islands within 1,000 miles, but the Prime Minister deprecated discussion that might embarrass the policy of the Imperial Government. The colonies were agreed as to the policy of restricting Chinese immigration. Some advocates of a white man's Australia would like to send away the 38,000 Chinese already settled in Australia, although in many localities the disappearance of the Chinese market gardeners would inflict much inconvenience and temporary hardship. Of other colored races, except the aboriginals, estimated at 200,000, whom the state governments endeavored to protect and preserve from extinction, there were only a small number of Hindus and the Afghans who are employed in transporting goods by means of camels in the arid regions of the interior. A motion requiring vessels carrying mails to be manned by white crews was rejected by the Government as contrary to existing contracts, but Mr. Barton promised in making future contracts to submit them to Parliament. The Australian Government proposed to take over the administration of New Guinea, and, if possible, of the Solomon Islands also. The Government of Tasmania objected to the postal regulation bill introduced by Mr. Drake because it contained a clause excluding from the mails communications relating to racing lotteries, or sweepstakes, which are legal in that colony. The bill creating an interstate commission contained important provisions affecting the business of public carriers, shipping firms, and merchants, both local and foreign. Sir John Forrest's defense bill classified the entire male population in three divisions: eighteen to thirty years of age; thirty to forty-five years; and forty-five to sixty. Except in times of emergency the defense force will be kept up by voluntary enlistment. In case of emergency the Governor-General has power to call out any part of the defense force for service anywhere within the limits of the commonwealth. The permanent forces are liable in such times to serve outside of the commonwealth, but not the citizen forces unless they voluntarily agree to do so. The Federal customs regulation bill authorized the collection of duties on ships' stores consumed by passengers and crews between the first port of call in the commonwealth and the port of destination. Against this provision steamship companies protested, and appealed to the Imperial Government. Shipping representatives objected also to a clause involving ship-owners in responsibility after goods have been landed, and overriding the customary contracts with shippers expressed in bills of lading. The tariff bill elaborated by the Cabinet was expected to produce a revenue of £8,700,000 per annum.

A bill for the restriction of immigration contained an educational test, such as has been adopted in Natal and some other colonies. The requirement that every immigrant should write 50 English words was intended to keep out Asiatic immigrants. A proposal that immigrants from Germany, France, and other European countries be allowed to write in their own language was not acceptable, as it drew a distinction between European and Eastern people. The bill contained provisions against the entrance of idiots, insane persons, recently released criminals, persons likely to become paupers, and sufferers from infectious or contagious diseases. It provided for the removal from the commonwealth of immigrants of the prohibited classes, and the cancellation at any time of certificates of exemption. Masters or owners of vessels introducing prohibited immigrants are liable to a fine of £100. Labor members asked for a measure directed in plain

the colored races, including the Japanese, proposed a clause prohibiting the entry of persons from any part of the world who are under contract to labor in Australia. A committee was appointed to inquire into the advisability of the commonwealth's unifying its own coinage and adopting the decimal system. A divorce bill introduced first in the Senate brought the laws of all the states into harmony with the acts of Victoria and New South Wales, and extended domicile to the whole commonwealth. It prohibited collusion and restricted the causes of divorce allowed in some of the states.

The Federal Prime Minister, in spite of his disclaimer of any intention to complicate British international relations, countenanced the claims made by British missionaries on behalf of the natives of the New Hebrides who resisted the claims of French colonists to lands in the two central islands. The New Hebrides, by agreement between England and France, are neutral territory, and disputes between Europeans and natives are settled by a joint commission of naval officers, but not disputes about land. The Federal Government, almost as soon as it was constituted, telegraphed to Mr. Chamberlain a proposal that an international tribunal be created to deal with land disputes. The French Government, after the establishment of the commonwealth, created a naval station in the Pacific, strengthened the land defenses, and increased the naval force to 5 warships.

New South Wales.—The Parliament of New South Wales consists of a Legislative Council of 75 members appointed for life and a Legislative Assembly of 125 members elected in separate districts by universal suffrage. The Lieutenant-Governor is Sir F. M. Darley. The Cabinet in the beginning of 1901 was composed as follows: Premier and Colonial Treasurer, Sir William John Lyne; Chief Secretary, John See; Attorney-General, Bernhard Ringrose Wise; Secretary for Lands, Thomas Henry Hassall; Secretary for Public Works, Edward William O'Sullivan; Minister of Public Instruction and Industry and Labor, John Perry; Minister of Justice, William Herbert Wood; Postmaster-General, William Patrick Crick; Secretary for Mines and Agriculture, John Lionel Fegan; Vice-President of the Executive Council, Francis Bathurst Suttor.

The Legislative Assembly that had supported G. H. Reid gave Sir William Lyne a still stronger support. The Labor party swung round to the support of Mr. Reid's successor, and reaped its reward in the readiness of the Government to bring forward measures included in the Labor program. The most important one that became law is the old-age pensions act.

The arbitration bill passed the Assembly, but was rejected by the Legislative Council, contradictory accounts having been given of the operation of the New Zealand law after which it was modeled. The Government appointed a commission to visit New Zealand and to make an impartial inquiry, with the intention, should the verdict be favorable, of resubmitting the bill in the succeeding session. The city corporation of Sydney was reorganized by a measure providing for the election of an entire new council every year, whereas formerly the aldermen held office for three years, one-third retiring each year. The municipal franchise was enlarged at the same time by giving the right to vote to lodgers paying 10s. a week. In accordance with another act the city expropriated all the water frontage and a considerable area in the rear, besides a whole section in the oldest

part of the town that had gone to decay. It was decided by the Assembly that the land on the water-front should not be resold, but only leased for fifty years. A harbor trust was created. Sir W. J. Lyne, having accepted a post in the Federal ministry, resigned the state premiership on March 20. A new Cabinet was constituted on April 10 as follows: Premier and Colonial Secretary, John See; Attorney-General, B. R. Wise; Minister of Public Works, Edward William O'Sullivan; Minister of Education, John Perry; Secretary for Lands, Patrick Crick; Minister of the Treasury, Thomas Waddell; Secretary for Mines, John Kidd; Minister of Justice, Robert Fitzgerald; Vice-President of the Executive Council, F. B. Suttor. Mr. Hayes and Mr. Bennett were appointed members of the Cabinet without portfolios. Federal affairs withdrew from state politics G. H. Reid, who resigned the leadership of the Opposition. Mr. Fitzgerald, having been defeated at the polls, could not remain in the ministry, and his vacant office was amalgamated with that of the Attorney-General in pursuance of the policy of reducing the expenditure of the state in consequence of the establishment of federation. The state elections were held on July 3. The principal feature was the success of the Labor candidates, of whom 22 were elected, and 40 Ministerialists, 20 Independents, and 43 Opposition candidates, which gave the Government a large majority with the assistance of the Labor party. Parliament met on July 23. A bill reducing the number of members in the state Parliament was a corollary of federation. It was accompanied by a proposal for the election by a referendum of a convention to revise the Constitution. The bill for compulsory industrial arbitration was introduced once more. The bill establishing women's suffrage, which failed to pass the Legislative Council by a narrow majority in the previous session, was also brought in again. The land laws were amended by an act immediately throwing open lands suitable for settlement. Another act provides holdings for working men in the vicinity of Sydney and other populous centers. Steps were taken to bring state products prominently before the world's markets. The prosperity of the community seemed to be reviving in spite of a continued drought. The fiscal question, on which the politics of the colony had lately hinged, was now transferred to the domain of commonwealth politics. It was expected that the people of New South Wales would pay heavier taxes under the Federal system, and that the sum to be refunded to the state from the Federal treasury would amount to over £1,000,000, out of which the old-age pensions, estimated at £400,000 a year, could be paid without resorting to fresh legislation. Pensions for soldiers maimed in South Africa, and for the families of the killed, were provided for, and more liberal provision was made for normal schools and advanced technical education and for water conservation and light railways. The accounts for the year ending June 30, 1901, were closed with a deficit of only £87,000, notwithstanding the extraordinary expenditure of £681,500 for despatching contingents to South Africa and China, extinguishing of the plague, inaugurating the commonwealth, and entertaining the Duke of Cornwall. The Opposition, led by Mr. Lee, resisted a long prorogation prior to dissolution, and the ministry won on a trial of strength by 66 votes to 28.

Victoria.—The Legislative Council of Victoria has 48 members, elected for six years, and the Legislative Assembly has 95, elected for three

years, the former by qualified, the latter by universal suffrage. The Lieutenant-Governor is Sir John Madden. The Cabinet in 1900 contained the following members: Premier and Chief Secretary, A. McLean; Treasurer, W. Shields; Attorney-General, W. H. Irvine; Solicitor-General, J. M. Davies; Minister of Mines, Railways, and Irrigation, A. R. Outtrim; Minister of Agriculture and Public Works, G. Graham; Minister of Lands, J. H. McColl; Minister of Defense, D. Melville; Postmaster-General, W. A. Watt; Minister of Public Instruction and of Customs, C. C. Salmon; without portfolio, J. Balfour. The defeat of the ministry necessitated the appointment of a new Cabinet, which was finally

constructed after some changes were made on Feb. 7, 1901, as follows: Premier, Treasurer, and Minister of Labor, A. J. Peacock; Chief Secretary and Minister of Railways, W. A. Trenwith; Attorney-General, I. A. Isaacs; Minister of Agriculture, J. Morrissey; Postmaster-General and Minister of Public Instruction, S. W. Gurr; Minister of Lands, D. J. Duggan; Minister of Defense and Public Works, W. M. McCulloch; Solicitor-General, A. Wynne; Minister of Mines and Water-Supply, J. B. Burton; without portfolios, S. Gilliott, R. McGregor, E. J. Crooke, and P. Phillips. The Victorian Parliament was

opened on June 18. The legislation proposed by the ministers included the calling of a convention to frame amendments to the Constitution in regard to both Chambers of the Legislature and the submission of these amendments to the direct vote of the people. A bill to make the old-age pension scheme permanent provided for increased expenditure where necessary, while guarding the financial interests of the state. The old-age pensions authorized under the ministry of Sir George Turner, who agreed to the increase of the maximum weekly payment from 7s. to 10s., proved more costly than they were expected to be, the applicants numbering 16,000 instead of the estimated number of 6,000, because the act had not been framed so as to exclude persons who had been previously supported by their children. With average payments of 8s. a week the total annual cost was £330,000. The amended act corrected some of the defects of the provisional scheme. The maximum weekly pension was again fixed at 7s. A new education act extended the public-school system in accordance with the most modern views, especially in regard to technical instruction. It was intended to remodel the Agricultural Department, with the aim of making Victoria one of the foremost countries in the application of advanced principles and methods of working in the field of primary production, and a director of agriculture would be appointed to direct and supervise the department, and the official agency in London be made a useful business medium to assist in the utmost ex-

pansion. The Government established a dairy college. The railroad earnings having increased by over £250,000, the extension of railroads would be promoted so as to enable producers in remote districts to convey their commodities to market at a medium cost. Further works for the supply of water would be constructed, and the mines act would be amended with the object of extending coal-mining. A Government coal-mine was established to supply railroads and public departments. The policy of economy in state expenditures was to be continued. Bills were presented for the settlement of trade disputes by courts of conciliation and arbitration, for con-

SYDNEY, NEW SOUTH WALES.

solidating the land acts, for forest conservation, and for the prevention of the adulteration of food. Under the factories act wages were fixed by the boards in some trades at such high figures that the fellmongers in Melbourne decided in the summer of 1901 to close their works, and employers in other trades threatened to do the same, and called for a suspension of the factory act until the conditions under interstate free trade could be understood, as it was feared that when free trade came Victorian manufacturers could not compete with those of New South Wales and other states in which wages were lower and employers were less hampered by labor restrictions imposed by the Government and the trade-unions. The Premier refused to consider the suspension of the factories act, but delayed extending it to new trades. Col. Sir George Sydenham Clarke received the appointment of Governor of Victoria on Aug 8.

Queensland.—The Legislative Council is composed of 42 members, nominated for life; the Legislative Assembly of 72 members, elected for three years by universal suffrage. The Governor at the beginning of 1901 was Lord Lamington, appointed in 1895. The Cabinet was composed as follows: Prime Minister, Treasurer, and Secretary for Mines, Robert Philp; Chief Secretary, Sir J. R. Dickson; Attorney-General, A. Rutledge; Home Secretary, J. F. C. Foxton; Secretary for Agriculture, J. V. Chataway; Secretary for Public Instruction and Postmaster-General, J. G.

Drake; Secretary for Lands, W. B. H. O'Connell; Secretary for Railways and Public Works, John Murray; without portfolios, D. H. Dalrymple and George Wilkie Gray. On Jan. 29 Mr. Murray succeeded Mr. Drake as Postmaster-General and Secretary for Public Instruction, while Mr. Leahy took his place as Secretary for Railways and Public Works. Sir J. R. Dickson retired, having been called into the Federal Cabinet as Postmaster-General, and Mr. Philp succeeded the latter as Chief Secretary, transferring the office of Treasurer to T. B. Cribb. While the opponents of colored labor won the victory in the Federal elections, Mr. Chamberlain disallowed a bill passed by the Queensland Legislature in 1900 which contained a clause prohibiting the employment of Asiatics and other colored laborers in sugar-mills receiving financial assistance from the Government. The Labor party was not satisfied with the proposal of the Colonial Secretary that an educational test be applied, as in Natal, and was determined to pass the bill again and again until it should receive the royal assent. Queensland suffered in 1901 from a drought of unprecedented duration that affected the whole of the western country, causing great mortality among sheep. This caused a decrease in railroad and customs receipts, which, with increased payments of interest on the public debt and added outlay on railroads, left the treasury at the end of the year with a deficit of £528,000, which could be met by the issue of treasury bills, as similar deficits had been met before. This expedient could not be repeated with safety, however, to tide over the expected deficit of 1902, nor were retrenchments possible on the effective scale that had rescued the treasury in 1893. The Government would have to give assistance to the pastoral industry, the oldest and most important one in the state. Unless the immense recuperative powers of the country asserted themselves, the only resort would be direct taxation, which was generally unpopular in Queensland, although the Labor party would welcome such a solution. An income tax was dreaded chiefly on account of its inquisitorial character, and a land tax no minister would have the courage to propose in Queensland, although both of these taxes produce a large revenue in New South Wales. Aside from the sheep-growing industry, the development of the country was proceeding favorably. Agriculture was flourishing. New markets had been opened to Queensland products, and fresh capital was flowing in. Mining continued to be developed, the yield of gold in 1901 having been the largest in the history of the colony. Railroads had been extended to the mineral fields, and further extensions with private capital to remote parts of the state were under consideration. Parliament met on July 16. Special sales of land were authorized to provide means for meeting the treasury bills. The state Treasurer, who was a new man in public life, announced that he would propose an income tax should it be found necessary when the Federal tariff came into force.

South Australia.—The Legislative Council has 24 members, elected from 4 districts for nine years by householders; the Legislative Assembly has 54 members, elected for three years by all adult citizens resident for six months in their respective districts. The franchise was extended to women in 1894. The Governor at the beginning of 1901 was Lord Tennyson, appointed in 1899. The Cabinet was composed as follows: Premier and Treasurer, F. W. Holder; Chief Secretary, J. G. Jenkins; Attorney-General, J. H. Gordon; Commissioner of Crown Lands, L. O'Loughlin; Commissioner of

Public Works, R. W. Foster; Minister of Education and Agriculture, E. L. Batchelor. The ministry was reconstituted on May 14, as follows: Premier, Chief Secretary, and Minister controlling the Northern Territory, J. G. Jenkins; Attorney-General, Mr. Butler; Commissioner of Crown Lands, L. O'Loughlin; Commissioner of Public Works, R. W. Foster; Minister of Education and Industry, Mr. Brooker. Parliament was opened on July 13. A new Constitution was laid before the Legislature reducing the number of members of Parliament by one-third, and limiting to 5 the number of ministers. The establishment of a Federal Parliament rendered the reduction of state expenditure imperative. A provision almost identical with the one contained in the commonwealth act averts deadlocks between the Legislative Council and the Assembly. Members of the council are elected on the basis of household suffrage by the whole body of electors voting as one constituency, the method formerly practised. Members of the Assembly are elected by single constituencies. Revenue returns were satisfactory, and new gold-fields found at Taroocla, west of Port Augusta, and in other sections, promised to increase the resources of the state. The early-closing act passed in 1900 was considered too stringent, and the Government proposed therefore to modify some of its regulations. An agent was appointed in London whose special duty is to promote the expansion of South Australian trade. An outer harbor was to be made at Largs Bay, and railroads from Gawler to Angaston and from Laura to Booleroo, running through rich producing areas. A measure was introduced to facilitate closer settlement on land fit for agriculture and more intense cultivation. Commercial business was buoyant. A loan for public works was raised locally. Receipts from railroads and customs were increasing.

Western Australia.—The Constitution of Western Australia was granted in 1890. The Legislative Council, at first nominated by the Governor, has been elective since 1893, when the colony passed the stipulated limit of 60,000 population. There are 30 members, elected for six years in 10 districts by property holders. The Legislative Assembly is composed of 50 members, elected in separate districts by universal suffrage. The Governor in the beginning of 1901 was Sir Arthur Lumley, in whose absence Sir Alexander Campbell Onslow acted as Administrator. The Cabinet was composed as follows: Premier and Colonial Treasurer, George Throssell; Commissioner for Railways and Director of Public Works, Barrington Clarke Wood; Attorney-General, Richard William Pennefather; Colonial Secretary, George Randell. A general election was held at the end of April, resulting in the return of 17 Ministerialists, 21 members of the Opposition party, 6 Labor candidates, and 6 Independents. Mr. Throssell and his colleagues resigned on May 21. F. Illingworth, the leader of the Opposition, relinquished the premiership to Mr. Leake, who on May 24 formed a ministry as follows: Prime Minister and Attorney-General, George Leake; Colonial Treasurer and Colonial Secretary, F. Illingworth; Commissioner of Railroads, J. J. Holmes; Director of Public Works, W. Kingsmill; Minister of Mines, H. Gregory; Minister of Lands, C. Sommers. The new Premier promised to investigate thoroughly the finances, to push forward public works, and to institute an inquiry into the working and equipment of railroads. In addition to a deficit of £50,000 an excess of expenditure of £500,000 was to be provided for. The state was committed to an expenditure on

loan account of £3,000,000 extending over three years, and would have to borrow that amount and £550,000 more for authorized works, besides carrying £1,000,000 of treasury bills maturing in the year. Rolling-stock and other requirements for the railroads involved an expenditure of £1,000,000. Still no alarm was felt, as the resources of the state were enormous and the revenue was elastic. Parliament was opened on June 28. An advisory board of public works was instituted. Expenditure without the authority of Parliament must be discouraged. The agricultural, pastoral, and mining industries would be promoted by Government in every way. The ministerial measures included amendments to the public service and conciliation acts, a bill for the regulation of factories, others dealing with the rights of electors and the redistribution of seats, and one abolishing plural voting. The railroad employees struck in July for a shilling a day more wages, refusing to accept the Government's offer of arbitration, and interfering with mining, manufacturing, building, and trade.

Tasmania.—The Legislative Council has 19 members, elected for six years by property owners, and the Legislative Assembly has 46

nominations were made for life, prior to 1891. The House of Representatives has 74 members elected by adults of either sex who have resided a year in the colony and three months in the electoral district. The Maoris elect 4 members. In 1899 there were 373,744 registered voters, 210,529 of them men and 163,215 women, in the European, and 13,628 who voted in the Maori districts.

The Governor at the beginning of 1901 was the Earl of Ranfurly, appointed in 1897. The ministry was composed as follows: Prime Minister, Colonial Treasurer, Minister of Labor, and Minister of Defense, R. J. Seddon; Colonial Secretary, Postmaster-General and Electric Telegraph Commissioner, Minister for Railways, Minister of Industries and Commerce, and Minister of Public Health, J. G. Ward; Minister of Lands and Minister for Agriculture, T. Y. Duncan; Commissioner of Stamp Duties and Native Minister, J. Carroll; Minister of Immigration and Minister of Education, W. C. Walker; Minister for Public Works, W. Hall-Jones; Minister of Justice and Minister for Mines, J. McGowan; Commissioner of Trade and Customs, C. H. Mills; without portfolio, A. J. Cadman.

The area of New Zealand is estimated at 104,471

MAIL-COACH STATION, NEW SOUTH WALES.

members, elected by householders. The Administrator at the beginning of 1901 was Sir J. S. Dodds, appointed Aug. 14, 1900. The Cabinet was composed as follows: Premier and Attorney-General, N. E. Lewis; Chief Secretary, G. T. Collins; Treasurer, B. S. Bird; Minister of Lands and Works, E. Mulcahy; without portfolio, F. W. Piessé. In Tasmania mining continued to show progress in 1901, and the Government revenue was satisfactory except for a decline in customs, imports being light in view of the impending commonwealth tariff.

New Zealand.—Under the Constitution of 1875 the executive power of the Crown is entrusted to a Governor, and the legislative power is vested in a General Assembly, consisting of a Legislative Council and a House of Representatives. The Governor summons, prorogues, and dissolves Parliament on the advice of his ministers. He may veto bills or withhold them for the consideration of the Imperial Government, can send drafts of bills to either house for consideration, and proposals for the appropriation of public money must come from him before Parliament can legally provide for expenditures. The Legislative Council contains 45 members, appointed for seven years, excepting those appointed when

square miles, that of the North island being 44,468, the Middle island 58,525, and Stewart's island 665 square miles. At the census of 1896 there were 703,360 inhabitants—371,415 males and 331,945 females, exclusive of natives. The proportion born in New Zealand was 62.85 per cent.; in other colonies, 4.63 per cent.; in the United Kingdom, 30.62 per cent.; in foreign countries, 1.9 per cent. Of the total population 43.68 per cent. lived in boroughs. Wellington, the capital, had 41,758 inhabitants; Auckland, 57,616; Christchurch, 51,330; and Dunedin, 47,280. The Maoris, on Dec. 31, 1899, numbered 39,854, having decreased from 56,049, their estimated number in 1857. There are 1,645 public elementary schools, with 3,615 teachers and 131,315 enrolled pupils, the average attendance being 107,066, while the private schools number 803, with 15,295 pupils. This is exclusive of the native schools, of which there are 83, with 148 teachers and 3,065 pupils.

The revenue for the year ending March 31, 1900, was £5,386,989, of which £2,107,567 were derived from customs, £860,898 from stamps, including postage and telegraph stamps, £1,621,613 from railroads, £293,627 from the land tax, and £128,721 from the income tax. Sales of land produced £90,831. The total expenditures were £5,140,127,

of which £1,749,394 were for the public debt, £1,039,412 for railroads, £472,653 for education, £388,582 for posts and telegraphs, and £278,692 for constabulary and defense. The expenditures out of the public works fund from 1870 to 1900 amounted to £32,978,626. The total receipts of the colony for the year ending March 31, 1901, were £6,012,267, and the expenditures were £5,479,703. For the year ending March 31, 1902, the revenue was estimated at £5,896,000, and expenditure at £5,763,000. The amount of the public debt on March 31, 1900, was £46,930,077, requiring £1,674,618 for interest, not including £28,703 on treasury bills, and £46,073 for the sinking-fund. In 1901 the Government raised a loan of £500,000 in the colony at 4 per cent. and borrowed £1,500,000 in London. The total debt was £49,500,000, and £1,000,000 more would be required to carry on the public works for another year. The local revenues in 1899 amounted to £685,769 from rates and £1,206,095 from other sources; local expenditures were £1,778,574, and the local debts amounted to £6,963,254. The unimproved value of lands in the colony in 1898 was assessed at £84,401,244, against £75,497,379 in 1888, the rate of increase being 11.79 per cent., the value of improvements at £54,190,103, against £35,640,335, an increase of 52.05 per cent.; total valuation, £138,591,347, against £111,137,714, an increase of 24.7 per cent.

Two-thirds of the land in New Zealand is believed to be good for agriculture and stock-raising. The total area is about 67,000,000 acres. There are 9,000,000 acres of barren land and 20,000,000 acres of forest. The area cultivated in 1900 was 12,474,511 acres, of which 10,853,302 acres were sown grass lands. This does not include 16,890 acres of garden, 24,401 acres of orchard, and 48,942 acres of plantations. There were 269,749 acres under wheat in 1899, producing 8,582,000 bushels, an average of 31.81 bushels an acre; 398,243 acres under oats, producing 16,326,000 bushels; 48,003 acres under barley, producing 1,585,000 bushels. The live stock in 1900 consisted of 261,931 horses, 1,210,439 cattle, 19,348,506 sheep, and 249,751 hogs. Since 1891 the average amount of land settled annually has been 628,000 acres. There were 83,300 persons engaged in agricultural and pastoral pursuits in 1896, of whom 31,204 were occupying farmers, 16,473 relatives working on farms, 20,236 farm laborers, 1,638 holders of pastoral runs, and 6,742 station hands. The area occupied by settlement in 1900 was 34,422,653 acres including, and 25,607,049 acres excluding Crown lands held under pastoral leases. Crown lands may be bought for cash or held on perpetual lease on condition of continued occupation and cultivation. The mines of New Zealand in 1899 produced 389,558 ounces of gold, valued at £1,513,173; 349,338 ounces of silver, valued at £40,838; 11,116 tons of kauri gum, valued at £607,919; and 975,234 tons of coal, valued at £487,617. The production of gold was 50 per cent. greater than in 1898 and preceding years. The total export of gold since 1857 was in value £55,966,498. There were 2,459 manufactories in 1895, employing 27,389 persons. Their capital amounted to £5,796,017, and their annual production was valued at £9,549,360.

The total value of imports in 1899 was £8,739,633; exports of colonial produce, £11,799,740; re-exports, including specie, £138,595; total exports, £11,938,335. The imports of textiles and clothing were £2,123,135; of iron and steel goods, including machinery, £1,578,855; of paper and books, £368,617; of sugar, £354,925; of spirits, wine, and beer, £306,491; of tobacco and cigars, £184,173; of tea, £183,691; of fruit, £180,590; of

oils, £126,967; of sacks, £123,596; of fancy goods, £110,114; of coal, £92,815; of other merchandise, £2,879,687; of specie, £125,977. The export of wool was 147,169,497 pounds, valued at £4,324,627; of frozen meat, 1,865,827 hundredweight, valued at £2,088,856; of kauri gum, 11,116 tons, valued at £607,919. The export of butter was 136,086 hundredweight, and that of cheese 69,440 hundredweight, valued together at £713,617. The gold export was £1,513,180, not including £14,913 of specie. The export of grain, flour, and pulse was £731,805 in value; of hides, skins, and leather, £483,762; of tallow, £311,649; of phormium, or New Zealand hemp, £184,411; of preserved meat, £90,910; of grass seed, £61,974; of live animals, £22,689; of bacon and hams, £14,364; of other colonial produce, £649,977; of British and foreign produce, £123,682. Of the total imports in 1899 the value of £5,526,645 came from Great Britain, £1,336,828 from the Australian colonies, £775,309 from the United States, £332,833 from India and Ceylon, £303,524 from Pacific islands, £22,879 from China, and £441,615 from other countries. Of the total exports £9,427,515 went to Great Britain, £1,708,036 to Australian colonies, £433,499 to the United States, £133,215 to Pacific islands, £10,973 to China, £3,277 to India and Ceylon, and £221,820 to other countries.

The number of vessels entered during 1899 was 609, of 811,132 tons, of which 553, of 738,929 tons, were with cargoes; cleared, 604, of 807,866 tons, of which 570, of 778,245 tons, were with cargoes. Of the vessels entered, 388, of 392,671 tons, were colonial; 149, of 350,861 tons, were British; and 72, of 67,651 tons, were foreign. Of those cleared, 379, of 386,219 tons, were colonial; 152, of 355,442 tons, were British; and 73, of 66,205 tons, were foreign.

The Government railroads on March 31, 1900, had a length of 2,104 miles, and there were 167 miles of private railroads. The capital expended on the Government lines had been £17,554,584. The gross receipts for the year were £1,623,891, and expenses £1,052,358, being 64.8 per cent. of the receipts; number of passengers carried, 5,468,284; tons of freight, 3,251,716.

The post-office in 1899 forwarded 37,380,671 letters, 1,103,700 letter cards, 1,643,051 postal cards, 17,883,208 books and parcels, and 15,717,388 newspapers, and 344,664 money-orders were issued and 245,377 paid.

There were 6,910 miles of telegraph lines and 19,228 miles of wire on March 31, 1900; number of despatches sent during the year, 3,159,093; receipts from telegraphs and telephones, £162,945.

The colonial Parliament was opened on July 2. The legislative program consisted of measures for improving oversea steam service, preventing the fixing of abnormal prices for coal and food-stuffs by trusts, the establishment of a Government coal-mine, and the regulation of the hours of clerks in mercantile offices and banks. The leader of the Opposition, Capt. Russell, challenged a supply bill, and when the Government obtained a majority of 27 he resigned the leadership on the ground that there was no organized Opposition. The address was carried by a practically unanimous vote. The Cook and other islands were formally annexed to New Zealand on June 11. A cable was laid in 1901 between New Zealand and Australia at the joint expense of the colonies and the Imperial Government, and a tariff of a penny a word to London was agreed to. Penny postage had proved a success, leading to an increase of business that promised to make the revenue in two years as large as it was before the

reduction of the rate. Railroad traffic and receipts showed a continuous increase. Progress was made in the construction of the main trunk lines. The Government intended to manufacture iron and steel and all rolling-stock for the railroads and to improve the technical schools. The system of making advances of money to settlers at a low rate of interest is popular and works satisfactorily. In six years £2,067,000 were so advanced, and the Government intended to raise £2,000,000 more for the purpose in London, but on account of the state of the money market applied for only half that sum. A commission was appointed in January to consider the advisability of federation with Australia. The Government and the people generally were opposed to federation. The Labor leaders considered New Zealand to be more advanced than Australia; manufacturers were of the opinion that, paying much higher wages, they could not compete with Australian manufacturers; and all New Zealanders felt confident of their future as a separate

vessels of the British navy in Australasian waters. There would be disadvantages to New Zealand in regard to postal and telegraph matters under federation, and the advantage to the commerce and industries of New Zealand would be very slight, since Australia offered little demand for New Zealand products. The possibility of moderate trade reciprocity was recognized, but without any sanguine hope of securing it immediately. The refusal of the commission to sacrifice the independence of New Zealand was quite in accord with the popular sentiment.

Fiji.—The Governor of Fiji, Sir George T. M. O'Brien, has under him 6 European commissioners, besides the one in the island of Rotuma, and 11 native chiefs at the head of the different provinces, and 175 inferior chiefs serving in various civil capacities. The area of the group is 8,045 square miles, including Rotuma. The population was estimated on Dec. 31, 1899, at 122,673, comprising 67,788 males and 54,885 females. There were 4,373 Europeans, of whom 2,759 were males

WOOL TEAMS, DARLING DISTRICT, NEW SOUTH WALES.

nation, a vigorous island folk who would absorb in their dominions not only the Cook Islands, but the Fijis, the Tonga group, and all the lesser islands of their part of the Pacific. The federation commission reported unanimously against federating with Australia, since federation would seriously prejudice the finances and hamper its Government in the prosecution of any policy for the development of the resources of New Zealand. The commissioners were of the opinion that imperial unity would be better safeguarded by the existence of two British powers in the Pacific. Neither of them would be likely in a gust of popular passion or prejudice to break away from the empire without inquiry into the attitude of the other, and by such inquiry time would be gained for reflection and a catastrophe probably averted. In regard to defense, they believed that so long as Great Britain retains command of the sea New Zealand will be able to undertake its own land defense, and that should Great Britain lose command of the sea, Australia and New Zealand would not be able to render material assistance to each other against a foreign power, and that what assistance either of them could render to the other would be forthcoming if they continued to be separate colonies. A long time must elapse before Australia can build up a considerable navy, and they suggested that the subsidy to the Australian squadron be increased on the condition that the Imperial Government provide more and better cruisers. They were in favor also of the training of an imperial naval reserve for service on

and 1,614 females; 13,282 East Indians, of whom 8,875 were males and 4,407 females; 98,478 Fijians, of whom 52,354 were males and 46,124 females; and 6,540 Polynesians, Rotumans, half-castes, and others, of whom 3,800 were males and 2,740 females. The European, or white, population consists mostly of Australians and New Zealanders. There were 64 births and 26 deaths among Europeans, and 3,395 births and 3,871 deaths among Fijians in 1899.

The revenue in 1899 was £98,621, and expenditure £95,568. Of the revenue £52,631 were derived from customs; native taxes, paid in produce, £20,768. The expenditure for salaries was £40,035. There is a debt of £250,000. The value of imports in 1899 was £263,044, of which £256,761 came from British possessions; value of exports, £481,856, of which £426,703 went to British possessions. European planters cultivated sugar-cane on 23,160 acres, coconuts on 20,891 acres, bananas on 2,228 acres, rice on 714 acres, tea on 210 acres, pineapples on 157 acres, and peanuts on 230 acres. The value of sugar exported was £340,603; of copra £77,330; of bananas, £30,607; of spirits, £16,343; of peanuts, £3,182; of pearl shells, £3,092; of trepang, £2,344; of corn, £1,366; of vanilla, £1,050.

A petition from Fiji for annexation to New Zealand that was put in circulation after a visit from Mr. Seddon, the New Zealand Premier, evoked a warning to the natives from Sir George O'Brien, who said to them in a speech that wherever there was a Government like that of New

Zealand the white man had always taken land from the natives: what had been done in New Zealand itself, where the colored people were cooped up on a fragment of land left to them, would happen to the colored people of Fiji also, who would lose nearly all their land. Mr. Seddon appealed to Mr. Chamberlain, demanding that these charges should be either substantiated or withdrawn. The Governor of Fiji issued an order in Council making it an offense punishable with six months' imprisonment for any person to cause Fijians to become disaffected or to induce any Fijian to take action having for its object the subversion or alteration of the present form of government. There was disaffection against the Governor among both whites and natives. The New Zealand Government requested the imperial authorities to inquire into the condition of Fiji.

British New Guinea.—When the southeastern part of the island of New Guinea was annexed in 1887 the Government of Queensland guaranteed £15,000 a year for the expense of administration. The governments of New South Wales and Victoria afterward agreed to divide the expense, each colony contributing a third, and each having a voice in the affairs of the protectorate. The Lieutenant-Governor at the beginning of 1901 was George Ruthven Le Hunte. The local revenue, derived mainly from customs, was £11,683 in 1899; expenditure £15,583. Missionaries are active in the island. The coconut groves are being extended through European influence. Europeans are prohibited from acquiring land titles from natives and from supplying them with firearms or spirituous liquors, and the employment of native labor is subject to regulations. Land for planting can be acquired from the Government by lease or by purchase, the price being 2s. 6d. an acre. Tobacco, sugar, rice, rubber-trees, coffee, and tea can be grown. The forests are rich and extensive, affording sandalwood, ebony, gums, rattan, and many other products. Trepang, pearl shell, and pearls are found along the coast, and have been exported since before the British occupation. Copra and sandalwood are also exported, and gold, which is found in the Louisiade Islands, on Woodlark island, and in the mountains of the mainland. The value of imports in 1899 was £52,200, and of exports £68,500. The number of vessels entered in the foreign trade was 92, of 19,600 tons; cleared, 81, of 19,200 tons. There were 7,767 letters, 2,120 newspapers, and 640 packets carried in the mails in 1899. The Australian Commonwealth has taken steps to assume charge of the administration of New Guinea, which the state governments of Queensland, Victoria, and New Guinea are willing to resign. Lieut.-Gov. Le Hunte has endeavored to conciliate and win the confidence of the natives, and has refrained from retaliatory proceedings when they have committed savage crimes. Many of them are cannibals. On April 8, 1901, James Chalmers, a missionary explorer, a half-breed missionary, and the native Christians who accompanied them were massacred and eaten on an island in the Aird river. The natives boarded their vessel and would not leave until the missionaries went ashore with them. The members of the party were killed and their heads taken off as soon as they landed. Mr. Le Hunte, with 20 armed Europeans, mostly Government officials, and 40 native constabulary went to the island and destroyed the war canoes and the village dwellings, which were lined with human skulls, but left the dwellings intact. The natives attacked the party repeatedly with flights of arrows by day and night, and they had to fire in self-defense, killing 24 and wounding many.

AUSTRIA-HUNGARY, a dual monarchy in central Europe, composed, under the fundamental law of Dec. 21, 1867, of the Empire of Austria and the Kingdom of Hungary, inseparable constitutional monarchies, hereditary in the male line of the dynasty of Hapsburg-Lorraine or, in the event of the extinction of the male line, in the female line. The legislative power in affairs common to both monarchies, which are foreign relations, military and naval affairs, with the exception of the national territorial armies, common finance, commercial and railroad affairs concerning both monarchies, the customs tariff, the coinage, and the administration of the occupied Turkish provinces, is exercised by committees of the legislative bodies of both monarchies. These committees, called the Delegations, meet alternately in Vienna and Budapest, the respective Austrian and Hungarian capitals. They are composed of 20 members elected annually by each of the two upper houses and 40 members elected by each of the two lower houses. Each Delegation meets and votes separately, and, in case of disagreement, they decide the question by a joint vote. The common ministers are responsible to the Delegations, and they may be impeached for any dereliction of duty.

The Emperor of Austria and King of Hungary is Franz Josef I, born Aug. 18, 1830, proclaimed Emperor of Austria on Dec. 2, 1848, when his uncle, Ferdinand I, abdicated in consequence of a revolution, and he was crowned King of Hungary on June 8, 1867, when the ancient constitutional rights of that monarchy were restored. The heir presumptive is the Emperor-King's nephew, the Archduke Franz Ferdinand, born April 21, 1865, son of the late Archduke Karl Ludwig and the Princess Annunziata, daughter of the former King of Naples.

The ministers of the whole monarchy at the beginning of 1901 were as follow: Minister of Foreign Affairs and of the Imperial House, Graf Agenor Maria Adam Goluchowski; Common Minister of War, Gen. Edmund, Freiherr von Krieghammer; Common Minister of Finance, Benjamin de Kallay.

The Common Budget.—The expenditure for common affairs in 1898 was 183,905,220 florins, of which 144,105,050 florins were ordinary and 39,800,170 florins extraordinary expenses. The net receipts from customs were 71,147,770 florins, leaving 112,757,450 florins to be provided by the two monarchies, 2 per cent. of which, under the old *Ausgleich*, which was continued in force as a *modus vivendi* until 1899, was paid by Hungary, and the remaining 110,502,301 florins were assessed to the two monarchies, 70 per cent. to Austria and 30 per cent. to Hungary. A joint commission agreed in November, 1899, that the quota of Hungary should be 34.4 per cent. The Parliaments of the two countries having failed to ratify this arrangement, the monarch decided that it should be adopted provisionally until June 30, 1901. The sanctioned estimate of common expenditure for 1899 was 156,857,000 florins; the budget estimate for 1900 was 172,324,750 florins. The budget for 1901 makes the total expenditure 362,854,411 crowns, of which 322,497,028 crowns are for ordinary and 40,357,383 crowns for extraordinary purposes. The expenditure of the Ministry of Foreign Affairs is 10,739,079 crowns, 10,530,784 crowns for ordinary and 208,295 crowns for extraordinary purposes; the expenditure of the Ministry of War for the army, 278,649,953 crowns for ordinary and 25,168,528 crowns for extraordinary purposes, making a total of 303,818,481 crowns; expenditure for the navy, 28,741,660

crowns for ordinary and 14,969,160 crowns for extraordinary requirements, making a total of 43,710,820 crowns; expenditure of the Ministry of Finance, 1,620,609 crowns for central administration and the various departments, 2,640,000 crowns for military pensions, and 11,400 crowns for extraordinary expenses, making a total of 4,272,009 crowns; for the Board of Control, 314,022 crowns. The receipts of the administrations were estimated at 5,819,705 crowns, leaving 357,034,706 crowns to be covered by the net receipts of customs and the matricular contributions of the two monarchies, assessed under the new Ausgleich arranged in November, 1899, in the proportion of 65.6 per cent. to Austria and 34.4 per cent. to Hungary. The extraordinary expenses of the troops occupying Bosnia and Herzegovina were estimated at 7,382,000 crowns, paid by the two monarchies in the same proportion, except 80,000 crowns collected by the military administration.

The common debt, incurred before 1868, amounts to 2,719,494,879 florins, the expenses of which, for interest and amortization, are 126,047,658 florins, of which Austria pays 95,737,055 florins and Hungary 30,310,603 florins. The paper money guaranteed by both monarchies jointly was 112,000,000 florins in amount on June 30, 1900, and 12,142,900 florins were Austrian notes. Besides this paper money there was a floating debt of 36,846,230 florins.

The currency of the dual monarchy was altered by the law of Aug. 2, 1892, establishing the gold basis. Instead of the florin a monetary unit of half its value was adopted, the crown, equal to 20.3 cents in United States currency. Besides ducats, which have the value of 9 crowns 60 heller, 20-crown and 10-crown pieces have been coined in gold; single crowns in silver, containing 4.175 grammes of fine metal; 20-heller and 10-heller pieces in nickel, 100 hellers making a crown; and 2-heller pieces and single hellers in bronze. The silver gulden or florins continue to be legal tender for any sum, but the silver crowns, although accepted by the Government for taxes up to any amount, are legal tender only to the amount of 50 crowns. Notes of the Austro-Hungarian Bank are legal tender. The bank has a capital of 90,000,000 florins, and in 1898 had a reserve fund of 32,535,000 florins and 737,476,000 florins of notes in circulation, while the assets consisted principally of 490,089,000 florins cash, 75,563,000 florins loaned to the Government, 258,483,000 florins of commercial loans, and 139,552,000 florins loaned on real estate.

The Army.—Military service is obligatory from the age of twenty-one for three years in the line, seven years in the reserve, and two years additional in the Landwehr of Austria or in the Honved of Hungary. Those not drawn for the active army are enrolled in the supplementary reserve for twelve years. The peace strength of the Austro-Hungarian army in 1900 was 3,597 officers and 9,889 men in the staffs, 1,697 officers and 7,153 men in military establishments, 9,428 officers and 161,602 men in 102 regiments and 102 cadres of infantry, 1,019 officers and 16,536 men in 4 regiments of Tyrolese jägers and cadres and 26 battalions of ordinary jägers, 1,890 officers and 45,906 men in 42 regiments of cavalry, 1,647 officers and 25,586 men in 56 regiments and 56 cadres of field artillery and 1 division of 3 batteries and 1 cadre of mountain artillery, 422 officers and 7,786 men in 6 regiments and 3 battalions of fortress artillery, 495 officers and 8,445 men in 15 battalions of pioneers, 89 officers and 1,490 men in 1 regiment and cadre of railroad and telegraph

troops, 79 officers and 2,964 men in the sanitary corps, 417 officers and 3,309 men in 3 regiments and 22 cadres of train, 2,415 officers and 22,949 men in 32 regiments of Austrian Landwehr infantry, 246 officers and 2,119 men in 6 regiments and 3 squadrons of Austrian Landwehr cavalry, 2,587 officers and 22,312 men in 28 regiments of Hungarian Landwehr infantry, and 426 officers and 4,346 men in 10 regiments of Hungarian Landwehr cavalry; total peace effectives, 21,160 officers and 325,350 men, with 62,824 horses and 1,048 field pieces. The infantry weapon is the Mannlicher rifle of 8 millimeters caliber, carrying 5 cartridges in the magazine. The cavalry are armed with sabers and repeating carbines. The field guns are of tempered bronze, having a smooth breech block, the bore being 9 centimeters, and that of the mountain guns 7 centimeters.

The Navy.—The Austro-Hungarian navy in 1900 consisted of five armored turret ships built between 1887 and 1897, the Kronprinz Rudolf, Wien, Monarch, Budapest, and Kronprinzessin Stephanie; six armored battle-ships with casemated batteries built before 1878, Tegetthoff, Custoza, Erzherzog Albrecht, Don Juan d'Austria, Kaiser Max, and Prinz Eugen; four ram cruisers built between 1889 and 1899, Kaiser Karl VI, Kaiserin and Königin Maria Theresa, Kaiserin Elisabeth, and Kaiser Josef I; 9 torpedo-vessels built between 1879 and 1897 and 7 of smaller size built between 1887 and 1897; 6 seagoing torpedo-boats; and 24 first-class, 31 second-class, and 7 third-class torpedo-boats. The navy was manned by 737 officers, 513 mechanics and employees, and 7,500 sailors. The Habsburg, of 8,300 tons, launched in 1900, and two sister ships since begun, are improvements on the Monarch, Wien, and Budapest, which displace only 5,600 tons, but are well protected with Harvey armor and armed with 4 9.4-inch guns mounted in couples in fore and aft turrets, with a powerful quick-firing armament. The larger vessels will carry 2 such guns in the forward turret and only 1 aft, but will have 12 6-inch quick-firing guns in casemates of Krupp armor. A sister ship to the armored cruiser Kaiser Karl VI, of 6,100 tons, has also been begun. The belt is 10½ inches thick, and the armament is 2 9.4-inch guns, 8 5.9-inch quick-firers, and 18 smaller ones.

Bosnia and Herzegovina.—The treaty of Berlin, signed July 13, 1878, placed Bosnia and Herzegovina, Christian provinces of Turkey, under the military and civil administration of Austria-Hungary and gave the right of military occupation over the sanjak of Novi-Bazar, the civil administration of which was reserved to the Porte. The civil population of the occupied provinces in 1895 was 1,568,092, and the military population 22,944; total, 1,591,036. Their area is 19,700 square miles. The foreign population was 70,848, of whom 66,376 were of Austro-Hungarian nationality. The budget for 1900 makes the cost of central administration 3,650,424 crowns; of the interior, 17,034,934 crowns; of finance, 12,750,780 crowns; of justice, 1,715,140 crowns; of buildings, 6,375,090 crowns; total, 41,526,368 crowns. There are 545 miles of railroad and 5,290 miles of telegraph. The number of messages in 1899 was 402,263, of which 153,091 were internal, 234,405 international, and 14,767 official. The post-office forwarded 9,457,505 letters and postal cards and 2,582,227 circulars and newspapers. The young men of the occupied provinces are obliged to serve in the Austro-Hungarian army by virtue of the law of Oct. 24, 1881. Four regiments of infantry and 4 sections of engineers are raised, numbering 6,711 men. The provinces are garrisoned by

the Fifteenth Army Corps, numbering 20,110 men.

Commerce and Production.—The total value of the special imports of merchandise into the Austro-Hungarian customs territory in 1899 was 804,400,000 florins, and of the special exports 930,700,000 florins. The imports of raw wool were 54,920,000 florins in value; of raw cotton, 54,453,000 florins; of silk, raw and manufactured, 42,585,000 florins; of coal and coke, 41,812,000 florins; of tobacco, 25,001,000 florins; of machinery, 22,007,000 florins; of coffee, 20,668,000 florins; of copper, 14,925,000 florins; of flax and jute, 14,731,000 florins; of wine in casks, 14,700,000 florins; of eggs, 13,672,000 florins; of prints and books not bound, 13,385,000 florins; of hides and skins, 7,090,000 florins; of corn, 6,918,000 florins; of wheat, 5,449,000 florins; of hogs, 4,023,000 florins; of lard and bacon, 2,670,000 florins; of rye, 1,302,000 florins. The exports of wood and wood manufactures were 116,303,000 florins in value; of sugar, 86,569,000 florins; of eggs, 42,609,000 florins; of barley, 36,348,000 florins; of brown coal, 32,198,000 florins; of malt, 25,249,000 florins; of glass and glassware, 24,990,000 florins; of cattle, 24,885,000 florins; of horses, 23,234,000 florins; of gloves and shoes, 22,196,000 florins; of woolen manufactures, 21,219,000 florins; of hops, 11,103,000 florins; of coal, 10,762,000 florins; of bed feathers, 9,809,000 florins; of cask staves, 9,809,000 florins; of poultry, 9,793,000 florins; of beans, 6,805,000 florins. The imports of gold and silver coin and bullion were 21,557,000 florins, and exports, 35,533,000 florins. The imports from and exports to various countries in 1899 are given in florins in the following table:

COUNTRIES.	Imports.	Exports.
Germany	299,273,000	491,437,000
Great Britain	74,145,000	83,256,000
Italy	59,699,000	71,737,000
Russia	43,333,000	40,451,000
United States	62,473,000	16,082,000
Switzerland	27,661,000	35,622,000
British India	43,717,000	18,217,000
France	27,687,000	29,920,000
Turkey	18,717,000	30,398,000
Roumania	14,144,000	33,007,000
Servia	17,988,000	13,104,000
Belgium	19,508,000	6,552,000
Netherlands	8,858,000	14,027,000
Egypt	8,221,000	10,334,000
Brazil	15,940,000	1,758,000
Greece	7,430,000	6,497,000
South America	11,760,000	1,819,000
Dutch East Indies	9,913,000	94,000

The area cultivated in Austria in 1899 was 28,290,656 hectares, of which three-eighths was under farm crops, over a third forest, and a quarter pasture and meadow. The production of wheat was 18,157,000 hectoliters; of barley, 24,250,000 hectoliters; of oats, 43,052,000 hectoliters; of rye, 30,897,000 hectoliters; of pulse, 3,791,000 hectoliters; of buckwheat, 2,025,000 hectoliters; of corn, 5,115,000 hectoliters; of other cereals, 1,356,000 hectoliters; of potatoes, 107,903,000 quintals; of sugar-beets, 65,284,000 quintals; of other beets and turnips, 25,977,000 quintals; of wine, 3,368,000 hectoliters; of tobacco, 39,000 quintals; of hops, 108,000 quintals; of hemp, 55,000 quintals; of flax, 69,000 quintals; of cocoons in 1898, 1,682,777 kilogrammes. The forests cover 9,787,508 hectares, of which 6,828,415 hectares are pine forest. The product of coal in 1899 was 44,750,000 florins in value; of brown coal, 47,584,000 florins; of iron, 38,626,000 florins; of lead, 1,872,000 florins; of quicksilver, 1,230,000 florins; of zinc, 2,020,000 florins; of silver, 1,905,000 florins; of copper, 921,000 florins. The total

value of minerals was 104,146,136 florins, and of furnace products, 47,498,858 florins. The value of fish caught by 14,385 fishermen in 3,404 boats in the summer was 1,615,469 florins, and by 11,816 fishermen in 3,101 boats in winter was 1,054,146 florins. The quantity of beer brewed in 1898 was 19,206,585 hectoliters; of alcohol distilled, 1,373,326 hectoliters.

Three-quarters of the people of Hungary depend on agriculture. Only 5 per cent. of the soil is infertile, 41 per cent. is farm land, 23 per cent. pasture and meadow, 28 per cent. forest, and 3 per cent. garden and vineyard. Two-thirds of the land is managed by the owners and about half the farms, occupying half the cultivated land, are between $7\frac{1}{2}$ and 150 acres. The yield of wheat in 1899 was 40,905,000 centners; of corn, 33,189,000 centners; of barley, 14,005,000 centners; of oats, 12,705,000 centners; of rye, 12,668,000 centners; of buckwheat, 146,000 centners; of mixed grain, 1,591,000 centners; of other cereals, 501,000 centners; of pulse, 2,216,000 centners; of potatoes, 38,651,000 centners; of sugar-beets, 16,224,000 centners; of other beets and turnips, 39,151,000 centners; of wine, 2,041,000 hectoliters; of tobacco, 435,000 centners; of hemp seed, 362,000 centners; of rape seed, 431,000 centners; of cocoons, 1,244,728 kilograms; of honey, 33,518 centners; of beeswax, 2,319 centners. The forests cover 9,037,844 hectares, of which 4,728,527 hectares are beech, 2,417,833 hectares oak, and 1,891,484 hectares pine. The exports of timber and forest products in 1899 were valued at 85,506,000 crowns, and imports at 13,386,000 crowns. The total value of ores and other minerals in 1899 was 57,383,000 crowns, the value of coal being 13,005,000 crowns; that of iron ore, 9,847,300 crowns; that of lignite, 29,300,800 crowns, and that of gold, silver, copper, lead, manganese, and other ores, 4,674,900 crowns. The value of pig-iron produced was 38,023,200 crowns; of gold, 10,059,900 crowns; of silver, 2,427,600 crowns; of antimony ore and regulus and crude antimony, 855,700 crowns; of lead, 740,900 crowns; of iron pyrites, 639,800 crowns; of coal briquettes, 499,200 crowns; of copper, 239,100 crowns; of other furnace products, 1,485,500 crowns; total, 54,970,900 crowns. The quantity of beer brewed in 1899 was 1,566,251 hectoliters; of alcohol distilled, 1,161,871 hectoliters; of sugar manufactured, 2,467,800 centners. The special commerce of Hungary in 1899 was valued at 1,198,761,000 crowns for imports and 1,200,500,000 crowns for exports. Of the imports, 22.66 per cent. was raw material and 77.34 per cent. manufactured products, while of the exports, 62.11 per cent. was raw material and 37.89 per cent. manufactured products. Of the imports, 78.27 per cent. came from, and of the exports, 71.41 per cent. went to Austria, Germany coming next, and then Great Britain, Servia, France, Switzerland, and Italy. The cotton fabrics imported were 142,316,000 crowns in value; woolen fabrics, 95,460,000 crowns; silk goods, 36,476,000 crowns; wine in casks, 28,927,000 crowns; wheat, 23,227,000 crowns; refined sugar, 23,049,000 crowns; coal, 20,732,000 crowns; boots and shoes, 19,785,000 crowns; cotton yarn, 19,784,000 crowns; coffee, 19,309,000 crowns. The value of flour exported was 146,964,000 crowns; cattle, 86,127,000 crowns; wheat, 70,211,000 crowns; barley, 61,063,000 crowns; hogs, 49,730,000 crowns; corn, 33,506,000 crowns; horses, 30,697,000 crowns; oats, 29,236,000 crowns; rye, 28,872,000 crowns; eggs, 28,533,000 crowns.

Navigation.—The number of vessels entered at the ports of Austria during 1898 was 105,412, of

12,682,701 tons; cleared, 105,413, of 12,686,481 tons. Of the vessels, 88 per cent., and of the tonnage, 90 per cent., was Austrian. The merchant shipping of Austria on Jan. 1, 1899, comprised 157 vessels for ocean navigation, of 172,286 tons; 1,400 coasting vessels, of 24,623 tons; and 10,958 fishing vessels and small craft, of 23,112 tons. The total number of sailing vessels was 12,418, of 58,097 tons; steamers, 187, of 161,924 tons.

The number of vessels entered at Hungarian ports during 1899 was 19,415, of 2,129,752 tons; cleared, 19,420, of 2,128,595 tons. Of the vessels, 84 per cent. and 60 per cent. of the tonnage was Hungarian. The merchant shipping of Hungary consisted of 62 vessels for ocean navigation, of 57,192 tons; 149 coasting vessels, of 5,483 tons; and 283 fishing and small craft, of 442 tons. Of the total number, 424, of 16,023 tons, were sailing vessels and 70, of 47,094 tons, were steamers.

Railroads, Posts, and Telegraphs.—There were 11,444 miles of railroad in Austria at the close of 1898, of which 4,763 miles were state lines, 1,681 miles belonging to companies but worked by the Government, 4,938 miles lines owned and worked by companies, and 62 miles foreign lines. The number of passengers carried in 1898 was 126,087,000; tons of freight, 111,198,000; receipts, 287,817,000 florins; expenses, 178,930,000 florins.

The length of railroad lines in operation in Hungary at the close of 1899 was 10,527 miles, of which 4,750 miles were Government lines, 3,719 miles lines of companies worked by the Government, and 2,058 miles lines owned and worked by companies. The number of passengers carried in 1899 was 61,581,000; tons of freight, 39,933,000; receipts, 258,300,000 crowns; expenses, 141,600,000 crowns.

The number of letters and postal cards that passed through the Austrian post-office in 1899 was 980,477,790; samples and printed matter, 131,712,730; newspapers, 102,609,700; receipts, 99,059,448 crowns; expenses, 85,425,706 crowns.

The number of letters and postal cards that the Hungarian post-office forwarded in 1899 was 281,679,000; newspapers, 111,989,000; samples and printed matter, 47,098,000; money and postal orders, 20,005,000; registered letters and parcels, 18,509,000. The receipts, including those from telegraphs and telephones, were 45,507,000 crowns; expenses, 32,713,000 crowns.

The length of telegraphs in Austria in 1899 was 33,235 miles, with 100,332 miles of wire. The number of messages sent in 1899 was 14,697,898. There were 253 telephone systems, with 102 circuits between cities, having altogether 68,445 miles of wire. The number of conversations in 1899 was 83,402,544.

The telegraph lines of Hungary had a total length of 14,015 miles, with 69,750 miles of wire. The number of messages, including railroad messages, was 13,919,737. There were 46 telephone exchanges and 27 intercity circuits, with connection with Vienna and Berlin. The length of wire was 31,380 miles.

Austria.—The legislative authority for the empire is vested in the Reichsrath, but each province possesses a large measure of autonomy and has a Landtag to legislate on matters not reserved by the Constitution for the Reichsrath. The upper house of the Reichsrath, called the Herrenhaus, is composed of 18 princes of the imperial family, 67 heads of noble families having large territorial possessions, 5 cardinals, 6 bishops possessing the rank of prince, and 140 members nominated for life. The lower house, called the Abgeordnetenhaus, is composed of 425 members elected for six years by 5 classes of electors—large proprietors,

cities, chambers of commerce and trade councils, rural districts, and the class embracing the whole body of electors. The Council of Ministers appointed Jan. 19, 1900, was composed as follows: President of the Council and Minister of the Interior, Dr. E. von Körber; Minister of National Defense, Graf Zeno Welsch von Welsersheimb; Minister of Railroads, Dr. H. Ritter von Wittek; Minister of Finance, Dr. E. Ritter Böhm von Bawerk; Minister of Justice, Baron A. Spens von Booden; Minister of Worship and Public Instruction, Dr. W. Ritter von Hartel; Minister of Commerce, Baron G. von Call von Culmbach; Minister of Agriculture, Baron K. von Giovanelli; without portfolios, Dr. A. Rezek and Dr. Leonard Pietak.

Area and Population.—The area of the Austrian Empire is 115,903 square miles. The population at the census of 1890 was 23,895,413, composed of 11,689,129 males and 12,206,284 females.

The number of marriages in 1899 was 213,631; of births, 986,098; of deaths, 656,176; excess of births, 301,997. The number of emigrants from Austria and Hungary in 1898 was 55,007, of whom 52,282 emigrated to the United States, 1,060 to Brazil, and 605 to the Argentine Republic.

Finances.—The revenue of the Austrian Government in 1898 was 794,058,000 florins in cash and 7,502,000 florins in bills; total, 801,560,000 florins. The expenditure was 803,547,000 florins in cash and 5,787,000 florins in bills; total, 809,334,000 florins. The revenue for 1900 was estimated at 1,585,811,822 crowns, the expenditure at 1,586,403,933 crowns. The budget estimate of revenue for 1901 was 1,641,997,585 crowns, and of expenditure 1,641,163,344 crowns. The sources of revenue were: Reichsrath and Council of Ministers, 1,661,800 crowns; Ministry of the Interior, 2,922,023 crowns; Ministry of Defense, 862,711 crowns; Ministry of Worship and Instruction, 13,936,032 crowns; Ministry of Finance, 1,148,589,848 crowns; Ministry of Commerce, 124,835,890 crowns; Ministry of Railroads, 280,476,440 crowns; Ministry of Agriculture, 33,852,381 crowns; Ministry of Justice, 2,522,444 crowns; pensions, 2,964,920 crowns; subventions and donations, 628,200 crowns; state debt, 26,356,296 crowns; debt administration, 19,600 crowns; sales of state property, 401,000 crowns; payment by Lombard railroads, 1,968,000 crowns. The branches of expenditure were: Imperial household, 9,300,000 crowns; imperial Cabinet chancery, 182,143 crowns; Reichsrath, 2,585,224 crowns; Supreme Court, 49,724 crowns; Council of Ministers, 2,931,714 crowns; contribution to common expenditure, 265,916,732 crowns; Ministry of the Interior, 67,570,603 crowns; Ministry of Defense, 59,194,751 crowns; Ministry of Worship and Instruction, 75,114,558 crowns; Ministry of Finance, 251,059,328 crowns; Ministry of Commerce, 125,772,230 crowns; Ministry of Railroads, 246,541,050 crowns; Ministry of Agriculture, 43,780,345 crowns; Ministry of Justice, 70,037,115 crowns; Board of Control, 441,800 crowns; pensions, 58,283,518 crowns; subventions and donations, 16,114,610 crowns; state debt, 345,122,525 crowns; debt administration, 1,165,374 crowns.

The debt of the Austrian Government on Jan. 1, 1900, amounted to 1,581,728,212 florins, the consolidated debt being 1,566,030,111 florins and the floating debt 15,728,101 florins.

The Reichsrath.—Elections for a new Reichsrath were held in January, 1901. The violent obstructive tactics of the Young Czechs, who by that means endeavored to force the Government to alter the language regulations according to their ideas, had stopped the machinery of parliamentary government and brought on the dissolution

of the Reichsrath. The conservative Czechs, called the Bohemian Feudalists, maintained the same views as to the historic rights and the integrity of the Kingdom of Bohemia and the political and administrative equality of the Czechs with the Germans. They differed mainly from the Young Czechs on the question of methods, condemning every form of obstruction, and going so far as to propose amendments to the procedure of the Reichsrath that would enlarge the disciplinary powers of its president so as to prevent in the future the scandalous scenes that paralyzed the normal functions of the Chamber in 1900. The elections in Bohemia turned on this question as to whether obstruction is justifiable or expedient. The language conflict increased the strength in Bohemia and elsewhere of the Pan-German party, which looks forward to the incorporation of the German-speaking lands of Austria and of Bohemia as well in the German Empire. The result of the elections was the dwindling of the moderate and conciliatory elements without shifting the balance between the aggressive parties. The Young Czechs gained the victory over the Old Czechs; the Pan-Germanists won several seats; the Polish faction was strengthened considerably; the once dominant German Liberals continued to decline in numbers; the Social Democrats increased at the expense of the Christian Socialists, or Anti-Semites, and of the Catholic Populists. The most striking feature of the contest was the setback received by the Viennese Anti-Semites, which the German Progressists helped to bring about by giving some of their votes to Social-Democratic candidates. The Clericals, as well as their Anti-Semite allies, lost heavily. In Bohemia the Clerical vote showed considerable gains, and the Socialists lost 6 seats to the Young Czechs and the Pan-Germans. The number of the latter in the Reichsrath was increased from 5 to 21. Half of these subscribed to the program of Dr. Schönerer, who advocated emancipation from Rome in order to prepare for the entrance of the German provinces of Austria into the German Empire, since the German Government would not favor the annexation of German Austria at the cost of bringing about Catholic preponderance in Germany. Schönerer and his principal lieutenant, Wolf, had actually changed their faith and entered the evangelical communion. The Pan-German members held a meeting to discuss Schönerer's program, which they accepted, with his leadership, with the proviso that it did not involve the renunciation of the Catholic religion, but was to be taken as signifying only emancipation from the influence of the Roman curia in political and national affairs. The Pan-Germanic joined hands with the German People's party, forming a strong group of over 60 members. The Czechs of all shades gathered together into one club. The German Progressists also adhered to the object of establishing German as the state language. The Catholic People's party and the Center party united in a club pledged to uphold Catholicism, the dynasty, Austrian interests, and parliamentary government.

The Reichsrath was opened on Jan. 31. The Pan-Germanic union, the Socialists, and the extreme faction of the Czechs had absented themselves when the Chamber was called upon to cheer the Emperor. The speech from the throne offered a list of important social and economic reforms, in which Dr. von Körber hoped to awaken sufficient popular interest to bring about a truce between the nationalities. The necessity was recognized of a clearer definition of the extraordinary powers of the Government in cases of emergency,

so that the rights of popular representation should be safeguarded and the responsibility of the Government clearly understood. At a calmer period the revision of parliamentary rules of procedure could be considered whereby the business of the Reichsrath would be expedited without infringement of the freedom of discussion. An administration independent of political influences was declared necessary in the interest of the people and the state. The abolition or alleviation of some taxes was announced, also the relief of certain provinces whose revenues were insufficient. Measures were needed for the regulation of the currency. The necessity of preserving Austria's position in the world's markets brought economical questions to the front. The expiration of most of the commercial treaties entailed a revision of the customs tariff. A bill for the promotion of industry and commerce would be brought in immediately. The completion of the railroad network of the state, especially by a second line to Trieste, would be spread over several years. Another measure was intended to secure to the laboring population dwellings conducive to health and morality. Means were required for the development and equipment of the superior schools to conform with the latest advances of science. Reforms in other parts of the educational system were in preparation, as well as in various other departments.

The settlement of the language question by legislation was the only safeguard for the continuance of the system of government in Austria which had produced a powerful army, flourishing finances, high public credit, and universal education. The Constitution afforded ample autonomy to the lands of the Austrian Crown, while securing the unity and strength of the empire. The feud of the nationalities was the disturbing cause that had interrupted the normal activity of the Reichsrath and hindered the establishment of old-age and invalid insurance and other projects for the material and intellectual development of the empire. The Government intended to do all that it could to cure the evil, but was bound to preserve intact the unity of language in certain branches of administration in which it constituted an old and established institution. The cooperation of the Reichsrath would be indispensable in the approaching settlement of the commercial relations between the two halves of the monarchy.

Among the projects of legislation, which were enough to occupy several sessions of a Reichstag working in perfect order, were measures for the protection of workmen, for the development of the commercial marine, for the construction of harbors, for the improvement of the army, and for Bosnian railroads. The Reichstag in the early part of the session was the scene of disorder and violence worse than any exhibitions of the previous Parliament. Missiles were thrown at the president, and several times the Czech and German members came to blows. The president of the Chamber had to decide how to receive interpellations in other languages than German. The Czechs demanded the recognition of the absolute equality of languages; the Germans insisted that no language be used but German. Formerly every member could speak German, but in the present Parliament there were illiterate Slavs who knew no language but their own. The Government endeavored to bring about a compromise, but consultations with the party leaders were fruitless. The Czechs appealed to the article in the Constitution establishing absolute equality of languages, the Germans to the traditional and necessary use of German and the impossibility of discussion carried on in the eight different languages of the

empire. The president then decided, on Feb. 20, to accept non-German interpellations, which must be translated into German, and in this form incorporated in the minutes, with the original interpellation appended. This decision was not satisfactory to either Czechs or Germans, and its announcement was the signal for an exchange of insults and an uproar that compelled the president to bring the proceedings to a close. The succeeding sittings were as stormy and scandalous. The use of insulting epithets was formerly unknown in Parliament, as it is contrary to the habits and education of the people of Austria of all classes, and is even punishable by law. The practice was introduced by the Anti-Semites in the Diet of Lower Austria and the municipal council of Vienna, and had the effect of demoralizing the surprised majority. At the moment when the conflict of nationalities became acute the innovation was adopted by the opposing parties in the Reichsrath, and the employment of abusive terms calculated to shock and revolt, and to provoke or silence opponents, was reduced to a science. The ruling of the president that the German translation of Czech interpellations be read in Parliament occasioned a fresh outburst of national passion, but the Czechs were not so outrageous as the Pan-Germans, who openly avowed their desire for annexation to Germany and imported religious rancor into the controversy by charges of immorality against the priesthood and by repeating clerical scandals. The Social Democrats joined in the attacks on the clergy. The Clerical Anti-Semites retorted by sweeping accusations against the Jews. The Government arranged a truce with the Czechs, promising public improvements at Prague and other advantages, though not the desired university at Brünn. The Reichstag discussed economic and other measures which were popular in the constituencies. The German and Czech members spontaneously came to an understanding for the advancement of canal and railroad schemes. In May, in day and night sittings, the Reichsrath endeavored to make up for the inaction of years. The annual contingent for the army, the imposition of a higher tariff on Italian wines, several measures affecting taxation, a bill making nine hours a day's work in mines, and the great railroad scheme of the Government were discussed, and the last measure, as well as the canal bill, was passed by agreement between all the parties. The regular business was interrupted at times by demonstrations against Anti-Semitic officials who had dismissed German Nationalist and Social-Democratic school-teachers. The arrangement made between Austrian and Hungarian parliamentary committees respecting the quota of each half of the monarchy in the common expenditure was laid before the Reichsrath, with a warning from the Prime Minister that the Government would not undertake to carry through popular measures if bills necessary for the existence of the state failed to pass. The new Ausgleich concluded by the Austrian and Hungarian governments was unpopular with all parties in Austria. It was generally regarded as a hard bargain extorted from Austria during the breakdown of the Reichsrath. The Czech representatives even of the moderate stripe were unwilling to support the Government in passing the measure through the Reichsrath on condition that a national concession be offered to their constituents, such as equality in the employment of the Czech and German languages in the public offices of Bohemia and Moravia.

Hungary.—The upper house of the Hungarian Parliament is the Chamber of Magnates, composed

in 1901 of 17 archdukes, 55 ecclesiastical dignitaries, 10 bannerets of the kingdom, the Count of Presburg, 2 keepers of the crown, 2 presidents of the royal assize court, 2 presidents of the administrative tribunal, the president of the royal table of Budapest, 3 delegates of the Diet of Croatia-Slavonia, the Governor of Fiume, hereditary members, consisting of 7 princes, 169 counts, and 49 barons, members nominated by the King for life, 50 in number, and 27 members elected by the Chamber of Magnates. The Chamber of Deputies is composed of 453 members, of whom 413 are elected for five years by the electoral colleges of Hungarian counties and towns, and 40 are elected from among its members by the Diet of Croatia-Slavonia. The Council of Ministers, constituted on Feb. 25, 1899, was composed as follows: President of the Council, Koloman von Szell; Minister of National Defense, Baron G. de Fejervary; Minister for Croatia-Slavonia and Dalmatia, E. von Czeh; Minister of Finance, Dr. L. de Lukaes; Minister of Worship and Public Instruction, Dr. J. von Wlassics; Minister of Agriculture, Dr. J. Daranyi; Minister of the Imperial Cabinet, Count J. Szechenyi; Minister of Justice, Dr. A. Ploss; Minister of Commerce, A. de Hegedus.

Area and Population.—The area of the Kingdom of Hungary, including Croatia and Slavonia, is 125,039 square miles. The population at the census of 1890 was 17,463,791, comprising 8,668,175 males and 8,795,616 females.

Finances.—The ordinary revenue of the Hungarian Government in 1899 was 503,525,000 florins; extraordinary and transitory revenue, 11,307,000 florins; total revenue, 514,832,000 florins. The ordinary expenditure was 454,886,000 florins; transitory expenditure, 13,094,000 florins; investments, 38,903,000 florins; extraordinary contribution to common expenditure, 6,685,000 florins; total disbursements, 513,568,000 florins. The estimate of revenue from all sources in 1900 was 1,054,513,404 crowns, and of the total expenditures 1,052,681,821 crowns. The budget estimate of ordinary revenue for 1901 was 1,012,770,396 crowns, and of extraordinary revenue 43,811,901 crowns; total, 1,056,582,297 crowns. Of the ordinary revenue, 2,849,317 crowns come from state debts, 2,000 crowns from the Ministry *ad latus*, 7,867,497 crowns from the Ministry of the Interior, 687,121,467 crowns from the Ministry of Finance, 268,606,725 crowns from the Ministry of Commerce, 38,924,077 crowns from the Ministry of Agriculture, 4,543,319 crowns from the Ministry of Instruction and Worship, 2,085,170 crowns from the Ministry of Justice, and 770,824 crowns from the Ministry of National Defense. The ordinary expenditure was estimated at 970,496,503 crowns, transitory expenditure at 30,771,834 crowns, and investments at 55,288,080 crowns; total expenditure, 1,056,556,417 crowns. Of the ordinary expenditure, 9,300,000 crowns were for the civil list, 182,144 crowns for the Cabinet chancery, 3,570,432 crowns for Parliament, 65,923,497 crowns for common expenditure, 42,951 crowns for common pensions, 19,448,005 crowns for Hungarian pensions, 259,964,560 crowns for the national debt, 27,350,106 crowns for debts of railroads acquired by the state, 312,204 crowns for debts of guaranteed railroads, 8,397,319 crowns for loans of separate departments, 16,926,513 crowns for the administration of Croatia-Slavonia, 334,640 crowns for control, 557,594 crowns for administration of courts, 979,869 crowns for the minister-presidency, 141,673 crowns for the Ministry *ad latus*, 92,360 crowns for the Minister for Croatia, 41,843,860 crowns for the Ministry of the Interior, 176,691,681 crowns for the Ministry of Finance, 188,744,-

045 crowns for the Ministry of Commerce, 45,337,315 crowns for the Ministry of Agriculture, 31,294,546 crowns for the Ministry of Instruction and Worship, and 36,492,491 crowns for the Ministry of National Defense.

The debt of the Hungarian Government at the end of 1899 was 2,475,225,000 florins, of which 1,089,033,000 florins were consolidated debt, 1,049,404,000 florins annuities, 11,626,000 florins treasury bonds, 76,265,000 florins debts of the various departments, and 248,897,000 florins arrears.

The Session of Parliament.—The most important measure of the session of 1901 was one declaring certain commercial occupations incompatible with a seat in Parliament, particularly an interest in any business house or an office in any company having dealings with the Government. The bill extended the scope of one passed in 1875 in consequence of abuses that became manifest during the commercial crisis of 1873. Count Stephen Tisza was disposed to object to the stringent provisions of the new bill because it would disqualify some of the most active and influential members of the Liberal party, but he and his followers eventually withdrew their opposition, sacrificing party advantages in the interest of political morality and the dignity and independence of Parliament. The establishment of a special Agrarian party in Hungary was a singular political phenomenon in a country where nine-tenths of the members of Parliament are agriculturists. The success of the Agrarians in Germany in forcing the Government of that country to adopt a minimum tariff prejudicial to Austrian, and especially to Hungarian trade, imposing high duties on cattle, pigs, poultry, eggs, and other animal products, was more freely discussed in Hungary than in Austria, and doubts were expressed whether a political alliance and commercial warfare could long subsist between two countries. The proposed German tariff was considered more favorable to Italy and even to Russia than it was to Hungary.

AUTOMOBILES. Among the many subjects of interest that have claimed the attention of the engineer and inventor, and, indeed, the business man and the society woman, is the recent advance in the manufacture and operation of automobiles. Of the many styles now on the market there are comparatively few that can be considered as having met the demands of the general public, and the horse is still the favorite means of transit with the greater number of business men. Many kinds of machines are now made in this and foreign countries. The motive power is divided into three distinct classes—steam, electricity, and gas, commonly called gasoline, from the fact that the gas is made directly from gasoline, which is carried by the vehicle. There are a few exceptions to this.

Referring to the steam-propelled vehicle, we find that many of its principal parts are common to all types of automobiles. It has a body mounted on the frame, running-gear having axles and wheels, a motor or engine geared to one of the axles to propel the vehicle, apparatus for steering, brakes, and means for signaling. These features may be made in many designs, and a good type of either could be used on any vehicle, whether propelled by steam, gas, or electricity.

The steam-propelled vehicle has the following apparatus necessary for its perfect operation: A steam-boiler; a steam-engine; a pump for forcing the water into the boiler; an automatic governor for keeping the water at the proper height in the boiler; a frame and running-gear, consisting of the axles, wheels, and differential gear; an air-pump to keep a pressure on the oil-tank to force the oil

to the burners; an oil-tank for fuel; a water-tank; controlling valves and levers for starting, stopping, and reversing the engine; the steering-gear; the brakes; the steam-muffler; the feed-water heater; the burners to heat the boiler; the trumpet or bell for signaling; and the vehicle body, containing the seat. Added to these are the many small parts, such as the automatic mechanism for releasing the steam when the pressure becomes too high and reducing the fire under the boiler to prevent the steam from creating too high a pressure. This constitutes a complete steam-plant mounted on wheels, which must be capable of being operated by any person having an ordinary knowledge of simple mechanics. Therefore it is necessary to make the whole operation of generating the power as nearly automatic as possible, and to design the mechanism so that it will not become deranged by reason of rough roads or any other ordinary condition likely to be encountered. This being the case, it is easy to understand the difference of opinion that exists as to the best agent for the propulsion of automobiles. The use to which the vehicle is to be put has much to do with the selection of the proper power. For heavy trucking, a large power that takes up comparatively little room is essential, whereas a vehicle built for pleasure and long runs could be almost entirely filled with the mechanism without impairing its efficiency.

The Steam Automobile.—The steam automobile is still the favorite type with many, and was among the earliest attempts to solve the problem. One of the best machines of this type is the locomobile. In this the power is applied to the rear axle from the engine. The steam-propelled vehicles of this type weigh about 1,000 pounds with tanks filled ready for a journey, and are designed for the accommodation of 2 persons. The wheels are of the steel-spoke variety, 28 inches in diameter, with pneumatic tires 2½ inches in diameter.

The gasoline-tank holds five gallons, and the water-tank 26 gallons. The extreme length is 7 feet 4 inches; extreme width, 4 feet 10½ inches; extreme height, 5 feet 2½ inches. This automobile carries sufficient fuel to run fifty miles without replenishing, and the water-tank will need refilling but once in that distance.

The steam-machines can be run at any speed by simply regulating the steam-valve, and this is one of the advantages of this type. They can be repaired by any intelligent machinist, as steam machinery is familiar to most mechanics, and any break or disorder is easy to locate. They will climb hills where a gas-machine will come to a standstill (both machines having the same power), due to the fact that the steam-machine can be regulated to run at a slow speed with a good pressure of steam, whereas a gas-machine engine must run fast enough to store the necessary power in its fly-wheel, and must then transmit the power through clutch mechanism to the axles, and as the gas-engine is an intermittent engine, it can not properly develop its power under these conditions.

The steam-machine starts with an easy movement, makes very little noise, and practically has no bad odors. It can be operated at a low cost, and the repairs are easy to make. Its disadvantages are the number of its parts which are liable to become deranged. The boilers become overheated and burn out, and they are, moreover, liable to explode from careless handling or, in case of collision, when the boiler is damaged. The gasoline is also a source of danger, especially with careless persons, but when it is handled with care few accidents occur. One of its chief draw-

backs is the amount of space that the mechanism occupies. If it is crowded too close, it is hard to get at it for repairs.

An automobile having several improvements over any now in the market of its type is shown herewith.

The engine is mounted directly on the rear axle. It is driven by steam, which is generated in a boiler composed of copper tubes, which has no shell or expanded joints, and no joints of any kind are in the heat of the fire. The greatest damage that could happen with this boiler would be the bursting of one of the tubes, which could be replaced easily by a new one while on the road, and in a few minutes. It would also take a pressure of more than 1,500 pounds per square inch of area to burst the tube, so there is very little danger from this cause. The bursting of the tube would not injure the vehicle proper, and is not dangerous to life. In this design the water is fed to the boiler automatically, whether the vehicle is moving or not. The steam is condensed, and the water is used over and over, thus saving the heat, keeping the boiler cleaner from scale and sediment, and preventing all noise from escaping steam. It also allows a much smaller water-tank to be used. Kerosene oil is used for fuel. It is gasified and burned under blast, which is automatically maintained and governed by the pressure of steam in the boiler. By the use of kerosene, the cost of operation is reduced more than 50 per cent. as compared with gasoline.

This machine has a 21-horse-power engine, and weighs complete but 1,200 pounds. It will run 100 miles without replenishing either fuel or water. For local traffic the tanks could be made much smaller and the engine of much less power, thus saving much of the space which is now filled with mechanism. This machine is being made by the Manhattan Automobile Company, of New York city, and is one of the best of its type.

The Gas-Engine Automobile.—This type of machine is well adapted for long journeys and high speed. There is less mechanism than in the steam-machine, but this type has serious defects that offset in a great measure its other advantages. The mechanism of the propelling parts includes a gas-engine, a carbureter or vaporizer for changing the liquid gasoline into gas, a sparking device to ignite the gas in the cylinders of the engine, a gasoline-tank to hold the fuel, an electric battery to furnish the electricity for the sparking device, a water-tank, a pump to circulate the water around the gas-engine cylinder to keep it from becoming too hot, a device to cool the water after it becomes hot from the engine, a friction-clutch to transmit the power from the engine to the axle of the vehicle, the differential gear, the reverse mechanism, and the change-speed device whereby the speed of the vehicle can be altered. It must also have the steering-device, brakes, etc., common to all automobiles. It will

be seen that there is considerable mechanism to be kept in order.

The gas-engine generally used in automobile practise is known as the Otto type four-cycle engine. This engine uses a mixture of gas and air, which is compressed in the cylinder and then exploded, creating the power, which is transmitted to the crank-shaft through the connecting-rod of the engine, and to the fly-wheel, which is mounted

MANHATTAN STEAM AUTOMOBILE.

on the crank-shaft. This shaft is very heavy, and the fly-wheel is very much heavier than those used in steam-engines, for the following reason: When the gas is admitted into the engine cylinder the piston is drawn back, drawing in its supply of the explosive mixture of air and gas; then the movement of the piston is reversed, compressing the mixture; the mixture is then ignited by the electric spark, and the explosion instantly follows, forcing out the piston and transmitting the power through the connecting-rod, crank, and shaft to the fly-wheel, where it is stored by reason of the wheel taking up the motion and power. The fly-wheel now has become the propelling power, and forces the piston back through the cylinder, thus expelling the carbonic-acid gases or products of combustion. It is then drawn back by the fly-wheel, drawing in a new gas mixture, and again reverses its movement, compressing the gas mixture, and is again exploded by the electric spark, thus giving new momentum to the fly-wheel. It will be seen from this that the engine gives but one power stroke in every four strokes, and that the other three strokes of the piston are absorbing a portion of the power that is stored in the fly-wheel by the power stroke.

The gas-engine has a governor, so the engine runs at a constant speed, and to have the automobile run at different speeds the gearing is changed by moving one of the controlling levers. There are usually three speeds at which a gas automobile, when operating on this principle, runs.

There is another way of governing gas-engines for automobile work which has come into more general use, and that is to throttle the explosive mixture, and also by changing the lead of the spark. Either of these ways will give good re-

sults, and engines are now on the market that will run at speeds of 700 to 1,600 revolutions a minute. With a well-designed engine arranged to drive a single-seated carriage, an engine capable of giving at least 4 horse-power at 500 to 600 revolutions a minute should be employed, and if there are steep hills, or it is desired to run at high speed, a 6-horse-power engine should be used.

Trouble is caused by the gas mixture not having the proper proportion of air and gas. The electric spark may fail to ignite the gases, either from the sparking plug being out of order or the electric battery being too weak. The gasoline may be of a poor quality, or too cold to vaporize. The vaporizer may fail to supply the oil vapor fast enough. The clutches may not work properly, causing the vehicle to start suddenly, or they may release slowly when it may be necessary to stop quickly, causing accidents that otherwise could have been averted. The danger of the gasoline-tank exploding is not great when it is handled with care, and the engine itself is as safe as any kind of engine, when properly made.

This type of vehicle requires a more experienced operator than either steam or electrically propelled vehicles, and when the parts are deranged or the engine fails to work, it is more difficult to locate the cause, and often more difficult to remedy than with steam. When the engine is stopped, it is necessary to get out of the vehicle and start the engine again by turning a crank to compress the charge of gas and get the first explosion, but as the engine is usually allowed to run while the vehicle is standing, this does not have to be done very often. The gas automobile made by the Au-

6 to 30 miles an hour without changing the gears, and on slower speeds, for hill climbing, etc., the slower gear is thrown in, and will work from 1 to 8 miles an hour. It runs with very little vibration, due to perfect balancing of the parts and the fact that a 3-cylinder engine is used, which allows the power to be more equally and evenly applied to the axle, and this freedom from vibration can not be attained unless the engines are carefully balanced. The engine cylinders are water-cooled, and the water-tank carries sufficient to keep them in proper condition for a day's run, due to the efficient water-heat radiators that are used, which continually cool the heated water as it comes from the engine jackets. The radiators are mounted on the front of the carriage, and are of such design that they do not detract from the general appearance of the vehicle. The water-tank holds 7 gallons. The Stanhope phaeton is steered by a jointed lever extending across and in front of the operator, managed by his right hand. Thus placed, it is less tiring to the arms than a sidewise-swinging lever. The surrey is steered with a wheel. A vertically-moving handle at the driver's left engages the clutches of the speed gears, and a pedal operates the reverse. A second pedal acts on a pair of powerful brakes, one on each rear hub, which will hold the carriage in either direction on a hill. A tube surrounding the vertical steering-post, at the driver's left, connects with the throttle-valve which controls the engine, and is operated with the left hand. One vaporizer of simple construction, which requires no adjustment, feeds all 3 cylinders of the engine. Jump-spark ignition, with variable lead, is em-

ployed, and the current that operates the igniter is furnished by 2 storage cells of battery. A muffler is used to silence the exhaust, thus making the machine noiseless compared with most of this type. The parts are all made on the interchangeable principle, so any broken or worn part can be duplicated at low cost and in a short time, by ordering the numbered part.

The Motor Bicycle.

—What may be properly classed with the gas-engine automobiles is a machine known as the motor cycle, which is an ordinary bicycle, driven by a small gas-engine.

On account of the difficulties encountered in reducing the mechanism so that it would fit within the frame of the bicycle, few manufacturers have been successful in producing a machine that is simple and neat. The diagram drawing illustrates a machine of this type, known as the Stratton motor cycle. This machine weighs complete but 78 pounds, and is propelled by gasoline gas, which is generated and used as follows: The tank (11) holds sufficient gasoline to propel the wheel about 75 miles at a speed varying from 3 to 35 miles an hour. The motor develops $1\frac{1}{2}$ horse-power, and is of the four-cycle type described above under the head of The Gas-Engine Automobile. The cycle is setarted by pedaling a few

RIKER ELECTRIC AUTOMOBILE.

tomobile Co. of America, in a test on ordinary roads of 464.2 miles, in which 80 automobiles started and 13 gas-machines won first prizes, won 2 of the 13, going the entire distance at an average speed of 12.91 miles an hour. This type of machine is more expensive than steam, and weighs considerably more, but a gallon of gasoline will propel it a greater distance than the same quantity of oil burned under the boiler will propel the steam-machine. The present machine will develop a speed of 30 miles an hour on good roads, and one supply of gasoline will propel the vehicle a full day's journey. The gasoline-tanks hold about 10 gallons.

This machine will run at speeds varying from

turns to get momentum to compress the charge in the engine; then the lever (17) is thrown into place, which causes the belt (19) to engage the small driving pulley of the motor, which in turn causes the piston (5) to move up and down

The Electric Automobile.—The electric automobile is in many ways superior to either the steam- or the gas-propelled vehicles. It is neater in appearance than the other types, and the mechanism is much simpler and easy to manage;

THE STRATTON MOTOR CYCLE.

in the cylinder (4), thereby drawing in the gas, which is formed in the mixing-valve (2). By turning the switch (15) the electric current is turned on, thereby causing a spark at the end of the plug (8), which ignites the gas, and the explosion forces the piston (5) downward, thereby causing the fly-wheels (7), which are connected to the small driving pulley, to revolve, and the power is transmitted to the rim (18) by the V-shaped belt (19). Compartment 13 contains cylinder oil, which automatically flows into the casing of the motor and lubricates the piston (5) and all the wearing parts. The exhaust gases of the motor are carried off through the pipe (20) into a muffler (21), which practically takes up all the noise. The mixing-valve (2) is a simple device for transforming the gasoline into a vapor and mixing it with air to form an explosive mixture. The batteries (10) supply the necessary current to ignite the gas in the engine. This current is made to flow through a coil of wire, and when the current is interrupted a second current is created in another coil of wire, known as the secondary coil, which is wound outside of the first coil, and this current is of much higher voltage and is used to make the spark. This double-coil arrangement is known as a sparking coil. The batteries are of the ordinary dry-cell type used for door-bell calls.

In case the fuel gives out or the motor fails to work, the tension on the belt can be relieved by means of the lever (17), and the bicycle can then be propelled in the ordinary way.

but its faults are of such a nature that they are hard to remedy.

Its mechanism consists of a storage-battery, an electric motor, an electric controller for regulating speed and reversing, gearing from the motor to the rear axle, differential gear to allow one rear wheel to run faster than the other in turning corners, etc., steering-gear, brakes, and signals. All the mechanism of this type has been fairly well perfected for propelling automobiles, with the exception of the storage-batteries. These have been perfected for work where they remain at rest, as in a power plant, but when they are placed on a moving vehicle, they are often shaken violently, and continually discharge the current at different rates, often at a higher rate than they can stand, and thus many troubles arise. In the first place, they are very heavy, and the active material comes loose from the plates; the plates buckle when the rate of discharge is too great; the acid creeps out of the batteries; the solutions become weak, or one cell gets badly out of order and causes a choking of the current; they sometimes short-circuit, thus losing the power. But the most serious drawback is the fact that, on account of the size and weight, they can not carry enough cells to propel an ordinary vehicle much more than 30 miles on one charge of the battery. It then becomes necessary to recharge, and this can only be done at some electric-power station. In case the vehicle is taken too far, and the electricity gives out, it becomes necessary to push the

vehicle to the nearest station, which may be miles away.

If it were not for these defects, electricity would be the ideal power for vehicles. The problem of getting a greater mileage from the electrically propelled vehicle has been attacked from a different direction, however, and the remedy consists in saving a part of the current and making it do work where it is now wasted, at the same time prolonging the life of the batteries. This method was devised and patented by Frank B. Rae, an electrical engineer of New York city, who was one of the earliest inventors in this line, and has proved successful. The Rae electric automobile differs from the ordinary in the design of the motor and the method of its control, the object being chiefly to obtain a very high efficiency in starting and accelerating, while at the same time maintaining the average efficiency at maximum speeds.

The electric automobile depends for its energy upon the storage-battery, and the motor should be designed to meet the limitations imposed by the battery. The makers of storage cells, of whatever type, are careful to state the rate of discharge for the best conditions of operation, and to give a maximum rate of discharge that should not be exceeded. The usual design of motors for automobile work is based upon maximum-speed conditions, and in starting and accelerating such a motor, the current consumption during this period is from two to three times greater than is

time in accelerating, and reaches speed with a current consumption little if any above the normal discharge rate of the cells. This is accomplished by a motor design in which the starting torque is produced by a large number of field turns and a small current, and by a system of regulation whereby the effective turns are decreased to increase the speed.

Below is a diagram showing the several combinations of field windings to produce this result. The motor is of the railway type, one motor only being used on the vehicle. It is geared to the rear axle by a simple differential gear, having one reduction, and is so arranged that the axle is continuous and is not weakened by dividing as is usually done. The tests upon one of the Rae cabs weighing approximately two tons, over a measured mile of level boulevard, gave the result shown in the table:

Position of controller.	Speed of motor R. P. M.	Speed of carriage m. p. h.	Current at 80 v.	Time in min. for 1 mile.	Watt-min. for 1 mile.	EFFICIENCIES.	
						Motor only.	Motor and gear
2	548	6.85	16.75	8.75	196	81.6	73.5
3	740	9.25	22.50	6.50	195	91.8	82.7
4	1,008	12.6	30.00	4.75	190	94.5	85.1

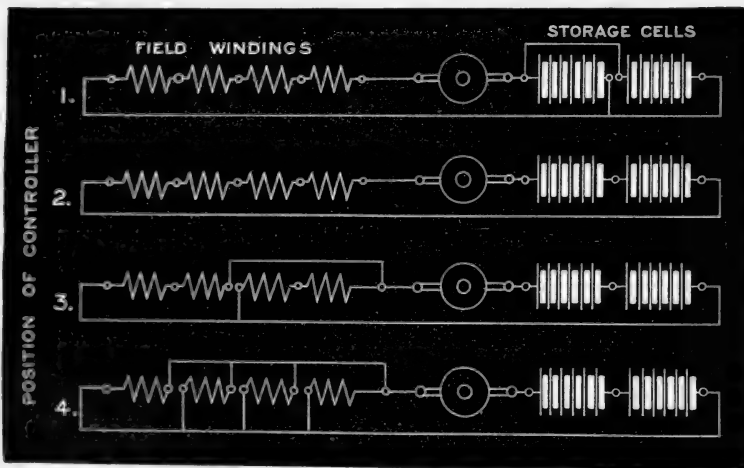

Whatever the speed made by the cab for the test distance, the watt-hours consumed were practically the same—that is to say, for a given distance the watt-hours per ton-mile for the machine tested averaged about 82 at any speed from 6 miles to 12 miles an hour.

The 4 - per - cent. grade is ascended at about 6 miles an hour, while the current draft is about 42 amperes, which is well within the discharge rate of the cells. In the cab with which this test was made the battery was rated at 125 ampere-hours at 80 volts, or 10,000 watt - hours. The radius of action was therefore 52 miles. The machine has repeatedly made 50 miles on boulevard and asphalt roads.

The Riker vehicles are driven by an

equipment which consists of 2 motors, each connected to a driving-wheel that turns freely on a stationary axle. The latter is in one piece, making the vehicle very strong. The motors are pivotally secured to the axle and suspended from the side bars. In some cases there is an advantage in using but one motor, which must therefore turn both rear wheels, and must be geared to them in such a way that either of them can turn independently of the other while rounding curves. To do this some makers cut the rear axle in halves, and connect the halves with the compensating gears. In this vehicle the compensating gear is placed in the left-hand rear hub, making the rear axle as strong as with the 2-motor method. This enables both methods of driving to be used, without sacrificing strength or simplicity.

Within a radius of 30 miles, and within New York city, charging stations are erected where

RAE'S SYSTEM OF MOTOR CONTROL.

required to operate the motor at maximum speed. It therefore follows that a motor ordinarily designed to utilize nearly or quite the rated discharge of the battery when operating under full-load and full-speed conditions, will require, to start and accelerate this load, a battery discharge of two or three times the rated output of the battery.

In practical operation in city streets, an automobile consumes a very large part of its time in starting, stopping, and accelerating, again slowing down and getting under headway, so that in ordinary practise the total energy taken from the battery for this work is greater, and the rate of discharge much more severe upon the battery, than is the case when the motor is operating under maximum-speed conditions.

The Rae system of design and control obtains a high starting efficiency, without sacrifice of

any electric machine may be recharged by connecting the batteries with a charging plug and depositing the price in an automatic receptacle, which turns on the current for a certain length of time, sufficient to charge the batteries.

Automobiles for Racing.—The machines built for high speeds, as for racing, have attracted a great deal of attention. They are mostly of the gas-propelled type. They are very heavy and powerful, and a speed of a mile in one minute sixteen and three-quarter seconds has been made over a measured course. These machines have a power of more than 50 horse-power. A vehicle now under construction in Jersey City is to be propelled at the rate of 70 miles an hour. It was ordered by several well-known men, and will cost \$20,000. The carriage will be of the skeleton type, following the lines of those used in France. The engine will be driven by gasoline gas, having 6 cylinders, and will develop 125 horse-power. It will weigh about 2,800 pounds. In a test on the Brooklyn, N. Y., speedway, Nov. 16, 1901, a Mors gasoline machine made a mile in 51½ seconds.

Regulations.—In New York a speed limit of 8 miles an hour is imposed on automobiles. In Cincinnati an ordinance was passed on Jan. 28, 1901, to regulate the operations of automobiles in the city streets. This ordinance requires every automobile to carry a lighted lantern between sunset and sunrise, the light to be visible at least 200 feet distant. These vehicles must also have a whistle or alarm-bell, to be sounded on approaching or crossing intersecting streets. The speed is restricted to 8 miles an hour, and no two may be operated abreast except upon special permission of the chief of police. They are not per-

mitted to interfere with any vehicle or member of the fire department or salvage corps going to or from a fire. A fine not exceeding \$5 is the penalty for violation of this ordinance.

The regulations in force in Paris, France, require the vehicles to be so constructed as not to allow the escape of any matter that might cause explosions or unpleasant smells, frighten horses, or obstruct the view of the driver. They must carry lights after dark, and handles regulating the machinery must be so arranged that the operator can work them without taking his eyes off the route he is following. Each vehicle must be provided with two distinct systems of brakes, each capable of shutting off the force of the motor and bringing it under instant control. One at least of these systems must act directly on the wheels or axles in such a manner as to bring them immediately to a standstill. All carriages exceeding 250 pounds in weight must be able to reverse their machinery and run backward. The name and address of the maker and owner of the vehicle must be displayed on it, and the operator must slow down, or if necessary stop, each time the vehicle may be the cause of an accident, of disorder, or of an interruption of traffic. In narrow or crowded thoroughfares the speed must be reduced to a walking pace. The approach of the vehicle must, if necessary, be signaled by a trumpet, and each one must be provided with two lamps, a white one and a green one.

In Spain automobiles are taxed, the tax being regulated according to the size of the cities. In Belgium one weighing 880 pounds or more is taxed \$9.65 a year, while those under that weight are taxed \$3.86.

B

BAPTISTS. The statistical tables published in the American Baptist Year-Book for 1901 gives the number of regular Baptist associations in the United States as 1,680, with 43,959 churches, 29,810 ordained ministers, and 4,233,226 members. These numbers show gains during the year of 25 associations, 532 churches, 337 ministers, and 51,540 members. The number of baptisms returned during the year was 107,235. The number of Sunday-school pupils, 1,794,820, was equivalent to about 40 per cent. of the church-membership.

The colored Baptist organizations have in all 10,043 ministers, 14,897 churches, and 1,591,735 members. These figures are included in the above enumeration.

The total amount of contributions for general missionary purposes was \$1,186,296, and \$10,128,298 were contributed for local purposes.

Two hundred and two Baptist institutions for higher education returned 2,463 teachers, 39,408 students, and property and endowments amounting to \$36,072,735.

The names of 38 Baptist benevolent institutions— orphanages, hospitals, etc.—are given, and a list of 118 Baptist periodicals is published.

The table of Baptists in the world gives: In North America 45,301 ministers, 30,586 churches, and 4,376,666 members; in South America, 28 ministers, 15 churches, and 1,639 members; in Europe, 4,069 ministers, 3,118 churches, and 488,869 members; in Asia, 1,602 ministers, 852 churches, and 119,745 members; in Africa, 111 ministers, 129 churches, and 6,700 members; in Australasia, 236 ministers, 169 churches, and 19,261 members; total, 51,347 ministers, 34,869 churches, and 5,212,880 members. The number of baptisms returned dur-

ing the year was in North America, 203,306; in South America, 291; in Europe, 22,492; in Asia, 8,178; in Africa, 810; in Australasia, 1,252; total, 236,329.

Northern Anniversaries.—The annual meetings of the Northern Baptist Societies in the United States were held in Springfield, Mass., beginning with the twenty-fourth anniversary of the Woman's Baptist Home Mission Society, May 20 and 21. The receipts of this society for the year had been \$68,972, and the expenditures \$72,970; and the accounts showed a deficiency of \$4,429. One hundred and fifty-nine missionaries had labored under the auspices of the society during the whole or part of the year, at or from 103 stations, in 34 States and Territories, the District of Columbia, 3 states in Mexico, Cuba, and Porto Rico—14 among Americans, 12 among Chinese, 19 among Indians, 32 among foreign populations in the United States, 61 among negroes, and 12 among Spanish-Americans. These missionaries, besides other meetings, had labored in 4,999 Sunday-schools and organized 42. The training-school at Chicago, Ill., where, besides Bible teaching, instruction is given in medicine, nursing, industrial training, kindergarten methods, physical and voice culture, with evangelistic visitation among the people, had been attended by 518 pupils, of whom 373 were Americans and the rest of 12 nationalities.

Publication Society.—The seventy-seventh anniversary of the American Baptist Publication Society was held May 22 and 23. The report mentioned a largely increased demand for the society's own publications, so many of them never having been sold before in a single year

during its history; yet the year's business as a whole had not been as successful as had been hoped, the aggregate of sales—\$670,972—showing a decrease of \$1,645 from the previous year. In the missionary department the receipts had been \$108,982, and the deficit of \$11,910 at the beginning of the year had increased to \$18,624. One hundred and ten missionaries and workers had been employed, 374 Sunday-schools organized, 644 persons baptized, 2,828 Sunday-schools and individuals aided by gifts of Bibles, books, and periodicals, and 747 institutes held.

Home Mission Society.—The meeting of the American Baptist Home Mission Society, May 23 and 24, was its sixty-ninth. The receipts—\$706,833—had been sufficient to liquidate the debt of \$32,201 with which the year was begun, meet all current expenses on a large scale, and leave in the treasury a balance of \$203. Of the expenditure, \$211,710 had been for mission work, \$251,263 for education, \$79,799 for expenses of administration and collection, and \$32,201 for the debt of the previous year. Eleven hundred and ninety-nine laborers had been supported wholly or in part by the society, 279 missionaries and 15 teachers among the foreign population, 53 missionaries and 101 teachers among the colored people, 20 missionaries and 23 teachers among the Indians, 14 missionaries and 6 teachers among the Mexicans, 12 missionaries and 5 teachers among Cubans and Porto Ricans, 3 teachers among the Mormons, and 578 missionaries among Americans. The society aided in the maintenance of 31 schools established for the colored people, Indians, and Mexicans, 7 day-schools for the Chinese, 1 day-school in Utah, 1 in New Mexico, and 1 in Cuba. Nineteen hundred and fifty-four churches and stations had been supplied, 4,906 members received by baptism, and 81 churches organized. An unusual demand had been made upon the board during the year for aid from the loan and gift funds in the erection of new meeting-houses. Fifty-two churches had been aided. The attendance of pupils in all the schools under the care of the society had been exceptionally large, and a notable improvement in the grade of preparation with which students enter was mentioned. The original purpose for which the schools were established—that of providing a trained leadership, especially well-qualified pastors and teachers—had been kept steadily in view; and while industrial education had not been overlooked or neglected, it had been subordinated to the intellectual, religious, and moral training. A resolution was adopted recognizing the increased importance of the Indian work, and the necessity of giving more attention to the education of the Indian children since the withdrawal of Government aid from the "contract schools."

Missionary Union.—The meetings of the American Baptist Missionary Union took place May 27 and 28. The report (eighty-seventh) represented that during the early months of the year it had looked as if an accumulated debt of \$111,000 might be increased to \$160,000; but instead of increase of debt the board were able to report the entire payment for all the work of the year closed, with a surplus; with which surplus and the sum of \$68,666 unexpectedly received from the bequest of the late Daniel S. Ford, \$73,000 had been paid on the debt, reducing the amount of it to \$38,297. Further, about \$50,000 had been sent in for India famine relief. The total amount of the receipts for the year (exclusive of the India famine relief funds) was \$687,706. The matter of cooperation between the colored Baptist brethren, North and South, with the Missionary

Union had been under advisement for several years. Now definite steps had been taken. An arrangement had been made with the National Baptist Convention, Louisville, Ky., for the joint employment of the Rev. Charles S. Morris, to visit the churches in the South, white and colored, in behalf of missions in Africa. Under a similar arrangement of cooperation with the Lott-Carey Convention, another colored Baptist body, the Rev. C. C. Boone had gone as a missionary to Palabala, on the Congo.

The numbers returned from the mission fields were: From the European missions, 1,231 preachers, 1,000 churches, 103,762 members, 79,742 pupils in Sunday-schools, 5,546 baptisms during the year, \$422,800 of contributions; from the missions to the heathen, 1,278 preachers, 954 churches, 112,163 members, 39,981 pupils in Sunday-schools, 6,553 baptisms, \$92,528 of contributions.

Report on Coordination.—A special joint mass-meeting of the societies was held May 23, to consider the report of the Committee on Coordination appointed by the societies at the previous year's meeting. In the voting upon the adoption of the report the parts were separated, and each section was acted upon by itself. The first recommendation, looking to a uniform qualification for delegates, was adopted in such shape as to read, "We recommend that the several societies, after mutual consultation through their executive boards, change their constitutions so as to require the same qualifications as to voters, and that the constitutional changes be submitted at the anniversaries in 1902." The second recommendation, providing for an annual "mid-year" joint meeting of the executive boards or committees of the societies, was passed without debate or division. The third recommendation, for the consolidation of the missionary periodicals into one, was rejected. The fourth section of the report, recommending that all churches recognize the claims of the general societies (Publication, Home Mission, and Missionary Union) for contributions, was opposed by the friends of the women's societies, and was lost. The fifth recommendation, deprecating special appeals, was likewise lost. The sixth section, providing for a committee of nine to consider district secretaryships and collecting agencies, was adopted without objection. The report was then adopted in the shape to which the meeting had reduced it, as a whole.

Education Society.—The Board of Management of the American Baptist Education Society reported at the annual meeting, June 25, that grants had been made during the year to 5 institutions of \$70,000 in all, conditioned on \$235,000 additional being given by their friends. Six institutions had completed the sums, \$180,000 in all, required to secure pledges made by the society. The society had in the year paid \$97,885 to meet \$345,734 raised by 13 institutions. In eleven years it had paid to Baptist educational institutions \$1,001,567, while \$1,867,683 had been collected otherwise for them, making an increase of Baptist educational endowments of \$2,869,250. This result had been made possible largely by the munificence of Mr. John D. Rockefeller. The receipts of the society for the year had amounted to \$103,500, of which \$100,823 were from Mr. Rockefeller. The payments had been \$99,490, leaving a balance of \$4,010 in the treasury.

Historical Society.—At the annual meeting of the American Baptist Historical Society, May 25, good progress was reported as having been made toward replacing the library destroyed in the burning of the building of the American Baptist Publication Society several years before.

Women's Societies.—The annual meeting of the Woman's American Baptist Home Mission Society, auxiliary to the American Baptist Home Mission Society, was held in Concord, N. H., May 1 and 2. Balances were reported by the treasurer of \$311 in the general treasury and \$84 in the Alaska treasury. The reports from the field related to work in the South, Utah, New Mexico, and Alaska, among French Roman Catholics in large manufacturing cities, and to the operations of Hartshorn Memorial College. From the Alaskan mission 13 church-members were returned, with 32 children cared for at the home—an institution the support for which is looked for from the Sunday-schools of New England. A change for the better was remarked in the attitude of the natives. While they had allowed their children to attend school, they had themselves heretofore held aloof from the whites. They had now asked to be admitted to the evening schools. Resolutions were passed by the meeting declaring that the main efforts of the society should be devoted to the work which it had pledged itself to uphold, while causes not directly in that line should be carefully scrutinized; and that its chief purpose should continue to be to promote Christian education and emphasize its importance. Other resolutions urged that every possible means be used to create a public sentiment in favor of a constitutional amendment making polygamy a crime, and defined the position of the society as against the manufacture and sale of intoxicating liquors.

Of the 2,807 auxiliaries of the Woman's Baptist Home Mission Society reported upon at its annual meeting of 1901, 354 were children's contributing organizations. Young ladies had during the past year contributed \$755 for work in Cuba, and girls and boys of junior age \$711, mainly for the support of the kindergarten in the city of Mexico and for the work for Chinese children in San Francisco, Cal. The sum of \$599 had been paid in in the name of the "Baby Band," consisting of 3,817 little folks seven weeks of age and younger, mainly for the support of the Chinese kindergarten in San Francisco.

Southern Baptist Convention.—The Southern Baptist Convention met in New Orleans, La., May 10. The Hon. W. J. Northen, of Georgia, was unanimously reelected president. The first report presented was that of the Foreign Mission Board for its fifty-sixth year. In accordance with the recommendation of the previous convention, the board had at once proceeded to enlarge its work. Twenty-one new missionaries had been sent out during the convention year, important new points had been occupied, and old ones strengthened. The receipts for the year had been \$156,083, constituting the largest contribution ever made by the people represented in the convention to foreign missions. For the fourth year in succession the board was able to report all indebtedness paid, and an appreciable cash balance remained on hand. The Chinese Publication Society at Canton had made some progress, and had been aided by a gift of \$500 from the Sunday-school Board. The establishment of theological training-schools was encouraged. Such schools were now in operation at Canton and Shanghai, China, in Africa, and at San Paolo, Brazil, and arrangements were making for one in Rome. An advance step had been taken in medical work, in the shape of preparations for opening a hospital in north China. It was represented that 87 per cent. of the contributions made to the board go directly to the work in the field, the expenses of management being about 13 per cent. The actions of the missionaries

in China had been governed during the troubles in that country largely by the advice of the representatives of the United States Government there. The missionaries in north China had escaped by going to Chefoo, on the coast, or to Japan. Those in central China not resident in Shanghai had to leave their posts temporarily, and the women in south China had sought places of safety for a season. The missionaries had acted with discretion and fidelity through all the troubles. None suffered bodily harm, though some of their houses were looted and many chapels were destroyed. The native Christians had as a rule been faithful. All the missionaries had now returned to their stations.

The Woman's Missionary Union had contributed \$31,801 to the foreign work during the year—an advance of \$4,043 over the contributions of the previous year. The women missionaries received no salaries, and the expenses they incurred amounted to only \$2,477. The missions under the care of the Foreign Board—in Brazil, Italy, Mexico, China, Japan, and Africa—returned altogether 127 churches, 166 out-stations, 102 missionaries (46 men and 56 women), 41 ordained natives, 130 unordained native helpers, 6,773 members, 1,009 baptisms during the year, 2,294 pupils in Sunday-schools, 70 houses of worship, 35 day-schools with 939 pupils, and \$10,259 of contributions.

The total receipts of the Sunday-school Board for the year had been \$78,381, an increase of \$6,778 from the previous year. It owed no debt, and the surplus on hand was adequate for current needs. The reserve fund had been increased by \$14,000, and now aggregated \$44,000, which were safely invested in interest-bearing securities. The appropriations aggregated, with denominational work, \$16,288, besides the supplies sent in boxes, which were valued at \$8,000. During the ten years of the existence of the board it had made appropriations of \$184,681. It had received \$2,995 for Bible work, and had appropriated 31,554 copies of Bibles, Testaments, and portions of Scripture, valued at \$5,016. The contributions of the Woman's Missionary Union to the board had been, in cash and boxes, \$9,023.

The Home Mission Board reported for its fifty-sixth year 811 missionaries, 2,660 churches and stations, 6,671 additions by baptism, 162 churches constituted, 100 houses of worship built, \$82,542 expended in the building and improvement of houses of worship, 511 Sunday-schools organized, and the details of the personal and other work of the missionaries in their several departments. The State boards of Alabama, Arkansas, Florida, Georgia, Indian Territory, Kentucky, Louisiana, Maryland, Missouri, Mississippi, North Carolina, Oklahoma Territory, Tennessee, Texas, and Virginia were in cooperation in part or the whole of their work. The receipts of the board for the year had been \$86,904 for the regular work, and \$4,110 in special gifts to the Church Building and Loan fund, making a total of \$91,075, as against \$79,366 in 1899. An increase of gifts had taken place in all the States except two. Seventeen missionaries had been employed in work among the negroes in Georgia, Kentucky, Missouri, North Carolina, and Virginia, with a total expenditure of \$2,391. Special emphasis was laid in the report on cooperative work, and special mention was made of the "mountain work" in North Carolina, Georgia, and Kentucky, for which \$2,850 had been appropriated. "Frontier work" was favorably spoken of. Not all that was hoped for had been realized in the matter of cooperative work with the Home Mission Society of the Northern Baptists. Labors

among the foreign population were carried on by one missionary in Baltimore, Md. The work in Cuba did not seem to have been helped by American occupation. The sum of \$11,277 had been spent upon it, and 177 baptisms were reported. The Church Building and Loan fund, which was begun with a contribution from the Woman's Missionary Union, now aggregated \$4,110. The year's contributions of this society to the board had been \$47,437. A committee of nine members on cooperation, appointed at the preceding meeting of the convention, brought in a report, recommending an adherence of the convention to the resolution made one year before to give special emphasis to the object of eliciting, combining, and directing the energies of the whole denomination in one sacred effort for the propagation of the Gospel, and that it avail itself of the educational work of the new-century movement, and the attention and interest that have been awakened, "to press with special vigor *just now* some practicable plan for trying to enlist, as far as possible, every church and every member of every church in this important work." It invited the State associations, conventions, and boards to cooperate in a "vigorous, specific movement of this kind," and to arrange for regular appeals in the district associations; requested the district associations to appoint committees of ways and means for the purpose of securing the interest and contributions of all the several churches in their bodies; and proposed the institution of a special agency, with provision for its expenses, the particular work of which should be to put itself into direct communication with all the State organizations and the district associations in behalf of the plan; to compile lists of the churches supporting the boards, revising them from time to time, for the use of the several boards; and to secure, through all proper agencies, direct communication with every church within the bounds of the convention, in order to induce them to contribute. In connection with this report an offer was presented from a group of Baptists in Baltimore of \$4,000 for the purposes of the proposed commission for three years, conditioned upon the appropriation of \$3,000 by the Sunday-school Board for the same purpose. The discussion of the report in the convention was directed chiefly to the recommendation of a new commission, and this was finally referred to a committee, none of whom should be a member of any of the boards, to report to the next meeting of the convention.

The total contributions of the Woman's Missionary Union to the three boards of the convention were \$88,062.

Meetings of the Southern Baptist Young People's Union were held in connection with the meetings of the convention.

Triennial German Baptist Conference.—The triennial General Conference of German Baptists in North America was held in Berlin, Ontario, Sept. 25 to Oct. 1. Prof. L. Kaiser was reelected moderator. The seven conferences comprised in the body—viz., the Atlantic, Eastern, Central, South-western, Northwestern, Texas, and Pacific Conferences—reported through their representatives advance in numbers and increased financial strength. A report was made representing that during the past year 12 new churches had been organized, making a total of 249 churches, and that the membership had increased to 22,889. The report of the general treasurer showed that a total amount of \$83,426 had passed through his hands. The home mission work was represented as enlarging in all quarters. A new enterprise had been started in South America, and was already

bearing fruit. The educational report showed that within three years 32 students had entered the ministry, and that the seminary (at Rochester, N. Y.), had representatives in Africa, Asia, Australia, Europe, and South and North America. Yet many of the churches were without pastors, and the number of students in the seminary at Rochester was diminishing. About \$80,000 of a subscription undertaken for education had been paid in. A report was made also concerning the publication enterprises of the conference and its newspapers.

A committee, consisting of a representative from each conference, which had had the care of orphans since the connection with the orphanage at Louisville, Ky., was discontinued, reported concerning its efforts to secure the adoption of the orphans of the Church in trustworthy families. A Ministers' Mutual Benefit Association and a General Benefit Association composed of ministers of the German Baptist churches, held their meetings during the period of the sessions of the conference.

Young People's Union.—The tenth annual meeting of the Baptist Young People's Union of America was held in Chicago, Ill., July 25 to 28, John H. Chapman presiding. The treasurer's report showed that the receipts of the union for the year had been \$86,638, and the disbursements a few cents less, while its liabilities were \$18,900. The report of the Board of Managers showed that examination papers had been received from all but 6 of the States and Territories of the American Union, all the provinces of Canada, and Japan, comprising, in all, 3,569 senior and 10,947 junior papers. Some changes had been made in the arrangement of the studies and the examinations. In view of the number of readers who did not take the examinations, it had been decided to have reports of reading. Under the new arrangement the Advanced Bible-Reader's Course will be a four years' study of the 66 books of the Bible, emphasizing the historical background, and the contemporaneous history, the literary character, the doctrinal and practical teachings of each book, and its relation to the whole scheme of biblical revelation. The Advanced Conquest Missionary Course will be a four years' study of missions from the time of Christ to the present day, as carried on by every evangelical body of Christians in all parts of the earth. The advanced Sacred Literature Course will be a four years' study of (1) the history of the canon of the Bible, its principles, methods of interpretation, and present-day questions of its interpretation; (2) the origin, growth, and character of the kingdom of God; (3) Christian doctrines, with biographical studies of the apostles; (4) Christian doctrines, with biographical studies of some of the leaders in the history of the Church. During the past five years the journal the Baptist Union, in addition to bearing all of its own expenses, had paid \$13,270 into the general work of the Young People's Union. Increased efforts were now being put forth to make the paper indispensable to the young people of the churches. The sessions of the convention were given mainly to the hearing of addresses, to conferences, and to "rallies," of which two were held by the German Young People.

Baptist Congress.—The nineteenth annual Baptist Congress was held in the city of New York, Nov. 12 to 14, Prof. Albert S. Bickmore presiding. In his address of welcome to the congress on behalf of the Christian community, Archdeacon Tiffany, of the Protestant Episcopal Church, dwelt upon the benefit which that body had re-

ceived from a similar congress, which had been formed seven years previous to the Baptist Congress. The subjects of The Consolidation of the National Baptist Societies, Modern Evangelism, or Proper Substitutes for the Old-Fashioned Revival, The Function of Penalty in the Christian Religion, The Ethics of Gambling, Cosmopolitanism *versus* Patriotism, and The Keswick Movement for the Deepening of the Spiritual Life, were discussed in papers prepared for the occasion, and in addresses by appointed and volunteer speakers.

Summary of Mission Work.—A History of American Baptist Missions, by Edmund F. Merriam, published by the American Baptist Publication Society, besides accounts of the distinctly foreign Baptist missionary societies (American Baptist Missionary Union and the Foreign Board of the Southern Baptist Convention), gives summaries of the missions of the American Baptist Home Mission Society in Cuba and Porto Rico, of the Home Mission Board of the Southern Baptist Convention in Cuba, and of the aid given to missions in various foreign countries by the American Baptist Publication Society. The extent of all the American regular Baptist mission work outside of the United States is represented by the numbers 585 missionaries, 4,868 native workers, 2,088 churches, and 217,100 members. The whole amount contributed by American Baptists for missions is given in the book as \$1,953,078, of which \$736,112 are for foreign missions and \$1,216,966 for home missions.

Canadian Baptist Conventions.—The Baptist Convention of Ontario and Quebec met at Brantford, Ontario, Oct. 15, Mr. A. McNee, of Windsor, presiding. The report on foreign missions gave an account of the condition of that work in India, where there were 28 missionaries, 9 ordained and 70 unordained preachers, 79 teachers, 8 colporteurs, and 36 native churches with 4,176 members, 352 of whom had been added by baptism during the year; and Bolivia, where 2 new missionaries had been added to the staff and there were a self-supporting school and a college at La Paz with 100 students. The native churches in India had contributed about \$1,270 to the support of the Gospel. Three schools of a higher grade were maintained in the same field. The receipts of the board for the year had been \$30,713, and the expenditures \$36,195, leaving a deficiency of \$5,482. The Committee on Manitoba, the Northwest, and British Columbia reported concerning the growth of the Church in those territories, where there were now 100 organizations, 7,000 members, and \$200,000 worth of church property, and the average contribution was from \$12 to \$19 per member. Fourteen new churches had been erected during the year in Manitoba and the Northwest, and several in British Columbia, and the new college building at Brandon had been opened. The committee's receipts had been \$6,507, with an expenditure of about the same amount, and including \$75 to Scandinavian and \$38 to Indian work. The Ladies' Indian Committee had received \$1,094. The Church Edifice Board reported an income of \$1,544 and an expenditure of \$1,034. Loans had been made to 4 churches. The income of the Home Mission Board had been \$23,549, and its expenditures \$28,007, leaving a deficit of \$4,458. One hundred and twenty-three pastors and 40 students had been employed, serving 350 churches and mission stations, 2 churches had been organized, 3 church buildings erected, about 500 converts baptized, and 4 churches declared for self-support. The Superannuation Board reported 21 annuitants on

its list, 9 of whom were ministers. Its receipts had been \$2,801, and its disbursements \$2,665. Reports were made of the condition, as to finances and students, of McMaster University and Woodstock and Moulton Colleges, all of which returned a total enrolment of 482 students, 63 of whom were studying for the ministry. The Grande Ligne Mission (to the French Roman Catholic population) returned 140 pupils at Feller Institute, 16 of whom had been baptized during the year, and 48 persons baptized in the churches. The total income of the mission had been \$15,664, of which \$2,203 had been contributed from the United States, while the expenses had been \$17,417. The sum of \$24,062 had been further received for the Building and Endowment fund. The Publication Board had received \$14,629 from sales, and returned practically no liabilities. The report on the state of religion showed that the present membership of the churches was 42,975; that there had been 572 baptisms during the year, and that the contributions of the churches had been \$326,747 for home objects and \$68,360 for work abroad. The Sunday-schools returned 36,961 pupils, with an average attendance of 25,529 and 4,491 teachers, 1,192 pupils joined the church during the year, and the total amount of \$22,758 raised, of which \$5,149 were for the various missions.

Convention of the Maritime Provinces.—The Baptist Convention of the Maritime Provinces met at Moncton, New Brunswick, in October. The reports from the churches showed that the number of baptisms in Nova Scotia had been 150 less than in the previous year, while two of the three associations in New Brunswick returned a gain of 50; but in more than half of the churches there had been no additions by baptism. A loss of more than 1,000 members appeared in 5 of the 7 associations from which statistics had come to hand. The receipts for home and foreign missions consisted of \$10,271 contributed through the Woman's Society and \$12,850 from other sources. The schools at Wolfville had had a prosperous year. The question of union of the Baptists and Free Baptists was discussed with much interest, and the convention resolved to invite the Free Baptist brethren to unite with it in foreign mission work.

The Baptists of New Brunswick, while united with those of the other maritime provinces in foreign missionary and educational work, have special interests, confined to their own province, in home missions, Sunday-schools, and the Ministers' Annuity Association, of which home missions are looked after by the New Brunswick Association, while the other causes are under the care of a special provincial convention, the meeting of which for 1901 was held at Hartland.

Baptists in Great Britain and Ireland.—The statistics compiled from the returns of the churches, published in the Baptist Handbook for 1901, give, as the principal numerical items of the Baptists in the British Isles: Number of churches, 2,739; of chapels, 3,918; of chapel seats, 1,323,251; of members, 365,678; of teachers in Sunday-schools, 51,825; of pupils in Sunday-schools, 528,131; of local preachers, 5,564; of pastors in charge, 1,992. These numbers show increases for the year of 35 churches, 48 chapels, 12,835 chapel seats, 12,420 members, 879 teachers and 8,743 pupils in Sunday-schools, 329 local preachers, and 33 pastors in charge. New chapels providing seats for 13,400 persons had been erected at a cost of £109,888, and £53,693 had been spent in improvements to buildings and the erection of new schools, class rooms, etc. Although the special efforts made in behalf of the Twentieth Cen-

tury fund had called for large additional contributions, chapel debts had been reduced by £86,839.

The annual meeting of the Baptist Union of Great Britain and Ireland was held in London in April. The secretary, in presenting the annual report, represented that the year had been one of unprecedented progress, with advance and increase everywhere. While the condition of the denominational funds—the Home Mission fund, the Augmentation fund, and the Annuity fund—could not be pronounced entirely satisfactory, the fact was to be accounted for by the special efforts which had been made in connection with the Century fund. The whole amount of this fund not having yet been promised, it had been determined to extend the period allowed for the collection of it, and instead of closing it Dec. 31, 1901, to keep it open to the close of the current presidential year. The total amount promised was £175,000, leaving £75,000 yet to be secured, while £100,000 had been received in cash. The report of the Baptist Missionary Society showed that the receipts for the general work of the missions, excluding all special funds, had amounted to £67,954, and the expenditure to £77,870. The receipts had been £1,361, and the expenditure £4,153 larger than in the previous year. A further amount of £4,123 had been contributed in liquidation of the debt of 1899-1900; but a deficiency of £9,915 still remained. The excess of annual expenditure over receipts was explained to be wholly due to the recent increase of missionary agency, 40 additional missionaries having been placed upon the staff of the society since the celebration of its centenary. The total receipts for the year, including special funds and a special gift of £10,000 by the late Mr. Robert Arthington for work in Central Africa, had amounted to £98,240, the largest total ever received by the society apart from the Centenary fund. The missionaries in China were returning to their posts after the troubles, and the attitude of the Chinese authorities seemed to be friendly. The record of the Congo Mission was described as having been "marvelously full of encouragement and inspiration." Satisfactory reports were given as to other fields occupied by the society. The Zenana Mission returned a staff in India of 64 missionaries and 200 native workers, with about 1,500 zenana pupils, 3,000 houses open for regular visitation, 640 villages visited for evangelistic purposes, and 93 girls' schools with 3,700 pupils. One of the missionaries in China had been murdered during the troubles. The receipts of the general fund had been, including special gifts of £865, £12,189, and the expenditures £13,018. The Legacy Reserve fund was exhausted, but a memorial gift of £1,000 had been placed as a special reserve fund to meet working expenses. The report of the Bible Translation Society showed that 655,000 Scripture portions and other publications had been issued from the Calcutta and Cuttack presses, and a very large amount of colportage work had been carried on at various stations. The progress of the revision of the Singhalese Old Testament was referred to. The balance-sheet showed an income of £1,537 and an expenditure of £1,484, with subscriptions £347 higher than in the previous year. The balance of the reserve fund stood at £1,306.

The Baptist Building fund, by means of the constant turnover of its capital, now amounting to £54,267, had been enabled during the year to make grants of sums varying from £700 to £70 for building purposes. The amount lent to the churches was £123 in excess of the loans of any previous year.

The memorial stone of the Baptist Church

House in London was laid during the season of the meetings of the union, under the direction of the president of the union, the Rev. Dr. Maclaren. The building will have a frontage of 80 feet on Southampton Row and 140 feet on Eagle Street, and is intended to accommodate the offices of the Baptist Union, and to provide library rooms, a large council chamber, quarters for the various Baptist societies and institutions, a ladies's room, and a visitors' room, where visiting friends may be entertained.

The autumnal meeting of the union was held in Edinburgh in the second week in October. In the absence of the Rev. Joseph Parker, D. D., the appointed preacher, whose health did not permit his making the journey from London, the missionary sermon was preached, Oct. 8, by the Rev. R. J. Campbell, of Brighton, on the subject of Christ's Cosmical Significance. The statement was made in behalf of the society that it was compelled to turn a deaf ear to urgent calls for reinforcements, because of the annual deficit of £10,000 which had been the rule for three or four years past. "Soon, unless the Baptists filled up the deficit, it would be not merely a question of sending reinforcements, but of recalling missionaries." Nineteen missionaries were returning to their fields, and 3 new ones were sent out. The meeting of the union proper was opened, Oct. 9, with an address on Evangelical Mysticism, by the president, the Rev. Alexander Maclaren, D. D. At a reception given to "Ecumenical Baptist Delegates," representatives of Baptist churches in the United States, Canada, Australia, New Zealand, South Africa, the Cape Verde Islands, Jamaica, France, Italy, Germany, Holland, and Sweden were greeted as guests of the union. A report made concerning the Twentieth Century fund represented that of the £250,000 which the union had started out to raise, £185,414 had been promised, of which £121,600 had been paid. One thousand and ten churches were contributing to the fund, while 567 churches having 57,000 members (many of them, however, not connected with the union), had not yet come into the scheme. A Baptist Women's Twentieth Century fund had been formed, and would attempt to collect 1,000,000 shillings toward completing the little more than £65,000 which still remained to be raised. The subject of the autumnal sermon, by the Rev. Dr. Alexander Whyte, of Edinburgh, was Marrow Men. Addresses were delivered on The Place of Baptists in the Progress of Christianity, by the Rev. Dr. Clifford; Great Laymen who have Served the Church, by Mr. G. W. Macalpine, of Accrington; Christian Reunion and Denominationalism, by the Rev. Charles Brown; The Highest Churchmanship, by the Rev. F. B. Meyer; and an address by the Rev. Dr. John Smith, Presbyterian. Other meetings were held in behalf of the Zenana Mission and the young people.

The South African Baptist Colonial and Missionary Aid Society has been formed for the purpose of arousing interest in and collecting funds for the European and native work of the South African Union; to be a board of reference to obtain suitable men as ministers and missionaries in South Africa; and to represent the South African Union at the annual assemblies of the Baptist Union of Great Britain and Ireland. This has been done in accordance with resolutions passed by the South African Baptist Union at its annual meeting in Grahamstown. This body further determined that the promotion of the work in the Transvaal and Orange river colonies should be a first charge upon all moneys collected by the society up to June 30, 1902.

Baptists of the Netherlands.—The Baptists of the Netherlands began to hold general meetings about 1880, and now have a regular organization called the Union of Churches of Baptist Christians in the Netherlands. They have 13 churches, and the annual meeting of 1901, which was held at Sneek, was attended by 26 pastors and delegates, and about 30 visitors from Germany, South Belgium, and England, as well as from Holland. Two additional churches had joined the union during the year. About \$300 had been contributed for missions, and the money was sent to the German Baptist missions in Cameroons, on the Congo, and in North Africa. About \$500 had been contributed to home mission work. The union decided to begin colportage work in Belgium and in parts of northern France.

Baptist Conference in Sweden.—The first Baptist church in Sweden was founded in 1848, with 6 members. The conference of 1901 was held at Orebro, in the province of Nerike, in September. The statistical reports represented 19 district associations, with 566 churches, 390 houses of worship, 7 new ones having been built during the year, 753 preachers, of whom 250 gave all their time to ministerial labor, 41,101 members, 1,704 baptisms during the year, 663,133 kronor contributed for church and missionary purposes, and church property valued at 3,159,033 kronor, against which stood 962,784 kronor of indebtedness; and 934 Sunday-schools, with 3,482 teachers and 46,172 pupils. The Committee for Foreign Missions reported 4 missionary stations in the Russian Empire, 1 in Spain, 1 in China, and a missionary family on the Congo working in connection with the American Baptist Missionary Union, which is sustained by Swedes. The mission in China had not suffered by the riots of the war, but was reported as prosperous, with a new church built at Kiaw-Chew, and several Chinese baptized by the missionaries. Several of the Swedish Baptists were expecting to visit the United States in 1902 to participate in the celebration of the fiftieth anniversary of the organization of the first Swedish Baptist church here, Sept. 26, 1852.

BELGIUM, a constitutional, representative, and hereditary monarchy in western Europe. The legislative power is vested in the Senate and the Chamber of Representatives: Senators are elected for eight years, half of them being replaced every four years. The number is half that of the Chamber, which is regulated according to the census in the ratio of 1 Deputy to 40,000 inhabitants. The Chamber of Representatives in 1901 contained 152 members, the Senate 76. Of the Senators 26 are elected by provincial councils, the rest directly by the people. Candidates for popular election must be taxpayers to the amount of 1,200 francs, or possess real estate worth 12,000 francs a year. Members of the Chamber of Representatives are elected for four years, half of them being renewed every two years. Every citizen over twenty-five years of age, possessing full civil rights, and domiciled for one year in his district, has one electoral vote, and can cast a supplementary vote if he is thirty-five years of age, married or a widower with legitimate issue, and pays 5 francs of direct taxes, or if he possesses real property of the value of 2,000 francs or investments in public funds yielding 100 francs a year. If he is a graduate of an institution of higher education or holds or has held public office or holds any position implying the possession of education he can cast two supplementary votes. The number of votes for members of the Chamber in 1900 was 2,239,621, cast by 1,452,232 electors; the num-

ber for Senators was 1,994,153, cast by 1,227,520 electors.

The reigning sovereign is Leopold II, born April 9, 1835, who on Dec. 10, 1865, succeeded his father Leopold I, a prince of Saxe-Coburg, who was elected the first King of the Belgians by a National Congress on June 4, 1831, after the secession of Belgium from the Netherlands. By the treaty of London, signed on Nov. 15, 1831, Austria, Great Britain, Prussia, and Russia guaranteed the perpetual neutrality of Belgium. The heir to the throne is Philippe, Count of Flanders, born March 24, 1837, the King's only brother, who has one son living, Prince Albert, born April 8, 1875. The Council of Ministers appointed on Aug. 5, 1899, was composed as follows: President and Minister of Finance and Public Works, Count de Smet de Naeyer; Minister of Foreign Affairs, P. de Favereau; Minister of the Interior, M. de Trooz; Minister of Justice; M. van den Heuvel; Minister of War, Gen. Cousebant Alkemade; Minister of Agriculture, Baron van der Bruggen; Minister of Railroads, Posts, and Telegraphs, M. Liebart; Minister of Industry and Labor, Baron Surmont de Volsberghe.

Area and Population.—Belgium has an area of 11,373 square miles. The population on Dec. 31, 1899, was estimated at 6,744,532, composed of 3,363,436 males and 3,381,096 females. The number of marriages in 1898 according to the corrected reports was 55,444; of births, 190,921; of deaths, 117,457; excess of births, 73,464. The decennial census of Dec. 31, 1900, shows a population a little over 6,800,000.

The number of immigrants in 1899 was 26,364 and of emigrants 22,957, showing a net immigration of 3,407.

Finances.—The ordinary revenue of the Government in 1898 amounted to 439,282,000 francs, and expenditure to 426,012,000 francs. In 1899 the ordinary revenue was 466,728,000 francs. The budget presented for 1901 makes the ordinary revenue 488,429,760 francs, and the ordinary expenditure 488,047,973 francs. Of the revenue property taxes were expected to yield 26,144,000 francs, personal taxes 21,289,000 francs, trade licenses 8,600,000 francs, mines 2,200,000 francs, customs 43,120,166 francs, excise taxes 65,450,500 francs, various taxes 2,902,000 francs, registration and other fees 30,200,000 francs, succession duties 19,720,000 francs, stamps 8,700,000 francs, fines, etc., 913,000 francs, rivers and canals 2,030,000 francs, railroads 206,000,000 francs, telegraphs 9,640,000 francs, the post-office 15,783,620 francs, pilotage 1,460,000 francs, domains and forests 3,537,000 francs, bank and other profits 15,871,800 francs, and repayments 4,868,174 francs. Of the total ordinary expenditure the interest and sinking fund of the debt absorbed 130,730,570 francs, the civil list and dotations 5,047,990 francs, the Ministry of Justice 26,544,900 francs, the Ministry of Foreign Affairs 3,159,168 francs, the Ministry of the Interior and Public Instruction 30,563,950 francs, the Ministry of Agriculture 11,967,309 francs, the Ministry of Industry and Labor 16,250,150 francs, the Ministry of Railroads, Posts, Telegraphs, and Telephones 164,560,412 francs, the Ministry of War 55,339,316 francs, the Ministry of Finance and Public Works 34,652,345 francs, the gendarmerie 7,155,863 francs, repayments, etc., 2,076,000 francs.

The capital of the public debt on Jan. 1, 1900, was 2,604,255,114 francs, comprising three series of 3-per-cent. *rentes* and Belgium's share of 219,959,632 francs in the old debt of the Netherlands. The 3-per-cent. *rente* of 84,798 francs a year under the head of military obligations has a capital

value of 2,826,536 francs, making the total 2,607,081,600 francs. The debt charge in 1900 amounted to 127,900,416 francs, including not only interest at 2 1/2 per cent. on the share of Belgium in the Netherlands debt, and interest and amortization of the 3-per-cent. *rentes*, but 2,500,000 francs for interest on temporary loans for extraordinary expenditures, 380,634 francs for annuities to the city of Brussels and the Duke of Wellington, 144,550 francs for annuities in the Netherlands, 1,751,930 francs for instalments on the price of railroads, 3,120,410 francs on railroad debts assumed by the state, 8,471,837 francs on debts incurred in completion of railroads, 612,000 francs annual instalment for seventy years from 1870 on the rolling-stock of railroads, 750,859 francs annual instalment for the telephone system, 1,105,000 francs for a fund for the construction of local railroads, 150,000 francs of guaranteed interest, 136,000 francs for various expenses, 4,882,000 francs for military pensions, 7,652,973 francs for civil pensions, 2,825,000 francs for teachers' pensions, 9,200,000 francs for the militia, and 2,153,050 francs for interest at 3 per cent. on caution money and other deposits.

Commerce and Production.—The special imports in 1899 had a total value of 2,260,200,000 francs; special exports, 1,949,000,000 francs; transit trade, 1,402,300,000 francs. The special imports of grain and flour were 343,700,000 francs; of wool, 187,200,000 francs; of wood, 123,400,000 francs; of gums, 96,400,000 francs; of hides and skins, 96,000,000 francs; of chemical products, 71,700,000 francs; of seeds, 69,200,000 francs; of coal, 52,600,000 francs; of animals, 48,200,000 francs; of iron, 41,600,000 francs; of drugs, 40,900,000 francs; of machinery and vehicles, 40,600,000 francs; of coffee, 39,400,000 francs; of flax, 36,500,000 francs; of colors, 34,300,000 francs; of cotton, 31,800,000 francs; of cotton manufactures, 31,800,000 francs; of wine, 27,800,000 francs; of animal fats, 24,100,000 francs; of vegetable oils, 22,400,000 francs; of woollens, 22,200,000 francs; of butter and cheese, 21,200,000 francs; of fish, 2,500,000 francs. The special exports of coal were 120,500,000 francs; of machinery and vehicles, 111,200,000 francs; of grain and flour, 93,300,000 francs; of iron, 92,700,000 francs; of skins, 89,900,000 francs; of glass, 87,800,000 francs; of linen yarn, 79,600,000 francs; of cut diamonds, 67,000,000 francs; of sugar, 62,800,000 francs; of zinc, 53,200,000 francs; of woolen yarn, 50,100,000 francs; of flax, 48,500,000 francs; of chemical products, 46,400,000 francs; of minerals, 44,300,000 francs; of fertilizers, 39,600,000 francs; of animals, 34,700,000 francs; of seeds, 34,200,000 francs; of gums, 33,000,000 francs; of colors, 30,900,000 francs; of cotton cloth, 25,400,000 francs; of meat, 23,200,000 francs; of animal fats, 22,000,000 francs.

The special trade with the different foreign countries in 1899 is shown in the table above, giving the values of imports for consumption and exports of domestic merchandise in francs.

Of the total area of Belgium about 65 per cent. is arable land, 18 per cent. forest, and 17 per cent. river, marsh, roads, and waste. Less than 19 per cent. of the people are engaged in agriculture. The yield of wheat in 1898 was 4,210,000 hectoliters; of barley, 1,302,031 hectoliters; of oats, 12,238,231 hectoliters; of rye, 7,296,932 hectoliters; of potatoes, 32,161,916 quintals; of sugar-beets, 15,071,981 hectoliters; of other beets and turnips, 16,393,133 hectoliters; of tobacco, 35,270 quintals. The production of raw sugar in 1898 was 188,026,000 kilograms; of refined sugar, 66,725,000 kilograms; of proof spirit, 593,340 hecto-

liters. The value of fish caught was 3,857,279 francs.

Navigation.—The number of vessels entered at Belgian ports during 1899 was 8,672, of 8,632,626 tons, of which 765, of 352,464 tons, were sailing vessels and 7,907, of 8,280,162 tons, were steamers. The number of vessels cleared in 1899 was 8,581, of 8,521,331 tons, of which 750, of 340,777 tons, were sailing vessels and 7,831, of 8,180,554 tons, were steamers.

The mercantile navy on Jan. 1, 1900, consisted of 6 sailing vessels, of 2,751 tons, and 67 steamers, of 105,786 tons. There were 381 fishing boats, of 3,826 tons.

Railroads, Posts, and Telegraphs.—The railroads at the end of 1899 had a total length of 2,850 miles, of which 2,521 miles were operated by the Government and 329 miles by companies. The number of passengers on the state railroads in 1899 was 114,858,223, paying 64,853,772 francs of the gross receipts of 201,229,218 francs. The expenses were 118,661,088 francs; cost of construction, 1,884,033,112 francs.

The post-office in 1899 carried 130,202,227 private letters, 57,800,288 postal cards, 24,119,478 official communications, 127,701,208 newspapers, and 114,924,160 book packets; receipts were 23,995,997 francs, and expenses 12,806,997 francs.

The telegraphs in 1899 had a total length of 3,958 miles, with 20,840 miles of wire. The number of internal despatches was 3,300,944; of international despatches, 3,363,927, including 567,320 in transit; of service despatches, 5,886,000; receipts were 8,783,017 francs, and expenses 6,372,931 francs. There were 91 urban telephone circuits with 22,340 miles of wire, and the number of conversations was 34,469,019; the interurban systems had 8,378 miles of wire, and the number of conversations was 566,590.

The Session of the Chambers.—A bill to regulate gambling, introduced by the Government and discussed by the Chamber in the early months of 1901, was intended to put an end to the public scandal of high play without destroying the prosperity of Belgian watering-places. The governments of France and Spain offered to co-operate with Belgium in drawing up an international code for the regulation of public casinos in their respective countries or, if found advisable, to suppress them altogether. The Government proposed special dispensations in favor of the casinos at Ostend, Spa, Namur, and Dinant, but the Chamber by a majority of 81 rejected the motion, and again refused to grant to the sea-bathing resorts an extension of their privileges for

two years when the bill was amended by the Senate to that effect. The prohibitory clause in the bill forbids all gambling in public places where stakes are generally known or are of sufficient amount to make them an object of gain.

A clause prohibiting games of chance in private as well as in public places was rejected by the Senate. The question of compensating Ostend and Spa, which had made public improvements on the strength of revenues derived from the gaming-tables, was laid over by the Senate for further discussion. When the Government old-age pension act went into force 175,000 old people applied for the pension, which is 65 francs a year, payable semiannually. A bill framed by the Government and passed by the Chambers changes the principles governing accidents to workmen and employers' liability. Under the old bill a workman claiming compensation had to prove negligence on the part of the employer. The new act provides that in all cases of disability extending beyond two weeks the employer is bound to pay half wages so long as total incapacity lasts, or, in case of partial incapacity, half the difference in earnings. Employers have the liberty of insuring their risks in the Government savings-bank or in private companies; if one does not do so he must pay a certain amount into a state bank or an insurance company approved by the state to provide for future compensation to workmen. The new bill extends the principle of compensation, hitherto confined to accidents from machinery worked by motive power, to those caused by agricultural machinery when it is driven by an elemental force. King Leopold having offered to give to the nation the greater part of the royal domains throughout Belgium, the Chamber of Representatives voted to accept the gift, but the Senate postponed action in order to determine the status of certain communes in the Ardennes. The Government agreed to grant amnesty to political offenders and persons convicted of misdemeanors connected with strikes, not including acts of violence. A Socialist motion to increase the pay of letter-carriers, which is only 2½ to 4 francs a day, was rejected. A bill was adopted granting higher pensions to teachers and admitting classes previously excluded. The Socialists interpellated the Government regarding instructions a general was said to have given to the civic guards to fire on the people in case of riot, and the Government's position that good citizens should prepare to resist rioting was sustained by the votes of the Right alone, the Moderate Liberals abstaining.

The question of military reform was referred to a military commission, and on its report was based a bill presented by the Government. The commission was appointed in order to appease a feeling of alarm at the inadequacy of Belgium's defenses and a growing sentiment in favor of personal service. The Belgian Government formerly, even when it did not neglect military affairs, relied for the security of Belgium mainly on the guarantee of the neutrality and inviolability of Belgian territory by the adjoining powers. In recent years military experts have impressed the people with the idea of the instability of treaty rights and with the necessity of being able to assert and defend Belgium's neutrality. In 1870 France and Germany, on opening hostilities, both invited Belgium to defend her frontier. Before the Franco-German War Antwerp was held to be the most important stronghold, the plan being in case of attack to concentrate supplies there and await assistance from outside. Since then strategists have recognized the Meuse valley as the key of the situation, and accordingly earthworks were

erected at Liège and Namur. The idea of a central citadel was not abandoned. Gen. Brialmont favored strengthening the inner ring of fortifications, which have become obsolete. The military commission pronounced in favor of the scheme already accepted by the Government of erecting a chain of forts extending in a semicircle 25 miles round the city. The demolition of the existing fortifications, constructed in 1859, was decided on, giving room for the city to expand and providing part of the means for defraying the cost of a new inner line of forts of greatly improved type, which would absorb 41,000,000 francs in addition to the value of the site of the old forts. The fortification of the right and left bank of the Scheldt was deemed urgent, also the strengthening of the batteries at Termonde, but the fortress of Diest was regarded as no longer necessary. The principle of an effective armed neutrality was approved without qualification; yet when it came to actual army reform the Government was afraid to offend the mass of the Clerical voters by abolishing substitution or materially enlarging the army on the peace footing. The commission recommended that the annual contingent of 13,300 men be increased to 18,000, considering this to be rendered necessary by the reduction of the term of active service to twenty-two months for infantry and six months for cavalry and artillery. Otherwise the peace strength of 47,000 men could not be maintained unless more volunteers could be attracted to active service. The Government decided to keep the annual levy of conscripts at the same figure as before and to hold out inducements for volunteers to be embodied with the conscripts and counted in the annual contingent. The principle of personal service, though recommended by the commission, was discarded. The sum to be paid for a substitute was reduced from 1,600 francs to 1,000 francs or less. Encouragement is given to volunteering by the offer of the same pay to volunteers as is given to regulars. One-year volunteers up to the number of 2,000 may be engaged without remuneration with the privilege of living at home or choosing their garrison town. Soldiers are not to be detailed for non-military duties, but will be trained in military duties throughout the shortened term of service. Preference in civil employments will be given to men who have served in the army in any capacity. The principle on which the army will be recruited is voluntary enlistment, not conscription, the annual levy in any district being fixed at the number required to fill out the contingent. The principle of volunteering is introduced in a country where conscription has been customary since the army was first created, adopted altogether as an experiment in direct defiance of the agitation that called for army reform. The war strength of the army is expected to be increased by the extension of volunteering and the reduction of the period of service with the colors from 145,000 to 180,000 men. The total period of service is eight years in the active army and five years in the reserves, which can only be called out in case of war. Volunteers are divided into those who choose the military profession, those who volunteer to draw for the contingent, those who offer themselves as substitutes, and those whose condition entitles them to special remuneration. All classes rank as regulars in regard to term of service and pay.

The Chambers had to decide in the session of 1901 the question of annexing the Congo State. Under the option of 1890, if the decision should be against annexation the loan of 25,000,000 francs made by Belgium to the Independent State would be repayable after a further period of ten years.

but with interest added. The advances under the conventions of 1890 and 1895 were made to extricate the Congo State from financial difficulties, but now that its finances were in a flourishing condition the sovereign was reluctant to submit the administration to the caprices of parliamentary majorities. As there was opposition to annexation in certain sections of the Belgian people, M. de Smet de Naeyer proposed to adjourn the question for a further term of ten years, and in the meantime to allow the loan to stand over without interest. Ex-Premier Beernaert opposed this project, believing that the rights of Belgium would lapse. Even the Socialists, opponents of colonial expansion hitherto, demanded the assertion of those rights or a new convention to preserve them. M. Beernaert proposed a bill declaring the annexation of the Congo State and providing for the continuance of the existing administration for a year, during which the Legislature should decide on a special *régime*, legislative, administrative, and judicial, for the new Belgian possession. This would likely have been carried had not the sovereign intervened, declaring in a letter to M. Woeste that the Congo administration would naturally refuse to participate in that sort of hybrid government which would be chaos and would produce friction and loss, both externally and internally; and stating that the time had not yet arrived when the Free State was able to assure to Belgium all the advantages that he desired should accrue to her, while, on the other hand, Belgium was for the moment unable to set up a substitute for the present administration. This declaration was tantamount to a threat of resignation as sovereign of the Free State if the annexation scheme were pressed. M. Beernaert withdrew his proposals, and a Government bill was presented, preserving Belgium's right of annexation by reaffirming the option and suspending financial relations between Belgium and the Congo State, thereby wiping out the various loans advanced by Belgium in the event of annexation. It was thus left to King Leopold to choose the moment when he shall transfer the Free State and under what conditions. The principle was admitted by both Chambers that the organic law of the new colony must be elaborated and approved by the Legislature before annexation, but the ministers intimated the kind of administration on which the sovereign will insist, which will be one entrusted entirely to the executive power, with native affairs left completely under his own control, the only intervention of Parliament to be in financial affairs, and in those it should have only the right to make suggestions, not to vote the budget. An annual report of the financial and economical condition of the colony will be submitted to the Belgian Chambers for formal approval, and only when it is a question of borrowing or other matter affecting Belgian taxpayers will the Legislature be called upon to take action, while King Leopold will exercise the same supervision and control that he has as sovereign of the Free State. Before the passage of the Government bill perpetuating the right of annexation, but postponing indefinitely its consummation, the French Government, which under the treaty of 1884 acquired a right of preemption, gave an assurance that it would in no way contest Belgium's right to annex the Congo territories. The total amount of the advances remitted to the Congo State as the condition of keeping the right of annexation alive is about 32,000,000 francs. The bill was passed. In the event of the King's death the Congo is definitely secured to Belgium by the King's testament.

Agitation for Electoral Reform.—More important than any question that came before Parliament was the question of suffrage which the Socialists brought to the front by a lively popular agitation. At their annual congress in April they decided to continue the struggle for the abolition of plural voting by every possible means, including, if necessary, a universal strike and street agitation. The fruit of the universal strike of 1893 in favor of universal suffrage pure and simple was the present electoral law establishing universal suffrage complicated with plural voting. This was voted in 1894 by the Catholic party then in power with M. Beernaert as Prime Minister. The tax qualification giving two votes shuts out 765,000 family men of the working class, about 70 per cent. of the total number, and the professional qualification for the triple vote gives disproportionate influence to ecclesiastics, who constitute one-sixth of the 42,000 electors so privileged. The Moderate Liberals in the former campaign for electoral reform were more averse to universal suffrage than the Clericals, who granted it because the Flemish peasants would strengthen their party as much as the working-class vote of the Charleroi and Liège districts would increase the Socialist representation, while the Liberals, their real political rivals, would derive from it little accession of voting strength. Now the Moderate Liberals were willing to support the Socialist demand. The Clerical majority, which has been preserved through the various changes in the suffrage and representation laws since 1884, has aroused much opposition by its legislation, and can hardly overcome a fusion of Liberals and Socialists at the polls. The education bill passed in 1895, prescribing religious instruction in the communal schools, unless parents apply for a special dispensation on the ground of religious scruples, this latter clause having been inserted in deference to public opinion, was never put into operation in communes where Liberalism is strong until 1901, and then only in a modified form. In Brussels the communal authorities rejected the list of priests nominated as religious instructors, and the Government law officers acknowledged that the communal council has complete administrative autonomy in school matters. The applications for special dispensation were so numerous in Brussels that religious instruction became a farce. The ministry narrowly escaped defeat in the Chamber on the question of text-books. Thus the revolt against secular education that brought the Catholic party into power has lost its motive and its energy. The Government in 1899 attempted to force through Parliament a redistribution bill that would rearrange the constituencies in such a way as to secure a permanent Catholic majority. The Moderates and Socialists saw through the maneuver, and the bill aroused such hostility that rioting took place in the streets of Brussels, and the Government yielded before the popular storm. The election of 1900 was held under the system of proportional representation enacted on Dec. 29, 1899. Voting is by *scrutin de liste*. The number of seats allotted to each party is proportioned to the number of times the total party vote contains the electoral divisor, obtained by dividing the total number of registered voters by the number of tickets in the field. Parties whose list of candidates obtains a less number of votes than the electoral divisor are left out of the representation, and thus second ballots are unnecessary. In the election of 1900 the Clericals won 85 seats, the Liberals and Radicals 33, and the Socialists 34, reducing the working majority of the Government from 70 to 18. In the session

of 1901 the electoral question was brought up by M. Janson, who proposed to take the opinion of the country on universal suffrage and the application of proportional representation to all elections by means of a referendum. The motion obtained 50 votes, and was rejected by a majority of only 35, although there is no provision in the Constitution for a popular referendum, which the Ministerialists described as a dangerous and revolutionary device. The Socialist party in a manifesto threatened revolution if pacific means should fail to bring about the system of one man one vote. On July 30 the Socialists in the Chamber enacted an episode of unprecedented obstruction and disorder. The Radicals and the Moderate Liberals agreed to unite with the Socialists in the campaign to secure the desired electoral reform before or by means of the election of 1902, after which Socialists and Liberals will resume their liberty of action.

BOLIVIA, a republic in South America. The Congress consists of a Senate of 18 members, 2 from each department, elected for six years, one-third being renewed biennially, and a House of Representatives containing 69 members, elected for four years, one-half being renewed biennially. The President and Vice-Presidents are elected for four years by direct popular suffrage. The President for the term beginning Aug. 6, 1899, is Gen. José Manuel Pando; the Vice-Presidents are Col. Lucio Peres Velasco and Dr. Anibal Capriles. The Cabinet in the beginning of 1901 was composed as follows: Minister of Foreign Affairs and Worship, Dr. Eleodoro Villazon; Minister of Finance and Industry, Dr. Demetrio Calvimontes; Minister of the Interior, Carlos V. Romero; Minister of Justice and Public Instruction, Samuel Oropeza; Minister of War and Colonization, Col. Ismael Montes.

Area and Population.—The area of Bolivia is 567,430 square miles. The population is estimated at 2,270,000, including about 250,000 uncivilized Indians.

Finances.—The revenue was estimated in the budget for 1900 at 7,331,400 bolivianos, and expenditure at 7,930,188 bolivianos. The foreign debt in 1900 amounted to 6,550,830 bolivianos, the internal debt to 3,934,250 bolivianos.

The Army.—The active army comprises 2 battalions of infantry, each consisting of 220 men divided into 4 companies, 2 regiments of cavalry, 2 regiments of artillery, 1 battalion in garrison in each department, and the military college, the total strength being 2,975 men. The National Guard, in which obligatory service for two years is prescribed by law, numbers 82,560 men, divided into three classes.

Commerce and Production.—The value of imports in 1899 was 12,839,962 bolivianos, and of exports 27,365,747 bolivianos. The production of rubber is increasing, much of it coming from the Acre district, the export in 1898 reaching 3,000 tons. The value of coca exported annually is about 3,000,000 bolivianos. The production of silver in 1898 was 9,961,433 ounces, and in 1899 it was 11,155,190 ounces. The annual production of concentrated tin ore is over 4,000 tons, and in 1899 the export of bars was 2,000 tons. About 3,000 tons of copper ore were exported. The value of silver exported was about 10,000,000 bolivianos; of rubber, 8,000,000 bolivianos; of tin, 5,000,000 bolivianos. Other exports are wool, cattle, hides, and coffee. Of the imports 27 per cent. come from Germany, 11 per cent. from Chili, 9 per cent. from Great Britain, 9 per cent. from France, and 8 per cent. from the United States. Of the exports 44 per cent. are shipped to Great

Britain, 35 per cent. to Germany, and 6 per cent. to France.

Railroads, Posts, and Telegraphs.—The length of railroad in operation in 1900 was 604 miles.

The postal traffic in 1899 was 1,181,683 pieces in the internal and 536,226 in the international service; receipts were 369,715 francs, and expenses 489,173 francs.

The telegraphs in 1899 had a total length of 2,254 miles, with 4,125 miles of wire.

BOOKBINDING, SPECIAL AMERICAN.

The binding of a book, though attractive to some, has had little or no significance to a very large number of persons. The majority of men could not tell the difference between a commercial or machine-made binding and a special or hand-made binding, and if the ordinary reader of the latest ephemeral but transiently popular novel were asked to pay \$500 for a binding, even though it had been executed by a Cobden-Sanderson, he would feel sure that the price was extortionate, and that he was being robbed. The mass of book-readers consider that bookbinding belongs to the publisher rather than to the purchaser of a book. Cloth is good enough for them, especially when the decorations are so ornate, as is now so frequently the case in edition binding. They know nothing of the charms of Levant morocco, tree calf, pigskin, vellum, and the like, which are curiosities to them, nothing more. It is only within very recent years that a binder whose ordinary price for covering a book with leather and for finishing it with inlay and gold tooling exceeded \$50 could have found it possible to secure enough patronage to maintain an establishment. Prior to 1875 the book world had been content with a simplicity that was severe. Our forefathers dressed the New England Primers in real board covers, which were again covered with paper, pasted on. Similar bindings of thin wood appeared upon that standard book Locke on the Understanding. With the passing of bindings of this kind a dull covering of calf came into use which now lingers in multiple specimen form upon the bargain-counters of dealers in second-hand books.

The time came when collectors of books had special bindings placed upon the volumes they cherished, but to have this done properly the books had to be sent to French or to English binderies, and be subject to the perils of two transatlantic voyages. Pioneer work in fine American bookbinding was perhaps done by William Matthews, who exhibited a copy of Owen Jones's *Alhambra* in this class of binding at the New York World's Fair in 1853. Many notable bindings were afterward executed by him, and his reputation as a special binder is exceedingly enviable. Following him not quite thirty years later, Otto Zahn, a binder who had studied and practised the art of fancy bookbinding in many lands, found enough encouragement to come to this country. He finally established himself in Memphis, Tenn., where he has since remained, and where he now binds for book-collectors of note throughout the United States. So great has become the demand for bindings of this class that Mr. Zahn has been obliged to limit his personal binding of books to those the minimum price of which is \$100.

Other bookbinders that are or have been well known in the practise of their art in this country are as follow: Smith, McDonald, Blackwell, Pfister, Kuster, Lauder, Stikeman, the Club Bindery, and Schleuning & Adams, in New York; Sanford, in Pittsburg; P. Ringer and Hertzberg, in Chicago; Peter Verburg, a pupil of Miss E. G. Starr, in

Chicago; Dudley & Hodge, in Boston; and the Roycroft Shop, East Aurora, N. Y. A large number of women have taken up the art, of whom the late Miss Evelyn Hunter Nordhoff was the pioneer. Others are Miss Ellen G. Starr, of Chicago; Miss Mary E. Bulkley, of Hillside, Mo.; Miss Elizabeth G. Chapin, of Brooklyn, N. Y.; Mrs. Idah Meacham Strowbridge (the Artemisia Bindery), formerly of Nevada, now of California; Miss Mary P. Dow, of Philadelphia; and Miss Minnie Sophia Pratt, Miss Emily Preston, Miss Helen G. Haskell, and Miss Florence Foote, all of New York city.

The new school of American bookbinding attracted attention first to itself and then to the old masters of bookbinding. Collectors who could gratify their fancies recalled the fact that Roger Payne once executed bindings, and that Jean

generally carries the gold-lettered title of the volume. The sides are the book's exterior minus the back, while the double is the inside of the book's cover. A book that is to have a special binding ought to be worthy of it. It would be foolish to bind a book made up of wood-pulp paper, that has been poorly printed, in full morocco, inlaid, polished, and elaborately tooled. If the book is a rare first edition, so much the better. The solace derived from the book will be all the greater if it be also one of a limited edition, signed and numbered. Upon such a book a choice binding may well be lavished, and if to the finished book be also added a slip case, the joy of the bibliophile can go no further. The book-lover who has had no personal contact with bookbinders may well take an early opportunity of visiting and studying a well-equipped bindery and

A ROYCROFT DE LUXE BINDING.

Steel-blue crushed levant, inlaid in heliotrope, pale yellow, purple, and olive-green.

Grolier lived and died, having in the meantime made himself notable through the binding of his books, in which he took great delight. The way was prepared for the binders who came into existence after them, and a market was assured for bindings that possessed artistic merit.

The special binding of a book is an interesting process. The material used, now very generally morocco, is carefully selected. In some cases the morocco is specially imported to the order of the binder who is to use it. The sewing is done with much care and generally with English sewing-cord. Some of the other features of forwarding, among which are beating, gilding, marbling, or sprinkling, putting the book in leather, etc., are entrusted to apprentices or other workmen, but they remain under constant supervision, while the lettering, tooling, inlaying or mosaic work, and other finishing processes, are reserved for the hand of the master.

To bookbinders a book has a head and a tail, a front and a back, two sides, and the double, which is of course in duplicate. The head of a book is also known as the top, which is generally gilded. The tail is the bottom of the book when it stands erect with the title conventionally horizontal. The front is opposite to the back, which

observing something of the technique of the work. It is only by such means that anything like an adequate understanding of the true significance of the art of bookbinding can be obtained.

The exhibitions of fine bindings that are held annually in New York city, Boston, Chicago, Baltimore, and to some extent elsewhere, the first of which was held less than ten years ago, have done much to spread the knowledge of special bindings. An appreciative coterie has come into existence, to whose ranks additions are being made constantly. It is also because of these exhibitions that we have become more critical and no longer accept even the old masters as flawless unless they are so. So quietly has the love of fine bindings fostered by the American craftsman grown among us, and withal so unobtrusively, that it is not generally known that there are many persons in our country who spend large sums on bindings; because the books while in process of binding are not on view to those not concerned, and when they are finished they go at once into the library of the owner, where their examination is reserved for him and his immediate friends.

A book in binding passes through forty distinct processes. The number of tools required, exclusive of those used for exterior ornamentation, is

between forty and fifty. Those that are used for what is called "tooling" are innumerable. A book is said to be "finished" when the various final tool impressions upon the inside or doublé, and the outside of the book's cover are complete. If the tool-markings are made without using gold-leaf, or some substitute, the book is said to be "blind-tooled." All books that are gold-tooled must first be blind-tooled, after which the impress of the heated tool must at least be duplicated exactly in the depression made by the blind-tooling, and if the smallest deviation takes place because of an unsteady hand or otherwise, the variation remains upon the book and can not be successfully taken out. Sometimes more than 2,000 separate impressions are made upon a comparatively simple book-cover in the decorative process. If the decoration be very elaborate, the number of tool impressions of course multiplies.

The more one studies the art of bookbinding the more complex does it appear, and when some little theoretical familiarity with it is reached, a finely bound book is no longer taken up with indifference and unconcern. The very "feel" of the morocco—now the favorite binding for fine books—which is the native tanned skin of a mountain goat, is full of pleasure to the enthusiast. The skin derives the name of morocco from the African country in which the goats are found in considerable numbers. Levant morocco comes from the Mediterranean ports of the Levant. Red morocco is generally considered by binders to be less liable to fade than any other color. There are many other binding materials, among which may be named alligator skin, roan or sheepskin, calfskin, pigskin, Russia, sealskin, and a very recent product called "niger calf." A freak binding that has been sometimes used is human skin. The book-lover who has reached the proper stage of development will derive a certain pleasure from the mere handling of his full-morocco books that is quite incomprehensible to others. His knowledge of the processes through which they have passed will be another source of pleasure to him, and a book that has been specially bound will have lurking charms for him that are securely hidden from all but brother bibliophiles.

Some very pleasing work in bookbinding has been done by such concerns as the Merrymount Press, Boston; Thomas B. Mosher, Portland, Me.; the Craftsmen's Guild, Boston; the Brothers of the Book, Gouverneur, N. Y.; the Laurentian Press, New York; and Thomas Maitland Cleland, in what are known as limited-edition issues. Many bookbinders, both here and in England, now take a certain number of pupils. The course varies from about seven months in some American binderies to twelve months in the general English shop. In France the course is much longer. Many women are turning their attention to bookbinding as an occupation, and some very fine results have been obtained by them. The charges for tuition in bookbinding vary greatly, but range from \$350 to \$2,000 a year. Bookbinding is now taught in many of the technical schools in the larger American cities. Some amateur binders appear to think that the preliminary processes of bookbinding are not so important as are the finishing ones. As a result, they produce books that are fair to exterior observation, but lack the lasting qualities. Their sewing is often poorly done in consequence, and without good sewing it is impossible to have really good binding. In the perfect book, good forwarding and good finishing go hand in hand. The result must be that the book, while giving eye pleasure, has also the quality of stability. In the hands of a

good binder it is so made that the book may be easily and fully opened and used without damage to the binding. The inside and outside are in harmony, and the thing of beauty is a joy forever.

VIENNESE INLAY BINDING BY SCHLEUNING & ADAMS, DESIGNED BY RALPH RANDOLPH ADAMS.
Yellow morocco ground. Heraldic colorings proper.

Watered silks and satins, as well as vellum, or various fancy end papers, are used for fly-leaves in special bindings. Painting, as a decoration for bookbinding, is seldom used at present. The same is true in regard to the embroidering of bookbindings, once so high in favor among old English binders. Some of the earlier binders used certain tools so persistently that they became characteristic, and now carry the originating binder's name. Thus we have a Le Gascon border and Venetian and Grolier ornaments. Roger Payne was accustomed to cut his own tools. The similarity of design forms used by Derome and Padeloup has been explained on the theory that the former purchased the tools of the latter at the sale of his effects after his death. A Janseniste binding shows a perfectly plain exterior, but lavishes a wealth of decoration in tooling and inlay upon the book's doublé, and to show the glories of the binder's achievement the book must first be opened. The number of eminent binders in New York city is greater than in any other city, but scattered all over the land are those who are working to good purpose in this field. The Club Bindery (New York) is doing some most excellent binding, but its bindings are unfortunately seldom seen outside of the shop of execution or at the Grolier Club, whence it sprang. Most of the workmen at the Club Bindery are importations, and the work done there is largely to the order of members of the Grolier Club, although some outside commissions are undertaken.

The bookbinding that has thus far come from the Roycroft Shop has not filled the full measure of ideality, but some of it shows signs of great promise. It has originated some very pleasing design forms, but has not yet accomplished its full

capabilities either in the matter of binding or in illuminating, in which it has followed classic models without having reached the transcendancy of the originals. Mrs. F. W. Goothold, of New York, and Messrs. Gilbo & Co., of Brooklyn, have obtained charming results in illuminations.

Certain of the pyrographic work done upon his bookbindings by F. J. Pfister is quite unique. An example shown at the Bonaventure exhibition in 1900 attracted much attention, as was also the case with one of his pyrographic bindings in the Scribner exhibition of 1901. Many of his bindings in the more generally practised style also are beautifully finished.

One of the most promising bookbinders who have recently appeared is Mr. Ralph Randolph Adams, of the New York firm of Schleuning & Adams, whose attention was some time since drawn to the bindings executed in Vienna hundreds of years ago, the production of which was abandoned because the binders of the day were unable to overcome certain difficulties. In this work the early binders actually inlaid leathers of different colors into the ground color of the bound book. They were, however, unable to prevent the leather from parting and showing a crack where it had dried out and shrunk, which was the cause of their giving up the method. It has been commonly supposed that this parting arose during the lapse of centuries, but this is true only in a very small measure, for it is now known that the parting took place as soon as the moistening caused by the paste had dried out, and this being observed by the binders themselves, occasioned the giving up of the work. For more than six years Mr. Adams has studied the Viennese bindings and has experimented with persistence, looking toward their production until he has at last overcome the difficulties that were insurmountable to the old binders of Vienna.

During the past twelve months he has been doing a kind of mosaic inlaying that has not previously been done to any extent in this country. In place of beating or paring down the leathers used so that they shall have only a half thickness, and then pasting on the inlay (or rather overlay), Mr. Adams cuts the morocco ground entirely away, exposing the boards, and then inserts the carefully fitted inlay. By this method

BINDING BY TOOF & CO., DESIGNED BY OTTO ZAHN.
Salmon crushed levant; inlaid, aranthus leaves; brown, French gray, and white mosaics. Valued at \$500.

he preserves the beauty of the grain of the leather, which is taken out by the other method, and secures a satisfactory result. His bindings are among the most hopeful of any that have come into notice during the past year. Some new methods in finishing produce gold effects, by a process newly discovered by Mr. Adams, that exceed even the brilliancy of the French finishing, which has hitherto been the distinguishing feature of French binding.

Modern American bindings, as well as those executed abroad, differ essentially from those of antiquity. The finished tooling that has grown by adding tool-mark to tool-mark has attained among modern binders a far greater perfection than was the case even when such masters as Roger Payne, Padeloup, Derome, and Le Gascon

PYROGRAPHIC BINDING BY F. J. PFISTER.

The flying bird is inlaid in blue morocco, with burnt outlines, feet, etc. The dragon-fly is also in natural colors by means of mosaic work in combination with poker work.

are considered. Our best modern bindings, compared with those of the old masters, clearly show wherein our foremost binders are superior in detail to their ancient brother craftsmen, so that if we have lost somewhat in the matter of boldness we have gained infinitely in delicacy of touch and perfection of finish. The school of American book-binding is no longer elementary, nor is it needful now for American book-owners to send their volumes to Europe for fine binding. We already have several pupils of Cobden-Sanderson, the famous English bookbinder, in the United States, and the work done by those who owe their skill to other masters is daily growing greater.

BRAZIL, a federal republic in South America. The National Congress consists of a Senate of 63 members, 3 from each state and the federal district, elected for nine years by direct suffrage, one-third retiring every three years, and a House of Deputies, containing 212 members, 1 to 70,000 of population, elected for three years by adult male Brazilians; soldiers in active service, members of monastic orders, paupers, and persons convicted of crime being excluded. The President of the republic is elected by direct suffrage for four years. Dr. Manoel Ferraz de Campos Salles was elected President for the term beginning Nov. 15, 1898, and Dr. Francisco Rosa e Silva was elected Vice-President. The ministers of state appointed by President de Campos Salles are as follows: Minister of Foreign Affairs, Dr. Olyntho de Magalhães; Minister of Finance, Dr. Joaquin Martinho; Minister of War, Marshal Joao N. de Medeiros Mallet; Minister of Industry, Alfredo Maia; Minister of the Interior and Justice, Epitacio Pessoa; Minister of Marine, Rear-Admiral J. Pinto do Luz.

Area and Population.—The area of Brazil according to recent calculations is 3,218,130 square miles. The population in 1890 was 14,333,915, not including about 600,000 uncivilized Indians. The number of immigrants in 1898 was 53,822 through Rio, Santos, and Victoria. The decision by the Swiss arbitrators of the boundary question between Brazil and France, announced on Dec. 1, 1900, sustained the contention of Brazil as to the river named in the treaty of Utrecht, and proved that France in 1713 voluntarily conceded to Portugal the territory in dispute. The Oyapuk river is the boundary of French Guiana and Brazil.

Finances.—The revenue for 1899 was estimated at 346,164,000 milreis, and expenditure at 346,000,423 milreis. The budget for 1900 made the revenue 53,975,543 milreis in gold and 312,958,000 milreis in paper, and the appropriations voted were 36,973,646 milreis in gold and 263,162,276 milreis in paper, including 9,026,670 milreis in gold for the currency guarantee fund and 23,920,000 milreis in paper for redemption of currency. For 1901 the revenue was estimated at 58,869,000 milreis in gold and 286,082,000 milreis in paper, the expenditure at 37,510,000 milreis in gold and 244,514,000 milreis in paper. Of the revenue 36,400,000 milreis in gold and 123,454,000 milreis in paper were import duties, 33,200,000 milreis in paper railroad receipts, 15,500,000 milreis in paper postal and telegraph receipts, 600,000 milreis in gold and 30,808,000 milreis in paper revenue from stamps, etc., 105,000 milreis in gold and 319,000 milreis in paper receipts from various taxes, 39,886,000 milreis in paper excise receipts, 8,565,000 milreis in paper extraordinary revenue, 12,678,000 milreis in gold emission, and 9,026,000 milreis in gold and 34,350,000 milreis in paper special revenue. Of the expenditure 16,094,000 milreis in paper were for the Department of the Interior and Justice, 969,000 milreis in gold and 527,000 milreis in paper for the Department of Foreign Affairs, 23,200,000 milreis in paper for the Department of Marine, 45,581,000 milreis in paper for the Department of War, 12,859,000 milreis in gold and 61,818,000 milreis in paper for the Department of Industry, Communications, and Public Works, and 23,682,000 milreis in gold and 97,294,000 milreis in paper for the Department of Finance. To secure the revenue required by the Federal Government taxation has become very heavy, and the revenues of the states and municipalities are obtained by a system of taxation that is not simply burdensome, but irksome and discouraging to enterprise. The financial year 1900 closed with a surplus of 35,000,000 milreis. The payment of interest on the foreign debt, which had been interrupted, was resumed by arrangement of the British creditors on July 1, 1901, when the Government had more than enough on deposit in London to meet the interest, which amounts to £2,400,000 a year. The Government has agreed to reserve 25 per cent. of the customs receipts for the purpose, and expects to have a surplus of £4,000,000 a year, besides £1,000,000 allotted to the fund for guaranteeing the currency. The revenue for 1901 was 27,000,000 milreis in gold and 281,000,000 milreis in paper.

The foreign debt on March 31, 1900, amounted to £38,639,281 sterling, consisting of £3,292,000 borrowed in 1883 at 4½ per cent., £5,298,600 raised at 4½ per cent. in 1888, the 4-per-cent. loan of £18,388,200 obtained in 1889, £7,331,000 borrowed at 5 per cent. in 1895, and £4,328,881 obtained in 1898. The internal debt amounted to 511,197,100 milreis, composed of a gold loan of 20,549,000 milreis paying 4½ per cent. interest, one of 7,127,500 milreis paying 6 per cent., 119,600 milreis payable in paper and bearing 4 per cent. interest, and the 5-per-cent. currency loan amounting to 483,401,000 milreis. The floating debt was 284,759 milreis, and there were treasury notes for 10,175,000 milreis. The paper money in circulation in July, 1900, amounted to 703,666,174 milreis. The debts of the states on Jan. 1, 1900, amounted to £10,135,729 sterling.

The Army and Navy.—The strength of the army on the peace footing in 1899 was 484 staff officers, 1,573 officers, and 9,035 men in the infantry, 606 officers and 3,179 men in the cavalry and engineers, and 1,400 cadets. The active army con-

sists of 40 battalions of infantry of 4 companies each, 14 regiments of cavalry of 4 squadrons each, 6 regiments of field artillery of 4 batteries each, 6 battalions of fortress artillery, 2 battalions of pioneers, and 6 transport squadrons. The gendarmerie numbers about 20,000 men. The National Guard is being reorganized.

The navy in 1900 consisted of 2 third-class battle-ships built before 1885; the armored coast-defense vessels Deodoro and Floriano, built in 1898 and 1899; 6 armored gunboats of various dates; 2 old monitors; 4 small protected cruisers, and 3 without armor; 18 gunboats; 4 torpedo-cruisers; and 9 first-class and 17 second-class torpedo-boats, besides 2 submarine boats built in 1895 and 1896. The fleet had 4,000 seamen, 1,000 stokers, 1,500 boys, and 450 marine infantry.

Commerce and Production.—The total value of imports in 1897 was 671,603,280 milreis, and of exports 831,806,918 milreis. The imports are cotton and woolen goods, iron, hardware, machinery, coal, flour, cattle, jerked beef, rice, codfish, pork, lard, butter, corn, olive-oil, macaroni, tea, candles, salt, kerosene, timber, wine and spirits, etc. Of the imports at Rio de Janeiro in 1899 Great Britain furnished 41 per cent., Germany 11 per cent., France 10 per cent., the United States 8 per cent.; of the coffee exports 68 per cent. went to the United States, and the rest to Europe. The exports of coffee in 1899 from Rio de Janeiro, Santos, Victoria, and Bahia were 9,284,412 bags of 152 pounds, compared with 10,248,186 bags in 1898 and 10,353,197 bags in 1897. The fall in the price of coffee has checked planting. The production of rubber in the Amazon valley is increasing, and rubber-trees have been planted in Bahia and other districts. In Pernambuco 167,198 bales of cotton were grown in 1898: There are sugar plantations and factories in the same state. In Rio Grande do Sul 232,000 cattle were slaughtered in 1900, against 270,000 in 1899 and 340,000 in 1898. In that state are fruit canneries, breweries, and tanneries. Rum and alcohol are distilled in increasing quantities. In Minas-Geraes gold-mines worked by foreign companies produce 148,000 ounces a year, and in that state and Bahia 40,000 carats of diamonds have been dug from river beds annually, and the quantity has lately increased. A company has erected machinery to work diamond-mines in Minas-Geraes. In the same state 65,000 tons of manganese ore were raised. Great development has taken place in the mining industry in a period of depression in other branches of production. About 200,000 persons are employed in cotton-mills, in which 100,000,000 milreis have been invested. There are also mills for weaving woolen and silk, and for grinding flour from Argentine and Uruguayan wheat. The cultivators of coffee have not attempted to reduce wages in order to escape from the financial embarrassment caused by the fall in the price of their product and in the exchange value of the currency, because attempts to lower the wages of industrial operatives have resulted in strikes and disorganization, and they fear that agricultural laborers would refuse to work if their wages were cut down. Large stocks of coffee were held over from 1900 and the crop of 1901 was abundant. The world's production of coffee, of which Brazil furnishes 62½ per cent., is being increased rapidly by new plantings in all subtropical regions; although the present production is at least 12½ per cent. in excess of consumption. The rubber, sugar, cotton, and tobacco interests in Brazil suffer from the falling rate of exchange, which affects all branches of the export trade, owing to the indebtedness of local producers to foreign

bankers and merchants. To alleviate the crisis in the coffee trade the Government in 1901 reduced freight rates on state railroads, and by agreement with the companies on private railroads also.

Navigation.—There were 1,077 vessels in the foreign trade, of 1,916,934 tons, entered, and 1,019, of 1,553,707 tons, cleared at the port of Rio de Janeiro in 1899; and in the coasting trade 1,229 vessels, of 652,329 tons, were entered and 1,263, of 682,080 tons, were cleared. At Bahia 854 vessels in the foreign trade, of 1,396,989 tons, were entered and cleared and 743, of 14,842 tons, in the coasting trade.

Railroads and Telegraphs.—The length of railroads completed on Jan. 1, 1900, was 8,718 miles, and 4,989 miles were being built, 4,670 miles more surveyed, and 8,440 miles besides were authorized. The Government has guaranteed 6 or 7 per cent. on the capital of most of the railroads. Of those in process of construction 3,699 had Government subventions. The Government owned 1,982 miles, which were leased to companies. The cost of these lines was 257,674,937 milreis.

The telegraphs have a length of 10,143 miles of line, with 21,936 miles of wire.

Political Affairs.—On information extracted from Baron de Bural, who afterward committed suicide, and confirmed by further inquiries, Rear-Admiral Custodio de Mello, who headed the naval revolt of 1893 and was amnestied after a period of exile, was arrested on the charge of conspiring to overturn the Government of President Campos Salles. The old revolutionist was said to have been busy spreading disaffection in the navy ever since his return to Brazil. The plan of the conspirators was believed to be to procure the murder of the President, which should be the signal for an insurrection. During the general confusion the monarchists in the army and navy were to take military possession of Rio de Janeiro and seize the Government buildings. The executive power would be entrusted to a triumvirate, consisting of Admiral de Mello, Marshal Cantuaria, and the Advocate Lafayette-Pereira. The ultimate object was the restoration of the empire. Rear-Admiral de Mello was arrested on March 23 and confined on the island of Cobras, as it was feared that his presence in the capital might give rise to a disturbance. Extraordinary precautions had been taken secretly to prevent an insurrection. The attention of the Government was directed particularly to the navy, and a close watch was kept on the war-vessels, as it was feared that the officers could not be entirely trusted. After being kept in custody for several months Admiral de Mello lodged a complaint against the Government in the Chamber of Deputies, alleging that his arrest was illegal, and that he was refused the means of defending himself. He based his claim on the Constitution, which allows every one to denounce the President of the republic for abuse of authority. His complaint was referred to a special commission, on the report of which the Chamber unanimously dismissed his charge against the President. When Congress was opened on May 3 the President urged the continuance of a policy of appeasement, from which the best results had been obtained during his administration, and mentioned a variety of circumstances tending to show the complete public tranquillity of the country. The Government proposed to develop military instruction and, as far as could be done without creating fresh financial difficulties, to accumulate improved war material. The Government is working for the purchase of the guaranteed railroads, which have annually cost the treasury 30,

000,000 milreis for many years without any compensation. A harbor at Rio de Janeiro was recommended to be constructed by private enterprise with Government assistance. On Aug. 5 the Minister of Justice resigned and was succeeded by Sabino Barroso.

BRITISH COLUMBIA, PROVINCE OF. A portion of the Dominion of Canada, 409,910 square miles in area, with a population of 150,000.

Politics and Legislation.—Politics in British Columbia at the beginning of 1901 were more harmonious than they had been for some time. The Government of Mr. James Dunsmuir, a millionaire mine-owner of high character but slight political experience, had developed considerable strength, while the popular personality of the new Lieutenant-Governor, Sir Henri Joly de Lotbinière, had also helped to put an end to faction warfare. The ministry was composed of the Hon. J. D. Prentice as Provincial Secretary and Minister of Education, the Hon. D. M. Eberts, Q. C., as Attorney-General, the Hon. J. H. Turner as Minister of Finance and Agriculture, the Hon. W. C. Wells as Chief Commissioner of Lands and Works, and the Hon. Richard McBride as Minister of Mines. The Premier held no portfolio. Late in 1900 two constituencies were opened through the resignation of sitting members who were candidates for the Dominion Parliament—Ralph Smith, in Nanaimo, and James F. Garden, in Vancouver. Mr. Smith was elected, and was succeeded by Mr. J. H. Hawthornthwaite in the Provincial Legislature (the latter being elected by acclamation). Mr. Garden was defeated for the Dominion House, but was renominated for the Legislature, and after a stiff fight carried Vancouver on Feb. 19 for the Government against Robert Macpherson, who had combined with the Liberal element, led by the Hon. Joseph Martin, and the Labor party in support of his candidature. The Legislature met on Feb. 20, and was opened by the Lieutenant-Governor in some state and with a complimentary escort of 40 khaki-clad soldiers from South Africa. The speech from the Throne was read by Sir Henri Joly de Lotbinière. Its significant passages were these:

“As a mark of appreciation of the valiant services rendered by the volunteers from British Columbia who went to South Africa to assist the empire in the war with the Transvaal and Orange Free State, my Government will introduce a measure authorizing the conveyance to them of free grants of land. A measure will be submitted amending the school act. There will be submitted for your consideration a bill having for its object the encouragement of the wood-pulp industry of British Columbia. I am pleased to know that the dairying industry continues to develop in so satisfactory a manner, and that new creameries are being established. My Minister of Agriculture has obtained a promise of continued cooperation on the part of the Dominion in rendering expert assistance in their construction and subsequent operation, and in giving instruction in the manufacture of butter and cheese. Recognizing the importance of encouraging provincial trade in agriculture and other natural products in the mining districts, efforts have been made to secure such a reduction of freight rates as will naturally tend in that direction, and I am pleased to announce that this will be brought about.

“For the purpose of promoting settlement, my Government is considering the advisability of introducing legislation having in view the extension of the system of small holdings. A measure will be introduced with the view of aiding the construction of a railway from the Boundary

Creek district to the coast; of a railway to the northern end of Vancouver island; and of a railway in Canadian territory from the coast to the northern boundary of the province. The industries of the province, I am happy to state, are in a prosperous condition. During the recess commissions were issued for inquiries into the conduct and general administration of the Asylum for the Insane; the rights of settlers on the Esquimalt and Nanaimo Railway land belt; and the adjustment of mining claims in the newly organized Porcupine district, and full reports of the commissioners in each case will be laid before you.

"Provision was made by you at the last session of the Legislature for the appointment of a commission to inquire into the working of the mining acts, and much preliminary information has been obtained by the Department of Mines in anticipation of the commission being used; but it having been announced that the Dominion Government also intended issuing a commission with respect to our mineral resources, a postponement was deemed desirable in order to ascertain to what extent these commissions might be able to cooperate to the advantage of the province. Amendments will be introduced to perfect, as far as possible, existing mining laws. The act regulating immigration, passed at last session, has come into effect, and the necessary machinery for its enforcement has been put into operation. A delegation, consisting of my First Minister, and the Honorable the Attorney-General, recently proceeded to Ottawa to lay before the Dominion Government the claims of British Columbia to increased recognition in the matter of railway development, and in other respects, and to arrive at a settlement of certain matters requiring adjustment between the two governments. The report of the delegation will be laid before you."

The Hon. J. P. Booth acted as Speaker, and when the House was prorogued on May 11 the following acts—among others of minor importance—were assented to in the King's name:

To authorize grants of land to British Columbia volunteers serving in the South African war.

To amend the extra-provincial investment and loan societies act, 1900.

To amend the land registry act amendment act.

To amend the placer mining act and amending acts.

To extend the provisions of the Canadian contingent exemption act, 1900.

Respecting the maintenance of wives deserted by their husbands.

To amend the succession duty act.

To provide for the collection of a tax on persons.

To amend the inspection of metalliferous mines act and amending act.

To amend the absconding debtors act.

To amend the summary convictions act.

To amend the trustees and executors act.

For the protection and reformation of neglected and dependent children.

To amend the coal-mines regulation act.

To incorporate the Lake Bennett Railway Company.

To incorporate the Queen Charlotte Islands Railway Company.

To incorporate the Kamloops and Atlin Railway Company.

To incorporate the Coast-Kootenay Railway Company, Limited.

To incorporate the Comox and Cape Scott Railway Company.

To incorporate the Victoria Terminal Railway and Ferry Company.

To incorporate the Imperial Pacific Railway Company.

To incorporate the District Power and Telephone Company.

To incorporate the Midway and Vernon Railway Company.

To incorporate the Kootenay Central Railway Company.

To incorporate the Vancouver and Grand Forks Railway Company.

To incorporate the Yale Northern Railway Company.

To amend the British Columbia immigration act, 1900.

Respecting assignments for the benefit of creditors.

To authorize a loan of \$5,000,000 for aiding the construction of railways and other important public works.

To amend the drainage, diking, and irrigation act.

Respecting the manufacture of wood-pulp and paper.

On Sept. 3 Dunsmuir—a Conservative in Dominion politics, elected to the Legislature and made Premier through opposition to the policy of Joseph Martin, the Radical leader—threw a bomb into the political arena by accepting the resignation of Mr. J. H. Turner, Minister of Finance, and appointing the Hon. John C. Brown Provincial Secretary and Minister of Education. Mr. James D. Prentice was transferred from this latter department to that vacated by Mr. Turner. Mr. Brown had been a devoted follower of Martin, an opponent of Dunsmuir until very lately, and a Radical of the most strenuous type. Mr. McBride, Minister of Mines, at once resigned his post, and the papers of the province with very few exceptions denounced the action of the Premier and the assumed change of policy toward what was popularly termed "Martinism." The defense made by the Colonist, the chief Government organ, was that the representation of both parties in the provincial Cabinet was desirable; that Mr. Brown himself was a good administrator and would make an excellent minister, and that he now had complete confidence in the policy of the Premier. When the new minister went back for election to his constituency of New Westminster he was met with violent opposition, and on Sept. 18, after a prolonged contest, he was defeated by Thomas Gifford by 52 votes. On Oct. 4 his retirement was announced, and the office was thereafter left vacant for some time, although Messrs. H. D. Helmcken, K. C., and R. F. Green were understood to have been offered Cabinet places. The Opposition papers declared that the Government was tottering, and loudly urged the Premier to resign, but the latter, on Oct. 10, announced that he still had a large majority in the House, and intended to remain in office. He met with a great personal misfortune about this time, when a fire in his coal-mines involved a loss of about \$1,000,000.

Relations with the Dominion.—On March 15 a report was submitted to the House by the Premier and the Hon. D. M. Eberts concerning their mission to Ottawa in January and February. In the documents thus published and in the discussions referred to, Mr. Dunsmuir had pressed strongly upon the Dominion Government the claims of British Columbia in various important matters—the necessity of checking Chinese and Japanese immigration; the right of the province to a greater share of the revenues arising from

the Chinese immigration act; the desirability of settling the conflicting fisheries jurisdiction; the readjustment of the lumber tariff; the granting of cooperative subsidies to railways within the province; the adjustment of financial relations. The latter was a particularly sore point. From 1872, when British Columbia joined the confederation, to July, 1901, the revenue contributed by the province to the Dominion had been more than \$42,000,000. If, Mr. Dunsmuir said, the contribution had been on the same basis per head as in the other provinces it would have been only \$15,957,000. The total amount expended by the Dominion in the province during this period was \$25,915,000. He therefore argued strongly that on this account, and because of the immense distances, the natural obstacles to travel and transport, the great mineral resources available for exploitation and the sparse population, it was the duty of the Federal authorities to help the provincial Government in building certain necessary railways. In the same way the fishery question demanded settlement. By the decision of the Imperial Privy Council in 1898, the fish of the lakes and seacoast had been declared provincial property, while the right of regulation and control had been largely vested in the Federal authorities. There was, however, much room for dispute and further litigation in the matter of licenses, and Mr. Dunsmuir proposed to Sir Wilfrid Laurier that they should compromise the question by a ten years' Dominion grant of \$100,000 annually for encouraging ship-building in the province. He pointed out that in this as well as other matters British Columbia believed itself unfairly treated. For 1899 the fisheries revenue of all Canada was \$76,447, of which the province contributed \$45,801, while receiving only \$12,195 out of a total Dominion expenditure upon fisheries of \$408,754. Other matters were discussed in a voluminous correspondence between Sir Wilfrid Laurier and Mr. Dunsmuir, but without practical result.

This whole question was brought before the House of Commons at Ottawa by the Hon. E. G. Prior, of Victoria, British Columbia, on April 30. He began with the assumption that his province was suffering considerable disabilities because of the neglect of the Dominion Government to place sufficient sums in the national estimates for the protection of its interests. He referred to the distance of the province from Ottawa, and to the difficulty of sending special delegations to the capital. He spoke of the mission of the Hon. James Dunsmuir and the Hon. D. M. Eberts to Ottawa, and to the able document which these representatives of the British Columbia Government had prepared upon the matters at issue. After referring at some length to the Chinese and Japanese question and to that of railway development, he quoted Mr. Dunsmuir's financial statements in the document mentioned above, and declared that while every one of the other provinces of the Dominion had received more from the Federal Treasury than they had paid into it, the Government of British Columbia had, since confederation, paid to the authorities at Ottawa \$13,507,258 more than they had received. Not one cent of the increased national debt of \$223,800,000 had been expended in the Pacific province, as he considered the Canadian Pacific a national undertaking from which all the provinces benefited. He compared the revenues paid by British Columbia and Nova Scotia respectively into the Dominion exchequer in the year ending June 30, 1900—the former \$3,220,688, the latter \$2,503,596. The Pacific province was therefore 28 per cent. in amount ahead of the Atlantic province, while the

percentage according to population was still greater—\$17.70 to \$5.45.

Similarly, in customs and excise, and in exports and imports, his province was ahead of those on the Atlantic coast. He quoted, with pride, the seagoing tonnage of Montreal and Victoria. The former great commercial center had a total of 2,068,313 tons; the latter, a small town in population, had 1,796,331 tons. "And yet," he exclaimed, "the Minister of Public Works can not or will not see fit to give the paltry sum of \$15,000 a year for the purpose of dredging and putting the harbor of Victoria into better shape." The port of Quebec, which had only 1,088,630 tons of shipping, owed the Dominion Government \$4,000,000 for advances. The unfairness in connection with the fisheries of the province was equally great. Out of a total Dominion revenue of \$79,788 from fisheries, British Columbia contributed \$53,195, while out of a total Dominion expenditure upon fisheries of \$251,469, British Columbia received only \$13,662. For fisheries protection his province was not given one cent, while Nova Scotia received \$97,370. He urged the Government to do something for the salmon-canning industry of the province. He also spoke at length upon the ship-building question and the matter of the mint and assay offices. A reference was made to the possibilities of trade with Siberia, and Mr. Prior concluded by saying that if the Government would do justice to his province they would soon develop a vast market for the products of eastern Canada.

Finances.—On April 29 the Hon. J. H. Turner delivered his thirteenth financial statement to the Assembly, and announced his coming retirement from the ministry. The principal receipts for the fiscal year 1900-'01, and the estimates for the coming year 1901-'02, were as follow:

SOURCES.	1900-'01.	1901-'02.
Dominion subsidies and payments.	\$242,689	\$284,151
Land sales and revenue.	115,000	157,000
Timber royalty and licenses.	80,000	85,000
Timber leases.	80,000	80,000
Free miners' certificates.	125,000	130,000
Mining receipts.	200,000	200,000
Licenses.	70,000	70,000
Real property tax.	120,000	125,000
Personal property tax.	70,000	75,000
Wild-land tax.	55,000	55,000
Income tax.	30,000	35,000
Revenue tax.	150,000	200,000
Mineral tax.	65,000	80,000
Registry fees.	120,000	110,000
Chinese restriction act.	35,000	135,000
Succession duty.	25,000	100,000
Coal royalties.	90,000	95,000
Miscellaneous.	111,550	124,600
	\$1,754,239	\$2,140,751

The expenditures for 1900-'01 and the estimated expenditure for 1901-'02 were, respectively, \$372,790 and \$411,440 upon the provincial debt; \$221,895 and \$253,980 upon civil government or salaries; \$219,470 and \$231,132 upon administration of justice; \$967,350 and \$41,325 upon legislation; \$118,700 and \$124,380 upon the maintenance of public institutions; \$70,650 and \$87,300 upon hospitals and charities; \$326,470 and \$369,037 upon education; \$665,323 and \$804,641 upon public works; \$145,820 and \$152,100 upon miscellaneous items. The total for the current year was \$2,218,468, leaving a deficit of \$461,229. The total estimated expenditure for 1901-'02 was \$2,475,335, showing a deficit of \$334,584. The supplementary estimates which have to be added to this amount were \$167,484.

The Fisheries.—The principal fish of this region are the halibut of the lakes and rivers, her-

ring; and salmon. The total value of the catch between 1876 and 1899 was valued at \$60,998,000. In the latter year the value of the salmon fisheries was \$4,007,396; of herring, \$37,450; of halibut, \$103,750; and of fur-seals in the north, \$441,825. The value of the fish for home consumption was placed at \$350,000, and the general total at \$5,214,073. The number of fishermen was 23,806, the vessels and boats 4,982, the salmon canneries 69, with a value of \$1,380,000, and the total value of all fishing-plants was \$2,604,773. The value of the product was \$21,891,706. In 1901 the total pack of salmon from Fraser river was 920,313 cases, against 316,522 cases in 1900. The price, however, to the fishermen was only 10 or 12½ cents, against 19 and 20 cents in the preceding year.

On Feb. 22 a discussion took place in the House of Commons at Ottawa as to the position of these fisheries and the question of control. The Minister of Marine and Fisheries said that certain inspectors had been appointed or retained to look after the enforcement of Dominion regulations as to fishing and to fix the times and seasons in which fish may be taken. "The local Government have the sole and exclusive right, under the Privy Council decision, to grant licenses for particular localities; they get the fees and appoint officers for that purpose. It is a divided jurisdiction, and we appoint three officers in Ontario to keep track of the manner in which our regulations are observed, and report to us whether these regulations are proper or not, and whether they should be amended." He proceeded to point out that "the exclusive power to make regulations in connection with the fisheries is vested in the Dominion Government, but the provinces of Ontario and Quebec, having been declared by the Privy Council to be the owners of the beds of the rivers and lakes, they were held, *a fortiori*, to be the owners of the fish in these rivers and lakes, and it was held that the provinces had the exclusive right to grant fishery leases of areas in these lakes. Therefore the revenues which we formerly derived from the issue of licenses are now handed over to the provinces of Ontario and Quebec." The minister admitted that there had been friction between the provinces and the Dominion upon this subject. "There has been a disposition on the part of the provincial governments to arrogate power with regard to regulations which I do not think they possess." Especially was this the case with regard to what were termed "supplementary regulations." Upon this point there had been "more or less friction." But there was no complaint as to the manner of administering the recognized Dominion regulations. The Hon. E. G. Prior, of Victoria, had asked why the Government had not treated British Columbia in this respect as it had Ontario and Quebec. The minister replied that there was a wide distinction between lake and deep-sea fisheries. "In the maritime provinces the question whether the bed of the sea from low-water mark to the three-mile limit belongs to the province as a proprietary right, or whether the Dominion has proprietary jurisdiction over it, is a question not absolutely determined." He believed the Dominion to have the right over seacoast fisheries. Mr. Prior then drew attention to another branch of the same subject. The Dominion revenue from Ontario fisheries last year (1900) was \$794; the Dominion expenditure upon Ontario fisheries was \$3,704. In Quebec the revenue collected was \$2,563, the expenditure was \$5,549. In Nova Scotia the revenue was \$5,494, the expenditure \$27,461. In New Brunswick the revenue was \$12,015, the expendi-

ture \$21,459. But in British Columbia, where the Dominion revenue was \$53,195, the expenditure upon the fisheries was only \$13,662. The reply was that Mr. Prior would "find the expenditure for the current year much larger."

On April 30 the Hon. Mr. Prior again brought up the question of the salmon fisheries of British Columbia, and quoted from two important documents or memorials prepared by the Cannery Association of the province. This organization was altogether in favor of provincial control of the fisheries. He himself deprecated the present divided jurisdiction under which the Dominion Government controlled the rivers below low-water mark, and the provincial Government looked after the rivers above low-water mark, so far as the fish were concerned. He also presented the claim of fishermen to be allowed to catch fish with traps and seines, as the American canning men did on the coast of their territory with the salmon sweeping past on their return to the Fraser. It was a great hardship. "Last year 2,269,245 pounds of salmon were bought by Canadian canners from the American fishermen, who caught our own salmon and sold them to us at a cost of some hundred thousand dollars." The time was coming, according to authorities whom he respected, when Americans would capture the most of our salmon on their way back to their natural spawning-grounds. He urged attention to this matter, even while admitting its serious difficulties and hesitating to express a personal opinion as to the right course to pursue. But he strongly advocated more hatcheries, and pointed to the annual expenditure for this purpose of \$50,000 in the State of Washington.

The Prime Minister thought this fishery question had two sides to it. "The remedy proposed by the honorable gentleman for the grievances of the canners—and I must say these grievances are of long standing—is to transfer the control of the fisheries in the Columbia river to the province of British Columbia. My honorable friend will find on reflection that such a remedy could not be thought of for a moment, because, under the British North America act, the Government and Parliament are powerless in the matter. We can not divest the province of any control which it has under that act, nor can we divest the Dominion of its control over any matter assigned to it by our Constitution."

Sir Louis Davies, in speaking for the Department of Marine and Fisheries, declared that there was no present indication of a falling off in the fisheries, and that there was not the same necessity for hatcheries as there was at the south. However, the Government was building one at Sicamous, and would build another on the Skeena river and, if necessary, at the River's Inlet. As to the matter of trap-nets, he thought an industry worth \$5,000,000 or \$6,000,000 a year to the people of the province was too valuable to destroy in this way. In reply to a question from Mr. Prior as to means for the preservation of the salmon as they came through American waters, the minister said that negotiations on that point had reached an advanced stage when they were broken off by the Alaskan boundary question at the Washington conference. In any case, British Columbia fishermen were not doing badly in their own mode of legal operation. There was an increase in 1899 over the previous year, and he was glad to see that the large undeveloped markets in Japan, China, and other Eastern countries were now being exploited. His own judgment was strongly against permitting the use of trap-nets, and it was founded upon the advice of

expert officers. There would be no justification for the change, as the salmon could be caught in Canadian waters by a less destructive method and in reasonable quantities.

Education.—During the fiscal year 1899-1900 the cost of education to the province was \$307,479, and to the cities \$81,886. There were in operation at the end of that period 4 high schools with 13 teachers, 48 graded schools with 235 teachers, and 246 common schools with 246 teachers. In rural districts these schools were under the control of a board of three trustees (elected), and in the cities of a board of varying numbers. The average attendance during the year was 13,438, and the number of pupils enrolled 21,531. The average actual attendance in high schools was 344, in graded schools 9,013, and in common schools 4,080. One of the most important of the measures passed in the Assembly in 1901 was the public schools bill introduced by Mr. Prentice. By it the school districts of the province were divided into three classes, the basis being as follows: For schools of the first class an attendance of 1,000; for those of the second class of more than 250; for schools of the third class an attendance of fewer than 250. The per capita grant was \$13 and \$15 and \$20, respectively, with a provision of \$300 for each school-teacher. Teachers in the third class were relieved from attendance at normal school.

Mining.—Up to 1901 British Columbia had produced \$62,584,442 of placer gold, \$12,812,860 of lode gold, \$12,380,449 of silver, \$7,619,626 of lead, \$4,362,583 of copper, and \$49,140,917 of coal and coke—a total of \$150,000,000. The annual report of the Minister of Mines for the province, made public June 29, showed a production in 1900 of placer gold, \$1,278,724; lode gold, \$3,453,381; silver, \$2,309,200; copper, \$1,615,289; lead, \$2,691,887; coal, \$4,318,785; coke, \$425,745; miscellaneous, \$251,740. The total was \$16,344,751, against \$12,393,131 in 1899. The increase in every direction was said by the minister in the Assembly to have been most marked. The number of mines in 1899 shipping more than 100 tons was 43, and in 1900 it had risen to 60. In East Kootenay the production of metals increased from \$523,666 to \$2,855,851; in the Slocan district from \$1,740,372 to \$2,063,908; in the coast districts from \$4,094,093 to \$4,805,153. There was a decrease in Trail Creek from \$3,229,086 to \$2,730,300. In coal the Vancouver island collieries showed a gross output of 1,383,376 tons, and the Crow's Nest Pass collieries 206,803 tons. Lead showed the greatest increase in production—\$1,813,017, or 206 per cent. over the previous year.

According to the provincial mineralogist, the mines of the province had paid back in principal and interest to the lenders of the money for their development \$6,529,420 in 1898; \$6,751,664 in 1899; and \$10,069,757 in 1900. There was considerable legislation affecting the mines during the year. The placer mining bill made the claims similar in size to those of the Northwest Territories, and this involved a general increase in creek claims, and bar and dry diggings, while bench and hill diggings were abolished altogether. An important clause compelled judgments affecting mineral claims to be sent to the mining Recorder, and entered in the books of the district concerned. Free miners were allowed to consolidate claims up to ten in number. By the inspection of mines act an uniform code of signals was authorized for use in the mines. Monthly returns were to be made by all mines engaged in treating or shipping ores, and they were to include the quantity of ore mined or treated and the assay

value thereof. Engineers in charge of hoisting-plants were forbidden to work more than eight hours a day.

Lands and Works.—The report of this department for 1900 dealt with roads, trails, buildings, dikes, and timber. By it the Government was shown to have built and maintained 5,615 miles of roads and 4,414 miles of trails in the province. Much necessary work was still being done in the mountainous mining regions. Various public buildings had been erected, and many repairs executed. A new court-house at Rossland, alterations in the Victoria court-house, and completion of the Nelson Registry Office and of a Government building at Atlin were announced. Important surveys were described, and important diking projects indicated. The timber cut on Crown lands was given as 232,831,982 feet, and as yielding a royalty of \$116,415. About 43,000,000 feet were reported upon which no royalty was paid. Including licenses, rentals, etc., the total timber revenue was \$145,766.

Labor Troubles.—This year strikes and labor struggles were numerous and injurious. The salmon-canneries difficulty turned upon the employment of Japanese and Chinamen, and was settled after some deeds of violence had occurred. Mr. Dunsmuir imported Scottish miners to replace the Chinese in his Vancouver island mines, and as soon as their fares had been paid and they had looked around a little most of them decamped to the United States. The trackmen's strike affected British Columbia more, perhaps, than the other provinces, but was general in its application. The Rossland strike was, however, the most important. Immediately after the passage of the eight-hour law in 1899 the Rossland Miners' Union prohibited its members from doing contract work. Men earning \$5 a day under contract had to go to work at the regular scale of \$3.50 a day, and the usual result of having no competition followed in work which was insufficient, and of operating expenses which were higher to the mine-owners than in any other country. Early in 1900 the latter decided, therefore, that they must, in the interest of their shareholders and the mines, revert to the contract system. They declared that no reduction of wages would follow, but the union thought otherwise, and for sixty-six days it succeeded in keeping the mines shut down. Then, on April 3, a settlement was effected by R. C. Clute, K. C., and Ralph Smith, M. P., on the basis of opening up the mines to full capacity at an early date and the right of the companies to employ both union and non-union men. The contract system was then adopted by the miners' union, with a good majority. Friction, however, soon began. The mine managers refused to allow "walking delegates" to visit their properties and interfere with their employees. Agitators declared that the "muckers" were being treated unjustly. At Northport a union was formed and, it was said, a series of aggressive movements were directed against the discipline of the smelter management. The ringleaders in the trouble were dismissed, finally, owing to a conspiracy against one of the foremen, and the strike then began. At first only a few of the men went out, but a campaign of calumny was started in all the mining regions and sympathy directed into a sort of boycott against the Northport smelter. On July 11, by a ballot of 258 out of 340, it was decided by the union to call out the 1,200 men employed in Rossland and its vicinity. The mine-owners declared that the whole trouble was caused by a small clique of agitators, without real reason, and on the day of the strike Bernard MacDonald,

general manager of Le Roi and other mines, made the following statement: "One thousand two hundred men are working peacefully on this hill. Less than half of their number are members of the union. The wages paid average over \$4.25 for miners and are \$2.50 for common labor. The pay-roll average for all our wage employees is \$3.55, which is a higher average than in other mining districts of the West. The eight-hour law for all underground men has been accepted by these companies without any attempt to lower wages. On the contrary, these have been voluntarily largely increased throughout the schedule for miners and various classes of labor, with the single exception of common labor, which was maintained at the figure which has always prevailed."

But 258 men had called out 700 union members and affected 600 other men engaged in the mines. The Board of Trade at Rossland, British Columbia, declared the strike illegitimate. The Carpenters' and Joiners' Union also went out, and the various organizations formulated their demands to Mr. MacDonald. He referred them to the London directors of his mines, and replied finally that they could not be granted. Toward the end of September, after the mines had been closed down more than two months, the strike was settled on a basis very similar to that of April.

Transportation.—When the Premier and Mr. Eberts visited Ottawa, early in the year, they asked the Dominion authorities, in view of the contributions of British Columbia to the Federal exchequer, to assist certain railway enterprises in the province at a ratio of two thirds to one third. Otherwise, owing to overlapping jurisdiction and the peculiarly heavy requirements of the province, it was contended that proper progress would be impossible. The following lines were strongly recommended for immediate cooperation: From Midway, in the Boundary Creek district, to the coast, at some point south of the Fraser river, having a ferry connection with Vancouver island. From the present terminus of the Esquimalt and Nanaimo Railway to some point on the north end of Vancouver island. From some point on the British Columbia seaboard, say at Kitimaat, to some point on the northern boundary of the province, to form part of an all-Canadian line to the Yukon.

"Throughout the center of British Columbia," Mr. Dunsmuir said, "extends a great and comparatively level plateau, admirably adapted for a trunk line of railway, from which would ultimately radiate branch lines to the coast through easy passes, everywhere tapping localities capable of remarkable development and of creating immense traffic—a wonderful natural system of communication, of which a parallel is not presented in any other province of the Dominion."

Nothing came of this at the time, but, during the session of the Legislature, the Government embodied its railway policy in what was called the loan bill, which authorized the borrowing of \$5,000,000 for giving aid to about 1,000 miles of necessary railway. It was new and advanced legislation. It discarded the principle of direct grants or bonuses, and put the matter in the form of a loan repayable at the discretion of the company receiving it, and bearing 2 per cent. interest for five years and 3 per cent. thereafter. It secured to the Government control of rates and supervision of contracts, and overcapitalization was one of the evils its terms were pledged to check. The charge upon the revenue for aid given under the act was to be 1½ per cent. for the first

five years after the subsidy was paid, and ½ per cent. thereafter. The measure finally passed on May 12, after prolonged debates in which the great point was the question of competitive lines under American control or Canadian lines under what was declared to be Canadian Pacific Railway control. Other matters complicated the issue, and the Government was supposed to stand by the Canadian Pacific Railway, and there the subject rested after the disposal of the loan bill legislation. The passage of the following resolution by the Associated Boards of Trade of Eastern British Columbia was one of the important phases of the controversy:

"Whereas, several applications have been made to the Dominion Parliament and provincial Legislature for acts incorporating railway companies to build lines of railway into the province of British Columbia from the United States; and whereas interested parties are strenuously endeavoring to create the impression that such railways, if constructed, would be inimical to the mining and smelting interests of this province; and whereas, in furtherance of their designs, the opponents of the competitive railways have proclaimed that those interested in mining and smelting in British Columbia are opposed to the granting of said charters:

"Therefore be it *resolved*, that the Associated Boards of Trade of Eastern British Columbia, representing every town in the metalliferous portion of eastern British Columbia, and every enterprise whose success depends upon the development of its mineral resources, emphatically declare for free trade in railways, and believe that every bona-fide railway company desirous of building railways in the province should be allowed to do so.

"And be it further *resolved*, that this association is strongly of the opinion that cheap freight rates are essential in building up the mining and smelting industries, and, in the absence of Government ownership of railways, these can be secured only by competition and the control of rates through a railway commission or other effective instrument."

Oriental Immigration.—This question came up for much discussion, and the competition of the Japanese and Chinese was keenly felt. In his appeal to the Dominion Government on Oct. 9, 1900, Mr. Dunsmuir declared that "without lowering the general standard of living necessary to meet the decrease in wages, it is not possible for white labor to exist in the face of a system that has grown up under conditions entirely foreign to Anglo-Saxon communities." The Dominion Government had, however, disallowed the provincial legislation of 1900 on the ground of imperial interests being affected by the attempted exclusion of Japanese. They increased the per capita tax from \$50 to \$100 a head, but this was not considered sufficient; \$500 was asked for, and the laboring interests of the province steadily refused to separate the Japanese from the Chinese in any proposed legislation. The latter the Dominion authorities were reasonably willing to deal with as requested. It was pointed out that these alien workers numbered 15,000 in a population of 150,000 and were steadily increasing, while trouble arose, not only in labor circles over competition in the salmon canneries and the mines, but in politics, through the naturalization in 1900 of 1,166 Japanese and Chinese. On March 13 an Oriental Labor Commission, appointed by the Dominion Government and composed of Messrs. R. C. Clute, K. C., Christopher Foley, D. J. Munn, and F. J. Deane, met in Victoria, and thereafter

at Vancouver and New Westminster in turn. They examined representatives from every interest and business and profession, and held a large number of meetings. The investigation was thorough, the questions most elaborate, and the results interesting. Dealing with the question of employing Oriental miners, one witness said that in Cumberland 261 Chinese and 77 Japanese were employed underground, and 102 of the former and 25 of the latter overground. Another witness said that in Victoria there were 388 Chinese merchants, 530 Chinese servants or cooks, 886 employed in salmon canneries, 197 laundrymen, 198 market gardeners, etc. He gave the total business of Chinese firms in the city as \$1,059,805 for the year ending Feb. 17, 1901; \$107,594 was spent for imports from China, and \$464,369 on goods purchased in Canada, England, and the United States. They had \$573,500 invested in city business, and \$296,000 in real estate. The Victoria Outlook gave the other side when it reckoned the total annual loss to the workmen of Victoria from Chinese competition at \$616,200. Col. Prior, M. P. for Victoria, urged the Government to do something effective in restricting this immigration, and congratulated them and the country upon the action of the Japanese Emperor in commanding his subjects to cease migrating to Canada.

The Mint.—The Dominion Government's action in establishing a branch of the Royal Mint at Ottawa and an assay office in Vancouver was warmly approved by the province, which had so long urged this policy. Mr. Dunsmuir, early in the year, had pressed for it, and declared that Seattle was built up very largely by Canadian gold from British Columbia and the Klondike, which had been taken there for assay, the result being a large purchase of supplies and free expenditure of money by the miners. Gold at the Seattle assay office was handled at the same price as at the mint in Washington, while at Victoria or Vancouver it could only be taken plus the cost of expressage, insurance, and other charges. At Ottawa on Feb. 16 Messrs. F. Buscombe and A. O. Campbell presented a memorial to the Government from which it was seen that out of \$20,166,687 worth of gold received at the Seattle assay office, from Jan. 1 to Oct. 24, 1900, \$16,374,488 was from the Canadian Yukon district, and \$493,116 from Atlin, British Columbia. On July 24, 1901, the Vancouver assay office was opened, with Dr. Haanel as superintendent.

BULGARIA, a principality in eastern Europe under the suzerainty of Turkey, created an autonomous tributary principality by the treaty signed by the representatives of the great powers at Berlin on July 13, 1878. Eastern Roumelia, which was created at the same time an autonomous province of Turkey, in 1885 proclaimed its union with Bulgaria, expelled the Christian governor appointed by the Sultan, and has since been administered as a part of the principality, the Prince of Bulgaria holding the title of Governor-General by appointment of the Sultan. The legislative body in Bulgaria is a single chamber called the Sobranje, containing 157 members, 1 to 20,000 of population, elected for five years by universal manhood suffrage.

The reigning Prince is Ferdinand, Duke of Saxony, born Feb. 26, 1861, the youngest son of Prince August of Saxe-Coburg-Gotha and of Princess Clementine, daughter of Louis Philippe, former King of the French. The heir apparent is Prince Boris, born Jan. 30, 1894. The Cabinet in 1900 was composed as follows: President of the Council and Minister of Foreign Affairs and Worship, T. Ivantchoff; Minister of the Interior,

Dr. V. Radoslavoff; Minister of Public Instruction, Dr. Vatchoff; Minister of Finance, M. Teneff; Minister of Justice, P. Pesheff; Minister of War, Col. S. Paprikoff; Minister of Public Works, T. Tontcheff. The Cabinet was constituted on Oct. 13, 1899.

Area and Population.—The area of the principality proper is 24,380 square miles, and that of Eastern Roumelia 13,700 square miles. The population of the principality in 1893 was 2,312,282, and that of Eastern Roumelia, 998,431; total, 3,310,713, of whom 2,505,326 were Bulgars, 569,728 Turks, 62,628 Roumanians, 58,518 Greeks, 52,132 Gipsies, 27,531 Jews, 3,620 Germans, 928 Russians, and 30,302 of other nationalities. The number of marriages in 1898 was 28,232; of births, 141,046; of deaths, 82,725; excess of births, 58,321.

Finances.—The budget for 1900 makes the total revenue 83,827,863 lei, of which 35,294,900 lei are derived from direct taxes, 29,401,000 lei from customs, 915,000 lei from fines, 5,676,247 lei from fees, 4,486,916 lei from rents and interest, 5,578,000 lei from transportation, and 1,975,800 lei from other sources. The expenditures were estimated at 83,270,370 lei, of which 1,250,380 lei were for the executive, 24,646,849 lei for the expenses of the public debt, 127,180 lei for the Board of Audit, 3,898,439 lei for the Finance Department, 7,238,880 lei for the interior, 3,838,354 lei for foreign affairs, 8,114,526 lei for public instruction, 4,289,584 lei for justice, 20,773,432 lei for the army, 3,229,570 lei for commerce and agriculture, and 5,863,176 lei for public works.

The public debt in 1899 was 290,000,000 lei, bearing 5 per cent. interest. A loan of 25,000,000 lei at 6 per cent. was obtained in 1900 on the security of the tobacco tax.

Commerce and Production.—The total value of imports in 1899 was 60,178,000 lei, and of exports, 53,467,000 lei. The imports of textiles were 20,676,000 lei in value; of metals and metal manufactures, 5,455,000 lei; of machinery and tools, 5,329,000 lei; of colonial goods, 4,702,000 lei; of mineral oils and gums, 2,697,000 lei; of hides and leather, 2,849,000 lei; of wood and wood manufactures, 2,677,000 lei; of glass and minerals, 2,162,000 lei; of drugs, chemicals, and colors, 2,050,000 lei; of paper and paper materials, 1,547,000 lei; of spirits, 1,092,000 lei; of animal food products, 839,000 lei; of cereals, 670,000 lei; of animals, 321,000 lei; of perfumery, 120,000 lei; of all other merchandise, 6,992,000 lei. The exports of cereals were 32,801,000 lei; of animals, 4,764,000 lei; of textiles and textile materials, 4,075,000 lei; of animal food products, 3,458,000 lei; of hides, skins, and leather, 3,184,000 lei; of perfumery, 2,663,000 lei; of wood and wood manufactures, 690,000 lei; of metals and metal goods, 592,000 lei; of gums and mineral oils, 285,000 lei; of spirits, 84,000 lei; of drugs, colors, and chemicals, 82,000 lei; of tools and machines, 80,000 lei; of colonial goods, 69,000 lei; of glass and minerals, 31,000 lei; of paper and paper materials, 21,000 lei. The imports from and exports to various countries in 1899 were valued in lei, or francs, as follow:

COUNTRIES.	Imports.	Exports.
Turkey.....	6,484,000	21,200,000
Austria.....	18,441,000	4,160,000
Great Britain.....	12,343,000	9,874,000
Germany.....	8,543,000	3,696,000
France.....	3,225,000	4,915,000
Belgium.....	1,549,000	3,215,000
Italy.....	3,195,000	1,026,000
Russia.....	2,181,000	152,000
Roumania.....	1,658,000	543,000
Other countries.....	2,559,000	4,680,000
Total.....	60,178,000	53,467,000

The imports from the United States were 204,051 lei, and exports to the United States 546,245 lei in value. The land tax in Bulgaria is 10 per cent. of the produce, as in Turkey, paid often in kind. Of the total area of 9,750,500 hectares, 48 per cent. is pasture, 25½ per cent. farm and garden land, and 17½ per cent. forest. Wheat is the chief crop, and much of it is exported. Wine, tobacco, and silk are important products. Of attar of roses, 4,327 kilograms were made in 1900. In the Government coal-mines near Pernik, 125,000 tons are raised annually.

There were entered during 1899 at Bulgarian ports 10,501 vessels, of 2,539,748 tons, and cleared 10,393 vessels, of 2,523,831 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1900 was 970 miles, of which 785 miles belonged to the Government.

The post-office in 1898 carried 10,317,000 letters, 2,661,000 postal cards, 10,779,000 newspapers, books, and circulars, and 304,000 money letters and postal orders of the total amount of 29,900,000 francs in the internal service, and in the external service 3,579,000 letters, 606,000 postal cards, 4,642,000 newspapers, books, and circulars, and 82,000 money letters and orders amounting to 8,939,000 francs. The postal and telegraph receipts were 2,921,831 francs; expenses, 3,127,723 francs. The Government telegraphs had a length of 3,270 miles, with 6,740 miles of wire. The number of internal paid messages was 1,053,494 in 1898; of foreign messages, 230,173; of service messages, 58,740; total, 1,342,407; receipts, 1,032,400 francs. There were 5 telephone circuits with 303 miles of wire in the towns and 5 interurban circuits with 925 miles of wire.

Political Affairs.—Depending entirely on agriculture and the exportation of cereals, when crops fail the people of Bulgaria are poor. After three successive short crops the situation became precarious in the autumn of 1900. The Government was embarrassed as well as the people, and issued 16,000,000 lei of notes payable in silver. Notes payable in gold previously issued could not be redeemed because there was no gold, but they were declared to be valid at the national bank for debts payable in gold or for foreign exchange. The national bank, however, refused to accept them except at a discount. The Government then agreed to pay them in silver with the premium added. For part of the salaries of officials warrants were given. The Government planned new taxes in the guise of monopolies of tobacco, salt, and petroleum. Direct taxation was already very heavy. The old tithes, requiring the cultivators to give up to the Government a tenth of the harvest every year, were abolished by the Stoiloff ministry, which created in their stead a land tax. In 1900 the tithes were again put into force, while the land tax continued to be collected also. The tax-gatherers met with forcible resistance when they demanded the tithes. The tithes, which are paid in kind, amounted to 25,000,000 lei for 1900. The land tax, payable in cash, yielded only half of the 18,000,000 lei estimated because the peasants had no money. The Cabinet succumbed, in December, 1900, to the internal and external difficulties that beset it, but Prince Ferdinand requested the principal ministers to remain in their posts and carry on the business of the country as a Cabinet of Affairs, only he insisted that Gen. Petroff, who was without party affiliations, should be included as Minister of the Interior. There are half a dozen factions in Bulgaria grouped about as many leaders, and whichever one is in power at the moment of a general election is able to

secure an overwhelming majority, because the local officials put the tickets of the Government candidates into the hands of the docile peasants, and those who are not docile the gendarmes drive away from the polls. The party chiefs were so numerous and all of them so ambitious that it became impossible to form any coalition ministry that would hold together. Prince Ferdinand resolved to ascertain, if possible, the genuine political sentiments and preferences, and determined therefore to have the approaching election conducted without the interference of politicians and under the protection of the military. This temporary government negotiated for a loan of 80,000,000 lei with French and Dutch bankers to enable it to continue the public works that were in progress and to pay off an advance of 25,000,000 lei obtained in Germany at the beginning of 1900 and liquidate floating debt and arrears of the Turkish tribute. For the new debt the tobacco monopoly, estimated to yield 15,000,000 lei a year, was pledged. Before the arrangement was completed M. Ivantchoff's Cabinet resigned, and Gen. Petroff, on Jan. 25, 1901, formed a provisional Cabinet to conduct public business until after the elections. The crisis arose over a question of appointments. Gen. Petroff found it necessary to remove several officials who were active partisans of M. Radoslavoff. The party leaders who remained in the Cabinet coveted the posts for their own followers, and when Gen. Petroff would not allow them to dispose of the vacant offices, M. Tontcheff, leader of the South Bulgarian Liberals, resigned, and M. Ivantchoff followed his example. The remaining members of the Cabinet were not faction leaders or politicians of importance. They were retained in their places, and with Gen. Petroff and Col. Paprikoff in control the election was expected to be free from coercion for the first time and the gendarmerie to be employed only for the purpose of preventing any recourse to violence on the part of the contending factions. Consequently over 800 candidates presented themselves, and the electioneering was more lively than had ever been seen in Bulgaria before. The hope that any one party would emerge with anything approaching a majority was disappointed. The three strongest ones together would form only a slight majority. The Stamboloffists, Zankoffists, Stoiloffists, and Karaveloffists were the most numerous, while Radoslavoff made a pitiful showing. There was a group which adhered to the existing ministry; the Peasants' party and the Socialists were represented, and the Turks sent their own representatives. All the party leaders were pledged to abolish the tithes. The elections were carried out with impartiality as far as Gen. Petroff could direct, but in some districts soldiers interfered for the purpose of aiding Zankoffist candidates. The Petroff Cabinet resigned on Feb. 26, and on March 4 a Cabinet of Karaveloffists and Zankoffists was formed, to which the Stoiloffists offered their support. It was composed as follows: Prime Minister and Minister of Finance, Petko Karaveloff; Minister of Foreign Affairs, M. Daneff; Minister of the Interior, Michael Saraoff; Minister of Justice, Alexander Radeff; Minister of Agriculture and Commerce, Alexander Rudskanoff; Minister of Education, Ivan Stavlikoff; Minister of Public Works, Ivan Belinoff; Minister of War, Gen. Paprikoff. In the new Cabinet Gen. Petroff retained the portfolio of the Interior and took that of Foreign Affairs *ad interim*, Col. Paprikoff remained Minister of War and took the portfolio of Public Works in addition, M. Dantchoff became Minister of Justice and Minister *ad interim* of

Agriculture and Commerce, and M. Bontsheff took charge of the Department of Finance. The Ivantchoff Cabinet had promised economies, but was unable to effect them. The war budget, which absorbs more than a fourth of the revenue, could not be cut down in a country where the army has as much political influence as it has in Bulgaria, nor could savings be effected in the civil service, where all the functionaries down to the pages and doorkeepers are turned out with each change of ministry, to be replaced by creatures of the party in power. The elections for the Sobranje took place on Feb. 11. The following of the late powerful ministers dwindled to almost nothing, while the strong chiefs of other days who had long been excluded from public life turned up at the head of considerable factions. The Macedonian agitation was aggravated by the distressful economical situation of the country, and one of its consequences was the aggravation of that situation for Bulgarians and still more for Macedonians, many of whom migrate annually into Bulgaria and Roumania for work, but were unable to do so this year owing to the difficulty of passing the Turkish frontier and to the quarrel between Bulgaria and Roumania. Saravoff, the president of the Macedonian Committee, had been sentenced to death by the Roumanian court for procuring the murder of a Bucharest professor, but the Bulgarian Government refused to deliver him up, and no Bulgarian minister dared to deal harshly with the Macedonian Committee, although its methods were criminal and the subject of warnings and complaints from several European governments. The Turkish Government treated Macedonians with the utmost severity, with the full approval of the powers. Often the innocent suffered for the guilty. Turkey had 150,000 soldiers massed on the frontier to put down the threatened rising. Macedonian refugees in Bulgaria petitioned the Sultan to let them return if they could find means of gaining a livelihood in Macedonia. The agitation for the emancipation of Macedonia from Turkish rule and its annexation to Bulgaria, an aim which ran counter to similar Servian, Greek, Roumanian, and Albanian national ambitions and defied not only the military power of the Turkish Empire, but the concert of Europe, was so popular in Bulgaria that no government dared to suppress the Macedonian Committee or even punish crimes committed by its members. The agitators were discharged officials, retired officers, politicians fallen from power, and idle adventurers of every type. They obtained money by blackmail and intimidation, and did not shrink from murdering men who threatened to show them up. Bulgarians were not required to contribute to the fund from which they lived, but foreign merchants, Roumanians, and others, especially Turkish subjects and Spanish and Polish Jews. They assessed sometimes the entire Jewish colony in a town, sometimes individual Jews. The committee, which has been in existence since the Russo-Turkish War of 1877, had Macedonian bonds printed, which were offered to some of the victims of its extortions at 50 per cent. of their face value. Rifle clubs were organized throughout Bulgaria. The part of Macedonia bordering on Eastern Roumelia was to be redeemed first, and the ostensible purpose was to make it an autonomous Christian province of Turkey, to be ultimately absorbed in Bulgaria, as Eastern Roumelia was, if not occupied at once by Bulgarian patriots and annexed without passing through the intermediate stage. Col. Petroff took more vigorous measures to curb the agitation than any of his predecessors, and thus provoked the enmity of the agitators and the

attacks of Karaveloff, the leader of the Liberal party, as well as of the Russophile Zankoffists, who have always abetted the agitation. The Macedonian Committee pretended that it still enjoyed Russian support, as it did at times in the earlier part of its career, although the Russian Government, as well as other European governments, had unmistakably intimated at Sofia and at Constantinople a desire that the Bulgarian Government should suppress the present agitation and fulfil its international obligations by proceeding against the lawless Macedonian Committee. Gen. Petroff showed a determination to put a stop to blackmailing and personal violence on the part of agents of the Macedonian Committee by warning the prefects against countenancing any infractions of the law. He also ordered the suppression of the rifle clubs, but he did not see that his order was carried out, nor did he proceed to the arrest of Boris Saravoff and his associates, who since they took charge of the agitation in May, 1899, had degraded it by their methods until proceedings of the Macedonian Committee had become an international scandal. The course that the new Government would pursue toward the Macedonian Committee was problematical, notwithstanding the encouragement the members of the ministry had given to it for electioneering purposes. Karaveloff and the Zankoffists were not men to condone methods that brought the Macedonian movement into disrepute, the new Minister of the Interior, who was an old leader of that movement, least of all, nor could the demands of Roumania, the warnings of the powers, or the complaints of Turkey, accentuated by vigorous repression in Macedonia, be continually disregarded. Unless the dangers of the situation were removed the necessary financial aid from European money markets would not be forthcoming. The agitators took heart, however, when their professed friends came into power. The rifle clubs again began openly to train volunteers. Whatever important move the new Cabinet in political matters made was believed to have the previous approval of the Russian Government.

The Sobranje met in extraordinary session on March 7. The new ministry stated that its task would be to bring about an equilibrium in the budget and end the financial crisis and to strengthen the bonds that unite Bulgaria to her deliverer, Russia, and develop good relations with neighboring states. This announcement gave no encouragement to the Macedonian Committee. The Porte took more energetic measures than ever to suppress the conspiracy that honeycombed Macedonia. The evidence of an intended insurrection was apparent. Agents of the Sofia body were found guilty of blackmail and assassination in various parts of Turkey and were executed. The Turkish Bulgarians were organized in revolutionary bands pledged to obey secretly all orders coming through local committees from the Macedonian Committee, which provided them with weapons. Murder and other political crimes were authorized, and the perpetrators were reported to Sofia for reward; but acts of personal vengeance and of pillage were prohibited, and those who committed them must suffer death. Every political murder must, however, have the sanction of the president of the Macedonian Committee. The chief of every band of 5 or 6 members received his appointment from Sofia. The members of different bands should not communicate with each other. The death penalty was threatened for desertion in action or for any disposition to betray the secrets of the organization for gain. The Porte demanded in energetic language that the Bulgarian Government dissolve the Macedonian Com-

mittee and its branches which were organizing armed bands on the frontier. Gen. Paprikoff issued military regulations forbidding military officers to have anything to do with the revolutionists and restricting the activity of the latter. This so incensed them that they attacked Prince Ferdinand in their newspaper organs. On April 5 Boris Saravoff and the other officers of the Macedonian Committee were arrested on a warrant issued by the magistrate who investigated the charges made by the Roumanian Government relative to the murder of Prof. Mihaileano. This sud-

den action of the authorities, occurring only a few days before the date of a Macedonian congress arranged by the agitators, occasioned riots and street fighting in Sofia. The untrustworthy chief of police was superseded by an army officer. The excitement was not widespread, and it soon passed over. The general feeling was one of relief. The arrested leaders, Saravoff and Stojanoff, were tried in August for complicity in the murder of Fitoffski, a Turkish spy, and Kovatcheff and Treloff for having planned the murder of Prof. Mihaileano. All of them were acquitted by a jury.

CALIFORNIA. (See under UNITED STATES.)
CANADA, DOMINION OF. A federal union of British provinces in North America; area, 3,458,400 square miles, with a population of 5,500,000.

Government and Politics.—By the general elections of Nov. 7, 1900, as shown in the completed returns, the House of Commons of Canada stood, nominally, as follows at the beginning of 1901: Liberals, 128; Conservatives, 79; Independents, 6. Giving the Independents to the Government, this would leave 134 Liberals to 79 Conservatives, against the vote in the preceding Parliament of 136 to 77. The Government at the beginning of the year was as follows, including the Earl of Minto, who had been sworn in as Governor-General on Nov. 12, 1898: Premier and President of the Privy Council, Sir Wilfrid Laurier; Minister of Trade and Commerce, Sir R. J. Cartwright; Secretary of State, Hon. R. W. Scott; Minister of Justice, Hon. David Mills; Minister of Marine and Fisheries, Sir L. H. Davies; Minister of Militia and Defense, Hon. F. W. Borden; Postmaster-General, Hon. W. Mulock; Minister of Agriculture, Hon. S. A. Fisher; Minister of Public Works, Hon. J. Israel Tarte; Minister of Finance, Hon. W. S. Fielding; Minister of Railways and Canals, Hon. Andrew G. Blair; Minister of the Interior, Hon. Clifford Sifton; Minister of Customs, Hon. W. Paterson; Minister of Inland Revenue, Hon. M. E. Bernier; Ministers without portfolio, Hon. R. R. Dobell and Hon. J. Sutherland; Minister without portfolio, and Solicitor-General, without a seat in the Cabinet, Hon. Charles Fitzpatrick.

Parliament met in its first session at Ottawa on Feb. 7. The Hon. L. G. Power was elected Speaker of the Senate, and Mr. L. P. Brodeur Speaker of the Commons. The Earl of Minto opened the Houses with an address from the Throne, of which the following are the significant passages:

"My Government has learned, with great satisfaction, of the progress being made with the Pacific cable scheme, and I trust that nothing may occur to delay its early completion. Last summer I made a tour through Canada as far as Dawson City, and was everywhere received with unqualified proofs of devotion and loyalty. During my journey I was, from personal observation, much impressed with the great activity displayed in the development of the mining and agricultural industries of the country, and with the substantial increase in its population. The thrift, energy, and law-abiding character of the immigrants are a subject of much congratulation, and afford ample proof of their usefulness as citizens of the Dominion.

"It gives me great pleasure to note the excellent display made by Canada at the Universal

Exposition in Paris. The fine quality and varied character of Canadian natural and industrial products is evidenced by the number of awards won in nearly every class of the competition. It is a remarkable testimony to the effectiveness of our cold-storage transportation facilities that fresh fruit grown in Canada secured a large number of the highest awards. It is extremely gratifying to observe that, as a result of the display of Canadian resources, considerable foreign capital has found its way to Canada for investment, and large orders from foreign countries have been received for Canadian goods.

RT. HON. SIR WILFRID LAURIER,
G. C. M. G.

"The improvement of the St. Lawrence route continues to engage the very careful attention of my Government. During the past year ship canals have been widened and deepened, additional lights and buoys have been provided, and in a short time there will be telegraph and cable communication with Belle Isle. These additional securities will tend to make safer and more efficient than ever our great waterway between the lakes and the Atlantic. I am glad to observe that the revenue and the general volume of trade continues undiminished, and even shows a moderate increase over the very large figures attained during the past year."

The address in reply to the speech from the Throne was moved on Feb. 11 by Hugh Guthrie, and seconded by Charles Marcell. Mr. Guthrie referred to the death of the Queen, the coming royal visit, and the general prosperity of the country. The latter development, "if not entirely, is very largely the result of the well-directed efforts of the administration." He dealt briefly with the position of the farmers, the importance of the preferential tariff, and the gallantry of Canadian troops in South Africa. Mr. Marcell referred particularly to the loyalty of his people in Quebec. "I thank Heaven that we, French-Canadians, should have had at Paardeberg and upon other battle-fields representatives of our nationality." He suggested that the Canadian flag should have a simple maple-leaf on a red field, and in connection with the Union Jack,

instead of the Canadian coat-of-arms, and then proceeded: "Our fellow-countrymen have upheld the British flag in this country. And as to us, the young generation of to-day, we mean also to uphold the same flag." Mr. R. L. Borden, the Conservative leader, followed with a short speech, in which he denied that the Government had been responsible for the public prosperity, and quoted one of its supporters, John Charlton, as declaring that "it was due to the blessings of Providence and to causes beyond the control of the Canadian Government." He asked why the imports to Great Britain in the first three years of Liberal rule had only risen \$4,000,000, while those from the United States had increased \$34,000,000. He expressed regret that adequate recompense had not been meted out to the returned soldiers from South Africa: that the fast Atlantic line project was still dormant; and that no reference had been made in the speech from the Throne to the subject of the Washington negotiations, and especially to the question of the Alaskan boundary. Sir Wilfrid Laurier followed and joined Mr. Borden in congratulating the mover and seconder of the address, and explained that the Imperial Government intended to do something in the way of pensions and allowances to the soldiers. If these were not sufficient, he had no doubt that "Parliament would be well disposed to supplement them by an extra grant." When the war was finished conditions might, he thought, permit a resumption of the Atlantic line negotiations. As to the Joint High Commission: "It is still in existence, and we intend at the earliest possible moment to resume negotiations." The address then passed without division, and after an unprecedentedly short discussion.

During the session that followed and was protracted on May 23 interesting and important debates took place. The coronation oath of the King was discussed at length, and a resolution was carried asking the imperial authorities to modify its terms so as to eliminate any offensive allusions to Roman Catholicism. The South African war was debated for many hours upon a motion presented by Henri Bourassa condemning the British Government for entering upon the contest, and urging its termination by granting independence to the Boers, subject to control of their foreign policy. The motion had only three supporters—Messrs. Bourassa, Monet, and Angers—but was notable for the eloquent speech made by the Premier in defense of the mother country, in approval of the objects of the war, and in sympathy with the Canadian forces which had joined in fighting for British rights and liberties in that far-off land. The address attracted much attention in England.

There was a prolonged debate upon Government ownership of railways, in which Mr. W. F. Maclean pressed that idea as a panacea for all the ills that Canada was heir to; upon the general transportation policy, or lack of policy, of the Government, and their expenditures upon the St. Lawrence route and the harbors of Port Colborne, Montreal, etc., with a view to diverting the grain trade of the far West from American to Canadian channels; upon the Pacific cable scheme, the taxation of Canadian Pacific Railway land grants in Manitoba, the question of a beet-sugar industry, and the manner in which the preferential tariff was injuring the woolen industry. The Government's majority was tested on March 29, when Mr. Borden moved the following, which was defeated on a party vote by 54 majority:

"That in the opinion of this House the welfare of this country requires a pronounced policy

of adequate protection and encouragement at all times to the labor, agricultural, manufacturing, mining, and other industrial interests of Canada.

"That in the opinion of this House the adoption of a policy of mutual trade preference within the empire would prove of great benefit to the mother country, and to the colonies, and would greatly promote the prosperity, unity, and progress of the empire as a whole; and that the present time, when the Commonwealth of Australia is laying the foundation of its fiscal system, is particularly opportune for taking prompt and energetic steps toward the furtherance of this object.

"This House is further of opinion that equivalent or adequate duties should be imposed by Canada upon the products and manufactures of countries not within the empire, in all cases where such countries fail to admit Canadian products and manufactures upon fair terms, and that the Government should take for this purpose all such available measures as may be found necessary."

The subsidy to the Pacific cable was increased so that Canada would take its share of £2,000,000 instead of £1,700,000. The silver-lead industry was encouraged with a bounty of \$5 a ton for lead refined in Canada, the maximum sum not to exceed \$100,000 in any one year, and to terminate in five years. The Dominion lands act was amended so as to give a settler from the United States one year in which to perfect his homestead entry. The alien labor act was changed so as to make the penalty of \$1,000 or less discretionary instead of arbitrary, and giving the right of application to a police magistrate, subject to judicial permission, as well as to the Attorney-General or High Court judges of the provinces. The late Queen's birthday was made a permanent holiday as Victoria Day. To Prince Edward Island was given an annual grant of \$30,000 in consideration of certain failures in the pledge by Canada at confederation to give it steady and efficient steam communication with the mainland. To the Montreal Harbor Commissioners was granted \$1,000,000 to build elevators and improve their terminal facilities. Power was obtained to appoint three additional judges in the Superior Court at Montreal, a chief justice for the Northwest Territories, and two police magistrates in the Yukon. A subsidy of \$100,000 was voted for a steamship-line between Canada and France. The sessional indemnity of members of the Commons was increased from \$1,000 to \$1,500.

The House adjourned on May 23 after a large number of measures had been assented to, besides those already mentioned, the following being the most important:

To incorporate the Canada National Railway and Transport Company.

To provide for the marking and inspection of packages containing fruit for sale.

To amend the Dominion lands act.

Respecting the Canadian Northern Railway Company and the Northern Pacific and Manitoba Railway Company, The Winnipeg Transfer Company, Limited, the Portage and Northwestern Railway Company, and the Waskada and North-eastern Railway Company.

To amend the Yukon Territory act, and to make further provision for the administration of justice in the said territory.

To amend the franchise act, 1898.

Further amending the act relating to ocean steamship subsidies.

To amend the act to restrict the importation and employment of aliens.

To amend the Pacific cable act, 1899.

Respecting the Ottawa Branch of the Royal Mint.

Finances.—On March 14 the Minister of Finance, Mr. W. S. Fielding, introduced his fifth annual budget. It was a cheerful statement, and the minister declared that in almost every department of Canadian industry there had been a most gratifying activity, while trade and commerce had flourished in such a degree as to make the period one of unexampled prosperity. The receipts for the last two financial years, ending June 30, were as follow:

SOURCES.	1898-'99.	1899-1900.
Customs	\$25,316,841	\$28,374,147
Excise	9,641,227	9,868,075
Post-office	3,193,777	3,205,535
Miscellaneous	8,589,404	9,582,227
	\$46,741,249	\$51,029,994

The total increase had been \$4,288,745, \$1,000,000 more than he had expected. The total expenditure chargeable to consolidated fund account—for what may be described as the ordinary purposes of government—was \$42,975,279, showing a surplus of \$8,054,714. This he described as the largest in the history of Canada, the next largest being that of 1899, which was \$4,837,749. There was, however, another class of expenditure called capital expenditure, and composed of items spent for special public works, railways, and railway subsidies. These amounts, including \$3,308,894 for the Intercolonial and Prince Edward Island Railways, \$2,639,564 for canals, \$1,089,827 for public works, \$230,850 for the militia, \$725,720 for railway subsidies, and \$1,547,623 for the South African contingents and the Halifax garrison, amounted to \$9,742,187. The public debt had been diminished by \$779,639. On June 30, 1899, it was \$266,273,446 (net); on June 30, 1900, it was \$265,493,806. On only two occasions in the history of the Dominion had it been possible to announce a reduction in the debt—in 1871, when Sir Francis Hincks was Finance Minister, and in 1882 under the *régime* of Sir Leonard Tilley. He estimated the revenue for the current fiscal year (1900-'01) at \$52,750,000, and the expenditures chargeable to the consolidated fund at \$46,400,000. The total capital expenditure, however, he estimated at \$10,700,000 additional, and thought that probably \$1,800,000 would have to be added to the public debt. As to the condition of the debt generally, he stated that the average yearly increase during the four years of the Laurier administration had been \$1,749,093, against an average of \$6,563,075 in the previous eighteen years.

Dealing with the coming fiscal year, 1901-'02, Mr. Fielding estimated an expenditure of at least \$44,000,000 on consolidated-fund account and \$6,296,000 on capital account, together with supplementary appropriations and bounties on steel and iron production of at least \$1,000,000. He did not expect a much increased revenue, and in this respect thought we had about reached "the crest of the wave of prosperity." The total expenditure upon the South African war was given in detail, and included \$1,547,623 expended in 1898-'99 upon the contingents and the Halifax garrison; \$724,068 expended from June 30, 1899, to Feb. 28, 1901, for the same purposes; and an estimated further expenditure to June 30, 1901, of \$120,000—a total of \$2,391,692. He spoke of the position of Canadian securities in the British market. Our $2\frac{1}{2}$ per cent. loan of 1897, issued at 91 $\frac{1}{2}$, was now quoted at 92, while British consols, which stood at 113 $\frac{3}{4}$ in 1897, were now quoted as low as 97 $\frac{1}{4}$. If, there-

fore, Canadian credit had not materially risen, it had at least not shared in the very natural results which war had brought to the greatest of British securities. The only change in the tariff announced by the minister was the free admission for one year of all machinery used in the equipment of beet-sugar factories.

Mr. E. B. Osler, a financier and capitalist, was selected to reply to Mr. Fielding in behalf of the Opposition. After pointing out that in the past four years the Government had obtained a revenue of \$30,950,000 over the revenue of the preceding four years, he declared that the surplus should have been treated in one of two ways—either to reduce the taxes or to reduce the public debt. Instead of this, it had been spent with a free hand, and the debt was actually increased by \$6,900,000. "Where are all the professions of economy and all the platforms of the present Government when in opposition? They proposed to reduce expenditure, they proposed to cease bonusing railways and other works which they thought should not require public money." The speaker came out very strongly in favor of calling a halt in the squandering of public money in the bonusing of railways and other public works. It was the duty of the Government to cease this policy in the older provinces at least. He declared that there was not the slightest effort on the part of the Government to keep the expenditure within the revenue. Mr. James Clancy took high ground against the alleged extravagance of the Government. They had collected a revenue of \$36,618,000 in 1896, and in 1900 one of \$51,029,000. They had increased the taxation of the people. In 1896 the customs duties were \$3.94 a head, and the excise 63 cents. In 1900 the customs rate had increased to \$5.37, and the excise to 83 cents. The specific increase on tobacco and cigars was \$1,313,337; on sugar, \$737,534; on rice, \$26,000. While the minister had taken \$14,000,000 more from the people than in 1896, he yet glorified himself for a slight reduction in the public debt of 1900. "In arriving at his surplus of \$8,000,000, the honorable gentleman did not include all the expenditures." The receipts for 1899-1900 were \$51,029,994; the total expenditure was \$52,717,466, leaving in reality a deficit of \$1,687,472. It was unfair and misleading to separate the capital and consolidated fund expenditures when both were paid in the main out of revenue.

Sir R. J. Cartwright, Minister of Trade and Commerce, defended the Government's financial position and record. It was true that the debt had slightly increased, but it was for such indisputably good purposes as the expenditure of \$3,500,000 upon the Crow's Nest Railway, the grant of \$1,500,000 for the expenses of the troops sent to South Africa, and the discount of about \$1,000,000 on the 2 $\frac{1}{2}$ -per-cent. loan. As to the future, he was very optimistic. "During the next twenty-five years, in fact during a shorter period, we shall probably have to refund the whole, or very nearly the whole, of our debts. At this moment the charges for our debt and sinking-fund are a little more than \$13,000,000 a year, but if my honorable friend (Mr. Fielding) succeeds in establishing 2 $\frac{1}{2}$ - or even 2 $\frac{3}{4}$ -per-cent. rates and in dispensing with the sinking-fund—as I know he will—the probabilities are that before the twenty-five years have expired we shall have reduced that \$13,000,000 to something like \$6,000,000 or \$7,000,000." He was quite assured as to the nature of the present tariff. Replying to a remark made by Mr. Cochrane, Sir Richard said: "If he means to say that our tariff is a very high revenue tariff, I will agree with him; if he says it is a protective

tariff, I differ." Mr. Borden moved a vote of want of confidence on May 23; and reviewed the whole financial position in his speech. His motion was defeated by 100 to 51 votes.

Trade and Commerce.—Mr. Fielding's budget speech, on March 14, contained important figures relating to the expansion of trade and commerce in the Dominion. The aggregate external trade of Canada in 1899 was \$321,661,213, and in 1900 it was \$381,571,236. The imports for consumption had risen from \$154,051,593 to \$180,804,316. The exports of Canadian produce had increased from \$138,462,037 to \$170,642,369. The exports of Canadian produce to Great Britain rose from \$85,114,555 to \$96,562,875, and to the United States from \$40,462,856 to \$59,666,556. The exports from Canadian mines to all countries rose from \$13,368,150 to \$24,580,266; from Canadian Fisheries, \$9,909,662 to \$11,169,083; from Canadian forests, \$28,021,529 to \$28,663,668; of agricultural products, \$46,743,130 to \$56,148,807; of Canadian manufactures, \$11,706,707 to \$14,224,287. The condition of the imports from Great Britain was shown by the figures of the five years during which he had held office: \$32,979,742 in 1896; \$29,412,188 in 1897; \$32,500,917 in 1898; \$37,060,123 in 1899; \$44,749,730 in 1900. The total trade of Canada had increased from \$148,387,329 in 1896-7 to \$224,420,485 in 1894-'95, and to \$381,517,236 in 1899-1900.

Speaking on the succeeding day, Mr. C. S. Hyman compared the trade of Canada under Conservative and Liberal rule. "During the seventeen years of Conservative rule there was an increase of \$52,015,000, or about \$3,000,000 per annum, while during the five years of Liberal rule it increased by \$157,097,000, or somewhat in excess of \$31,000,000 per annum. Mr. E. D. Smith took up this point and argued that if the Government were responsible for the increases in trade they were also responsible for the decrease. In 1898 the export of wheat had been \$17,313,916 in value, and in 1899 \$10,000,000 less. In 1898 the export of flour was \$5,425,760, and in 1900 \$2,791,885. He quoted similarly other figures, and the total value for agricultural products showed a decrease from \$75,000,000 in 1898 to \$68,000,000 in 1899. They had risen since then, but his point of responsibility was, he contended, still good. The Minister of Customs, in comparing the commerce of Canada with that of the United States, on March 26, said the domestic exports of the United States in the fiscal year 1900, exclusive of coin and bullion, increased 14 per cent., and those of Canada 23 per cent. The grand aggregate trade of the republic increased $13\frac{1}{2}$ per cent.; that of Canada 19 per cent. On the basis of a population of 76,000,000 the foreign trade of the United States was \$32 per head in 1900, and that of Canada, on a basis of 6,000,000 population, was \$63 per head. The aggregate trade of the United States increased 28 per cent. between 1896 and 1900; that of Canada 60 per cent.

The official reports for the year ending June 30, 1901, showed a total export trade of \$195,641,838, of which \$40,143,828 was the product of the mines; \$10,730,999 the product of the fisheries; \$39,271,619 the product of the forest; \$57,703,265, animals and their produce; \$38,594,226, agricultural products; \$17,845,935, manufactures; and \$351,966 miscellaneous. Of the imports, \$181,237,988 were entered for consumption. Of this amount \$105,969,756 were dutiable and \$75,268,232 non-dutiable. From Great Britain \$43,164,297 were imported, and from the United States \$110,485,008. The total trade was \$386,903,157, against \$381,520,286 in 1900.

Agriculture and Live Stock.—In reply to an inquiry, the Minister of Customs stated in the House of Commons, on March 11, that the total export of Canadian cattle to Great Britain in 1894-1900 was 735,204 in number, at a value of \$48,471,963, and an average price per head of \$65.93. To the United States in the same period the number was 233,660, the value \$3,718,435, and the average price \$15.91. The average price to Great Britain had decreased from \$78.43 to \$66.12, and to the United States it had increased from \$14.34 to \$17.98. Figures were given of the export of other annual products to Great Britain and the relative values in 1898-1900 as follow: Butter increased in quantity from 10,000,823 pounds to 24,317,436 pounds, and in value from \$1,915,550 to \$4,947,000; cheese decreased in quantity from 196,220,771 pounds to 185,627,757 pounds, and increased in value from \$17,522,681 to \$19,812,670; bacon and hams in quantity from 85,208,562 pounds to 134,949,129 pounds, and in value from \$8,029,482 to \$12,749,175; eggs decreased in number from 10,280,466 dozen to 10,109,383 dozen, and increased in value from \$1,244,051 to \$1,447,030.

On March 28 Mr. Henderson referred to the great expansion in production of hogs during recent years, and, incidentally, of the value of protection in bringing about this result. In 1889 the farmers were unable to hold their home market against American competition, and the duty was increased upon hogs, mess pork, fresh pork, bacon and hams. In 1890 36,000,000 pounds of hog product were imported from the United States. In 1900 only 12,000,000 pounds were imported. In 1889 only 4,000,000 pounds of hams and bacon were exported; in 1900 there was an export of 135,000,000 pounds. The home market had been preserved, and the British market cultivated.

Militia.—In reply to an inquiry on April 3, the Minister of Militia and Defense said there were 43 battalions of active militia in Ontario, 30 in Quebec, 9 in Nova Scotia, 6 in New Brunswick, 2 in Manitoba, 3 in British Columbia, and 2 in Prince Edward Island. Of these troops, 2,298 were cavalry, 3,843 artillery, 328 engineers, 29,476 infantry; 140 belonged to army service corps, 344 to the bearer companies, and 192 to field hospitals. Sixty-nine corps were armed with Lee-Enfield rifles and carbines, and the remainder with Snider rifles. In camps all troops used the former. There were at the time of speaking 6,164,828 rounds of ammunition at the headquarters of battalions in Ontario; 4,443,826 in Quebec; 232,850 in Nova Scotia; 318,517 in New Brunswick; 195,540 in Prince Edward Island; 181,615 in Manitoba; 479,833 in British Columbia. There were 90 field-guns attached to the various cavalry battalions. There was only one arsenal—that at Quebec.

Later in the session Dr. Borden introduced and carried a measure granting pensions to the officers, non-commissioned officers and men of the permanent corps upon completion of twenty years' service. Widows and children of officers who had served twenty years and were at the time of death on full pay or in receipt of pensions, were to be entitled to receive pensions. Officers, however, were to have their pay reduced by 5 per cent. as a sort of pension sinking-fund.

The Strathcona Horse returned from South Africa during the year, and were presented with colors by the King in person at Buckingham Palace, London. Various imperial honors were conferred upon Canadian officers who had served during the war.

The Royal Tour.—During a great part of the year Canada was stirred with anticipation and preparation for the state visit of the Duke and

Duchess of Cornwall and York. The heir to the throne was returning from a tour that had included many British islands, Australia, New Zealand, Natal, and Cape Colony, and had covered more than 30,000 miles by sea and land under the British flag and within the empire. Loyalty to the King found expression in the welcome that was given to the royal couple as they landed at Quebec on Sept. 16, and pride in the empire was voiced in the reception that was everywhere given to the visitors as they traversed the Dominion from shore to shore.

At Quebec the reception was particularly effective, and the electrical display from fortress, city, and harbor added to the natural grandeur of the scenery, made the evening spectacle wonderfully impressive. A review of 6,000 troops took place on the Plains of Abraham, and later of 11,000 troops at Toronto and 10,000 at Halifax. The royal receptions here and at Montreal were canceled, out of respect to the memory of President McKinley, whose funeral was then taking place. His Royal Highness distributed the medals awarded to the troops who had served in South Africa. In Winnipeg the central feature of the welcome was the presence of immense arches of wheat upon the chief streets; at Calgary, the gathering of thousands of Indians in solemn greeting and an exhibition of Western bronco-riding and sports; at Vancouver, a great gathering of school-children singing patriotic songs; at Victoria, Indian war-dances and the fireworks and illumination of the city and a fleet of men-of-war in the harbor.

At Toronto, seven miles of continuously decorated streets lined by 11,000 soldiers and several hundred thousand people, musical welcome by a trained chorus of 2,000 voices, a crowded reception at the Parliament buildings, state dinners, military review, university honors, and constant cheering—were indications of the interest taken in the royal couple. At Ottawa, the unique feature of the welcome was the visit to a lumbermen's camp and a trip down the Ottawa on a lumbermen's raft. From Halifax the Duke and Duchess sailed on Oct. 21, accompanied by a fleet of warships.

Banks.—In his budget speech on March 14, 1901, the Minister of Finance gave statistics illustrating the condition of banking in Canada. On Oct. 31, 1870, the circulation of Dominion notes had been \$7,450,334; in 1895 it was \$22,893,259; in 1900 it had risen to \$28,113,229. The circulation of small notes (\$1 and \$2) rose from \$3,489,830 on Oct. 31, 1875, to \$7,312,917 in 1895, and \$10,236,116 in 1900. The total circulation of the notes of Canadian chartered banks on Oct. 31, 1870, was \$18,642,895; in 1895, \$34,671,028; in 1900, \$53,198,771. In the Government and post-office savings-banks there was on June 30, 1870, the sum of \$3,337,072; in 1885, \$32,979,076; in 1895, \$44,450,498; in 1900, \$53,149,722. Public deposits in the chartered banks on June 30, 1870, amounted to \$54,074,760; in 1885 to \$95,030,429; in 1895 to \$182,688,227; in 1900 to \$277,256,716.

The annual report of the chief bank in Canada, the Bank of Montreal, was made public on May 14, 1901. Its net profits for the year were given as \$1,537,522, and its 10-per-cent. dividend as \$1,200,000. The capital stock of the institution was \$12,000,000; its reserve fund, \$7,000,000; its notes in circulation, \$6,482,214; its deposits not bearing interest, \$18,184,774; its deposits bearing interest, \$54,501,853. The assets included gold and silver coin, \$2,564,358; Government of Canada demand notes, \$3,472,440; indebtedness by British agencies and banks, \$2,536,166; indebtedness by

foreign agencies and banks, \$2,261,257; call and short loans in Great Britain and United States, \$23,536,628; bonds, debentures and stocks, \$2,889,973; notes and checks of other banks, \$1,690,470; current loans and discounts in Canada, \$58,850,449. The total liabilities were given as \$99,582,059, and the total assets as the same amount.

Relations with the United States.—Speaking in the House of Commons on Feb. 18, Mr. W. F. Maclean referred to the strong tariff policy assumed by the Russian Government toward the United States, and declared that "we must have a little De-Wetteism in our Government. We must have a tariff with a sliding scale which will be friendly to a friendly government, but will be protective as against an unfriendly one." There was only one way to settle questions at issue between Canada and the United States, and that was by means of the tariff. "If they find their goods barred out of Canada, they will quickly come to terms. In 1896 we imported \$57,000,000 worth of goods from the United States. That sum has grown to-day to \$96,000,000 or more, and it is growing steadily. Canada is the best outside market the United States have. But as long as we are fools enough to let their goods come into this country under the present low tariff, while they put up a high tariff to bar out our goods, we shall never get fair treatment from them."

On March 15 Sir Richard Cartwright described the advantage to Canadians of trade with Great Britain over trade with the United States. "Man for man and family for family, our trade with the 40,000,000 of people in Great Britain is very much more profitable to us than our trade with the 70,000,000 people of the United States." We sold to the former about \$96,000,000 worth, and to the latter about \$60,000,000 worth per annum—to the one country \$2.50 a head, and to the other 80 cents a head of its population.

Mr. Clarke Wallace, on March 18, went at length into the tariff relations of the two countries as they affected the agricultural interests of Canada. The best way to live on amicable terms with the people of the United States was to look more closely to our own interests. "Let us make a tariff that will suit ourselves, and if the American people charge high duties on Canadian products, let us protect our farmers by charging high duties on their products." He then quoted a large number of items upon which the American duty was higher than the Canadian.

During the year no direct steps were taken to settle the Alaskan question or the ever-open subject of reciprocity. In the House of Commons Sir Wilfrid Laurier expressed more than once his belief that the negotiations of 1899 would be resumed, but at Montreal, in a speech on Nov. 6, he said there would be no more journeys to Washington seeking reciprocity. It would soon, he thought, be the other way. If nothing was to be done by the United States to make trade relations easier, it was urged by Mr. Charlton, a Liberal leader, and by the *Toronto World*, a Conservative newspaper, that the duties on American products be raised to the full level of the American tariff on Canadian products. There was some expectation, however, that President Roosevelt, in pressing the McKinley policy of reciprocity, would include Canada in a fair offer for mutual interchange. In this connection the universal sorrow in Canada over the death of the President was significant of the kind feeling entertained toward the United States.

The Mint.—On May 17 Mr. Fielding, Minister of Finance, announced in the House of Commons that arrangements had been made for the estab-

ishment in Canada of a branch of the royal mint. The structure, with fittings and plant, was to cost \$300,000 and require an annual outlay of not more than \$75,000. It would make all gold, silver, and copper coins required in the Dominion, and, if time permitted, would have authority to make British sovereigns out of Canadian gold. The officials of the mint would be specialists appointed by the authorities of the Royal Mint in London, and he estimated that the profits on the coinage would about equal the annual expenses. An assay office would be established in British Columbia, and the expenses of freight, insurance, etc., would be paid by the Government, so as to place the miner going to Vancouver in the same position as the miner going to Seattle, and making it possible to receive much of the millions of Canadian gold now going to the American center. The bankers of the country did not approve of this proposal, but Parliament and the people generally appeared to do so, and it soon became law. Mr. E. S. Clouston, President of the Canadian Bankers' Association, declared it to be a dangerous tampering with the currency and interference with a system which was now almost perfect. The trouble about miners and Seattle was due to the fact that most of them were Americans, and that the American steamers were more comfortable than the Canadian. The mint policy would disturb and disorganize the currency system without any adequate return, and bring in the still more dangerous element of a free-silver coinage question. The policy, however, was carried out, the mint was soon in course of erection, and the assay office was duly established at Vancouver.

The Census.—On Aug. 17 the result of the decennial census was announced, and the population of Canada was stated to be 5,338,883, against 4,324,810 in 1881. It was a disappointment to many who had confidently expected that the figures would at least reach the 6,000,000 mark, but was slightly improved by the subsequent addition of 150,000 which had been in some way omitted, and which made the total nearly 5,500,000. The population by provinces was as follows:

PROVINCE.	1891.	1901.	Increase.
Ontario	2,114,321	2,167,978	53,657
Quebec	1,488,535	1,620,974	132,439
Nova Scotia	450,396	459,116	8,720
New Brunswick	321,263	331,093	9,830
Manitoba	152,506	246,464	93,958
British Columbia	98,173	190,000	92,927
Northwest Territories	66,799	145,000	78,201
Prince Edward Island	109,978	103,258	* 5,820

* Decrease.

The city of Montreal had a population of 266,826, or an increase of 46,645; Toronto of 207,971, or an increase of 26,751; Quebec of 68,834, or an increase of 5,744; Ottawa of 59,902, or an increase of 15,748; Hamilton of 52,550, or an increase of 3,570; Winnipeg of 42,336, or an increase of 16,697; Vancouver of 26,196, or an increase of 12,487; Calgary 12,142, or an increase of 8,266. The increases in the other cities ran from 1,000 to 7,000. Halifax had 40,787, St. John 40,711, London 37,983, Victoria 20,821, Kingston 18,043 (a slight decrease), Brantford 16,631. The greatest comparative increase was in Sydney, Cape Breton, which had risen from 2,427 to 9,908, while Valleyfield, Province of Quebec, as a result of industrial progress, increased from 5,515 to 11,055. There was a decided increase in the number of families in the Dominion, the number for 1891 being 921,643, and for 1901 1,043,296. The number of dwellings had also increased from 877,586 to 1,006,652.

Miscellaneous Statistics.—The pulp trade of Canada showed some progress. During the first six months of 1901 Canada shipped to Great Britain \$814,110 worth, against \$2,000,000 received from Sweden, \$2,750,000 from Norway, and \$270,000 from the United States. In May, 1899, Canadian exports of pulp were 5 per cent. of the total imported by Great Britain; in May, 1900, they were 7½ per cent.; in May, 1901, they were 13½ per cent.

In 1900 there were 35,057 miles of telegraph lines in Canada. Of these, 18,286 miles belonged to the Great Northwestern Telegraph Company, 8,886 to the Canadian Pacific Railway Company, 2,912 to the Western Union Company, and 4,973 to the Dominion Government. The Government lines were largely in regions where the traffic was not very great, and where they were more a convenience than a paying business enterprise. The outlay was \$76,965 and the receipts only \$44,529.

On June 12 the two great concerns which had worked a revolution in the coal and steel industry of Nova Scotia at Sydney held their annual meetings at Montreal. The statement of the Dominion Iron and Steel Company showed a bonded indebtedness of \$8,000,000, preferred stock of \$5,000,000, common stock of \$15,000,000, bills payable of \$90,808, and accounts due of \$545,848—a total liability of \$28,636,687. The credit side of the statement showed \$14,551,480 as the value of their property, \$9,668,406 as the value of the plant, \$1,435,849 as due upon preferred stock, \$1,205,583 cash in banks and miscellaneous sums making the same total as the liabilities.

The Dominion Coal Company showed an estimated output of 2,600,000 tons for 1902, against 2,044,877 tons in 1901 and 884,500 tons in 1895. The total assets of the company were placed at \$22,705,718, the surplus balance at \$592,843, the net proceeds from sales, etc., at \$687,294.

Postal Affairs.—The report of the Postmaster-General for 1900 placed the net revenue of the year at \$3,183,984, and the expenditures at \$3,645,646, leaving a deficit of \$461,661, against a deficit in the preceding year of \$398,917. The total number of letters posted in Canada was 178,292,500, the post-cards 27,130,000, the registered letters 4,312,000, the free letters 6,318,000, the newspapers, etc., 32,972, packages 3,803,750, closed parcels for Great Britain and elsewhere 31,988. The number of money-orders issued was 17,128, and the amount \$201,145. The amount paid on money-orders was \$2,797,375. Various improvements were made during the year, such as the use of automobiles in cities, insurance on registered correspondence, the introduction of postal notes and other conveniences for the public.

Criminal Statistics.—The figures for 1900 showed an increase in the number of convictions in every province except Quebec. Nova Scotia showed the lowest percentage, 7.07 in 10,000, as against 26.40 in 10,000 in British Columbia. The total number of the convictions was 5,768, or 10.72 in 10,000, against 10.75 in 1899. There were fewer indictments among the laboring and industrial classes, and a slight increase in the commercial and agricultural classes. The proportion of females was larger than in 1899, but much smaller than in the average of 1884-'96. The figures for 1900 were 5.8 per cent., against the average mentioned of 8.7 per cent. Criminals from foreign countries increased considerably. The proportion of Roman Catholic offenders was 38.8 per cent. and the figures generally were stated to indicate the formation of an habitual criminal class with repeated offenses.

Railways and Canals.—The official reports for 1900 showed a railway mileage in the Dominion of 17,824, and a total paid-up capital of \$998,268,405. Of the cost of these railways the Dominion Government had contributed at the rate of \$8,952 per mile, the provincial governments \$1,756 per mile, and the municipalities \$891. On June 30, 1900, there were 17,657 miles in operation; a train mileage for the year of 55,177,877; a total of passengers carried, 21,500,175; tons of freight, 35,946,183. The earnings of all the roads were \$70,740,270, and the working expenses \$47,699,798. The Government railways—the Intercolonial and Prince Edward Island lines—had a passenger traffic in 1900 of \$1,477,468, a freight traffic of \$2,996,418, and a total earning power of \$4,726,810. Their mileage was 1,511; paid-up capital, \$64,636,200; the passengers carried were 1,939,225; and the freight was 2,213,455 tons. The receipts were \$4,726,810, as against \$3,903,343 in 1899, and the expenses \$4,652,336, as against \$3,893,739 in 1899.

The Canadian Pacific Railway annual report for the fiscal year ending June 30, 1901, was made public in September, and showed gross earnings of \$30,855,203, and working expenses of \$18,745,828. Fixed charges for interest amounted to \$7,305,835, and the surplus for the year was \$5,736,965. The half-yearly dividend to April 1 was \$2,224,086, and to Oct. 1 \$2,248,420. The cost of the railway and equipment was given as \$225,353,616, and that of the ocean, lake, and river steamships at \$4,123,591. The value of acquired securities held against debenture stock issued was stated at \$34,589,455, and of real estate, hotels, and buildings held by trustees for the company at \$1,448,381. Other securities were placed at \$2,190,161, while the balances due on lands sold and town sites was stated at \$3,652,869. Advances to various railways and interests amounted to over \$10,000,000, and the total assets were \$291,518,571. The liabilities included \$65,000,000 of capital stock, \$91,540,082 of other stock, \$47,238,086 of mortgage bonds, \$17,831,000 of other bonds, \$4,364,851 of current accounts, and interest due of \$1,828,279. The total cash subsidies from Dominion Government, provincial governments, and municipalities were \$29,930,590, the proceeds of land grant sales were \$22,663,120, and the surplus earnings account was \$11,122,560. The mileage of the railway was 6,873 in 1900.

The Grand Trunk Railway had a mileage in 1900 of 3,138, and a paid-up capital of \$344,760,896. It carried in that year 6,214,374 passengers and 9,621,705 tons of freight—an increase in each case over 1899. Its train mileage was 16,488,361, its receipts \$20,430,167, and its expenses \$12,999,371. The earnings from passenger traffic were \$5,478,775, from freight traffic \$13,329,695, and from other sources \$1,621,697. The cost of maintenance was \$2,714,895, and of working and repairs \$5,862,117. The general working expenses were \$4,422,359.

The canals of Canada on June 30, 1900, had cost for building and maintenance \$79,043,784, and for repairs, renewals, etc., more than \$16,000,000. In the fiscal year 1900, \$2,760,219 was spent for construction, \$227,627 for repairs, and \$292,609 for maintenance. The revenue was \$322,643, against \$403,879 in 1867, and \$369,044 in 1899. The tonnage of Canadian vessels passing through in 1899 was 4,308,733. The total passengers carried were 213,711 and the freight 6,225,924 tons, while the tolls amounted to \$276,658. The traffic through the Canadian Sault Ste. Marie canal for the season of 1899 included 12,000,000 bushels of grain and 8,000,000 feet of lumber. Through the American

canal went 45,000,000 bushels of grain and 1,000,000 feet of lumber.

Shipping and Fisheries.—The lighthouses in Canada in 1900 numbered 693, and their maintenance cost \$497,535. The wrecks and casualties in Canadian waters, or of Canadian ships in other waters, numbered 151 against 270 in 1899, and the damage done was placed at \$356,848. The revenue of the Marine Department was \$130,229, and the expenditures \$982,562. The vessels built and registered in Canada were 297, with a tonnage of 22,329, and those sold to other countries were valued at \$205,618. The total registered tonnage of seagoing vessels which carried cargo into and from Canada was 10,661,128, an increase of over 1,000,000 tons in the year. The tonnage of vessels employed in the coasting trade was 33,631,730.

The value of the yield in Canadian fisheries during the fiscal year 1899 was \$21,891,706, the chief products being cod, herring, lobsters, and salmon. There were 12,839 vessels and 28,100 men receiving a Government bounty in that year. The expenditure of the Government upon fisheries in 1900 was \$411,717, and the revenue \$88,407. There were, in 1899, 18,708 men employed in lobster canneries, 8,970 in vessels, and 70,893 in boats—a total of 79,863 Canadian fishermen. The total value of their vessels, traps, etc., was \$10,149,840. The exports of fish from Canada was \$9,909,662 in 1899, and \$11,169,083 in 1900; while the imports were respectively \$875,851 and \$1,060,708.

Insurance.—The total life assurance carried by Canadian companies in 1900 was \$267,392,184, an increase of \$15,000,000 during the year. The net premiums received were \$9,211,082, and the assurance issued and taken was \$38,602,589. The policies that became claims amounted to \$3,131,554. Of the rest of the business, British companies did \$30,414,376—a slight increase—and received \$1,371,430 in premiums, and American companies \$125,155,863—an increase of \$12,000,000—with premiums of \$4,263,181. Canadian companies also did \$35,864,762 of business abroad, and received premiums of \$1,626,198. The total life insurance business of Canada in 1900 was \$303,256,946, with \$10,837,280 paid in premiums.

The fire insurance carried in Canada in 1900 was \$802,181,916, and the premiums collected were \$10,014,279. British companies did \$540,448,620 of business, and received \$6,709,847 in premiums; American companies \$108,127,777, with \$1,370,581 in premiums; Canadian companies \$153,605,519, with \$1,933,850 in premiums. The total losses paid in Canada were \$7,780,001, and the percentage to premiums was 93.70. The accident assurance business amounted to \$111,541,077, with premiums of \$703,520 and claims paid of \$431,521.

CHEMISTRY. Chemical Theory.—While it still seems impossible to break up the atoms by ordinary chemical action, the prospect of effecting that result by electrical methods appears more hopeful. Prof. J. J. Thomson, of the University of Cambridge, has announced that in the course of experiments with the cathode rays and other applications of electricity he has succeeded in determining the existence, weight, volume, and other physical properties of matter 1,000 times more minute than the atom of hydrogen. He calls these particles corpuscles; and on the basis of his discoveries he bases the hypothesis of the corpuscular constitution of matter.

A considerable part of the address of Prof. Arthur W. Rücker as president of the British Association is devoted to the consideration of the validity of the theory of atoms. The author admits that the atom is hypothetical, but shows

that the hypothesis is a useful one in that it furnishes the only intelligible explanation of such phenomena as those of diffusion, expansion, and heat. Reviewing the criticisms that have been made against the theory, he replies to them, and cites certain experiments that have been made recently—such as those of Sir W. C. Roberts-Austen on the interpenetration of gold and lead, and experiments with electrified, highly rarefied gases which seem to bear in favor of it, and concludes that, “in spite of many outstanding difficulties, in spite of the tentative nature of some of our theories, the atomic theory unites so many facts, simplifies so much that is complicated, that we have a right to insist—at all events, till an equally intelligible rival hypothesis is produced—that the main structure of our theory is true; that atoms are not merely helps to puzzled mathematicians, but physical realities.”

Among the various theories of solution, that of Van't Hoff, which regards the dissolved substance in a dilute solution as existing in a gaseous state, has found much favor. But determinations of molecular weight derived by this hypothesis do not agree, especially in the case of electrolytes, with those obtained by other methods or deduced from the chemical formulae. This circumstance, coupled with the fact that the least electromotive force suffices to generate a current in an electrolyte, had already led Clausius to replace the hypothesis of Grotthuss by other theories; but Arrhenius, observing that the anomalies in the osmotic pressure and the freezing-points occur exclusively in solutions of electrolytes, was led to the hypothesis that these contain the acids and salts in a state of dissociation, increasing with the dilution. The hypothesis of electrolytic diffusion has been put by Profs. Angelo Battelli and Annibale Stefanini to a variety of tests in connection with the mechanical phenomena of osmotic pressure, optic phenomena, thermal phenomena connected with freezing-point and boiling-point determinations, and electric phenomena. Many of the results favor the hypothesis of the existence of free ions in solutions, but others are difficult to reconcile with this theory.

Another theory of solutions is suggested, with a new conception of thermal pressure, by Mr. G. N. Lewis in the Proceedings of the American Academy of Sciences. The theory according to which the thermal pressure of any phase is equal to the pressure which the substance would exert if under the same conditions as a perfect gas, arose in the consideration of certain remarkable general laws which treat of heterogeneous equilibrium in which the several phases are subject to different pressures. The author believes that the same assumption is alone sufficient to explain all the laws of dilute solutions.

From a large number of experiments made in the study of the relations between the electric conductivity and the chemical character of solutions, Prof. John Gibson has deduced as the broad principle underlying the results obtained, that in solutions intermolecular reactions tend toward maximum specific electrical conductivity.

The electrolytic dissociation theory of Arrhenius is severely criticized by Prof. Kahlenberg in a paper published in the Bulletin of the University of Wisconsin (No. 47, February, 1901), in which experimental evidence in contradiction of it is brought forward. Prof. Kahlenberg has remeasured the conductivity of a number of electrolytes at zero and 95°, and has calculated the degree of dissociation from the measurements as well as from determinations of the lowering of the freezing-point and the rise of the boiling-point. The

two sets of results he has obtained are not concordant, a fact which the author regards as bearing very strongly against the dissociation theory. Nature maintains, however, that this theory, even though it has not met with universal acceptance, is not thus to be so easily overthrown, especially until some more satisfactory and fruitful alternative hypothesis shall have been put forward to take its place.

Heydenweiller, studying chemical actions of a very mild order, such as the solution of copper sulfate in water and the substitution of iron for copper sulfate—the changes being conducted in a closed vessel—observed that the chemical action was accompanied by a real but minute alteration in weight. In a notice of Heydenweiller's work, Lord Rayleigh mentions the question that arises whether the mass changes as well as the weight. If it does, and it should prove that the total amount of matter involved in a chemical change is not a fully constant quantity, then important revisions will have to be made in physical science, and some facts that are now puzzling may be explained. If, on the other hand, the mass too does not change, and it is shown that mass and weight are not always in strict proportion, the accuracy of certain mechanical constructions in which mass and weight are important factors will be affected.

In a paper on zymic action read before the chemical section in the British Association, Prof. Adrian Brown cited the experimental results of an investigation of the action of invertase on cane-sugar. They confirm the conclusions of previous workers that the action of inversion does not follow the simple law of mass action. But the author does not regard the action as independent of mass influence. He considers that mass influence in inversion changes is restricted by some other and hitherto unrecognized influence, which he believes he has found in the time factor of molecular change.

It was shown in a paper read by G. T. Bailey in the British Association that microscopic examination had revealed that metals occur in two forms, viz., as (a) minute scales or spicules, and as (b) a transparent glass-like substance. The spicules do not vary much in size in the different metals, and have a diameter of from $\frac{1}{1000}$ to $\frac{1}{100}$ of a millimeter. The form (a) passes into the form (b) when the metal is pressed or hammered, and all polished metallic surfaces are covered with a thin layer of this transparent form as with a lacquer enamel.

Chemical Physics.—Prof. James Dewar detailed some of the results of his researches in extremely low temperatures in a Bakerian lecture on The Nadir of Temperature and Some Allied Problems, delivered before the Royal Society. He had found that the helium thermometer, which records 5° F. absolute as the boiling-point of hydrogen, gives 16° F. absolute as the melting-point. This value does not differ greatly from the value previously deduced from the use of hydrogen-gas thermometers, 16.7°. The lowest temperature recorded by gas thermometry is 14.5° absolute, but with more complete isolation and a lower pressure of exhaustion it will be possible to reach 13° F. absolute, which is the lowest temperature that can be commanded by the use of solid hydrogen. The latent heat of liquid hydrogen near the boiling-point is about 200 units, and the latent heat of solid hydrogen is about 16 units.

The order of the specific heat of liquid hydrogen was determined by the author as averaging about 6 between the freezing-point and boiling-

point. Hydrogen therefore follows the law of Dulong and Petit, and has the greatest specific heat of any known substance. The surface tension of hydrogen at its boiling-point was about one-fifth that of liquid air under similar conditions. It did not exceed one-thirty-fifth of the surface tension of water at ordinary temperatures.

Free hydrogen, helium, and neon have been separated from the air by two methods, one of which depends on the use of liquid hydrogen to boil the dissolved gases out of air kept at the boiling-point of nitrogen, and the other on a simple arrangement for keeping the more volatile gases from getting into solution after partial exhaustion. A gaseous material was found in the air that could be separated without the liquefaction of the air. The spectroscopic examination of this matter was reserved to be dealt with in a separate paper by Prof. Liveing and the author.

Helium from the gas at the King's Well, Bath, was subjected by Prof. Dewar to a pressure of 80 atmospheres with part of the narrow portion of the glass tube in liquid hydrogen. On sudden expansion, a mist from the production of some solid body was clearly visible. It proved, however, to be caused by some other material than helium, probably by neon. A similar mist was seen with hydrogen under similar conditions of expansion and certain relations (specified by the author) to its critical temperature; and from this experience applied to interpret the helium experiments, the critical temperature of helium gas was computed to be under 9° absolute. It is now safe to say, Prof. Dewar continues, that helium has been really cooled to 9° or 10° absolute without any appearance of liquefaction. On account of the small refractivity of helium the liquid must be far more difficult to see than liquid hydrogen. The hope of being able to liquefy helium, which would appear to have a boiling-point of about 5° absolute, or one-fourth that of liquid hydrogen, is dependent on subjecting helium to the same process that succeeds with hydrogen, only instead of using liquid air under exhaustion as the primary cooling agent, liquid hydrogen under expansion must be employed, and the resulting liquid collected in vessels surrounded with liquid hydrogen. From a tabular statement of the results of theory and experiment given by the author, it appears that by the employment of liquid or solid hydrogen as a cooling agent, we ought to be able to liquefy a body having a critical point of about 6° or 8° absolute, and a boiling-point of about 4° or 5° absolute. Even then, if liquid helium could be produced with the probable boiling-point of 5° absolute, this substance would not enable us to reach the zero of temperature; another gas must be found that is as much more volatile than helium as helium is than hydrogen in order to reach within 1° of the zero of temperature.

Among miscellaneous observations made by the author in the course of his inquiry is that of the great increase of phosphorescence in the case of organic bodies cooled down to the boiling-point of hydrogen, which is very marked when compared with the same effects brought about by the use of liquid air. Photographic action is still lively, although it is reduced to about half the intensity it bears in liquid air. Some crystals placed in liquid hydrogen became for a time self-luminous on account of the high electric stimulation brought about by the cooling, causing actual electrical discharges between the crystal molecules.

Prof. Dewar, in his lecture on Gases at the Beginning and the End of the Nineteenth Cen-

tury, said that while he had at one time thought he had liquefied helium, he had found that he had not. The gas he had then dealt with had proved to be a mixture of helium with some other gas or gases that can be liquefied, but pure helium had not yet been obtained in liquid form. When it becomes possible to prepare liquid helium in any quantity, we may hope to get down to temperatures lower than any obtained with hydrogen, and approaching closely to the absolute zero.

In the course of the dynamic investigation of the bromination of aromatic compounds, the dependence of the velocity of bromination on the nature and position of the substituting groups of the benzene ring has been studied by L. Brunner, and especially the catalytic activity of the most important bromin "carriers." In respect to this capacity, aluminum, chromium, iron, and thallium salts, compounds of antimony and phosphorus, and iodine have been examined. The catalytic activity of the bromin "carriers" was found to depend upon the nature of the substance which was being disseminated, so that the arrangement of these bodies in a general series according to their activity is now possible. For benzene and bromobenzene the order is aluminum, iron salts, iodine, antimony, phosphorus, halogens.

The investigations of radioactive substances and the properties of radioactivity continue to yield novel and interesting results. M. and Mme. Curie have established the fact that when any substance is placed near a radiferous salt of barium it becomes itself radioactive. The radioactivity persists long after removal of the barium salt, but decreases with time, at first rapidly, and then more and more slowly. A. Debiere observed similar phenomena when salts of barium were placed in intimate contact with salts of his actinium. MM. Curie and Debiere, subjecting radium to air exhaustion in a glass vessel, found that the vacuum steadily decreased through the giving out of a gaseous substance which, when collected, was found to be intensely radioactive. Mme. Curie observed irregularities in the radioactivity of oxid of thorium that have not yet been explained, but for a part of which Owens suggests that air currents might account. E. Rutherford, of McGill University, observed that air which had been kept near oxid of thorium, and was then taken some distance away, retained its conducting power for several minutes, and finding similar powers possessed by other thorium compounds, concluded that a particular radioactive emanation susceptible of being carried off by the air was given off by them. M. Dorn reproduced the experiments of Owens and Rutherford with radiferous salts of barium. Rutherford found that the emanation given off from a specimen of radium was small at atmospheric temperature, but could be enormously increased by slightly heating the radium, so that he obtained in this way 10,000 times the amount of emanation given off at ordinary temperatures. Imprisoned in a closed vessel, the emanation remained radioactive a long time. The results of further experiments pointed to the conclusion that the emanation from radium was a radioactive gas, with a molecular weight probably lying between 40 and 100. Experimenting on the communication of radioactive properties to distilled water, M. and Mme. Curie and M. A. Debiere have observed that under certain conditions water can be made even more active than the body from which the influence is communicated. When kept in a sealed tube the water loses the greater part of its activity in a few days. When in an open vessel the loss of activity is much more rapid, and is more

rapid according as the surface of contact with the air is increased. Solutions of radium salts behave in an analogous manner. From these observations the authors deduce a theory which explains various phenomena of radioactivity. Assuming that each atom of radium acts as a continual and constant source of radioactive energy without knowing precisely whence this energy comes, they find that that of it which is accumulated in a body from a mass of radium tends to dissipate itself in two ways: 1. By radiation (rays charged and not charged with electricity). 2. By conduction to a body in contact or transmission from particle to particle through the medium of gases and liquids (induced radioactivity). The phenomena are similar in their manifestations to those of heat under similar conditions, and the explanation offered is analogous to that given for them.

M. Henri Becquerel has observed that metals receiving the direct rays from a radioactive substance appear to give off a secondary radiation, the penetrating power of which is more feeble than that of the primary rays, and is analogous to the same property of the secondary Röntgen rays discovered by M. Sagnac. The effect of the secondary radiation is such that a metallic plate placed upon a photographic plate, instead of acting as a screen to arrest the radiation from the source, gives, on the contrary, a stronger impression.

Prof. Marekwald, of Berlin, having inferred from the experiments of P. and S. Curie, Giesel, and others, that the barium salt extracted from pitchblende contains the radium salt as an isomorphous constituent, and that the process used by these workers for separating a strongly radioactive salt from the barium compound is probably similar to that in use for isolating the constituents of an isomorphous mixture, fractionally crystallized from water the barium chlorid prepared from pitchblende. He found that pure barium first separated, and then a material, probably the eutectic mixture, which was very rich in the radioactive component. The most strongly radioactive fractions had the power of immediately discharging a charged gold-leaf electroscope when at the distance of half a meter from the latter, and when preserved under colored glass soon turned to a deep-brown color. The radioactive substance was strongly luminescent in a dark room, and on interposing the hand between the preparation and a barium chlorid platino-cyanid screen, the bones of the fingers were seen sharply delineated on the screen. In the course of his address at the British Association, the author exhibited several preparations of "phototropic" substances, compounds which changed color on exposure to sunlight and recovered their original tint on preservation in a dark place. He remarked that the rapidity of change in either direction is considerably enhanced by the temperature.

In an investigation of the physiological action of radium rays, by MM. Henri Becquerel and P. Curie, radiferous barium chlorid carried on the arm in a thin gutta-percha envelope caused at first a slight burning of the skin, resembling a burn, but without pain. After a few days the red area increased and the skin was broken, and a sore still remained fifty-two days after the action of the rays. The effects were considerably stronger and exhibited greater penetrative power when more active material was employed.

M. Henry Becquerel concludes a summary of the studies of this subject with the remark that they show that "a new order of phenomena has

arisen from the study of a new property of matter—radioactivity."

New Substances.—On submitting the three varieties of sulfur to the action of liquefied ammonia at -80° C., M. Moissan obtained no reaction, but on allowing the temperature to rise slowly, solution occurred, at different temperatures, ranging from -38° to -11.5° with the different varieties. From this solution a new compound, sulfammonium, was obtained, of a dark-red color, and having at -23° the composition $(N.H_3)_2S$; at 20° $(NH_3)_2S.2NH_3$, which is completely dissociable at the ordinary temperature and pressure, and possesses the property of being able to add sulfur in the cold to a large number of simple and compound bodies.

In the description of some new organo-metallic compounds of mercury, MM. Auguste Lumière, Louis Lumière, and Chevroliet represent that when alkali phenol disulfonates react with mercuric oxid, compounds are formed of great solubility and presenting some peculiar reactions. They are not precipitated by soda, hydrochloric acid, or ammonium sulfid. Their taste is purely saline, and not metallic, as is usual with mercury salts. The solutions possess great antiseptic power.

The fact that continuous beating of the pulp in the making of paper produces a transparent and elastic mixture which hardens on drying and greatly strengthens the paper has been utilized for the production of a new economical substance. This substance, cellulith, is prepared by a process exclusively mechanical: a beating of the pulp for a much longer time than is necessary for the production of mere paper. After such beating, which may last for from forty to one hundred and fifty hours, until a homogeneous mixture having no trace of fiber appears, the air in the substance is removed by beating for two more hours; what coloring matter may be desired is added, and then the substance is heated. The hot cellulose liquor passes into a vessel having a perforated bottom, through which it drips. On evaporation of the water the pulp hardens, gradually attaining the consistency of horn, and having a specific gravity of about 4. Cellulith may be worked as horn or ebonite is. Combined with sawdust and 30 per cent. of lampblack, a kind of dark ebonite is formed, which is dense and capable of being polished.

In an account of the hexafluorid of sulfur published in 1900, M. Moissan mentioned that other bodies were formed at the same time containing sulfur and fluorin. He has since, with M. Lebeau, made a further contribution to the subject. The compound described is sulfurous fluorid, SO_2F_2 , and it is obtained by the regulated action of fluorin on sulfur dioxide. The conditions of the experiment had to be carefully studied, as the reaction of these two gases is so violent that explosions frequently occur. The new gas is necessarily accompanied by others, because the operation is carried on in glass vessels. The separation of these gases is effected by liquefying the whole at -80° C., and fractionating in a vacuum. Sulfuryl fluorid is a colorless, odorless gas, solidifying in boiling oxygen, melting at -120° C., and boiling at -52° C. Although in some respects it resembles its halogen homologue, it recalls in its stability and inertness in other reactions the properties of the hexafluorid. Thus it is without action upon water, even in a sealed tube at 150° C. M. Moissan remarks that these experiments with fluorin show that although it is undoubtedly at the head of the halogen group, it is a little removed from the others, having spe-

cial and characteristic properties which show affinities rather to oxygen than to chlorine.

In a preliminary account of their investigation of the nature and origin of the poison of *Lotus arabicus*, or the Egyptian vetch, W. R. Dunstan and T. A. Henry show that the toxic property is due to the prussic acid which is formed when the plant is crushed with water, by means of the hydrolytic action of an enzyme, *lotase*, on a glucosid, *lotusin*, which is broken up into hydrocyanic acid, dextrose, and *lotoflavin*, a yellow coloring matter. The authors have continued the investigation, with the object of ascertaining the properties and chemical action of *lotoflavin* and of *lotusin*, and also of studying the properties of *lotase* in relation to those of other hydrolytic enzymes. From *lotusin*, a monobasic acid, *lotusinic acid*, is obtained, which furnishes yellow crystalline salts. With the exception of amygdalin, *lotusin* is the only glucosid definitely known that furnishes prussic acid as a decomposition product. *Lotusin* is isomeric with luteolin, the yellow coloring matter of *Reseda luteola*, and with fisetin, the yellow coloring from young fustic, *Rhus cotinus*. Morin, from *Morus tinctoria*, appears to be hydroxylotoflavin. The amount of prussic acid given by plants of different stages of growth has been ascertained. The formation reaches its maximum about seeding time, and after this diminishes rapidly. The power of *lotase* is rapidly abolished by heat, and is gradually destroyed by contact with alcohol or glycosin.

Tanaform, an antiseptic much employed lately in veterinary practise, and first prepared only a few years ago, is a condensation product of tannic acid and formaldehyde. It is a buff-colored powder, odorless and almost tasteless, insoluble in water, but fairly soluble in alcohol, ether, caustic alkali, and ammonia, and possesses all the antiseptic powers of formaldehyde, but is free from its unpleasant smell and irritant action, while it retains the astringent properties of tannic acid. It appears to be harmless when taken internally.

In the preparation of the dialdehyde of succinic acid by C. Harries, the aldoloxim of the aldehyde is prepared by the method of Ciamician and Dunstedt from pyrrol and hydroxylamin; and this, suspended in water and treated with nitrous acid, gives an aqueous solution of the new dialdehyde, from which the pure substance can be isolated with some difficulty by fractional distillation. Succinic aldehyde is the first member of the aliphatic dialdehydes to be isolated in a purely monomolecular form, and is of interest as being the starting-point for the preparation of the three heterocyclic rings, furane, thiophene, and pyrrol. The ready convertibility of the aldehyde into derivatives of these rings is shown experimentally in the note of the authors.

Hitherto only one organic base, nicotine, has been known as occurring in tobacco. As in most plants producing alkaloids several bases usually occur together, Pictet and Rotschy undertook a search for others in this plant. In the treatment of a large quantity of tobacco extract, three new bases were discovered, which were named nicotine, nicotallin, and nicotemin. The last of these was associated with crude nicotine, with which it is isomeric; but it differs from it in being a secondary base, and in forming a nitrosamin by means of which it can be separated from the nicotine notwithstanding it is present in only a very small amount in the crude base. The nicotine contains two atoms and the nicotallin four atoms of hydrogen less than nicotine.

The osmyloxalates are described by M. L. Wintribert as forming a well-characterized series of

salts. Details are given in the author's paper before the Academy of Sciences of Paris of the preparation and properties of the salts of sodium, ammonium, silver, barium, strontium, and calcium.

Prof. William Ramsey and Morris M. Travers, continuing their examinations of the new gases in the atmosphere during 1900, found that the presence of what they had called metargon was to be accounted for by the fact that in removing oxygen from the mixture of the gases (krypton, neon, xenon, helium, etc.), phosphorus containing carbon was employed. This mixture when burned in oxygen yields a spectrum to some extent similar to that furnished by carbon monoxide, but differing from it in that lines of cyanogen gas are also present. The authors are satisfied that their metargon, the spectrum of which is visible only at high pressure, and only when impure phosphorus has been employed to remove oxygen, must be attributed to some carbon compound. Although their experiments had been numerous, they had not succeeded at the time of preparing their paper (in November, 1900) in producing in quantity any gas yielding this composite spectrum. It could only be obtained by a mixture of carbonic monoxide with cyanogen.

By many repetitions of the process of liquefying by means of liquid air the mixture of argon, krypton, and xenon obtained by the evaporation of air, the authors succeeded in separating the three gases from one another. It was proved that they are all monatomic by determining the ratios of their specific heats, using Kundt's method. Experiments were made, too, on compressibility and observations of the spectra. That these gases form a series in the periodic table between that of fluorine and that of sodium is regarded by the authors as proved from three lines of argument: based upon the steady ratio of 1.66 between their specific heats at constant pressure and constant volume; on the fact that if their densities are regarded as identical with their atomic weights, as is the case with certain diatomic gases, there is no place for them in the periodic table; and because they exhibit gradations in such properties as refractive index, atomic volume, melting-point, and boiling-point, which find a fitting place in diagrams showing such periodic relations. "Although, however," the authors say, "such regularity is to be noticed, similar to that which is to be found with other elements, we had entertained hopes that the simple nature of the molecules of the inactive gases might have thrown light upon the puzzling incongruities of the periodic table. That hope has been disappointed. We have not been able to predict accurately any one of the properties of one of these gases from a knowledge of those of the others; an approximate guess is all that can be made. The conundrum of the periodic table has yet to be solved."

Sir William Crookes has pointed out that in his earlier proposed arrangement of the elements at equidistant intervals on an ascending curve of figure 8, horizontal vacant spaces exist into which the new elements helium, neon, metargon, and krypton may, in consideration of their properties, be appropriately inserted.

The powerful oxidizing acid called Caro's acid, which is prepared either by treating a persulfate with concentrated sulfuric acid or by the electrolysis of moderately concentrated sulfuric acid, or by the action of concentrated sulfuric acid on hydrogen peroxide, has been found by Baeyer and Villiger to have a composition represented by the formula H_2SO_5 . It is gradually changed in solution to sulfuric acid and hydrogen peroxide.

In experiments on the separation of thorium, Mr. Charles Baskerville, of the University of North Carolina, obtained determinations proving the presence of an oxid having unusual specific gravity, which could not be accounted for except by the presence of either a new oxid of a known element having greater density than the usual non-volatile residue after ignition, or of an unknown element. Similar indications were afforded in the experiments on radioactivity. From the insufficient data already obtained, it appears that in case the element be tetravalent, its atomic weight lies between 260 and 280. The author proposes, if the supposed new element is identified, to call it Carolinium, and to give it the symbol Cn. The possibility of this new substance being identical with M. Debiere's actinium is suggested.

B. Brauner, of Prague, also announces the conclusion that thorium does not consist of a single element, because on fractional hydrolysis of ammonium thorium oxalate, fractions are obtained in which the atomic weight of the metal varies from 220 to 232. Supposing there are two constituents, he distinguishes them as Th α and Th β .

Experiments on the transformations of Röntgen rays by matter have shown M. G. Sagnac that the study of the electric action of the secondary rays emitted by a body affords a test of the presence of small quantities of relatively active substances, such as copper, iron, or aluminum. Hence, also, a method of searching for new elements.

Experiments upon the action of high temperature on alcohols, described by W. Ipatieff, show that when alcohols are passed through red-hot tubes according to a method adopted by Berthelot, the corresponding aldehydes are the chief product. In many cases the yields are so good that the method becomes an advantageous one for the preparation of certain aldehydes. The hot tube may be of glass or iron, preferably iron, and the temperature that gives the best yields is about 700° C. Alcohol treated in this way gave 25 per cent. of the theoretical quantity of formaldehyde, isobutyl alcohol about 40 per cent., and isoamyl alcohol from 30 to 40 per cent. of the corresponding aldehydes.

Martignon has observed that the rare earth metals—neodymium, praseodymium, and samarium—are capable of combining with hydrogen when the metal is set free from one of its compounds in the presence of that element. This is effected by heating the oxid of one or other of the metals with metallic magnesium in an atmosphere of hydrogen. If the liberation of the metal is carried out in an atmosphere of nitrogen, a nitrid is obtained. Nitrids of thorium, cerium, and lanthanum have been prepared in a similar manner.

It was observed a few years ago by MM. Sabatier and Senderens that nickel is capable of causing the direct combination of hydrogen with ethylen and acetylen, with the formation of ethane in both cases. The same authors have now shown that reduced nickel is a very active catalytic agent, surpassing even spongy platinum so far as hydrogen is concerned. Thus a mixture of hydrogen and benzene vapor passed over reduced nickel at the temperature of about 200° C., readily gives hexahydrobenzene, no benzene escaping conversion if the hydrogen is in excess. The reaction appears to be a general one, since the homologues of benzene behave similarly. Nitrobenzene is reduced to anilin.

The studies of F. von Kuzelgen show calcium carbid to be a very powerful reducing agent, it being even capable of decomposing compounds of

the alkali metals. Chlorids are much more easily reduced by it than oxids. With most chlorids when once the action is started at any point it usually proceeds throughout the entire mass, and very often with explosive violence. For the reduction of oxids, on the other hand, external heat must generally be applied. Moissan has shown that molten carbid acts on the oxids of carbid-forming metals with the formation of metallic carbids. When, however, the reduction takes place at a lower temperature, the metal is free, or almost free, from carbid. At intermediate temperatures the amount of carbon in the reduced metal would increase until the temperature is sufficiently high—as in Moissan's experiments for the formation of carbid—when carbid alone would be produced. As a rule, however, reaction by means of calcium carbid yields purer metals than if the reduction is affected by carbon alone, since the reaction takes place at a lower temperature. When the carbid is employed in the proper proportion, only traces of calcium are present in the reduced metal. By using a large excess of carbid, however, calcium alloys can be obtained. Calcium carbid can be utilized in the laboratory for various reducing purposes, but its application on a technical scale would be conditioned on the yield of metal. In the case of oxids the yield depends on whether the oxid is easily reduced by carbon or not. Both the calcium and the carbon of the carbid act as reducing agents, the former being the more powerful, as indicated by the differentiation of the general equation into two stages. The greater the difficulty of this reduction of the oxid by carbon, the less will the carbon assist in the reduction—that is to say, more carbid will be required for the reduction, which will then take place chiefly at the expense of the calcium. This being the case, free carbon is liberated, and the larger the quantity of carbon thus set free, the greater the difficulty of fluxing or obtaining a regulus. The reduction of copper by carbid is, according to Moissan, hardly likely to become a technical process. Carbid may, however, become useful in the production of other metals in the pure condition, as, for example, for the reduction of nickel oxid or bismuth oxychlorid. Improvements might be effected in the case of oxids easily reduced by carbon, by adding a certain amount of free carbon to the mixture. Again, if the oxids are difficult to reduce by carbon, if the reduction, for example, takes place chiefly at the expense of the calcium, a saving might be effected by the addition of aluminum to increase the reducing power of the carbid, and to decrease the quantity of carbon. The application of carbid for the reduction of alloys appears to offer better prospects. By proper use of chlorid and oxid, it is possible to reduce simultaneously metals the separate reduction of which offers great difficulty. Alloys can thus be obtained which are not easily prepared by fusing the constituents, owing to differences in the melting-points. Carbid can also become useful in refining metals. The process of reduction by means of carbid is not without hope if it be applied in its proper place. This lies not in attempting to replace existing processes of reduction, but rather in application in cases where existing methods are either useless or give only unsatisfactory results.

Among some striking experiments based upon the affinity of aluminum and magnesium for oxygen, which are described by A. Dubois, is one in which moistened magnesium or aluminum powder is placed upon a scorifier or porous plate, covered with dry magnesium, and ignited. As soon as the combustion reaches the moistened

part an exceedingly brilliant flame appears, which is due to the reaction of magnesium with water vapor. The magnesia thus formed is left in long filaments. Another interesting experiment is upon the reaction of aluminum on alumina. Four atoms of the metal to one molecule of the oxid are mixed; upon igniting they react with vivid incandescence, forming, it is represented, the oxid Al_2O_3 .

It is shown by W. H. Stanger and B. Blount that in preparing cement by the rotary process it is possible to approach the theoretical ratio of acids to bases, and to obtain a stronger and sounder cement than the best cements commercially prepared by the discontinuous process. The raw materials at the works with which the authors are concerned are a calcareous shale and a limestone. These are crushed, dried, finely powdered, and fed mechanically into rotary kilns. The fuel is powdered coal driven in by a blast of air through an injector burner at the lower end of the kiln. An intensely hot flame, readily controllable, is thus produced, and heats the raw materials introduced at the upper end of the kiln, which are caused to travel downward in a direction opposite to that of the blast. The materials are then heated systematically, and at the lower end of the kiln near the burner become converted into clinker. This falls into a rotating cylinder lined with fire-brick, through which is passing a current of air serving to feed the coal-dust flame. A great part of the heat of the clinker is thus regenerated. The clinker is then roughly crushed between rollers that work under a spray of water, and passes through a final rotary cooler into trucks by which it is conveyed to stock boxes over the grinding plant. Thus, from the crushing of the raw materials to the storing of the finished cement, no hand labor is employed, all conveyance, distribution, and transmission being done mechanically.

In a method for the preparation of amids from the corresponding aldehydes described by Messrs. Pickard and Carter, the aldehyde dissolved or suspended in water is shaken with a slight excess of ammonia persulfate and a certain quantity of lime; after the reaction is over no difficulty is met in separating the amid in quantities amounting to 30 or 40 per cent. of the aldehyde taken. The method is said to lend itself to the preparation of alkyl-substituted amids; when it is used for this purpose, potassium sulfid is substituted for the ammonium salt, and the alkylamin is present.

In a new method of preparing anilin and its analogues, by MM. Paul Sabbatier and J. B. Senderens, a mixture of hydrogen and nitrobenzene vapor is passed over reduced copper kept at a temperature of from 300° to 400° C., when the yield of anilin is nearly theoretical. If nickel is employed instead of copper, the reaction goes farther, even at 200° , benzene and ammonia being produced.

Atomic Weights.—In a lecture at the Royal Institution, May 30, dealing with the combinations of carbon, Prof. Dewar exhibited some examples of exothermic carbon compounds, which on decomposition give out heat, and remarked that such bodies, being characterized by the facility with which they passed into new combinations, were especially important as a basis for organic synthesis. An infinite number of carbon compounds were already known, and in addition to those which occurred in the animal and vegetable worlds, chemists were every year preparing thousands of absolutely new ones which had never existed before. Why had carbon this power of

unlimited multiplication of new bodies—a power in which it differed so markedly from other elements? Silicon most nearly resembled it, and was much more abundant in the world, yet in spite of attempts to constitute a chemistry of silicon like that of carbon, chemists were very far from getting the former to make compounds in the same way as the latter. In attempting an explanation they entered a region of speculation, but there was a basis to go upon in the indisputable fact that the smallest chemical unit of carbon combined with four units—not more—of hydrogen. Kekulé, in whose hands and those of Frankland this fact had resulted in the formation of the doctrine of atomicity, threw out the brilliant idea that carbon was capable of unlimited combination with itself, as an explanation of the multiplicity of its compounds, and conceived of the carbon atoms as linking themselves together in a chain. In this way something was lost of the combining power of each atom—for example, while two separate atoms would have altogether eight combining powers, when linked together the combined couple could have only six—but the number of possible compounds was indefinitely increased.

The question of a possible variability in the valency of carbon is involved in certain experiments described by Herr M. Gomberg. By the action of such metals as silver, zinc, and mercury upon triphenyl chlormethane, $(\text{C}_6\text{H}_5)_3\text{Ccl}$, the halogen was removed, and, working in the complete absence of air, the resulting product was not, as would be expected, hexaphenylethane, but an unsaturated body which readily absorbed oxygen from the air and combined directly with the halogens. The author thinks that the only possible explanation of the observed facts lies in the assumption that the substance is really triphenyl methyl, $(\text{C}_6\text{H}_5)_3\text{C}$, in which the carbon is trivalent.

The values obtained for the atomic weights of iodine and tellurium having been inconsistent with their relative positions in Mendeléeef's table, numerous determinations of the atomic weight of tellurium have been made in recent years, the results of which have varied from 127.5 to 128; but all above that of iodine instead of being below it, as required by the periodic law. It was pointed out by O. Steiner that these determinations had been made from the analysis of inorganic preparations, the absolute purity of which from substances of different atomic weights from that of tellurium had not been demonstrated. Taking the diphenyl telluride, $\text{Te}(\text{C}_6\text{H}_5)_2$, a stable and well-defined compound, and distilling without decomposition in a vacuum, this author obtained 126.4 as the approximate atomic weight of tellurium—a figure much lower than the other determinations, and corresponding with the prediction of the periodic table. The investigation is not yet complete.

The principle that the transparency of substances to the Röntgen rays depends upon the atomic weights of the elements contained in the substances, has been applied by A. Benoist to the determination of the atomic weight of indium. He found by this method that if the metal is bivalent its atomic weight is 75.6, but if trivalent it is 113.4. By another process the author found that the atomic weight of indium was nearer to that of silver (108) than to that of arsenic (75). Hence he infers that the higher valency as found by transparency to the Röntgen rays is the more probable one.

The assumption of the atomic weight of 113 for indium, corresponding to the oxid In_2O_3 is con-

firmed by the preparation by MM. C. Chabrie and E. Rengarde of well-characterized alums with cesium and rubidium.

Announcement was made at the annual meeting of the Chemical Society in London, March 28, that a committee of the society had decided to recommend, in reference to a uniform system of atomic weights, (1) that $O = 16$ be taken as the basis of calculation; and (2) that in assigning a number as the atomic weight of any element, only so many figures should be employed that the last may be regarded as accurately known to one unit in that figure.

A method of estimating sulfids, sulfydrates, poly-sulfids, and hyposulfites coexisting in solution, particularly in certain mineral waters, described by M. Armand Gautier, is based upon the fact that sulfydrates, distilled in a vacuum, give up all their sulfuretted hydrogen in excess of that required to form the monosulfid, and this, again, yields the whole of its sulfur on distilling in a current of carbon dioxide.

Chemical Analysis.—All ordinary sulfuric acid contains selenium or oxidized compounds of it, and such compounds can generally be detected in the purer acid supplied to laboratories for pharmaceutical purposes. Two fairly sensitive methods of detecting selenium are described. One is by the use of codein, which gives an intensely blue coloration to the sulfuric solution of selenious acid; and the other is by the precipitation of selenium when sulfurous acid is passed through sulfuric acid diluted with four times its volume of water. M. Ad. Jouve regards the selenium as existing in the sulfuric acid in the forms of selenious and selenic acids. He records experiments in the examination for selenium in raw acetylene passed over sulfuric acid, and adds that the detection of selenium in sulfuric acid is of some interest if the acid is to be used in the free state, whether from the pharmaceutical point of view or under other circumstances in which it might be introduced in small quantities—for selenium compounds are far from being harmless to the human organization.

A very close chemical relationship has been observed by Nencki and Marchlewski between the red coloring matter of the blood and the green chlorophyll of plants. Hematoporphyrin, a derivative of hemoglobin, and phyllocyanin, obtained from chlorophyll, both yield on reduction hemopyrrol, which is probably an isobutyl or methyl propyl pyrrol.

Water containing the most minute traces of lead affords to the naked eye a faint though persistent opalescence, a fact which has given rise to the opinion that the toxic metal is in combination with some organic matters. Of such character are waters that have remained for a long time in new pipes or in old pipes which have been disturbed by some repairs or soldering. Waters exposed when in contact with lead to the silicious and carbonated dust of the air are always contaminated with nitrated particles. For the detection of lead, M. Billoeq uses a zinc reagent in which the soda has been replaced by ammonia. This reagent is added in excess to the suspected water, and left quiet for several hours. The absolutely limpid supernatant water is then decanted off, and the rest is thrown on a filter. The filtration is very rapid, and the dried precipitate is easily detected. This is decomposed with warm acetic acid containing a little acetate of ammonia, and is filtered. The clear acid filtrate is touched with a small glass rod wetted with a solution of chromate of potassium. If the water contains lead, a yellow cloudiness appears, and after the

lapse of some time a precipitate of chromate of lead is formed. Absolutely limpid water gives no trace of lead with this reaction.

In the ordinary analysis of feeding stuffs, it has been the general custom to determine only a few of the many constituents present; for the computation of ratios or for the determination of feeding values; an estimation of the moisture, fat, protein, ash, and fiber is all that is usually required, the percentage of undetermined matter being simply designated "nitrogen-free extract." This method of procedure, though sufficient for many purposes, is not scientifically accurate, and chemists have for a long time felt that a closer study should be made of the various substances or groups of substances, such as ether extract, protein, and fiber, and that more attention should be given to the bodies making up the nitrogen-free extract. Considerable work has been accomplished in such analysis during a few years past. Good workable methods have been adopted for the determination of sugars, starch, and pentosans, and some attempts have been made toward a separation of the various lignine and cellulose bodies that make up the greater part of what is termed crude fiber. In many cases, more particularly in the analysis of grains, the percentages of the various constituents will approximate very closely 100 per cent.; but in other cases, with feeds rich in fiber, a considerable discrepancy still exists. Messrs. C. A. Browne, Jr., and C. P. Bristle describe an analysis they have made on the principles indicated (Pennsylvania State College Agricultural Experiment Station) of a sample of distillery waste. In conclusion, the authors remark that while the sum of the percentages of the different constituents in many feeding stuffs does not equal exactly 100 per cent., the results are as close as can be expected with the present methods of analysis.

Acetylene gas has been found by Jouve to furnish a very delicate test for selenium in sulfuric acid by precipitating it in the elementary condition.

Experiments in the synthesis of some aromatic aldoxims by means of fulminating silver are described by R. Schall and E. Retseh. If a polyhydroxylic derivative of benzene is dissolved in ether, some fulminating silver suspended in the solution, and hydrochloric acid led slowly into the well-cooled solution, the silver fulminate disappears and the hydrochlorid of the new aldoxim crystallizes out. The method has been successfully applied to resorcinol, orcinol, pyrogallol, and phloroglucosinol.

The use of metallic sodium as a reducing agent in blowpipe analysis is recommended by Charles Lathrop Parsons, who finds, contrary to Hempel's experience in that particular, that the reaction takes place with the greatest ease on charcoal. A small piece of metallic sodium is hammered out flat. The substance to be reduced is powdered and spread upon it, pressed into the metal with the hammer, and the whole is turned and kneaded into a little ball with a knife blade. It is then placed upon a slight depression in a piece of charcoal and ignited. A momentary flash ensues, and the reduction is accomplished. The residue is then heated before the blowpipe, and as the sodium oxid and hydroxid immediately sink into the charcoal, any fusible metallic particles collect easily into a button, and may be recognized in the usual manner. Volatile metals, like zinc, oxidize and yield with surprising readiness the characteristic coatings, and on digging up a little of the charcoal, moistening with water, and placing upon a silver coin, the "Hepar" reaction is obtained if

sulfur was present in any form. Applied to minerals the method yields results but little less certain than when pure oxides or salts are reduced. The metallic sodium does not need to be kept under naphtha, but may be supplied to a class in small rubber-stoppered, wide-mouthed bottles. But it must be kept away from water or moisture. Large quantities of sodium must be avoided, or the reaction may become dangerously violent.

Miscellaneous.—The address of Prof. J. H. Long, chairman, before the chemical section of the American Association, was on the Teaching of Chemistry in the Medical Schools of the United States. A historical review of the subject was given, after which the speaker dwelt on the far-reaching importance of chemistry, inorganic as well as organic, to the medical student, and the inadequacy of merely analytical courses. He emphasized the fact that the burning problems of the physiology, the pathology, and the therapeutics, if not of to-day, certainly of the near future, are essentially chemical, and that they are not necessarily confined within the accepted limits of what is called organic chemistry.

Attention was directed in England during 1900 to a considerable number of cases in which persons had shown symptoms of arsenic poisoning after drinking beer; and investigations were set on foot to discover whether the beer in the market was contaminated with this drug, and if so to find the source of the contamination. In very many instances traces of arsenic were found in the glucose supplied to the breweries. More care was then taken in the preparation of this substance, and complaints became less frequent. The whole subject of the presence of arsenic in substances in common use was reviewed by Mr. Alfred C. Chapman, of the Society of Public Analysts, in a paper on Food and Drugs; Some of the Important Recent Events, read before a meeting of Inspectors of Weights and Measures, July 12. The author presumed that the manufacturers would in future take such precautions as would render a repetition of recent experiences impossible; but while this was so, the investigations of chemists had shown that arsenic in minute traces was a very much more frequent impurity than had been suspected. The finding of contamination of a sample of effervescent phosphate of soda by that substance had led to the discovery that arsenic in traces was of very common occurrence in phosphate preparations. Fully 90 per cent. of the 1,000,000 tons of sulfuric acid annually produced in England was prepared from pyrites containing more or less arsenic. This arsenic, sometimes to the extent of 1 per cent., found its way into the manufactured acid, and as this was used in numberless manufactures, it would easily be seen that such manufactured products were all liable to contamination. Traces of arsenic thus found their way into soda, artificial manures, soap, glass, borax, and distilled vinegar, while it had been met with in traces in glycerin, baking-powder, sweets, etc. Besides its occurrence in the arsenicated minerals in considerable quantities, arsenic was found in traces in coal, and consequently in the atmosphere, in many natural river waters, in sea water, in sulfur, in some river waters, and occasionally it might even be present in roots and green vegetables. These facts show how extremely difficult it is to avoid in practise minute traces of this almost ubiquitous substance. In certain cases occurring at Manchester, arsenic had been easily traced back to the fuel used for kilning the malt; and unless fuel entirely free from arsenic was used, malt, dried on the sys-

tem in vogue, must necessarily contain traces of arsenic; although with proper care such traces would be so infinitesimal as to be absolutely negligible in practise.

The investigations of this subject have also led to the discovery of selenium in poisonous doses in the beer, and to the suggestion that it may have been present as an additional agent in other cases of poisoning attributed to arsenic.

The use of sulfuric acid, either as such or in a more portable form as sodium hyposulfite, is advocated by Samuel Rideal as a disinfectant for destroying the bacillus typhosus in potable waters, or in drainage from isolation hospitals.

Mr. M. Ackroyd showed in a paper read in the British Association that when the observation periods are shortened to daily estimations of chlorin, minimal amounts of rainfall are marked by maximum content of chlorin, and *vice versa*.

The conclusion is stated by Samuel Rideal, after the examination of a number of humus residues from the bacterial treatment of sewage, that if the sewage has undergone proper treatment, the small quantity of peaty deposit called by Cameron "burnt-out ash," is of the nature of humus, and practically inoffensive; and he quotes Kenwood and Butler as agreeing that at Finchley in 1900 the deposit from open septic tanks could be removed with little offense, and had been spread without nuisance over small areas of land in the neighborhood. This deposit has also the agricultural value of humus. Like peaty matters generally, it has a function in the property of encouraging, when in small quantity, the nitrifying action in the final oxidation, and itself undergoes slow oxidation to carbonic acid and nitrates.

The quantity of grain harvested when basic slag is used as a manure depends generally, F. W. Daffert and O. Redmair say, on the proportion of phosphoric acid in the slag. The rapidity of the action of the slag is in direct relation with the fineness of the grinding of it, and with its chemical nature. The authors propose for the determination of the agricultural value of slag to depend on the solubility of the total phosphoric acid in formic acid. A good slag yields 90 per cent. of its phosphoric acid to this reagent.

A comparative examination was made by Mr. Leo Vignon, as to ordinary properties, velocity of saccharification, and heats of combination, of cotton cellulose, mercurized cellulose, cellulose dissolved in Schweitzer's reagent and precipitated by acids, and Girard's nitrocellulose. The author found that concentrated alkalis, such as are used in the operation of mercurizing and probably hydrating, depolymerize the cellulose, without conferring any new chemical functions on it. The same is true of diluted acids acting under the conditions necessary for the formation of Girard's hydrocellulose.

It appears, from experiments described by A. Rossel and E. Laudriset, that the purity of acetylene gas is as much affected by the manner in which carbid and water are brought in contact for its generation as by the quality of the carbid employed.

Illustrations of the advantages which engineers have derived from chemical coadjutors are given by Prof. Frank Clowes in a James Forrest lecture on Chemistry in its Relations to Civil Engineering, delivered before the Institute of Civil Engineers. Among them, the author mentions as a most striking instance in which the engineer has been supplied by chemistry with suitable constructive materials the introduction of cheap steel of varying qualities in substitution for costly

steel and other less suitable forms of iron. The Bessemer process was suggested and made successful by the chemical knowledge which was supplied to those who were interested in the procedure. A broad extension of the application to further utilization of chemical knowledge and suggestion is anticipated. The metallurgical chemist and the chemical metallurgist are at present engaged in furnishing metals and alloys new to commerce at the disposal of engineers who can use them, as they are more suitable than others heretofore employed in their various designs. The necessity of chemical knowledge and chemical advice to the gas engineer was enlarged upon. The spheres of the engineer and the chemist are closely connected in the matter of water supply, as well as in that of the purification of sewage, as to which the cooperation of the chemist and the engineer has enabled such cities as London, Manchester, etc., in recent years to carry out on an experimental scale most important trials of natural and bacterial treatment of sewage, and has led to the publication of reports on the subject which will become classical. This experimental work has promoted considerable and valuable development and improvement of the bacterial method.

In studies of the chemical and biological changes that occur in the treatment of sewage on "bacteria beds," E. A. Letts and his coadjutor represented in the British Association that a large portion of the unoxidized nitrogen was found to have disappeared during the passage through the beds. This may have been due either to the escape of the nitrogen in a gaseous state as free nitrogen, or possibly as oxids, or to the passage of the nitrogen into the tissue of animals or vegetables. Both of these causes of loss may operate at the same time. An examination of sewage matter before and after the passage through the beds showed that in nearly all cases the amount of dissolved nitrogen present in the sewage was greater after treatment than before, although, of course, if free nitrogen were evolved, only a minute fraction of it would remain dissolved in the sewage effluent. With respect to the possible biological explanation of the loss, it is pointed out that the sewage beds at Belfast and other places swarm with minute insects (*Podura aquatica*), and that species of worms are also present. These in feeding on the sewage undoubtedly cause a loss of nitrogen.

CHILE, a republic in South America. The Congress consists of a Senate of 32 members elected for six years and of a Chamber of Deputies elected for three years by the direct vote of the people. Senators in the provinces and Deputies in the departments. The President is elected indirectly for five years. Federico Errazuriz was elected President of the republic for the term beginning Sept. 18, 1896. The Cabinet constituted in November, 1900, was composed as follows: Prime Minister and Minister of the Interior, Mariano Sanchez Fontecilla; Minister of Foreign Affairs, Worship, and Colonization, Alberto Gonzalez Errazuriz; Minister of Justice and Public Instruction, Francisco Herbozo; Minister of Finance, Manuel Covarrubias; Minister of War and Marine, Arturo Besa; Minister of Industry and Public Works, Emilio Bello Codecido.

Area and Population.—Chile has an area of 290,829 square miles. The population on Jan. 1, 1900, was estimated at 3,110,088. The number of marriages in 1899 was 13,053; of births, 106,787; of deaths, 86,278; excess of births, 20,509. Santiago, the capital, had 320,638 inhabitants in 1899; Valparaiso, 143,022; Concepcion, 55,458.

The numbers of agricultural and industrial immigrants brought from Europe by the colonization agents of the Government have been 1,402 in 1895, 2,102 in 1896, 870 in 1897, 564 in 1898, and 548 in 1899. The sum appropriated for colonization in 1898 was 616,890 pesos. The Government has large tracts of land for suitable settlers.

Finances.—The ordinary expenditures authorized for 1900 were 11,068,114 pesos for the interior, 2,047,332 pesos for foreign affairs and colonies, 13,265,827 pesos for justice and public instruction, 5,705,955 pesos for finance, 9,766,588 pesos for the army, 7,154,699 pesos for the navy, and 24,407,487 pesos for industry and public works; total, 76,415,002 pesos. The ordinary revenue was estimated at 95,954,390 pesos in currency, and the extraordinary revenue at 22,404,386 pesos; total revenue, 118,358,776 pesos. In 1899 the total revenue was 97,218,070 pesos in currency and 95,948,104 pesos in gold, and the expenditures were 77,267,740 pesos in currency and 78,777,314 pesos in gold.

The public debt on Dec. 31, 1899, amounted to 310,254,183 pesos, 234,289,414 pesos representing the foreign debt, which was £17,571,706 sterling, consisting of £11,441,160 of 4½-per-cent., £5,813,266 of 5-per-cent., £179,900 of 5½-per-cent., and £137,380 of 6-per-cent. bonds. The internal debt was made up of 2,109,155 pesos of 3-per-cent. obligations, 20,827,203 pesos borrowed to release mortgaged lands, 1,903,532 pesos of municipal debts for which the Government is liable, and 51,124,880 pesos of paper money. The paper money was issued by the Government in 1898 after three years of contraction and an attempt to introduce specie payments on a gold basis. The coinage act of 1895 prescribed the coinage of 20-, 10-, and 5-peso gold pieces, called colons, doubloons, and sudcos, and silver pesos, the ratio of 30 to 1 being adopted. From 1895 to 1898 there were coined 42,699,530 pesos in gold and 8,009,354 pesos in silver. When the issue of 50,000,000 pesos of new paper money was authorized in July, 1898, the President was authorized to lend 20,000,000 pesos to the banks at 4 per cent., and to raise a loan of £4,000,000 for the purpose of withdrawing the forced paper currency after four years.

The Army.—The active army is recruited by voluntary enlistment. After serving two years the soldiers are transferred to the National Guard, excepting those who are reengaged as non-commissioned officers. All able-bodied Chileans between the ages of eighteen and fifty are under obligation to serve in the National Guard according to the military law of Feb. 12, 1896, but exemption is granted to very many. The law of Dec. 31, 1896, fixed the maximum strength of the active army at 9,000 men. The infantry are in the main armed with Mauser rifles of a Chilean design, though some carry Mannlichers of 8 millimeters caliber. The cavalry weapon is a Mauser carbine of the Chilean model. The effective strength of the active army in 1899 was 2,835 infantry, 1,745 artillery, 2,092 cavalry, and 315 engineers; total, 6,987 men. There are about 2,400 officers in the National Guard, training in which takes place at the age of twenty, after which the members pass into the sedentary, and at the age of thirty into the passive guard.

The Navy.—The Chilean navy contains 3 armor-clads, the O'Higgins, Capitan Prat, and Almirante Cochrane; the armored cruiser Esmeralda; the monitor Huascar; 4 protected cruisers, the Blanco Encalada, Ministro Zenteno, Presidente Errazuriz, and Presidente Pinto; 3 torpedo cruisers, the Almirante Simpson, Almirante

Lynch, and Almirante Condell; 4 destroyers; 2 gunboats; 2 armed transports; and 7 first-class and 8 smaller torpedo craft. The school-ship Baquedano was not yet completed at the beginning of 1901. The South American Steamship Company, which receives a subvention of 125,000 pesos a year, is under obligation to adapt its 15 steamers for the transport service in case of war. The navy was manned in 1898 by 199 officers, 155 employees, and 3,794 seamen.

Commerce and Production.—The total value of imports in 1899 was 106,260,358 pesos, and of domestic exports 163,106,133 pesos. The values in pesos of the imports from and exports to various countries were as follow:

COUNTRIES.	Imports.	Exports.
Great Britain	44,338,000	110,521,000
Germany	29,749,000	20,922,000
United States	8,198,000	7,350,000
France	5,525,000	9,334,000
Peru	5,185,000	4,248,000
Argentine Republic	2,186,000	305,000
Italy	1,537,000	870,000
Uruguay	1,336,000	829,000
Bolivia		1,124,000
Other countries	8,206,000	7,596,000
Total	106,260,000	163,106,000

The imports of animal and vegetable products was 17,696,659 pesos in value; of textile manufactures, 29,058,119 pesos; of raw materials, 21,689,398 pesos; of watches and jewelry, 2,091,536 pesos; of machinery, 12,695,066 pesos; of household furniture, 5,686,111 pesos; of paper, 2,940,975 pesos; of wines and spirits, 931,831 pesos; of tobacco, 336,268 pesos; of ores and metals, 42,319 pesos; of articles connected with arts and sciences, 837,045 pesos; of drugs, 1,690,254 pesos; of arms and ammunition, 786,709 pesos; of miscellaneous merchandise, 9,970,402 pesos. The exports of mineral substances were 137,637,603 pesos in value; of agricultural produce, 10,597,870 pesos; of manufactures, 3,862,117 pesos; of wines and spirits, 328,615 pesos; of animals and animal products, 5,050,108 pesos; of miscellaneous domestic products, 1,460,424 pesos; of foreign merchandise, 1,573,819 pesos; of coin, 2,595,577 pesos. Of the nitrate export 39 per cent. went to Germany, 17.3 per cent. to France, 13.3 per cent. to the United States, 11.2 per cent. to Great Britain, and 10.9 per cent. to Belgium.

Navigation.—The number of vessels entered at the ports of Chile during 1899 was 7,267, of 10,016,704 tons; cleared, 7,154, of 9,738,769 tons.

The merchant navy comprised 142 vessels, of 71,214 tons, of which 39, of 27,387 tons, were steamers.

Railroads, Posts, and Telegraphs.—The total length of railroads in 1899 was 2,841 miles, of which 1,223 miles belonged to the Government and 1,618 miles to companies. The Government lines cost 85,907,165 pesos to construct; receipts in 1899 were 13,997,800 pesos; expenses, 13,911,783 pesos; number of passengers carried, 6,346,184 pesos; tons of freight, 2,089,330.

The post-office in 1898 handled 55,404,009 pieces of mail-matter in the internal and 6,519,281 pieces in the international service; receipts were 1,791,881 francs, and expenses 2,122,195 francs.

The Government telegraphs in 1899 had a total length of 11,200 miles. The number of despatches was 1,183,691. The length of telegraphs and cables belonging to companies and railroads was 3,860 miles. The length of telephone lines was 11,329 miles.

Internal Affairs.—The presidential election which occurred in Chile in 1901 influenced all

events in the early part of the year. Pedro Montt was announced as the Liberal Conservative candidate early in February, and a month later Jernan Riesco, a nephew of President Errazuriz, was nominated as the candidate of the Liberal Alliance, the Government party. A special session of Congress being called on March 6, the Cabinet resigned to give place to one to be composed of Liberals only. The new ministry was constituted with difficulty after a protracted crisis. One that was formed by Amunategui Rivera on March 15 did not meet with the approval of Congress, which passed a vote of censure on the following day. The President exhibited no haste in appointing other ministers, and strained relations between him and Congress resulted. Julio Seegers, whom he commissioned to form a ministry on April 2, was not successful in his efforts. On April 21 a Cabinet was formed at last, composed as follows: Prime Minister and Minister of the Interior, Anibal Zanartu; Minister of Foreign Affairs, Worship, and Colonization, Augusto Orrego Luco; Minister of Justice and Education, Ventura Carvallo; Minister of Finance, Luis Martiniane Rodriguez; Minister of War and Marine, Gen. Vicente Palacios; Minister of Industry and Public Works, Joaquin Fernandez Blanco. Even then the crisis was not ended. On May 1 the ministry was satisfactorily reconstructed as follows: Minister of the Interior, Anibal Zanartu; Minister of Foreign Affairs, Luis Rodriguez; Minister of Justice, Ramon Escobar; Minister of Finance, Juan Sanfuentes; Minister of War and Marine, Gen. Wenceslao Bulnes; Minister of Industry and Public Works, Joaquin Blanco. On the same day President Errazuriz resigned his office into the hands of the Minister of the Interior until after the presidential election, asking leave of absence from Congress until June 25, on the ground that republican precepts and traditions forbade him to continue in the exercise of the presidential authority when a relative of his own was a candidate for the presidency. Anibal Zanartu accordingly discharged the presidential functions with the title of Vice-President. The regular session of Congress began on June 2. The Vice-President in his message stated that the relations with the Argentine Republic were satisfactory, and that the questions with Bolivia and Peru remained in abeyance. He expressed approval of the idea of arbitration provided it did not interfere with national independence and the rights of sovereignty. The extension of a trunk railroad to the nitrate districts and the laying of a cable were urged as of pressing importance, while public works for which money had been appropriated, causing a deficit of \$6,000,000 in the estimates, could be postponed. New measures on education, law reform, public health, police, and the condition of the working classes were the legislative program. The election for President would be conducted with the freedom guaranteed in the Constitution, and the conversion law would be maintained in its integrity. The presidential election was attended with some disorder. In Valparaiso the police fired on supporters of Señor Riesco, who was elected by a decisive majority over Señor Montt. President Errazuriz died on July 12, and Vice-President Zanartu remained at the head of the executive until Sept. 18, when President Riesco was installed.

The industrial condition of Chile was more favorable than it had been, the price of copper having risen and the crisis in the nitrate trade having been overcome by a combination of the companies for restricting production. The efforts

of the Government to attain sound currency, coinciding with auspicious commercial conditions, had brought Chilean paper money in three years from a discount of 30 per cent. almost up to par. Then there came a relapse early in 1901. Exchange went against Chile because the wheat crop had failed, and instead of having a large surplus for export the Chileans imported \$5,000,000 worth. The succession of Señor Zañartu, the leader of the party that prefers a fluctuating depreciated paper currency, and the uncertainties of the presidential election were depressing circumstances, for it was not supposed that Vice-President Zañartu would help a man to be elected who would faithfully carry out the law that promised a resumption of specie payments on Jan. 1, 1902, for which purpose a fund of \$50,000,000 was being accumulated.

International Disputes.—The state of tension existing between Chile and the Argentine Republic over the interpretation of the treaty delimiting their respective territories in Patagonia was removed by the reference to arbitration. The still unsettled difficulties between Chile and the republics of Peru and Bolivia remain a source of disquiet and irritation in South American politics. The district of Atacama was claimed by Bolivia from the foundation of that republic, but being a desert region it was not occupied or inhabited until Chileans began about 1840 to utilize the guano deposits and later the nitrate found there. The Chilean Government then asserted that the coast belonged to Chile almost up to the Bolivian post of Cobija. Bolivia protested in 1866, and a treaty was then made recognizing a sort of divided jurisdiction over the territory of Atacama. An assertion of sovereignty on the part of Bolivia led to fresh negotiations, resulting in the treaty of 1874, which conceded that the territory, including the nitrate mines and the port of Antofagasta were under the sovereignty of Bolivia, but stipulated that for twenty-five years the persons and property of Chileans should not be subjected to any other contributions than those then in force. A quarrel arose in the following year, and Peru joined Bolivia in the defense of her rights against the alleged aggressive designs of Chile. Chile was victorious in the war, and having occupied not only the province of Atacama but the Peruvian provinces of Tarapacá, Arica, and Tacna, it was stipulated in the treaty of Ancon, concluded with Peru in October, 1883, that the nitrate-producing district of Tarapacá should remain a Chilean possession unconditionally and perpetually, while the territories of Tacna and Arica were to be subject to the Chilean laws and authorities for ten years, at the end of which it would be decided by a plebiscite whether they should remain in the possession of Chile or revert to Peru, the country to which the inhabitants chose to belong having to pay \$10,000,000 in silver to the other. A third clause of the treaty provided that the manner of taking the plebiscite and the terms of payment of the indemnity should be settled by negotiations, the settlement thus arrived at to be an integral part of the treaty. No treaty was concluded with Bolivia, but only a truce, because the Bolivian Government could not be brought to assent to any permanent arrangement except such a one as would give Bolivia ample access to the sea. In the compact of truce Atacama is not mentioned. The only coast district recognized as ever having been Bolivian is the narrow strip extending from the Peruvian frontier to a point a few miles south of Cobija. The free entry of Chilean products into Bolivia was one of the terms of the truce, the object of both parties being to prepare the way for a stable treaty of peace and amity. The

plebiscite has not yet been held in Tacna and Arica, nor has a definitive treaty been concluded with Bolivia. Plenipotentiaries have been appointed several times to discuss the terms of a settlement, and all their efforts have led to no result. At first the Chilean Government was disposed to favor Bolivia at the expense of Chile, suggesting as the basis of a definitive treaty that the port of Arica go to Bolivia. In case Chile could not dispose of Arica the cession of some other port was discussed, and Bolivia showed an unwillingness to accept any alternative port that Chile was willing to cede. The discussion was so protracted and hopeless that the Bolivians began to consider an alliance with the Argentine Republic and another appeal to arms for the purpose of getting the seaport that they needed. Chile therefore broke off negotiations and began to discuss with Peru the conditions under which the plebiscite should be taken in Tacna and Arica. It was proposed to submit these conditions to arbitration. These negotiations, which seemed likely to be as futile as the prior ones with Bolivia, were interrupted by a civil war that broke out in Peru. The fund that Peru had accumulated for the purpose of paying the indemnity to Chile in the event of the provinces returning to Peru, which seemed to be the most likely outcome of the plebiscite, was expended in the war, and when peace returned Peru was for that reason in no hurry to resume negotiations. Soon, however, the Peruvian Government did press for the fulfilment of the treaty of Ancon, and the Chileans have betrayed the greatest reluctance to carry out the terms of the treaty. The arbitration proposals to which the Chilean Government had consented were rejected by the Chilean Congress. The idea was promulgated that the retention of Tacna and Arica was necessary in order to give Chile a scientific and strategic frontier. The same reason militates against the concession of a seaport to Bolivia. The adoption of this policy by the Chilean Government was followed by a great extension of the administrative organization in the occupied provinces, and the announcement of schemes of public works that would so strengthen the influence of Chile as to turn in her favor the plebiscite when it takes place at some indefinite future time. When Bolivia urged the renewal of negotiations for a definitive treaty based on concession of a seaport the Chilean Minister of Foreign Affairs replied bluntly that Bolivia must abandon all expectation of a concession of territory on the seacoast on the part of Chile. The protocol arranged by the plenipotentiaries Billinghurst and Latorre in 1898, providing for the manner of taking the plebiscite in Tacna and Arica, passed the Chilean Senate after having been approved by both houses of the Peruvian Congress, and was rejected by the Chilean House of Deputies on Jan. 16, 1901. The attitude of Chile was universally disapproved in South America outside of the Chilean nation. Peru and Bolivia asked the good offices of the United States to induce Chile to submit differences to arbitration and carry out the terms of the treaty of Ancon. The principle of *beati possidentes*, the idea that might makes right, seemed to Spanish-Americans to have captivated all parties in Chile. This was regarded as deplorable because it marred the harmony of the impending Pan-American Congress. The Congress of 1890 discussed arbitration for the settlement of all disputes between American republics, but the subject was not yet ripe. Since the Venezuela arbitration the idea has gained ground until nearly all the republics in the two Americas are willing to consent to this pacific means of ad-

justing differences among themselves. It was the main question to be considered at the Pan-American Congress appointed to meet in the city of Mexico in October. A tentative program to guide the action of the Congress, drafted by the Bureau of American Republics, at Washington, was officially adopted by the Government of Mexico, which submitted it to each government for approval or suggestions. Chile suggested that, if any government objected to the discussion of any question that was presented before the Congress, that subject should not be considered. Secretary Hay pointed out that this would bring all the work of the Congress to naught. Chile then proposed to the Mexican Government to exclude all pending questions from the discussion on arbitration, and to consider an arbitration agreement that will only apply to future questions that may arise. In a note to Washington Chile asked for a definition of the limits within which the subject of arbitration was to be discussed. This communication was considered at a meeting of the Executive Committee of the Bureau of American Republics. The Minister of Costa Rica, presenting the Chilean view, moved that the action of the Congress on the subject of arbitration be prospective and not retrospective. The committee agreed to this at the time, but afterward took up the matter again at the request of the Minister of Bolivia, who objected to limiting the deliberations of the Congress by a prearranged program and thought that the Congress itself ought to be permitted to define the limits of its discussions. Acting Secretary of State Hill offered a motion declaring that the limitations of the program could only be exceeded by the unanimous vote of the Congress, which would allow Chile to prevent the discussion on arbitration from going beyond the limitations of the program. The Colombian minister proposed, on the contrary, to have the discussion on arbitration entirely unrestricted, leaving full liberty to members of the Congress to initiate the consideration of any subject not specified in the program. The proposal of Mr. Hill was approved by the ministers of Costa Rica and Ecuador, while the ministers of Bolivia and Colombia voted in the negative. The Assistant-Secretary of State refrained from voting, leaving the decision of the committee undetermined until the Spanish-American members could arrive at an understanding, which they failed to do, although they met several times to consider the matter. The position of the United States in this controversy was a delicate one on account of the overweening jealousy of the power of this republic entertained in all Spanish-American countries and fostered by intriguing Europeans. When the United States Government, like the Government of Mexico, intimated a willingness to limit the discussion on arbitration in order to avert the threatened abstention of Chile and promote an agreement on arbitration, even if applicable only to future quarrels, the suspicion arose in South America that the United States favored the side of Chile in the disputes with Peru and Bolivia. If the United States voted for unrestricted discussion the Chileans would consider it a mark of disapproval and animosity. The governments of the Argentine Republic, Brazil, Paraguay, and Uruguay, as well as the Peruvian and Bolivian governments, were unwilling to participate in the Congress unless arbitration could be debated without restrictions. The Chilean minister at Washington on July 18 intimated to Secretary Hay that Chile might not attend the Congress unless guarantees were given that disagree-

able questions would not be allowed to come up for discussion. The Argentine representative in Mexico notified the Mexican Secretary of State that his Government would not be represented unless free discussion were allowed on all pending and future arbitration cases. Bolivia, Brazil, Colombia, Paraguay, Peru, and Uruguay took the same view, and all entered into an agreement with each other that if debate should be restricted they would withdraw their representatives in sign of protest. The Argentine Government advanced the opinion that any other course would signify acquiescence in the Chilean ideas of conquest. The Argentine Republic and Chile entered into a mutual agreement not to purchase war material pending the award of the boundary arbitration between themselves, but the Argentine Minister of Foreign Affairs, taking credit for the initiation of an international South American policy that would tend to the maintenance of peace, that of unlimited arbitration, for which the adherence of Ecuador was sought, stated that the Argentine Republic would not engage to remain neutral unless existing treaties were respected, and would not countenance conquest of territory. The Mexican Government announced officially that no alteration had been made in the original program of the Pan-American Congress, and that free discussion would be allowed on arbitration in all cases, present and future.

CHINA, an empire in eastern Asia. The Government, as laid down in the regulations of the Tsing dynasty, is based on the government of the family, and in theory the Emperor exercises supreme paternal authority. The principles and system of government were taken over by the Manchu conquerors, who founded the Tsing dynasty in 1644, from the Ming dynasty, and have been handed down since the age of Confucius. All acts of government are regulated as far as possible by precedents running back thousands of years. Imperial affairs are under the direct control of the Cabinet, called Neiko, consisting of 2 Manchus and 2 Chinese, advised by 2 members of the Hanlin College, whose duty it is to see that all edicts and proclamations conform in style and substance with the dynastic regulations and Confucian precepts. Important questions are decided by the Chun-Chi-Chu, the Grand Council, composed of 5 or 6 of the highest officers of state, both Manchus and Chinese, who have control over the Manchu army, and, unless the Emperor is a strong and resolute ruler, wield the real authority. Decrees and orders are issued by this council in the name of the Emperor to the executive boards in Peking and to the provincial authorities. The boards of administration are provided over each by a Manchu and a Chinese. One board, called the Civil Office, supervises the conduct and administration of the officials, confers titles, and grants rewards and precedence for meritorious conduct; another, the Board of Revenue, manages the finances; the third, the Board of Rites, enforces the laws relating to the ceremonies of the court and all public functions ordered by the Emperor, and regulates the rites called for by an eclipse or other national calamity; the fourth, the War Board, has charge of military affairs and directs the movements of troops; the fifth is the Board of Public Works; the sixth, the Board of Punishments, is the high court of criminal jurisdiction which tries and judges official delinquencies. A seventh board, the Admiralty Office, created in 1885, sits at Tientsin and directs naval affairs. The Board of Censors, composed of 40 to 50 members, also under the dual presidency of a Manchu and a Chinese, is independent of the Gov-

ernment, and its members have the duty of watching over all branches of the administration and the right to present memorials to the Emperor regarding any public need or evil or any relapse from the ancient standards. Their function is to keep the Emperor informed of all that goes on in any part of his dominions that is worthy of his notice, and in particular to keep an eye on malfeasance or oppression on the part of officials. The Tsung-li-Yamen, or Foreign Office, since 1861 has conducted all business with Western nations and with institutions directed by foreigners, such as the Maritime Customs and the Pekin University.

The Emperor is Tung-Chih, reigning under the style of Kwangsu, born Aug. 2, 1872, son of Prince Chun, the seventh son of the Emperor Taokwang. He was chosen by the imperial family to succeed his cousin, the Emperor Tung-Chih, who died without naming a successor in 1875, and until March 4, 1889, his aunt, the Empress-Dowager Tsu-Hsi, born Nov. 17, 1834, acted as regent, as she had done previously during the long minority of his predecessor, who was her son. On Sept. 22, 1898, in consequence of the Emperor's action in decreeing radical reforms, he was sequestered, and the Empress Dowager resumed the active direction of affairs. During the retirement of the Emperor, who was announced to be very ill, Pu-Chin, son of Tsai-Yi, son of Yit-Sung, fifth son of the Emperor Taokwang, was proclaimed the adoptive son of the late Emperor Tung-Chih and the heir to the throne. This proclamation was issued on Jan. 24, 1900. There are as many as 6,000 recognized princes of the royal blood.

Area and Population.—The official estimates of the area in square miles and of the population of the provinces of China proper are given in the following table:

PROVINCES.	Area.	Population.
Pechili.....	58,949	17,937,000
Shantung.....	53,762	36,247,835
Shansi.....	56,268	12,211,453
Honan.....	66,913	22,115,827
Kiangsu.....	44,500	20,905,171
Nganwei.....	48,461	20,596,288
Kiangsi.....	72,176	24,534,118
Chekiang.....	39,150	11,588,692
Fukien.....	38,500	22,190,556
Hupeh.....	70,450	34,244,685
Hunan.....	74,820	21,002,604
Shensi.....	67,400	8,432,193
Kansu.....	125,450	9,285,377
Szechuen.....	166,800	67,712,897
Kwangtung.....	79,456	29,706,249
Kwangsi.....	78,250	5,151,327
Kweichau.....	64,554	7,669,181
Yunnan.....	107,969	11,721,576
Total.....	1,313,328	383,253,029

Manchuria, with an area of 362,310 square miles, has a population estimated at 7,500,000; that of Mongolia, with an area of 1,288,000 square miles, is estimated at 2,000,000; Tibet is estimated to have an area of 651,500 square miles and about 6,000,000 inhabitants; Jungaria is 147,950 square miles in extent and has about 600,000 inhabitants; and Chinese Turkestan has an area of 431,800 square miles and 580,000 inhabitants. The area of the Chinese Empire is 4,218,401 square miles, and the estimated population 402,680,000. The ports open by treaty for Europeans to reside in are Canton, with about 2,500,000 inhabitants; Tientsin, with 1,000,000; Hankau, with 850,000; Hangchau, with 700,000; Fuchau, with 650,000; Shanghai, with 615,300; Suchau, with 500,000; Chungking, with 300,000; Ningpo, with 255,000; Chinkiang, with 140,000; and Amoy, Niuchuang, Wuhu, Wenchau, Shasi, Kiukiang, Wuchau,

Kiungchau, Chifu, Swatau, Ichang, Pakhoi, Szemao, Mengtsz, Lungchau, Samshui, Funning, Kongmun, Kaulun, Lappa, and Yatung. The number of foreigners residing in the treaty ports in 1899 was 17,193, of whom 5,562 were English, 2,440 Japanese, 2,335 Americans, 1,621 Russians, 1,423 Portuguese, 1,183 French, 1,134 Germans, 448 Spanish, 244 Swedes and Norwegians, 234 Belgians, 178 Danes, 124 Italians, 106 Dutch, 90 Austrians, 42 Koreans, and 29 others. There were 401 British commercial houses, 195 Japanese, 115 German, 76 French, 70 American, 19 Russian, and 10 Portuguese; the Italians, Dutch, Belgians, and Spaniards had each 9, the Austrians 5, the Danes 4, and Swedes and Norwegians 2.

The Army.—The Army of the Eight Banners is composed of descendants of the Manchus, Mongols, and Chinese who put an end to the Ming dynasty in the seventeenth century and placed the reigning dynasty on the throne. These troops are usually cantoned in 25 towns of the province of Pechili in the vicinity of the capital and distributed in garrisons in certain cities of the provinces and in Mongolia and Turkestan. The Army of the Green Flag, or provincial troops, are commanded by the Governor-General and governors. Their total strength is supposed to be between 400,000 and 500,000. Other troops, called irregular, are recruited and disbanded as occasion requires.

The Navy.—The naval forces of China are divided into the Peiyang, or northern squadron, belonging in the Gulf of Pechili, and the entirely independent southern squadron, called Nanyang, kept at Fuchau and Canton. The Peiyang consists at present of 5 small protected cruisers, the Hai-Chi, Hai-Tien, Hai-Yung, Hai-Shu, and Hai-Chen; 2 torpedo gunboats, the Fei-Ying and Fei-Ting; 1 unarmored cruiser, the Fu-Tsing; and 4 destroyers. The Nanyang comprises 2 small protected cruisers, the Yang-Pao and Ye-Sing; 7 unarmored cruisers, the Hsi-Ying, Honan-Tai, Kai-Chi, King-Ching, Nan-Shin, Nan-Yin, and Pao-Min; and 2 torpedo-cruisers, the Kuang-Ting and Kien-Wei. There are besides 5 gunboats, built before 1885, and 26 torpedo-boats.

Commerce and Production.—The value of imports in 1896 was reported by the Maritime Customs to be 202,589,994 Haikwan taels; in 1897, 202,828,625 taels; in 1898, 209,579,334 taels. The value of exports in 1896, 131,081,421 taels; in 1897, 163,501,358 taels; in 1898, 159,037,149 taels; in 1899, 195,784,832 taels. These figures do not indicate the entire value of the foreign commerce, because a great deal of merchandise is transported in native vessels that are beyond the control of the Maritime Customs. The imports of cotton yarn were valued at 54,941,000 taels; of cotton cloth, 48,524,000 taels; of opium, 35,793,000 taels; of rice, 17,813,000 taels; of petroleum, 13,002,000 taels; of sugar, 10,226,000 taels; of coal, 6,397,000 taels; of iron goods, 4,021,000 taels; of fish, 3,849,000 taels; of woolen cloth, 3,680,000 taels; of raw cotton, 3,476,000 taels; of flour, 3,189,000 taels; of matches, 2,713,000 taels. The exports of raw silk were valued at 71,366,000 taels; of tea, 31,469,000 taels; of silk fabrics, 10,527,000 taels; of beans and bean cake, 9,418,000 taels; of skins, 7,720,000 taels; of wool, 4,141,000 taels; of matting, 3,652,000 taels; of sugar, 3,373,000 taels; of cotton, 2,980,000 taels; of straw braid, 2,882,000 taels; of tobacco, 2,310,000 taels; of clothing and shoes, 2,224,000 taels; of provisions and pulse, 2,184,000 taels; of paper, 2,158,000 taels; of oil, 2,046,000 taels; of porcelain and pottery, 1,893,000 taels. The values of the imports and exports in 1899 were in Haikwan taels as follow:

TREATY PORTS.	Imports.	Exports.
Shanghai.....	153,808,000	90,937,000
Kaulun.....	24,501,000	26,221,000
Canton.....	13,862,000	23,900,000
Tientsin.....	14,255,000	10,872,000
Swatow.....	13,315,000	4,525,000
Amoy.....	13,602,000	1,377,000
Niuchuang.....	5,279,000	8,693,000
Fuchau.....	5,986,000	5,869,000
Lappa.....	3,655,000	6,173,000
Chifu.....	6,540,000	2,075,000
Hangchau.....	440,000	6,155,000
Wuchau.....	4,076,000	1,846,000
Mongtze.....	3,374,000	1,883,000
Kibingchau.....	2,510,000	2,142,000
Pakhoi.....	2,443,000	1,650,000
Other ports.....	6,110,000	1,458,000
Total.....	273,756,000	195,785,000

The reexports from the various ports, amounting to 9,008,000 taels, are not included in the imports as given in the above table. The values in taels of the imports from and exports to the various foreign countries and ports in 1899 were as follow:

COUNTRIES.	Imports.	Exports.
Hong-Kong.....	118,096,000	71,846,000
Great Britain.....	40,161,000	13,963,000
Japan.....	35,896,000	17,251,000
United States.....	22,289,000	21,686,000
East India.....	31,911,000	1,731,000
Siberia.....	28,000	13,214,000
Macao.....	3,409,000	5,824,000
Odessa.....	3,239,000	5,343,000
Singapore.....	3,646,000	2,232,000
British America.....	1,209,000	260,000
Rest of Europe.....	10,172,000	36,764,000
Other countries.....	3,445,000	5,671,000
Total.....	273,756,000	195,785,000

The quantity of tea exported in 1899 was 1,630,795 piculs, of which 869,873 piculs went to Russia, 236,021 piculs to Great Britain, 218,535 piculs to the United States, 117,737 piculs to Hong-Kong, and 45,607 piculs to Australia. The development of Chinese commerce in the last few years shows a great increase of American trade, particularly in flannels, sheetings, and jeans. Russian cottons have also come into competition with Manchester goods. Russian kerosene has driven the American oil out of the market, but the loss of this trade is offset by the imports of American canned foods, cigarettes, and a variety of minor products.

Navigation.—The number of vessels entered and cleared at the treaty ports during 1899 was 65,418, of 39,268,330 tons, of which 12,698, of 1,473,890 tons, were sailing vessels, and 52,720, of 37,794,440 tons, were steamers. Of the total number, 25,350, of 23,338,230 tons, were British; 31,009, of 9,349,247 tons, were Chinese; 3,712, of 2,839,741 tons, were Japanese; 2,078, of 1,854,246 tons, were German; 822, of 613,191 tons, were French; and 716, of 310,107 tons, were American.

Railroads and Telegraphs.—The railroads already built in 1900 had a total length of 292 miles. The railroads planned and authorized would make 4,036 miles more.

There were 14,285 miles of telegraph lines completed in 1900. Along the coast the Great Northern and Eastern Extension Telegraph Companies have submarine cables. The central administration of the Chinese Government telegraphs is at Shanghai.

Peace Negotiations.—At the beginning of 1901 the allied troops, under the command of the German Field-Marshal Count von Waldersee, were in occupation of Peking and other places in the province of Pechili, and were guarding the railroads. The conditions on which the powers were willing to evacuate the capital city and province

had been given to the Chinese plenipotentiaries in a joint note. All the powers had repeatedly pledged themselves that they would maintain undiminished the territorial integrity of China and the principle of equal treatment to foreigners embodied in existing treaties. Germany and Great Britain had entered into a separate agreement to keep the coasts and rivers free to the commerce of all nations, so far as they exercised influence, and not to make use of the present complications to seek territorial advantages, provided no other power sought to turn the situation to its advantage; contrariwise they would agree between themselves as to what steps they would take to protect their own interests. The other powers had joined in the first part of this agreement, while rejecting the proviso, except Japan, which adopted it integrally as one of the signers. Russia had made an independent declaration that she would not infringe on the independence or integrity of China. The United States and Russia endeavored to induce other powers to abate their demands for money indemnities from China and for the execution of high Chinese officials implicated in the anti-foreign movement. The Chinese court was willing to accept the conditions imposed by the powers so as to deliver Pechili from the military operations that were carried on under the orders of Count von Waldersee, who had arrived with a large German force after the allied troops had broken down the resistance of the Chinese army, which had evacuated Pechili, the main force accompanying the court in its flight to the province of Shensi. The commander-in-chief, whose field staff was composed of German officers only, sent out punitive columns which scoured the province of Pechili. The German troops, who had the spirit of retaliation impressed upon them when they set out and the example of looting after their arrival, and who were ignorant of the people and of what had been done by those who were on the spot before them, began by harassing the neighborhood of Peking, looting wherever they went and shooting innocent villagers on the supposition that they were Boxers. Soon they were sent out on expeditions and allowed to live on the country. They continued to punish the innocent with the guilty, and were said to engage in systematic pillage, to levy fines in quiet villages in order to reduce the cost of feeding themselves, and even to kill wantonly and to maltreat women. They outraged without compunction the cherished beliefs of the people, destroyed the authority of native officials, collected indemnities from towns that were either innocent or had already made atonement for their crimes, drove out the regularly constituted officials who were acting in harmony with the Europeans, set free Boxers who were held by the Chinese for punishment, sacked friendly towns, and killed the native police and harmless villagers. Chinese officials, appointed by Li-Hung-Chang as Viceroy of Pechili, were already administering the province under foreign supervision. The allied commanders in Peking drew up a code of laws to be administered by Chinese judges. Persons who had any part in the Boxer rebellion or had committed injury to the life or property of any Chinaman or foreigner during the uprising, or who attacked the foreign police or resisted arrest, were punishable with death, as well as persons guilty of murder, robbery, burglary, counterfeiting, and other ordinary crimes.

The United States proposed that the negotiations concerning the indemnities to be paid by the Chinese Government and the revision of the commercial treaties should be withdrawn from the deliberations of the foreign ministers in Peking

and be submitted to another tribunal. Some of the powers expressed dissent and others hesitated to give a definite reply. For this reason the proposal was withdrawn, and a despatch was sent urging that negotiations be expedited. The Yang-Tse Viceroy, who had saved central and southern China from being carried away by the antifeign movement and who had braved the imperial displeasure in their efforts to bring the deluded court to reason, objected strongly to some of the terms demanded by the powers as destructive of the independence of China. Their protest, intended probably to influence the powers rather than the court, had no effect. On Jan. 13 the Chinese envoys, Li Hung Chang and Prince Ching, notified the foreign ministers that they had received the imperial sanction to sign the protocols in the form required by the ministers, and on Jan. 14 they signed them. A few days later they sent a note to the ministers inquiring as to the probable date of the withdrawal of the allied troops, stating that the officials marked out for punishment by the ministers had been dealt with and had suffered the severest penalties that the Chinese law prescribes for the crimes they had committed. The ministers replied that the signing of the agreement must be followed by acts showing good faith, and that it would be useless for the Chinese Government to expect the removal of the troops until China had conclusively proved her intentions. The ministers were still discussing the punishments that they would require the Chinese Government to inflict upon the antifeign princes and mandarins. Death was prescribed for Prince Tuan, Gen. Tung-Fuh-Siang, and Duke Lan, and for the high officials Ying-Nien, Chao-Shu-Chiao, and Chih-Hsiu, as well as for Prince Chuang and Yu-Hsien. Men who had the Chinese army at their back and the court in their power were not likely to submit to such a fate. The United States, Japan, and Russia, recognizing the impracticable nature of the demand, opposed the death penalty. The Chinese Government at Singan-Fu proposed to decapitate Yu-Hsien, to order Prince Chuang to commit suicide, to exile Prince Tuan, Duke Lan, and Ying-Nien to the frontiers, and to degrade Chao-Shu-Chiao, Tung-Fuh-Siang, and posthumously Li-Ping-Heng and Kang-Yi. The demand of the ministers that capital punishment should be inflicted on every one of the offending princes, generals, and officials seemed to the Chinese mind illogical, in no way a fulfilment of the paragraph in the note requiring the punishment to fit the crime; for if the severest known penalty were inflicted on the least offenders, there could be no fitting punishment for those whose crimes were graver. A supplementary list of officials to be punished was furnished by the ministers. They agreed to allow the Emperor to commute the death sentence into banishment to Chinese Turkestan in the case of the imperial Princes Tuan and Lan. Tung-Fuh-Siang, the commander-in-chief of the Chinese army, could be dealt with when the Emperor had the power, as was secretly promised, and the others, living and dead, must suffer the disgrace of capital punishment before the powers would believe in the good faith of China. The death sentence was demanded for Chih-Liu and Hsu-Cheng-Yu, who were prisoners in the hands of the Japanese. For the members of the Tsung-Li-Yamen and the other Peking officials, Hsu-Yung-Yi, Hsu-Ching-Cheng, Lien-Yuan, Li-Shan, and Yuan-Chang, who were executed in the summer, posthumous honors were demanded.

The humiliations and privations of exile made the court willing to agree to terms that the Viceroy Liu-Kun-Yi of Nankin, and Chang-Chih-

Tung of Wuchang protested against; still the Empress Dowager would not return to Peking until the European soldiers were withdrawn. The leading members of the Grand Council at Singan-Fu, constituting the Central Government, were the astute Yung-Lu, Lu-Chuan-Lin, believed to be a reactionary, and Wan-Wen-Shao, who was credited with progressive ideas. The court agreed to the punishment demanded for the guilty officials, and issued a bulletin announcing the sentences. The Chinese plenipotentiaries suggested that the Board of Punishment was the proper organ to give effect to the decrees. Edicts were issued complying with the other demands of the joint note. Prince Chun, the Emperor's brother, was commissioned to go to Berlin to express China's regret for the murder of Baron von Ketteler, the German minister. The powers themselves could decide about the legation guards and fortifications, the military posts on the railroad, and the razing of the Taku forts. China had accepted all the conditions of peace imposed by the powers. The amount of the indemnities and the manner of payment alone remained to be determined. The speedy compliance with the twelve demands of the powers was probably hastened by a threatened expedition to Singan-Fu that Count von Waldersee was preparing, which was cancelled after the final submission of the court. The conversion of the court at Singan-Fu to ideas of progress was coincident with the resumption of authority by the young Emperor, with the concurrence of the Empress Dowager.

The military experts who studied the question of defensive works for the legations proposed an international fortress, with walls, moats, siege-works, Maxims, barracks for 2,000 soldiers, and supplies and munitions sufficient to withstand a siege of three months. The area of the legation quarter was vastly extended, enabling the representatives of the powers to seize private property of great value. No Chinese or employees of the Chinese Government should be allowed to live within the diplomatic area. The Italian legation took possession of the Temple of Ancestors, which was sacred to the Emperor's own use, and, in addition to other property, laid claim to the residence and garden of the Director-General of the Imperial Maritime Customs, and the Austrian, French, and German legations insisted on expropriating the rest of the compound from which Sir Robert Hart and his staff assisted effectually in the defense of the legations during the siege. Sir Robert Hart sent a letter of protest to the ministers. The legations of Russia, the United States, and Belgium occupied the sites of other Government offices. The Board of Public Works, the Board of Revenue, and the Board of Ceremonials were taken by the British and the Russians. The American legation was the only one that volunteered to compensate Chinese owners of the ground required for the extension. The legation quarter has an area of nearly one-half of a square mile. The legations began building barracks for the 1,750 soldiers to be permanently quartered within this space. A glacis was built around the entire legation area. The American embrasures commanded the main entrance to the imperial palace, the German the Hatamen gate. The ministers having ignored the plan for a uniform system of defense that the allied generals recommended, the governments worked independently. The ministers avoided conspicuous fortifications lest they provoke hostilities or prevent the court from ever returning to Peking. Against the advice of the military engineers who designed a fortress, they adopted the principle that the works should be

no more than a protection against mob violence. They generally consist of a wall 15 to 20 feet high and 3 or 4 feet thick, with loopholes for rifles and machine guns. In the walls in front of the American and some of the other legations the loopholes were bricked up, so as not to give offense. The Chinese Government made a demand that the yamuns of the Board of Government and the temples should be restored, and held that the foreign governments should compensate private owners for the property they took for their own purposes, and not place this burden on the Chinese treasury in addition to the indemnities. In the end the Chinese authorities were induced to grant the requisite concessions, and to undertake to pay private owners.

The ministers made out lists of provincial officials that deserved death for having instigated or permitted the murders of missionaries and other Europeans during the Boxer uprising. Besides 240 missionaries, 30,000 converts had been murdered by the antifeign fanatics, and to expiate the massacres, officials of various degrees were designated by the ministers for punishment. Of the murdered missionaries, 113 were British, 78 were Americans and Scandinavians aided by American societies, and 49 were Roman Catholics. The British minister was especially anxious to bring to justice the persons responsible for the Chuchau massacre, and obtained the assistance of the Governor of Chekiang, on whose report the Imperial Government eventually decreed the degradation of the ex-Governor and the commander of the troops. The victims at Chuchau were 11 British missionaries, who were murdered in obedience to the imperial edict of July, 1900, ordering the extermination of foreigners. The Russian minister positively refused to be a party to any further demands for decapitations. The Spanish minister agreed with him in the opinion that diplomatists who had endured the siege were not fit judges in such matters. Mr. Rockhill, the United States special commissioner, was instructed by the President to object to further bloodshed. The Japanese Government took the same view. The majority of the ministers insisted on exemplary justice in the localities where the Boxer crimes were committed, and presented a list of 140 officials marked out for punishment, of whom 11 should be doomed to decapitation. The Russian Government took no interest in proceedings relating to the murders of missionaries. The Russian Church, although it is represented by a fine edifice and a staff of ecclesiastics in Peking, has never made proselytes in China. Russia was opposed from the beginning to dictating judicial decrees in China, as the United States and Japan were also, but the representatives of these powers had concurred with the others so far in order not to disturb the concert. The demand for decapitations was afterward cut down to 4 and for other sentences to 91, and in the end the ministers did not insist on the punishment of any local officials beyond those already dealt with in Chuchau. Boxers who were caught in the American quarter of Peking, Gen. Chaffee, under instructions from Washington, invariably handed over to the Board of Punishments to be judged according to Chinese law.

Field-Marshal Count von Waldersee called a conference of the foreign commanders on April 29, to consider the question of the withdrawal of the troops. The ministers were informed that evacuation might begin as soon as they had agreed on the sum to be paid by China in indemnities and China had agreed to its payment. The generals decided to hand over the administration of Peking

gradually to the Chinese, who had already established the various boards of government. This plan was in operation in the Japanese, American, and British quarters, the military exercising only a passive supervision over the departments confided to the Chinese officials.

In the discussion of the indemnity and the mode of its payment serious differences between the Cabinets were disclosed, and the question was taken from the consideration of the ministers to be settled by negotiation between the governments. The claims put forward by some of the powers seemed likely to bankrupt China. Italy demanded for the purpose of rebuilding the legation sixteen times the cost of the one destroyed, and Germany wanted China to pay for the fortifications at Kiaochau. France's claim was swelled in order to provide a liberal recompense for native Christians, and thus strengthen the influence of that power as the protector of all the Catholic missions in China. Russia required to be reimbursed for the cost of her army in Manchuria and for repairs on the Manchurian railroads. Private claims for damages amounted to immense sums, almost every foreigner in China regarding the situation as an opportunity for enriching himself at the expense of the Chinese treasury. The Austrian and Italian governments insisted on indemnities for the families of soldiers who were killed in the defense of the legations and in the march of the relief columns from the sea to Peking. All the governments required repayment of the expenses of the expeditions to China. The United States Government took the view that legitimate damages ended as soon as the legations were rescued and the capital city and province occupied by the allied troops, but obtained no support for this contention, which would exclude the greater part of the German claim, and was a stricture on the useless and mischievous punitive expeditions that Count von Waldersee sanctioned in order to keep his soldiers busy. The ministers appointed the British, French, German, and Japanese representatives a committee to examine into the financial resources of China. They questioned all who were most expert in the matter, and came to vague and inconclusive results. The claims after being sifted amounted to 450,000,000 taels, or £65,000,000. The United States Government endeavored to get the powers to agree first to a lump sum that would be within the resources of China to pay, and to apportion this among themselves according to the expenses and damages they had incurred. The sum of \$200,000,000 was suggested as being sufficient to pay well-founded claims, though perhaps beyond the ability of China to pay. The United States would be content with an eighth of this, and the other seven parts might be divided among the seven powers that had taken an active part in the relief of the legations, excluding the two others. If the powers would cut down the total to \$100,000,000, a sum that China could pay without being seriously crippled, the United States would reduce its claim proportionally with the other powers. The United States was willing to accept in payment bonds of the Chinese Government bearing 3 per cent. interest at par. The claims when first presented amounted to \$85,000,000 for Russia, \$60,000,000 for Germany, \$55,000,000 for France, \$25,000,000 for the United States, \$24,000,000 for Great Britain, \$23,000,000 for Japan, \$6,000,000 for Belgium, and \$30,000,000 for Italy, Austria-Hungary, and Spain, and for every month from April 1 the total increased at the rate of \$10,000,000. The French claim included \$18,000,000 demanded by the Catholic Church on

account of the destruction of mission property. This did not include the sums exacted from local authorities to indemnify native Christians. American Protestant missionaries collected indemnities from local authorities and individuals, and the money thus paid the United States Government proposed to reckon in abatement of its total claim. Local mandarins were willing to make voluntary compensation in order to keep their names out of the black list of guilty officials, and wealthy men and villages would pay to obtain immunity from the visitation of foreign soldiers. The sums exacted, amounting to many millions of taels, and the methods employed to compel payment aroused fresh hatred against the missionaries in the northern and central provinces. Germany increased her claim later to \$70,000,000 on account of the prolonged military occupation. Great Britain was willing to agree to a reduction of the indemnities all round, and Russia and Japan were non-committal. All the other powers rejected the proposal of the United States. Japan made a request to be allowed to increase her claim to cover the depreciation of Japanese bonds issued to defray the cost of the expedition. Other powers came in with increased demands when they saw that their allotments were likely to be disturbed, and Japan thereupon withdrew the request, although it was strongly backed by the United States and regarded with favor by other powers.

The committee of ministers discovered that the total imperial revenues amount to about \$65,000,000 in gold per annum, of which \$14,000,000 are derived from the land tax, \$12,000,000 from the Imperial Maritime Customs, and the rest from the grain tax, salt gabels, likin dues, opium tax, and miscellaneous sources. Foreigners thought that the land tax might be doubled or trebled without producing hardship, the salt tax raised from \$6,000,000 to \$20,000,000, and the total revenue increased to \$150,000,000, while Government expenses could be cut down to \$45,000,000, leaving \$105,000,000 a year with which to pay interest on foreign loans. The committee of foreign ministers found that the maritime customs, amounting to between 28,000,000 and 29,000,000 taels, were practically exhausted, 24,000,000 taels being absorbed in paying interest on the existing external loans, 2,500,000 taels in the maintenance of the staff of foreign employees, 120,000 taels in supporting the university, and 1,300,000 taels in keeping up the Chinese legations abroad. The committee recommended for the service of the new loan an increase in the customs duties to 10 per cent., yielding from 10,500,000 to 18,000,000 taels; a salt tax, yielding from 4,000,000 to 20,000,000 taels; a Peking octroi, yielding 500,000 taels; a commutation of the rice tribute, yielding from 1,000,000 to 8,000,000 taels; the abolition of the Manchu pensions; and the reduction of military expenses. The committee recommended that the indemnity loan be guaranteed by the powers, enabling China to pay the required £65,000,000 by borrowing £70,000,000 at 4 or 4½ per cent., whereas on the strength of her own credit she would have to issue a 5-per-cent. loan of £85,000,000. The members of the committee were as far from being unanimous in recommending the financial scheme as in the estimates of the yield of the proposed taxes, which varied from 21,500,000 to 61,500,000 taels. The land tax and the likin they thought ought not to be touched. If they were divided in opinion the governments were still more so. The proposal to raise the customs tariff to 10 per cent. ad valorem came from Germany, and was supported by the

other powers excepting the United States, Great Britain, and Japan, the only three besides Germany that have important trading interests in China. Such an increase has been contemplated for a long time, but only in connection with the abolition of likin duties and other hindrances to commerce with the interior and the establishment of new treaty ports, throwing the whole of China open to foreign trade, in which case the increased receipts must go to reimburse the local authorities for their loss of revenue. Otherwise the effect would be to build up immense manufacturing interests in China, which, with foreign capital and superintendence, the newest modern machinery, and cheap Chinese labor, would undersell every other manufacturing nation. Russia was much more urgent than Germany in pressing for the increase in the tariff, for the blow to seaborne commerce would be an advantage to Russia by increasing the overland trade with Russian possessions. France would also benefit by the diversion of commerce to her possessions south of China. Sir Robert Hart recommended as new sources of revenue a stamp tax, to produce annually 5,000,000 taels; a tax on native opium, to produce 10,000,000 taels; and a house tax, to produce from 20,000,000 to 80,000,000 taels. These new taxes were intended to supply the deficiencies in the imperial revenues caused by China's increased indebtedness to foreign powers. As security for the indemnity loan the Director-General of Customs, who has been a financial adviser of the Chinese Government for over thirty years, proposed an excise duty on salt, which would produce from 15,000,000 to 20,000,000 taels a year; a customs duty to be paid by Chinese junks, which would yield from 3,000,000 to 5,000,000 taels; an octroi at Peking, if needed, producing 500,000 taels; the abolition of the Manchu stipends, amounting each year to 3,000,000 taels; and the commutation of the grain tribute into money, giving 2,000,000 taels. Sir Robert Hart proposed that the indemnity be paid by annual instalments, each power accepting Chinese bonds for its portion of the total sum. Several powers, however, objected to this method because they wanted their portions immediately, and it was feared by others that individual powers might intervene in China for their aggrandizement if China failed to meet her obligations promptly. Sir Robert Hart thought that the likin and salt duties should be collected by the Maritime Customs Department. The new taxes he suggested in deference to the objection of Great Britain to an immediate increase of the customs tariff to 10 per cent., which in pounds sterling is about the same as 5 per cent. was when the duties were fixed in accordance with the Tientsin treaty; but by doubling the tariff rates and gradually abolishing likin he thought that China would be able to pay the debt without difficulty by reason of her expanding resources. The duties were fixed in 1861 at 5 per cent. ad valorem, but the valuations adopted then and since have converted them into specific duties which are at the present time only 2½ to 3½ per cent. ad valorem. Great Britain and the United States could not object by way of compromise to such increases in the specific duties as would make an effective 5-per-cent. rate. This was the recommendation of the committee of ministers in case a 10-per-cent. tariff was not acceptable, and they proposed to assign further to the payment of the indemnities the native customs and to impose duties on certain articles that have been imported free, such as butter, flour, cheese, foreign clothing, and spirits. The estimates of what these sources would produce varied

from 5,500,000 to 15,000,000 taels. The Russian minister estimated that the native customs would give 3,000,000 taels, and that there was an available balance of 3,500,000 taels in the existing customs revenue, which could be increased by 2,500,000 taels if the import duties were raised to an effective 5-per-cent.; if they were raised further to 10 per cent. there would be an additional 10,000,000 taels, giving a total of 19,000,000 taels to provide for the service of a loan of £70,000,000 at 4 per cent., being 800,000 taels more than would be required.

The ministers notified China on May 7 that the joint indemnity would be 450,000,000 taels, and asked by what methods she proposed to pay it. The Chinese Government promptly agreed to pay the sum demanded, proposing to meet a loan for that amount, conjointly guaranteed by the powers, at 4 per cent. interest, extinguishable in fifty years, by paying 20,000,000 taels annually, of which 10,000,000 taels would be raised by a salt tax, 3,000,000 taels from native customs, and 2,000,000 taels from the *likin*; if need should arise the Manchu pension fund would be appropriated. Great Britain and the United States opposed a joint guarantee, while Russia and the other powers insisted on this and Russia on an increase of customs duties to 10 per cent. The United States Government proposed to submit the whole question of indemnities to the arbitration of The Hague tribunal, but found no support for this solution. The deadlock lasted nearly two months, and was broken at last by a compromise. As finally decided, the amount of the total indemnity was not changed from 450,000,000 taels, equal to \$337,000,000. Each creditor power was to receive the amount of its claim in Chinese bonds bearing 4 per cent. interest from July 1, 1901, to be extinguished in 1940 by a sinking-fund, the first payment to be made in 1904. Payments are to be made in gold at the rate of exchange existing on April 1, 1901. The fiscal resources assigned to the payment of the bonds are the salt gabel, the native customs levied in non-treaty ports, and the maritime customs imposed in treaty ports on foreign goods, the duties being raised to an actual 5-per-cent. *ad valorem* payable in silver, excepting the portions of the maritime customs and of the salt gabel that are already pledged for the payment of other debts. The free list is abolished except in the case of cereals. If the duty of 5 per cent. prove inadequate, the powers will be at liberty to increase it up to 10 per cent. The proposal to pay off the bonds by 1940, instead of 1950, as suggested by the ministers, came from the Chinese Government, which must make a considerable financial sacrifice to become rid of the debt sooner. The annual burden of the national debt is maintained to the last at about 42,000,000 taels, whereas the scheme favored by the ministers would steadily reduce the burden after a few years. The interest and sinking-fund of the indemnity loan amount to 23,000,000 taels per annum. Revenues now assigned to other debts will, when those debts are extinguished, be applied to the indemnity, the principal and interest of which will require first and last the payment of 1,000,000,000 taels. In accordance with one of the demands of the powers the Tsung-li-Yamen was abolished and a Board of Foreign Affairs (in Chinese, *Wai-Wu-Pu*) instituted in its place, presided over by an imperial prince and containing two ministers and two assistants. Wang-Wen-Shao and Chu-Hung-Chi were appointed ministers and Hsi-Hu-Peng and Lien-Fang assistants. The *Wai-Wu-Pu* shall have precedence over all other boards, and the ministers

shall have direct access to the Emperor. Foreign ministers when admitted to audience will be conveyed in imperial chairs to the palace through the central gates, and will be received in the halls where the Emperor is accustomed to entertain imperial princes.

The ministers proposed improvements in Peiho river and a channel for ocean steamers in Shanghai river, and the Chinese representatives accepted this proposition. The consideration of conditions to facilitate commerce and inland navigation, which were under negotiation before the Boxer troubles began and formed one of the leading demands in the note of the powers, was by mutual consent left to be the subject of future negotiations in connection with the increase of foreign customs to 10 per cent. and the concomitant abolition of the *likin*. It was agreed that the new 5-per-cent. tariff, including goods heretofore exempt from duty, should come into force on Oct. 1, 1901, but that goods already in transit at the date of the signature of the protocol should be admitted at the old rates of duty. The average prices of merchandise from 1897 to 1899 were taken as the basis of valuation for the new specific duties, for it was decided that the duties should be specific and not *ad valorem*, so as to prevent frauds. A commission was appointed to conduct commercial negotiations with China, as provided in the protocol, its task being to revise the treaties of commerce and arrange for the opening of new ports to trade. Delay was caused after the question of the indemnity had been settled by the opposition of Great Britain to the negotiations being conducted by an international commission in which Italy, Spain, Austria, and the Netherlands would be represented, their trading interests in China being insignificant, while England has three-fourths of the total Chinese trade. The British proposal was that each power should negotiate a tariff separately, the advantages of which would be secured to the others by a most-favored-nation clause. With the object of preventing the isolated action of any of the powers in connection with the reopening of the Manchurian question or otherwise, the British Government proposed to exact a covenant from China that she would not convert or redeem the indemnity debt, but would pay it in strict accordance with the scheme of amortization extinguishing the debt in 1940. As the British amendments were unacceptable they were withdrawn.

The demand contained in the joint note for the perpetual interdiction of imports of arms and war material into China, and also of the materials for their manufacture, was opposed by the United States and Japan from the beginning as depriving China of an essential element of independence. The Chinese plenipotentiaries pointed out that the Chinese Government would not be able to preserve the internal peace and order for which it was held responsible if prevented from maintaining an armed force. It was finally decided to forbid the importation of arms for two years, the prohibition to be extended, if found necessary, for further successive periods of two years. The Chinese meanwhile had been importing munitions of war in large quantities, and in their own arsenals were turning out magazine rifles and smokeless powder. When the edict was issued forbidding imports of munitions of war for two years it was directed to private merchants, and did not apply, as the ministers had intended it should, to either the imperial or the provincial governments. The edict ordering the punishment of provincial officials was equally nugatory, and some of the persons whom the ministers had proscribed were

An edict suspended for five years examinations in cities where foreigners had been killed or maltreated.

The draft was completed and agreed on by the ministers on Aug. 16, and Chinese commissioners signed this protocol on Sept. 7. It consisted of 12 articles. The first recited that Prince Chun had been appointed on June 9 special ambassador to proceed to Germany to express the regrets of the Chinese Government for the murder of Baron von Ketteler, and had sailed on July 12; and that China had undertaken to erect a memorial arch spanning the street at the place where the murder occurred, and had begun the work on June 25. The second article recited that by the edicts of Feb. 13 and 21 Prince Tuan and Duke Lan were exiled to Turkestan and condemned to perpetual imprisonment; Chuang, Ying-Nien, and Chao-Shu-Chiao ordered to commit suicide; Yu-Hsien, Chi-Hsiu, and Hsu-Cheng-Yu condemned to execution; Yang-Yi, Hsu-Tung, and Li-Ping-Heng to posthumous degradation; while Hsu-Yung-Yi, Li-Shan, Lien-Yuan, Yuan-Chang, and Hsu-Ching-Cheng were rewarded with posthumous honors. By other edicts Tung-Fuh-Siang was cashiered and punishment was inflicted on provincial officials, and it was stated that Chuang committed suicide on Feb. 21, Ying-Nien and Chao-Shu-Chiao on Feb. 24, and Yu-Hsien was executed on Feb. 22, and Chi-Hsiu and Hsi-Cheng-Yu on Feb. 26; and that an edict suspended examinations for five years in places where antiforeign crimes had been committed. In the third article it was stated that by way of honorable reparation for the murder of Sujiyama an edict of June 18 had appointed Na-Tung special envoy to convey the regrets of the Chinese Government to Japan. The fourth article stated that China had already paid the cost of expiatory monuments in foreign cemeteries that had been desecrated. The fifth article stated that an edict had been promulgated forbidding imports of arms and materials used in their manufacture for two years, the time to be extended, if necessary. In the sixth article China's obligation to pay the indemnity was acknowledged, the edict accepting 450,000,000 taels as the amount having been issued on May 29, the payments to be made in gold at the rate of 38. to the tael, payable half-yearly, the debt to be extinguished in thirty-nine years according to the plan of amortization, the balance of the maritime customs, raised to an effective 5-per-cent, and including articles previously on the free list excepting rice, cereals, flour, and precious metals, being assigned as security, also native customs administered in open ports by the Imperial Maritime Customs and the unhypothecated portion of the salt gabel, the conditions on which the increase in the tariff was agreed to being that the duties should be specific, and that the beds of the Whangpoo and Peiho rivers, the approaches to Shanghai and Peking, should be improved with the financial participation of China. The seventh article defined the limits of the legation area, and affirmed the right of the legations to have a defensible quarter reserved for exclusively foreign use, and also the right to maintain legation guards. In the eighth article China agreed to raze the forts at Taku and others forts impeding communications between Peking and the sea. In the ninth article it was stated that China on Jan. 16 had conceded to the powers the right to occupy the points necessary for keeping open communication between Peking and the sea—namely, Huangtsun, Langfang, Yangtsun, Tientsin, Chunliangcheng, Tangku, Lutai, Tongshan, Lanchau, Changli, Chingwantao,

and Shanhaikwan. In the tenth article China promised to post during two years the edict of Feb. 1 prohibiting membership in any antiforeign society on pain of death, the edict enumerating punishments, the edict prohibiting examinations, and the edict of Feb. 1 declaring that the viceroys, governors, and local officials responsible for order will, if guilty, be dismissed and never employed again. By the eleventh article China agreed to negotiate amendments to the commercial treaties; also to contribute 60,000 taels a year toward the conservancy of the Peiho channel and half the cost of the Whangpoo improvement, estimated at 460,000 taels a year for twenty years. The twelfth article stated that the edict of July 24 transformed the Tsung-li-Yamen into the Wai-Wu-Pu, or Board of Foreign Affairs, which has precedence of the six other ministries of state. China having thus complied to the satisfaction of the powers with the conditions of the note of Dec. 22, 1900, which the Emperor accepted in its entirety in his decree of Dec. 27, the powers on their part agreed to terminate the situation created by the disorders of the summer of 1900 and to withdraw the international troops, with the exception of the legation guards, from Peking and evacuate Pechili, with the exception of the points named.

The Emperor's brother, Prince Chun-Tsai-Fong, who was commissioned to convey the Emperor's regret for the murder of the German minister to the Kaiser, did not proceed at once to Berlin after his arrival in Europe, but halted in Switzerland until he could receive instructions from China in regard to the ceremonial which the German Government wished to prescribe. As an act of humiliation suited to the expiatory character of the mission, and still more as a recognition of the equality of the German and Chinese sovereigns, the Chinese prince was asked to kowtow to the Kaiser, or go through the reverential ceremony that Chinamen perform in the presence of their Emperor, consisting in touching the ground three times with the forehead and making nine profound bows. This demand was withdrawn, and it was arranged that the Chinese prince should make three obeisances. Prince Chun was received at the Sans Souci palace, in Potsdam, on Sept. 4, and delivered to Kaiser Wilhelm a letter from the Emperor of China expressing deep regret that Baron von Ketteler had been murdered as the result of the invasion of Peking by the rebellious Boxers and the act of the soldiers in joining the rebellion, rendering it impossible for him to take due protective measures.

Military Operations.—The relief of the legations and the occupation of the Chinese imperial city accomplished the ostensible objects of the military intervention before the arrival of Count von Waldersee, who had been accepted by the intervening powers as commander-in-chief of the international forces after a preliminary correspondence between the German and Russian Emperors. When he arrived with the German expedition of 20,800 men he found 18,500 English and Indian troops under Gen. Sir Alfred Gaselee, the Japanese force of nearly the same strength under Gen. Yamaguiehi, the Americans under Gen. Chaffee's command, the French contingent of 16,000 under Gen. Voyron, the large Russian force under Gen. Linevich, and the small Italian and Austrian detachments. There were divergent views among the different governments as to the military policy to be followed, though they agreed in the opinion that the purpose of the troops was to guard the capital and the surrounding districts and hold them until China accepted the terms that the

powers should impose as the conditions of evacuation. The city was divided into districts after capture, and each national contingent had its quarters in the district given into its charge. At first there was havoc and indiscriminate looting, but after the several commanders took charge of different sections they established patrols which stopped most of the looting by individuals within the city. Systematized looting by command was then begun. The houses of the princes and mandarins who had accompanied the Emperor and Empress Dowager to Singan-Fu were stripped of their valuable contents, as were merchants' warehouses. The imperial palaces were gutted, except those guarded by the Japanese, who alone refrained from plunder. American commanding officers did not countenance looting, however, and the French and the Russians kept their troops partially under control. The British collected the loot and sold it at auction for the benefit of their officers and men.

The American and French governments declined to recognize the necessity for a commander-in-chief after the object of the joint expedition had been already achieved, and their commanders would not take orders from the German field-marshal. The Japanese accepted his authority as a matter of form, with the understanding that it would not be exercised. The Russians withdrew their forces to Manchuria, leaving Gen. Wogack with only enough troops to guard the railroad and garrison the stations in the northeast, with instructions to take no part in hostile operations against the Chinese. Except the Italian troops and the petty Austrian detachment, the English were the only troops besides the German expedition that were placed unreservedly under the command of Count von Waldersee, whose staff was composed only of German officers. For larger operations having a political bearing he called into consultation the commanders of the international forces, who decided whether they would cooperate with their troops, seeking first the advice of their ministers or instructions from their governments if the proposed movement was likely to have political consequences. The international command of Count von Waldersee was by agreement between the cabinets confined to the province of Pechili. By agreement with the Chinese court at Singan-Fu, Chinese troops were kept out of Pechili so that they should not come into collision with the international forces. A formal agreement was made on Jan. 2 between Count von Waldersee and Li-Hung-Chang, who was Viceroy of Pechili, defining the limits of the district to be occupied and kept in order by the allies, outside of which the Chinese engaged to preserve peace and order. The military district to be patrolled by European troops was defined in general orders. The railroads and the military posts outside of Pekin were assigned to different divisions of the international force. The German troops who had come too late to have a share in the fighting and the looting that followed must have occupation, and were therefore sent out on excursions in all directions through the military district. They harried the country, seizing supplies where they could find them, and carrying off whatever valuable loot was left, shot defenseless people, disarmed the police, levied fines on villages and towns which had already expiated the Boxer crimes committed in them, and dismissed the native officials whom the European officers had restored and who were establishing order. These depredations were committed by the orders of the German officers. When the troops, demoralized by such barbarous tactics, forgot dis-

cipline and committed crimes and excesses on their own account, the guilty ones were punished as severely as in the American command, and more severely than French or Russian soldiers who got out of hand. The result of the German policy was to plunge the country into anarchy after peace and order had already been restored. The native police having been disarmed and suppressed, the only persons carrying arms were bands of Boxers and brigands, who easily evaded the foreign troops and pillaged the country people with impunity. Deserters from the European armies increased the number of robbers. The devastation of peaceful districts by the troops added fresh increments to the starving Chinamen, whose only means of livelihood was robbery. In the middle of February Field-Marshal von Waldersee announced his intended great expedition to the borders of Pechili, to Taiyuen-Fu in Shansi or beyond, to Singan-Fu, as was variously given out. The expedition or the threat was intended to impress the Empress Dowager with the necessity of yielding to the demand of the ministers for the punishment of the antiforeign members of the Pekin Government. The commander-in-chief requested the cooperation of the American and French commanders, who asked instructions from their governments. The United States Government telegraphed to Minister Conger, instructing him to protest strongly against further military operations, and communicated with the cabinets in Europe. Nearly all the powers agreed that it was inexpedient to resume military operations while peace negotiations were in progress. The ministers in Pekin, though not responsible for the intended movement, approved of it as a means of pressure. While Marshal von Waldersee continued his preparations the Chinese court yielded to the demand of the ministers. The French commander, Gen. Voyron, as well as the American commander, refused to take part in an expedition into Shansi. The allies failed to organize any uniform system of administration that inspired the confidence of the Chinese. The Japanese and the Americans were the most successful, and the French and the British did best when they relied on the native officials. The Germans by their indiscriminate punitive raids and wholesale requisitions aroused resentment. When the time was approaching for evacuation Field-Marshal von Waldersee planned an expedition through southern Pechili, where brigandage and Boxer crimes were becoming rife, but this he gave up because even the English declined to take part.

Looting and the selling of loot continued in Pekin as long as anything of value could be found. The temples were robbed of their images and decorations, and even of the gilded tiles on their roofs; the palaces of their wood carvings and metallic ornaments. The missionaries, who were among the first to begin looting in Pekin, applying the proceeds to the support of the native Christians, went through the country imposing fines of their own authority on villages where native Christians had been murdered or robbed and churches destroyed. An American missionary named Ament, who obtained money from nearly forty villages for the purpose of compensating the families of Christian converts who had been massacred, was arrested by the French on the charge of extortion. Bronze and porcelain figures of enormous weight were shipped to Europe. Auction sales of Chinese loot were held in London and Paris. A collection of choice objects sent to France for public museums was returned to China by order of M. de Lanessan, Minister of Marine, to be restored to the temples and palaces from which

... were taken. The German military ... away the instruments that were ... to the Chinese Government astronomical observatory centuries ago by Jesuit missionaries. The German Government offered to return them, but the Chinese Government asked the Germans to keep them. The Americans and Japanese guarded the Forbidden City effectually, and the French left the Palace of Ancestors undespilled. Nevertheless pillagers carried off a large part of the treasures preserved in the imperial city, and fire destroyed many of the buildings. In the beginning of March the greater part of the Temple of a Thousand Years in the Summer Palace was burned to the ground. A conflagration that occurred on April 17 in the part of the Winter Palace occupied as the German headquarters cost Gen. von Schwarzhoff, chief of staff, his life when he attempted to save military documents. Count von Waldersee escaped narrowly, and unique art treasures and costly presents for the Kaiser were consumed in the flames, which wiped out an acre of buildings. Another fire, which occurred on June 5, destroyed many buildings in the Forbidden City, among them the Wuying hall, which contained the archives of the dynasty and the imperial library. The cause was at first supposed to be lightning; later it seemed probable that some servant of the court had started the fire in fulfillment of the imperial policy of obliterating the historical precedents and literary standards that were considered the chief obstacle to political progress.

Of more than a score of expeditions undertaken before January, only a third resulted in encounters with Chinese troops or Boxers and a few others in the execution of local ringleaders according to the German reports. The Chinese reported that the troops and ringleaders were in several instances regular police and properly constituted officials and the Boxers peaceful villagers. Boxers and bands of robbers did appear near the main garrisons of Peking, Tientsin, and Paoting-Fu, and became bolder and more numerous, but the troops could not catch them. Count von Waldersee formulated his plan for evacuation before the end of January, but the condition of the river and harbor and the lack of transport rendered it impossible for the troops to embark before April. Besides the permanent legation guards, whose number was fixed at over 2,000, he intended to leave 6,000 troops at Taku and Lutai, in the Tientsin district, and 1,500 at Shanhaikwan, to remain until all the conditions of peace were fulfilled; also to occupy the towns of Hosiwu, Matou, and Tungchau until the evacuation of Pechili. The permanent garrisons at Tientsin and Shanhaikwan were fixed at 2,000 and 1,500 men respectively, and garrisons along the railroad at about 300 men each, placed near enough together to be able to patrol the whole line, the troops at each station to consist of men of one nationality and the command of the whole force to be taken by the different countries in rotation. The American and Russian generals thought that half the number of troops would be sufficient to guard the legations, and that 1,000 or 2,000 stationed at Tientsin, Shanhaikwan, and perhaps two or three other points, were capable of protecting communications with the sea, instead of 6,000 distributed at nine different points. The larger plan of the commander-in-chief was adopted, but the United States furnished no troops except to guard the legation. Russia only a contingent at Shanhaikwan. After the razing of the forts the seaport garrisons were to be reduced. The Austrians decided to have only 200 men for a legation guard, the Italians the same, and the

Americans 150, while the guards of the British, French, Germans, Russians, and Japanese were 300 strong. Including these, the garrisons at Tientsin and Shanhaikwan, 9 posts on the railroad between Peking and Shanhaikwan, and 250 men in small posts on the Peiho river, the permanent international force to be kept in Pechili was expected to number 12,500 men.

Paoting-Fu was held by a French garrison, and in the mountain passes beyond leading into Shansi were the outposts of Gen. Liu's army of Chinese regulars. For months the two forces faced one another without mishap. Gen. Bailloud, who had 3,000 men at Paoting-Fu, desired to attack when Gen. Liu massed 10,000 troops within 12 miles of the French advanced positions, but was restrained by orders from Peking. A massacre of Christians at Chingting-Fu was avenged by the French, who had difficulty in settling the quarrels between Christians and the rest of the population at Paoting-Fu, where the Catholic missionaries were so arrogant and exacting that the military would not uphold them, and left the government of the city to the Chinese officials, confining their own action to the arbitration of disputes. A German reconnaissance was carried beyond Paoting-Fu while the preparations for the advance toward Singan-Fu were in progress. Col. Hoffmeister's column was checked at Kuangchang by imperial Chinese troops, who fought stubbornly, although their losses were about 300 killed, and compelled the Germans to retire. Gen. Yinchang, by order of Li-Hung-Chang, requested Count von Waldersee not to send out expeditions, but to restrain the native Christians and the missionaries from making exorbitant claims, to allow the Chinese troops to remain within 10 miles of the allies for the purpose of keeping off Boxers and robbers, and within the occupied territory to seek the assistance of the Chinese officials in the detection and punishment of the guilty. The field-marshal promised not to send out expeditions unless bands of robbers or an advance of Chinese troops made it necessary, and said he would seek the assistance of Chinese officials. The indemnities to be paid to native Christians he said would be settled in the future by mutual agreement between them and the local officials, or would be referred to the diplomatic representatives. In March the Japanese began to withdraw their forces, gradually turning over the districts they occupied to the Chinese officials, with whom they had already cooperated. The United States Government, in April, withdrew all American troops, except enough to serve as a legation guard. A reported advance of Gen. Liu's troops a mile or two beyond the agreed line offered the Germans an opportunity they eagerly seized for an encounter with the Chinese regulars. In previous skirmishes the Chinese had retired, relying on assurances, coming mostly from Russia and the United States, that if they evaded a conflict the allies would not advance, and the negotiations would reach a peaceful conclusion and Pechili be evacuated on more favorable terms than would be the case if they were drawn into fighting. On the report that the Chinese had passed the bounds in the northwest, Gen. Kettler's brigade marched out in four columns. Col. Hoffmeister's column met the Chinese, who had retired to the Great Wall, on April 23, and drove them into Shansi, capturing several banners and guns. On the same day the column of Major von Mühlenfels, numbering 1,100 men, attacked a strong body, estimated at 2,000, in a bastion commanding the pass into Shansi and fought all day, and the Chinese did not yield, but toward evening began to enclose the Germans, who entrenched

themselves and sent for reinforcements. The Chinese had surrounded their position with rifle-pits, and when they had lost 40 men the Germans feared they could not hold out. In the night the Chinese retired. Col. von Ledebuhr's column had a skirmish with the Chinese at Haishankwan, after which they retired beyond the Great Wall. Col. von Wallmenich encountered them in a strong position, and being joined by the battalion of Major von Müllmann, pursued them to Kukuan, capturing 11 old and 2 quick-firing guns. The French, who marched out to take part in the aggressive movement, but were restrained at the last moment by orders from their Government, agreed to hold Kukuan while Gen. Kettler concentrated his whole force at Paoting-Fu and prepared to march through the mountain passes into Shansi. The advance column had already started to climb the mountains when, as the result of *pourparlers* with the Chinese commissioners and their messages to Singan-Fu, the Chinese court consented to evacuate their advanced positions and retire beyond all question from the neutral zone. Another German expedition was sent into Mongolia in consequence of a report that the Chinese were gathering a great force beyond the Great Wall. The territory occupied by the allied troops did not extend more than half-way to the Great Wall. Still, the rumored massing of a Chinese army under Prince Tuan in Mongolia seemed deserving of investigation, and consequently a cavalry force was sent out under Capt. Magnis to reconnoiter. Four columns, selected from widely separated garrisons, rendezvoused punctually at a village in Mongolia 250 miles from Peking, having run over the whole country as far as the center of Mongolia without finding anything to justify the rumor. One of the parties, consisting of only 18 men, entered Kolgan, and found there a quantity of ammunition in the arsenal. Although it was a Chinese post, Lieut. Kummer decided to destroy this, and by the explosion 12 of his men were killed and all the others wounded except a single man. Placing this one as a sentry before the arsenal gate, the plucky lieutenant, who was severely wounded himself, sent word for the Governor and principal officials to come and assist him in an investigation into the causes of the explosion. The Governor and two others were admitted, and were bound and gagged by the mutilated soldiers; another official was then brought in, and dismissed with the warning that Lieut. Kummer would blow the Governor's brains out at the least hostile move on the part of the populace, after which a wounded soldier rode 60 miles to Chatou for reinforcements.

The renewal of active operations by the Germans was followed by a recrudescence of Boxer troubles in the same part of Pechili. A numerous band raided villages and threatened to massacre Christians and attack German posts south of Paoting-Fu. These Boxers were largely recruited from desperate farming people whose horses and cattle had been seized and houses plundered by the foreign troops. Near the Mongolian frontier and in northern Shansi there was also a revival of the Boxer movement. When evacuation was near, the cooperation of the Chinese regular soldiers was called in, in conjunction with whom the French operated against the Boxers on the western border.

While Gen. Kettler was engaged with the Chinese regulars on the west, the international troops at Shanhaikwan were busy with marauding bands who crossed the Great Wall in the east. Col. Radford, with 800 British, Japanese, and French soldiers, set out to punish a large band that had de-

feated a large force of Sepoys and killed an English officer, Major Browning. The enemy were encountered in force, and were driven back into the mountains, 50 being killed to 9 of the allies. These hungry bands that broke into Pechili from Manchuria were Hongsots and others whom the Russians had driven out. After the frightful massacre committed by the Cossack troops of Gen. Gribski, who, misinterpreting the Czar's order to fling the Chinese across the Amur, had attacked every Chinese village near Blagovestchensk with fire and sword, and driven into the flood 4,800 men, women, and children, and killed twice as many more on invading Manchuria, the Russian Government, upon occupying Manchuria, took pains to regain the good-will of the Chinese by giving them a good government. An immense number of troops were poured into the country. The people were generally peaceful, and the Tartar governors made only a brief and formal attempt to check the invaders, afterward submitting gracefully and cooperating loyally with the Russians for the preservation of order. The Boxers of Manchuria were soon subdued with their help, and after the Chinese generals who made a stand withdrew their garrisons into Pechili, occupation was found for the Cossacks, most of whom were Buddhists and racial relatives of the inhabitants, in clearing the country of the brigands, who were a veritable pest and a serious incubus on the industry of an exceedingly productive province. These Hongsot brigands were originally hired workmen or condemned malefactors who had been sent to dig gold in the mines belonging to the Chinese Government situated in the wild part of northern Manchuria. The miners quickly deserted to dig gold on their own account, and those who came to take their places did the same, until the mountains were filled with a population of strangers too numerous to subsist on the scanty supply of gold, who made laws for themselves and robbed all others, infesting every road in the country, so that high Chinese officials had to pay a price to be allowed to travel unmolested. To sweep these bands out of Manchuria was a long and difficult task, but one that was amply repaid by the gratitude of the people and the benefit to the industry and progress of the province. The expelled brigands on their way southward tore up the Manchurian Railroad, which gave color to the reports of Gen. Gradekoff's expeditions against alleged Boxers, Chinese troops, or the enemy—an enemy formidable enough, but one whose conquest filled the Chinese of Manchuria and elsewhere with gratitude and admiration for the conqueror, whereas the exploits of Count von Waldersee and the other generals, except their similar police services, excited contempt or pity among a people who abhor war and are impressed only by ethical principles and economical forces.

The French followed the Americans in reducing their force, withdrawing 9,000 men in May. Inactivity was fatal to discipline, and friction between the powers was reflected in the attitude of their soldiers, who came near clashing on several occasions. When the American force in Peking was reduced the Germans expected to be placed in charge of the part of the Forbidden City that the Americans were guarding, and vented their spleen when disappointed by paying no attention to the challenge of the American sentries, until one day a German was shot. When Indian soldiers were placed to guard the area at Tientsin that was in dispute between Russia and England, the Russians and French jeered the Sepoys and almost provoked them to turn their weapons on their tormentors. French soldiers off duty came into conflict with

... and there were frequent street ... nationalities. The Germans at ... boats striking against a ... upon a tug flying ... among two men of the Chinese ... after which they imprisoned and flogged the ... When called on for an explanation, Gen. von ... the German commander, alleged that British tugs and lighters were in the habit of deliberately running against the bridge. The Indian and English troops at Tientsin and elsewhere incurred the animosity of all the Continental soldiers, and the American troops had sometimes to share this odium.

Count von Waldersee, with two-thirds of the German force, departed in June, after Gen. Bailland and the French troops had already gone. The Japanese and British forces were gradually withdrawn. The Japanese before leaving their quarters at Peking had instructed a Chinese police force to take their place, and the Chinese Government, on resuming authority, engaged Japanese officials to assist in organizing the new civil administration for the whole city and a Japanese colonel to command the police. Trained Chinese troops from Shantung and Honan were brought in to succeed the allies throughout the province, and cooperated with them in each district before they were withdrawn. Peking was handed over to the Chinese early in July. A new association, called the Lien-Chuang-Hui, or Society of Allied Villages, took the place of the Boxer organization in the west and south, and in consequence the French decided to retain a garrison of 1,000 men at Paoting-Fu until the autumn. A force of 3,000 imperial troops could not, or would not, subdue a body of these new Boxers at Chichau. The ministers, in virtue of the clause in the protocol which holds high officials responsible for the existence of anti-foreign societies, called upon the newly installed Chinese authorities to suppress this society within a short limit of time. The new movement spread into Shantung, where the Governor put it down, while more energetic commanders checked it in Pechili. Officers of the dispersed imperial troops took command of the new Boxer bands, which persecuted cruelly the native Christians, compelled the country people to join the society, and levied on villages for supplies.

The military at Taku and the other fortresses dismantled them and removed war material, but the decision to level their walls was not carried out, because the ministers, yielding to the patriotic objections of the Chinese ministers, omitted this one of the demands of the powers from the protocol.

Peking had been in the possession of the allies a year when the Chinese garrison, 3,000 in number, returned on Sept. 17, when the command of the capital was formally surrendered to Prince Ching. The Americans still retained possession of the south gate and the Japanese of the east gate. No other foreign troops remained in the capital, excepting the legation guards, nor any in Pechili, except the detachments at Shanhaikwan, Tientsin, and other points on the railroad. The evacuation of Peking took place on Sept. 22, and the points along the route were successively evacuated.

The Manchurian Question.—Russian interests in China were so different from those of the commercial nations of the West, the policy of Russia so distinct, her diplomatic methods so much more effective, and her influence so powerful, that the ministers in dealing with the Chinese court through the plenipotentiaries at Peking could not tell to what extent the court was influenced by Russia or bound by secret engagements. By

mobilizing the Siberian and a part of the European troops, Russia made a display of military power immensely greater than the whole army that the allies threw into Pechili. The Russian army occupying Manchuria numbered 175,000 men. In its attitude toward the Chinese dynasty and people, the Russian Government assumed the rôle of protector against European encroachments as well as against internal disturbers. The friendship that had existed for centuries between the Czar and the Son of Heaven obliged the Czar to lend troops for the suppression of a revolt in the Middle Kingdom, and these Russian troops had occupied Peking for the reestablishment of order, thus strengthening the fraternal friendship between the Chinese and Russian rulers. Russian troops occupied Manchuria simply to preserve order, and their task would be to suppress brigandage and protect peaceful trade. The right of Russia to exercise military and political authority in Manchuria was secured by a secret treaty long before the present intervention of the powers. When Manchuria was saved from Japan by the intervention of Russia, with the officious backing of other powers, which merely pretended to the Chinese to have any control in the matter, it was evident that this great and rich country would fall to the share of Russia. It was foreseen before the Japanese war that this would be the political consequence of the building of the Siberian Railroad. When the concession of seaports and the right of way for the railroad were granted Germany and Great Britain seized seaports as compensation, and, by beginning the partition, brought on the Boxer revolt. Great Britain, as well as other powers, recognized Manchuria as a sphere of Russian influence, to compensate for which Germany sought a sphere in Shantung and Great Britain in the Yangtse basin, a region too vast and rich for this claim of preemption to be made good, especially when British enterprise shunned this field, in which Belgian and French capitalists, with Russian political backing, began to build railroads and German and American goods crowded British manufactures out of the market. Germany secured in the Anglo-German agreement a waiver of any exclusive commercial privileges that England might claim in the Yangtse valley, but restricted the agreement to ports and rivers where the parties have influence, and consequently denied afterward that the agreement applied to Manchuria, a Russian sphere in which Germany claims no influence. Russia made use of the military occupation of Manchuria to consolidate her political influence, to introduce Russian administration, and to promote the peaceful annexation of the country. Capital was poured in through the Russo-Chinese Bank, which developed mines and by its discounts quickened the commerce of the province, increasing production and bringing remarkable prosperity at the time when rich districts of Pechili were becoming depopulated and turned into a wilderness. Russian taxes, the survey and registration of lands, Russian money, and the assimilation of the administration to the Russian system were introduced without friction. There was an ample supply of Russian officials who had learned the Chinese, Mongolian, and Manchurian languages in the school at Ourga, in Mongolia. The Russian troops were selected from tribes nearest akin to the Chinese and having the Buddhist religion. Russian colonization was begun by the settlement of 80,000 emigrants from European Russia along the Argun river in central Manchuria. The Chinese inhabitants of Manchuria became so well satisfied with Russian rule that they would not willingly go back to the former

régime. In Mongolia, too, Russian enterprise, hand in hand with Russian political control, was making similar progress.

The Japanese Government was not blind to the inevitable destiny of the northern dominions of the Chinese Empire and understood the protectorate actually exercised by Russia, and was seeking to consolidate its own position in Korea by similar methods. Japan, wishing to gain time, and Great Britain, anxious to hem back the Russians until British interests are more firmly established in central China, supported by the United States, which has had considerable trade in Manchuria, chose to ignore the actual status of the province and consider that it was not even pledged to Russia, when it was really delivered and held, the previous arrangements between the Russian and Chinese governments being secret. English statesmen assumed that the Anglo-German agreement was intended to avert the Russian annexation of Manchuria, but the German Chancellor repudiated the suggestion. Russia, whose annexations in the East are as far as possible gradual and pacific, was quite willing to agree to the fiction, and intended to restore the nominal sovereignty to the Chinese Emperor. An agreement between Gen. Korostovich, representing Admiral Alexeieff, the Russian commander-in-chief, and Tseng, the Tartar general at Mukden, provided for the resumption of the civil administration by the Chinese authorities subject to the control of a Russian resident, and for the organization of Chinese police under the Tartar general, could call on the aid of the Russian military when necessary, but must disband all Chinese soldiery and deliver over all munitions of war to the Russians. The English Government, learning of this secret agreement from newspaper reports, asked at St. Petersburg for explanations. Other versions were given or other agreements unearthed. A second agreement provided for the maintenance of a Chinese army in Manchuria after the completion of the railroad, Russia to be consulted as to its strength; allowed Russia to extend the railroad in the direction of Peking as far as the Great Wall; and restrained China from granting railroad or other concessions or even building railroads, not alone in Manchuria, but in Mongolia, Ili, Kashgaria, Yarkand, and Khotan without the permission of Russia. Count Lamsdorff explained that the first agreement was a temporary arrangement made by the military authorities for the duration of the simultaneous presence of the Russian and Chinese authorities in Manchuria, and that this *modus vivendi* must be followed before evacuation by a permanent agreement with the Chinese Government, not ceding territory or conferring an actual or a virtual protectorate, but giving an effective guarantee against the recurrence of an attack on the Russian frontier or the destruction of the railroad. The Japanese Government took a more strenuous course in opposing the Manchurian agreement than the British or American governments. Japanese naval forces were mobilized and despatched to Korea. The Germans could not understand the attitude of England and the appeal to the Anglo-German agreement of Oct. 16, 1900, as in framing that agreement it was explained by the English as well as the German negotiators that its guarantees could not extend to Manchuria, England having, by a previous understanding with Russia, conceded, even more explicitly than Germany had done, that Manchuria was outside of her political and commercial sphere. The trading rights in Manchuria, as in other parts of China, secured to all the powers by the treaty of Tientsin, Russia

had already repeatedly promised to respect. The position taken by Great Britain resolved itself into the argument that China would impair her ability to pay indemnities by yielding up any part of her sovereignty in Manchuria. Japan appealed to the Anglo-German agreement promising active measures for the preservation of the integrity of the Chinese Empire or anti-Russian measures in its dismemberment. Japan in accepting that agreement stated that she did so as a co-signatory, and the Japanese Prime Minister now explained that the express provisions of the agreement were the ones that Japan adopted, and it did not concern her if other powers interpreted it by a strange code of their own.

The United States Government appealed to the international understanding existing regarding the preservation of the territorial integrity of China, all the powers having assented to this principle as laid down in the American circular note of July 3, 1900. In a memorandum given to the Chinese minister on Feb. 19 and communicated to the powers on March 1, 1901, Secretary Hay stated the opinion that it would be improper, inexpedient, and dangerous for China to make arrangements or to consider any proposition of a private nature involving the surrender of territory or financial obligations by convention with any particular power, at least without the knowledge and approval of all the powers engaged in joint negotiation. In answer to Japanese inquiries Russia declined to discuss with a third power the terms of the agreement pending negotiations, but promised to publish it when concluded, and would consider any representations that Japan might make, as the agreement was not intended to impair China's sovereignty or to injure the interests or rights of other states.

When the second agreement came to the notice of the British Government Lord Lansdowne detected in it the virtual establishment of a protectorate over Chinese Turkestan and Mongolia as well as over Manchuria. Count Lamsdorff said that negotiations were pending, the subject of which could not be disclosed, as such a course would be incompatible with the character of one independent state negotiating with another. Japan and the United States both represented to the Chinese Government through the plenipotentiaries at Peking that it would be inadvisable to sign a separate convention regarding Manchuria while peace negotiations were still proceeding, and both sounded the other powers, all of which took the same view, even France and Germany. England, Germany, Austria, and Italy offered the same counsel to China. Japan notified China that if Russia obtained any territorial or commercial advantages Japan would require equivalent advantages. Even Russia concurred in a memorandum from Washington against secret arrangements with any one power without the agreement of all while negotiations were going on, but assumed that it did not apply to a temporary military arrangement. Other conditions that Russia sought to weave into the agreement were that the appointment of the Tartar general in each of the three provinces of Manchuria should be subject to the approval of Russia, a right that Russia already exercised; that a Russian official should control the police in each province; and that the frontier customs should be under Russian control, and transit for goods imported from Siberia should be free throughout the interior. Although the Russian Government refused to disclose the contents of the draft agreement further than to state that they did not infringe the existing treaty rights of other powers in China, the Chinese let

the powers to their own advantage. The Yangtse viceroys, who had been appointed advisory members of the peace commission, sent a strong remonstrance to the court against signing the treaty, as it would impair Chinese sovereignty in the northern territories, though Russia had agreed to accept a less stringent control over the civil administration in Manchuria and to renounce her pretensions to exclusive rights in Mongolia and Turkestan, and also the cession of Kinchau. A new article was introduced stating that, China having broken her engagement by giving the railroad from Shanhaikwan to Shinminting as security for a foreign loan, Russia shall have the right to construct a branch of the Manchurian Railroad to the boundary of Pechili at the Great Wall. The Imperial Government directed the Chinese ministers in Europe to appeal to the powers to intercede with Russia and induce her to either forego demands which were injurious to China and countries having treaty rights in Manchuria, or to influence Russia to extend the time so as to allow further negotiations, the Russian Government having notified the Chinese court that an answer was expected by April 2. The convention was not signed at that term, the Yangtse viceroys having added to the protests of the powers a declaration that they would not recognize it if signed. China had been informed that Russia would tear up the draft unless it was signed at the date appointed. On April 3 the Russian Government notified the powers that it did not intend to proceed further with the Manchurian agreement, but would await the development of events, though regretting that the intention to bring the occupation to a speedy termination and to submit the arrangements for effecting that end to the ministers at Peking had come to naught. China, in notifying Russia of her inability to sign, said that in the perilous situation which she was passing through it was impossible to grant special privileges to one power when others objected lest she alienate the sympathies of all. The effect of the diplomatic intervention of the powers had, according to the Russian view, the effect of prolonging the occupation and attendant Russification of Manchuria. In the Russian circular note Russia renounced all negotiations, since a special agreement, instead of serving as an open testimony of Russia's friendly sentiments toward China, might involve that neighboring empire in various difficulties.

The Russian minister demanded the resumption of the Manchurian negotiations after the signature of the protocol. The work of railroad construction was pushed rapidly in Manchuria, many thousands of laborers being brought from the south. Chinese emigration into Siberia reached such dimensions that the Russian authorities took measures to stop it as much as possible. The junction of the Port Arthur Railroad with the main Manchurian line was effected in July. Sir Robert Hart appointed Russian officials to collect the maritime customs in Manchuria, who also collected the native customs. The Tartar general, Tseng-Chi, who had been removed after signing the agreement with Admiral Alexeieff, but was reinstated at the demand of Russia, was confirmed in his office for four years. In Turkestan, as well as in Manchuria, and even in Tibet, the prestige and influence of Russia seemed to grow amazingly as the result of the Chinese troubles. Envoys of the Dalai Lama went to visit the Czar in the summer, the mission being represented as a religious one due to the fact that the Czar had some millions of Buddhists among his subjects.

Politico-Commercial Rivalries.—Connected with the Manchurian question were the Anglo-Russian disputes about railroads in north China, which were incidents of a rivalry that began long before the Boxer outbreak. In the railroad convention between England and Russia England promised not to interfere in railroad matters north of the Great Wall. The other sections of the northern railroads, which connect Peking with the sea, built with about £3,000,000 of British capital, and constituting the only British enterprise in China, were regarded as a political rampart against the progress of Russian influence and control into China proper. These railroads were torn up by the Boxers and by the Chinese troops that opposed the advance of the allies to Peking. When Count von Waldersee arrived at Tientsin on Sept. 27, 1900, the first question that confronted him was with regard to the reconstruction and control of the railroads. Gen. Gaselee thought that the British superintendent of the line, Mr. Kinder, could collect Chinese workmen, recover hidden material, and get the line into working order quickly under the control of the British military authorities. The Russians having already occupied the railroads and begun repairs, and the British being not yet in sufficient force even to guard the line, and having to depend on Chinese workmen, which seemed to be out of the question from a military point of view, the field-marshal decided to entrust the section between Tongku and Yangtsun to the Russians, while the one from Yangtsun to Peking would be reconstructed by the Germans assisted by the British and other allied troops. The part running up from Tongku to Shanhaikwan he decided to place also in charge of the Russians. The Luhan line in the interior, in which French bondholders were interested, had already been occupied by French troops. Gen. Gaselee obtained the support of the American and Japanese generals for his contention that civilian management would be more effective. Count von Waldersee was not shaken in his opinion, and on Oct. 18, 1900, issued the order for a strictly military control, giving to the Russians control of the line between Yangtsun and Shanhaikwan, while a German officer, Major Bauer, was appointed to repair and protect the section from Yangtsun and Peking with German, British, and Japanese troops. Complaints about the transfer of the railroad to the Russians and arrangements made to secure material belonging to the Belgian company owning the Peking and Hankow Railroad when presented at Berlin again and again were simply forwarded to Count von Waldersee, to whom military matters had been entrusted. Representations were made subsequently at St. Petersburg also by the British Government. Direct negotiations with the Russian Government were more fruitful, and finally an arrangement was made for the transfer of the line from Shanhaikwan to Yangtsun to Count von Waldersee, to be given by him into the control of the British. The railroad was formally handed over to the Germans on Jan. 15, 1901, and by them transferred to the British on Feb. 21. The extension of the northern railroad from Shanhaikwan to Shinminting and Niuchuang was not restored to the British, but remained in Russian control. Russia offered to buy this part of the line from the Chinese Government. This would secure the English bondholders from loss, but the English Government would not readily sanction this solution, which would be in violation of a covenant not to alienate any part of the line. The concession for a great trunk railroad running through China from Peking to Canton had been

acquired by the Belgian syndicate that had constructed part of the line, the American and other concessionaires having sold their interest.

After the British railroad administration had resumed control of the northern railroad a serious quarrel arose respecting a part of the river front in Tientsin where the railroad officials wanted to build side-tracks. This same piece of land was claimed by Russia as a concession granted by Li-Hung-Chang as Viceroy of Pechili. The Russians, who were in possession and had set up boundary posts, stopped the railroad construction until a superior British force took possession under instructions from Gen. Barrow to carry on the siding by armed force if necessary. Gen. Wogack protested, and both he and the British general stationed troops on the disputed area and appealed to the field-marshal, who said he could only judge the military question, leaving the question of ownership to be decided by the governments concerned. Instructions came from England to maintain the sentries, but not to use force except to repel aggression. Count von Waldersee had the military guards on both sides reduced to a small number, and sent back the troops that the British and Russian commanders had ordered up. The sentry guards were left in their respective stations on the disputed land until the question of right could be determined diplomatically. The railroad company claimed to have a title to the part taken for a siding, and residents of the British concession opposite set up titles to other parcels of the alleged Russian concession. For ten days in March British and Russian sentries faced one another in hostile array. The agreement closing the incident was reached by direct negotiations between the British ambassador in St. Petersburg and the Russian Minister of Foreign Affairs after the sentries on both sides had on March 22 been removed by agreement between the two commanders. The determination of the validity of the rival claims to the land was reserved for future investigation and negotiation. American residents were anxious that the United States should resume the former American concession at Tientsin. The title to this concession was relinquished during the administration of President Cleveland, and the land was incorporated in the British concession with the understanding that should it ever be needed it would be restored. Mr. Conger, after his return to China, applied to the Chinese Government for a new grant which would fix definitely the boundaries of the American concession. Austria-Hungary, which has had no settlement in China hitherto, and a consulate only at Shanghai, obtained an area in Tientsin. Italy has a settlement adjoining that of Austria. Belgium also determined to establish settlements in China. France and Japan extended the limits of their concessions. Germany already possessed sufficient land at Tientsin. At Canton land was selected for a German concession.

Reform Edicts.—The court at Singan-Fu was not only humiliated by its banishment from the capital, but the hardships suffered during its long flight continued after its arrival at the ancient seat of empire, for Shensi and the neighboring province of Shansi were afflicted with one of the severest famines known in the history of China, having lost three successive crops. Two-thirds of the population were without sufficient food, and a large proportion lacked fuel and clothing to keep them from freezing. The domestic animals were sacrificed to allay hunger. Infanticide became common; the poor sold their women and children, and some resorted to cannibalism. The

court ordered large quantities of rice to be distributed. When the minister announced that native Christians were discriminated against, they protested, and in response to their representations an imperial edict was issued on Jan. 29 ordering all relief officials and Chinese soldiers to treat native Christians in exactly the same way as all other Chinese throughout the empire.

An imperial edict was issued on Feb. 6 suspending for five years all official examinations in districts where foreigners were killed, and one forbidding the existence of antiforeign societies, reciting the punishment of guilty persons, and placing on local officials responsibility for the maintenance of order, with the warning that they would be dismissed permanently from the public service if trouble occurred. These edicts complied with conditions laid down in the note from the powers. An imperial decree issued on Jan. 29 attributes the antiforeign outbreak to the old system of government, condemns blind adherence to precedents, and orders the substitution of foreign methods for Chinese errors, calling upon viceroys, governors, officials of the Central Government, and ministers abroad to suggest reforms for the court and Government, local administration, education, military affairs, and finance. The old system of memorializing the Emperor was declared to be useless, and for the future it was forbidden. Corrupt and dishonest officials were declared to be responsible for China's troubles, and it was therefore of paramount importance to employ only good men and to abolish or modify ancient methods and customs. In an edict issued in February the Emperor adopted the principles that Chang-Chih-Tung and other viceroys had advanced in memorials to the throne. The incessant efforts of officials to maintain a fair exterior regardless of realities, their self-interest, and their devotion to precedent, were declared to be the bane of the land. Excessive reverence for literary form had diverted the mind of the nation from substantial progress, and even where Chinamen have imitated Western methods they have copied what is superficial and immaterial, disregarding the fundamental elements in the strength of Western nations, which are truth, justice, and devotion to the common good. This significant edict, while reproaching Kang-Yu-Wei, the founder of the revolutionary reformers, whose projects were characterized as veiled rebellion, condemned the officials and the literati, the system of literary examinations, and the literary essay; declared that military and financial helplessness had resulted from adhering to obsolete methods; and pointed to foreign methods as the only hope of rescuing China from the disasters that had overtaken her. The progressive Yuan-Shi-Kai, who succeeded Yu-Hsien as Governor of Shantung, even lauded missionaries, and publicly invited them back to the province where Chinese pride and exclusiveness had their deepest roots, promising assistance and protection to missionaries of all churches, a promise that he kept faithfully. By an edict published in the beginning of March the Emperor declared that all decrees and reports issued between June 20 and Aug. 14, 1900, were annulled, and directed that they should be expunged from the archives so that no trace of them should be left in history. Some of the viceroys and governors in a memorial suggested that imperial princes and students of rank should visit foreign countries, that the army should be drilled entirely after Western methods, that the colleges and schools should be extended, and that a standard dollar currency should be adopted. Progressive Chinamen, in consultation with

in 1862, established in Peking a school for the purpose of giving a principal in which Chinamen could obtain a literary degree can quickly learn the Chinese language, and through the Chinese translations can learn the sciences of the West, including history, mathematics, philosophy, law, and medicine.

All the viceroys and governors were invited to advise the court as to the reforms that they thought necessary. Chang-Chih-Tung proposed an international commission to investigate missionary methods. The missionaries are known to the Chinese as the scholars who teach Western doctrines. The Catholics have prospered more than the Protestants, knowing the Chinese language and assimilating Buddhist symbolism in their worship. Protestants—by their charitable protection of infants, their medical skill, and, above all, by their instructions in the sciences and practical arts of the West, have won the respect of the intelligent and progressive element, and they are the principal propagators of Western political ideas. The Chinaman who embraces Christianity adopts only that part of the Christian moral doctrines which he finds serviceable and of practical utility. In joining a Christian community he cuts himself loose from Chinese society and enters an illegal secret society, which he will not do unless he obtains compensatory benefits. These consist in financial assistance and in protection. Thus bankrupts, impoverished men, and social outcasts become converts, and thus missionaries find themselves the heads of associations for mutual benefit and defense of an economic and social character, and tend themselves to become practical business men.

By an edict issued on April 23 the Grand Council was abolished and a General Board of State Affairs was constituted in its place, with Prince Ching as its president, and as the other members Li-Hung-Chang, Yung-Lu, Kun-Kang, Wang-Wen-Shao, and Lu-Chuan-Lin, three of the members being Manchus and three Chinese. The viceroys Liu-Kun-Yi and Chang-Chih-Tung, who had already been attached as associate members to the Chinese Peace Commission, were appointed advisory members of this new supreme council, the appointed task of which was to recommend what reforms were needed in China. Their report would be laid before the Empress Dowager by the Emperor, and the changes approved by her would be put into force after the return of the court to Peking. The Empress Dowager canceled the nomination of Prince Tuan's son as heir presumptive of the throne. A series of decrees enjoined the protection of foreigners and of native Christians. The responses to the invitation to superior officials throughout China to send in reform schemes were so numerous and so conflicting that the Emperor appointed a commission to examine the various projects and report upon them for the information of the Empress, who would have the ultimate decision.

In Canton the Viceroy Tao-Mo, with the concurrence of the Tartar general, issued a proclamation abolishing the privileges of the Manchus, declaring that they should henceforth be treated similarly to the Chinese in the Kwang provinces. The policy of maintaining the special privileges of the Manchu colonies in the Chinese cities has been enforced more vigorously in Canton than in other places, and the Tartar braves have been accustomed to terrorize the peaceable inhabitants of the city, while their own quarter, into which the Chinese police were not allowed to penetrate, has been the refuge of the lawless. The new order abolished the special Manchu tribunals, making

the Manchus amenable to the ordinary courts, invested the Chinese police with the same powers in the Manchu quarter as in other parts of the city, and forbade the Manchu soldiers, as Chinese soldiers are forbidden, to carry arms except on duty. The Yangtse viceroys and several others in their memorials suggested the abolition of the Manchu pensions and of all special privileges of Manchus in the capital as well as elsewhere. The progressive Viceroy of Canton took steps to suppress opium-smoking among his subordinates, having memorialized the throne in regard to this vice. He also gave encouragement to the establishment of schools of Western learning. Li-Hung-Chang proposed in a memorial that examinations in Chinese classics should be suspended everywhere for five years, and that after that they should be combined with examinations in the Western branches. When Li-Hung-Chang, in April, asked the court to appoint a time for its return to Peking, the Empress Dowager replied that that would be impossible until the guests of the nation had departed. When negotiations for evacuation were advanced and the departure of the foreign troops was in prospect, the date of Oct. 6 was set for the reentry of the court. In Peking the Chinese officials tried to disguise the ruin caused by the siege and occupation by erecting wooden facsimiles of the temples, pagodas, gates, and palaces that were destroyed. The court removed from Singan-Fu to Kaifung-Fu, in Honan, in October; and did not proceed to Peking at the time set, putting off the date till another year because the Chinese plenipotentiaries had mismanaged the negotiations and allowed too large a foreign force to remain in Peking. An edict issued on May 30 ordered the destruction of all official documents in the archives in order to do away with burdensome precedents, and directed that the official writers of the six boards of government who were familiar with the old forms and precedents should be dismissed, and that the presidents should draw up such regulations for the conduct of future business as would enable them to have immediate knowledge of all transactions. After the documents in all the public departments at Peking were destroyed and the clerks dismissed, the boards of government were at a loss how to proceed without records or precedents. Proclamations were placarded in Peking and other cities declaring that a national crime was committed by China in 1900, and that the punishment inflicted should be a warning against its recurrence. An edict issued in October admonished officials to enforce the reforms decreed, for the destiny of China was involved in these changes, designed to render her independent.

CHRISTIAN ENDEAVOR, SOCIETIES

OF. The twentieth International Convention of the United Societies of Christian Endeavor, held in Cincinnati, Ohio, in July, was very largely attended. The secretary's report showed that there were now 61,427 societies, and called attention to the fact that the figures representing this number were the same as in 1891, but were arranged in different order, for they read then 16,274, while the nearly 1,000,000 members of ten years before had become nearly 4,000,000. It had been expected each year that a falling off in the increase in numbers would begin, but the time for that had not yet come. A net increase of nearly 2,000 new societies had taken place since the International Convention of 1900 in London, with nearly 100,000 added members. Unification of local and district unions had advanced during the year, and interdenominational fellowship had been fostered. "The denominational loyalty of Christian En-

deavorers," the report said, "is seldom challenged, and on the contrary we find it officially and heartily commended in many ecclesiastical courts and assemblies in many denominations." Fifteen countries were mentioned in which national Christian Endeavor unions had been formed, and Christian Endeavor leaflets and constitutions might be found in more than 20 languages, in Indian dialects, and the dialects of India and Africa. A larger number than ever of the societies had adopted some systematic and proportionate plan for giving money to the cause of missions, to their home churches, and to other benevolences. The two-cents-a-week-pledge plan had worked well wherever it had been tried. More than 20,000 members were enrolled in the Tenth Legion, contributing at least one-tenth of their income to religious causes. Eighty-five hundred and twenty-six societies had contributed, as societies, \$200,216 directly to the denominational mission boards, \$247,858 to their home churches, and \$56,387 to other benevolences. There were now 26,000 Comrades of the Quiet Hour, pledged to make it the rule of their life to spend at least fifteen minutes in private devotion at the beginning of the day. One hundred and sixty thousand young people had in the last twelve months joined the church from the ranks of the societies. The number of junior societies was now 16,000, with 483,000 members, and that of intermediate societies 1,285, with 38,500 members. The usual general and sectional meetings were held. Three large auditoriums and as many churches as were required were used for the meetings. On the first day methods were considered, The Twentieth Century Home was the topic of addresses, and reports were made. The subject of Twenty Years of Christian Endeavor was treated in pulpit addresses on Sunday, and evangelistic meetings were also held on that day. On Monday, July 9, 26 denominational rallies were held, and addresses were delivered and five-minute speeches made in the auditoriums. At noon the Christian Endeavorers participated in the noon-day evangelistic work in the tenement and factory districts. Similar exercises were continued on the last day of the meetings.

Twentieth Anniversary.—The twentieth anniversary of the Young People's Society of Christian Endeavor was celebrated Feb. 2, with special services at Portland, Me., where the first society was established in the Williston Church, Feb. 2, 1881. A memorial tablet was erected in this church as a part of the celebration.

The semiannual meeting of the Board of Trustees was held in Portland in connection with the anniversary celebrations, and plans were made for unifying the work in city, district, county, and State unions. It was decided to hold the international conventions, after 1901, biennially, instead of annually, as heretofore, in view of which the trustees recommended to the State unions that they consider the advisability of holding biennial State conventions, alternating with the International Convention, and that special attention be given to the county and district conventions during the year when the State convention is not held. The following minute was adopted: "Since Christian Endeavor has become a world-wide movement it appears to us wise, on this, its twentieth birthday, to make plain the flexibility and adaptability of the organization to the varying needs of churches in all lands. The fundamental principles of the Society of Christian Endeavor are the following: First, personal and avowed devotion to our divine Lord and Saviour Jesus Christ. Second, the covenant obligation as

particularly embodied in the prayer-meeting pledge, to do what Christ would like to have us do. Third, constant religious training for all kinds of Christian service in the prayer-meeting and by various committees. Fourth, loyalty to the local church and denomination with which each society is connected. Fifth, interdenominational spiritual fellowship, through which we hope to fulfil our Lord's prayer for spiritual unity, that they may all be one. Sixth, Christian Endeavor makes no attempt, nor never has attempted, to legislate for the individual conscience, and neither the united society nor any State or local union regulates, controls, or imposes conditions upon any society of Christian Endeavor. These unions are for fellowship, instruction, and inspiration, and not for legislation or for the exercise of control. If any society is in doubt as to methods of organization and service, it should turn for authoritative instruction to the pastor and church with which it is connected. The united society does not insist upon uniform conditions of organization or a particular form of pledge, which shall constitute a Christian Endeavor Society. So long as a society holding the fundamental principles of Christian Endeavor enumerated above is working for Christ and the Church as its church directs, and is making the young people 'more useful in the service of God,' it is in fact a society of Christian Endeavor, and will be heartily welcomed into the fellowship of the movement."

The Rev. Dr. Francis E. Clark, founder of the societies, spoke at the anniversary meeting on Christian Endeavor in the Twentieth Century, and at the quiet-hour services the subjects of The Gains in Twenty Years of Christian Endeavor, The Essentials of Christian Endeavor, A Campaign of Education, Making the Most of Our Forces, Revivals of Spiritual Interest and of Civic Righteousness, and Advance Steps for the New Century, were discussed.

British Societies.—The British National Christian Endeavor Convention met at Sheffield, May 25. The report showed that during the ten months since the World's Convention of 1900, 533 new societies, including 119 junior societies, had been formed.

CHRISTIAN SCIENTISTS. The adherents of Christian Science declare that more than 1,000,000 persons are interested in their faith, and that their journal, Science and Health, has a circulation of 211,000 copies. Three new Scientist churches were dedicated on Easter Sunday, 1901—one in New York, which it was estimated would cost, when completed, \$725,000; one in Chicago, Ill., costing \$120,000; and one in Toledo, Ohio. A movement was quietly set on foot in the autumn of 1901 to raise the whole amount of the cost of the church in New York in advance of its completion, and \$400,000 was secured in four weeks, \$100,000 having been subscribed at one meeting. There are 7 churches in Greater New York and 3 in Chicago. The oldest church of the Scientists is in Boston, Mass., and cost \$250,000. The United States census of 1890 gave the Christian Scientists 8,724 members and 26 pastors or readers (2 to a church). The census of churches for 1900, prepared by Dr. H. K. Carroll, who was chief of the Department of Religious Statistics in the census of 1890, gave them 10,000 ministers, 579 churches, and 90,000 members, membership being understood to include not all adherents, but only persons who have signed the Church tenets. The Christian Scientists have churches or organizations in the larger American cities, Australia, England, and Ger-

many, and followers all over the world. The church at Hyde Park, London, is said to have 300 members, and congregations of five times that number. It is estimated that the Scientist churches in America will accommodate about 400,000 people, and the houses are usually full and often crowded at both of the Sunday services. The church in Boston, Mass., includes large numbers of non-resident members on its rolls, and claims to have had 3,000 additions in 1900.

COLOMBIA, a republic in South America. The Congress, which meets biennially, consists of a Senate of 27 members, 3 from each department, and a House of Representatives containing 66 members, 1 to 50,000 inhabitants. Electors must be able to read and write or must have an income of 500 pesos a year, or real property worth 1,500 pesos. The President and Senators are elected for six years by indirect suffrage, Representatives by direct vote on collective tickets for each department. The President of the republic for the term beginning Aug. 7, 1898, was M. A. Sanclemente. The Vice-President is J. M. Marroquin. The Cabinet was composed in the beginning of 1901 as follows: Minister of the Interior, Gen. G. Quintero Calderon; Minister of Foreign Affairs, Dr. C. Martinez Silva; Minister of Commerce and Communications, Dr. P. A. Molina; Minister of War, Gen. Ospina Camacho, successor to Gen. Prosperon Pinzon; Minister of Public Instruction, Dr. M. Abadia Mendez; Minister of Finance, Dr. E. Restrepo Garcia. The head of the executive power was the Vice-President.

Area and Population.—The republic has an area of 513,938 square miles, and about 4,000,000 inhabitants, including 150,000 tribal Indians.

Finances.—The estimate of revenue for the biennial period 1899–1900 was 29,918,640 pesos in paper, and of expenditure the same. The revenue is mainly derived from customs duties, which were expected to produce 21,453,640 pesos. Heavy duties are collected on exports. The slaughter of cattle and sale of meat are monopolies of the Government. The chief items of expenditure were 4,493,000 pesos for justice, 3,773,500 pesos for debt, 3,731,000 pesos for financial administration, and 2,524,848 pesos for the army, the strength of which was fixed at 1,000 men in 1898. The revenues of the departments, derived mainly from monopolies in tobacco, salt, gambling, etc., were estimated for the two years at 16,986,756 pesos, and the expenditures at 17,346,040 pesos.

The internal debt on June 30, 1899, amounted to 11,359,074 pesos, the consolidated debt being 5,633,716 pesos, on which the annual interest is 353,300 pesos, and the floating debt 5,725,358 pesos, for the redemption of which Congress has set apart a sinking-fund amounting at that date to 1,738,000 pesos. The foreign debt, most of which is held in England, was compromised in 1897 by the issue of £2,700,000 of new bonds bearing 1½ per cent. interest for the first three years, then 2 per cent. for three years, 2½ per cent. for a like period, and finally 3 per cent. The interest was £47,250 in arrears on July 1, 1900. On Dec. 15, 1900, the Government, with the object of improving the fiscal situation, issued a decree providing for the leasing by public tender for fifteen years, instead of five years as limited by law, of the emerald-mines, the revenues from the pearl, coral, sponge, and seaweed fisheries, and the rural properties of the nation except the uncultivated lands. The entire product of the leases was to be devoted to the redemption of the currency. The pearl and coral fisheries in the Pearl Islands, 50 miles south of Panama, have been famous for a century, especially for the remarkable pearls—

white, greenish, leaden gray, and black—brought up by expert divers who work when the water is clear. The pearl shells are not marketed. Formerly those who worked in these waters paid a percentage on their finds, and more recently an annual tax.

Commerce and Production.—Of the total value of exports in 1898, which was \$19,157,788, the United States took \$5,305,879; Great Britain, \$4,816,354; France, \$3,371,760; Germany, \$3,079,886; and Venezuela, \$1,000,738. The exports were valued at \$19,157,788. The imports are metals, hardware, foodstuffs, beverages, cotton goods, illuminating oil, drugs, paper, and linen goods. The exports are coffee, timber, tobacco, vegetable products, animals, hides, minerals, rubber. The United States exported the value of \$2,985,800 in 1899, in which year the imports showed an increase of which 50 per cent. consisted of American cottons, provisions, etc., and 40 per cent. of English importations. The civil war in 1900 caused a falling off in both imports and exports of about 25 per cent. The export duties were fixed on March 1, 1901, at \$3 in currency on 100 pounds of coffee, hides, roll tobacco, and cleaned cotton; \$5 on rubber, manufactured tobacco, tortoise-shell, and tolu-balsam; \$1 on ivorynuts and cottonseed; \$5 a thousand feet on mahogany, cedar, and other woods; \$10 a kilo on bird skins and orchids; \$50 on heron plumes; \$20 a ton on ores; and on gold 20 per cent., on platinum 15 per cent., and on silver 10 per cent. of the value. The paper dollar was worth about 10 cents. Imports of cereals, vegetables, dairy-products, and lard were exempted from duty.

Railroads.—There were 376 miles of railroads completed on Jan. 1, 1901. The Panama Railroad across the isthmus from Colon to Panama, owned by an American company, has a length of 48 miles. A railroad from Puerto Barrio, on the Magdalena river, to Medellin is being built by the Government of the department of Antioquia, and 42 miles have been built to Caracoli by American engineers, leaving 76 miles yet to be built. In the department of Bolivar an American company operates a railroad, 66 miles long, connecting Cartagena with Calamar, on the Magdalena, and one of 28 miles connects Barranquilla with the port of Sabanilla. In Cundinamarca a railroad runs from Bogotá, the national capital, to Facativá, 25 miles; another to the salt-mines of Zipaquirá, 37 miles; a third to Soacho, 7 miles; and one to connect Bogotá with Giradot, on the Magdalena, was completed from the latter point to Juntas de Apulo, 25 miles, and work on the remaining 71 miles was in progress when stopped by the war. These are all national railroads. In Cauca a Government railroad runs from the Pacific port of Buenaventura to San José, 25 miles, and is being continued 61 miles farther to Cali. In Magdalena there is a line from Santa Marta, on the Atlantic coast, to the Sevilla river, 42 miles, which is to be carried 191 miles farther to El Banco, on the Magdalena river. Santander has a railroad, 34 miles long, running from San José de Cucuta to Puerto Villamizar, on the Zulia river, at the frontier of Venezuela. In the department of Tolima an English company built a railroad between Ladora and Honda, 21 miles, to avoid a dangerous stretch of river navigation; and a line was begun between Ibagué and the river port of Giradot, but only 2 miles were built of the total distance of 37 miles.

The Panama Canal.—The original Panama Canal Company, organized by Ferdinand de Lesseps in 1881, expended nearly the whole capital received up to June 30, 1886, which was 772,545,-

412 francs, and attempted in December, 1888, to raise a loan of 600,000,000 francs. Failing in this, the company suspended operations in March, 1889, and went into liquidation. An extension of time for the completion of the work was granted by the Colombian Government in 1894, when a new company was formed which undertook to finish the canal in ten years from that date. The new company started with a capital of 65,000,000 francs, with which it expected to demonstrate that the plan of a ship-canal with locks was quite practicable and commercially profitable, and thus attract sufficient fresh capital to complete the work. In 1900 a further extension of six years was obtained, making the date when the canal is to be completed April, 1910. The main task performed by the new company has been the reduction of the Culebra ridge, because this was looked upon as the chief engineering difficulty. The cutting has been so far advanced as to show that this obstacle can be overcome. About 3,500 men have been employed for five years on this part of the canal, and in 1901 the company had funds remaining to carry on the work for one year more. The cost of completing the canal was estimated in 1899 at 512,000,000 francs. The total length of the route is 46 miles. The prospect of raising capital in France was so slim that the directors of the company began negotiations with the United States Government for the sale of the concession and the unfinished work. They set a price high enough to reimburse the original shareholders, or as an alternative proposed that the French company should be a partner in the canal with the United States Government. The French engineers estimated in 1901 that the canal could be completed with an additional expenditure of not more than 250,000,000 francs. A commission of engineers which examined the two routes for the United States pronounced the Panama and the Nicaragua projects both to be feasible. A new effort to raise a capital of 500,000,000 francs in France met with no response. The Colombian Government studied a scheme for completing the canal by its own means, employing convicts sentenced to long terms to carry on the excavations. The average number of such prisoners is 1,000. The legality of the last extension conceded to the new Panama company was disputed, and in case the courts should decide it to be invalid the Colombian Government considered the alternate plan of offering the concession to the United States Government with absolute control and the perpetual lease of such adjacent territory as may be necessary. Negotiations between the new French company and the United States Government were still pending. The American engineers estimated the value of the useful work done by the French companies to be not over \$43,000,000, less than a fourth of the capital that had been spent. The American experts, while approving in general the plans of the French engineers, regarded the Culebra dam, designed to impound the waters in the rainy season and store them for feeding the canal in the dry season, as unsafe unless built up from the solid rock instead of from a bed of clay. They found by boring that underneath this bed of clay, between it and the rock, there was a thick stratum of sand.

Civil War.—The revolutionary invaders having been driven out of the country, and the insurgents dispersed before the opening of the year 1901, the Government officially declared peace throughout the territories of the republic, and decreed that the Magdalena war flotilla should be employed to carry import and export cargoes. Shipments of gold from the mines of Antioquia

and Tolima, and also of coffee, were made in conformity with this provision, and consignments for Colombia arrived. In January bodies of insurgents again took the field and attacked the Government troops at Panama and other points, but gained no advantage and soon subsided. The causes of the civil war, which had already lasted a year, go back to the dictatorship of Dr. Núñez, who was elected President in 1880 by the Liberals, the party that had governed the country for twenty years, and in 1885 went over to the Conservatives, and with their support ruled as a dictator till 1895. After abrogating the Constitution, his first step was to repudiate the foreign debt. Unable to borrow more money abroad, and needing funds to satisfy his supporters, he founded a national bank with a monopoly of the banking business, obtaining the capital by discounting with the Panama Railroad Company the payments of \$500,000 a year in gold due to the Government according to the contract made at the time the concession was given. For an advance of \$3,000,000 he released the company from the annual payments for twenty-five years. The national bank issued non-convertible paper money, which was declared to be the legal tender for all debts, and the only lawful money, it being a punishable offense to make contracts stipulating that payments should be made in any other kind of money. The amounts of the earlier emissions were made public, but subsequently currency was secretly issued by the bank of unknown amounts, and the issues have continued until the paper dollar, with which all debts contracted in gold have been wiped out, was worth only a few cents. While the rate of exchange was rising rapidly a *moratorium* was decreed, enabling debtors to postpone payment until the currency became almost worthless. The premium on gold has recently fluctuated between 3,500 and 4,000. President Caro, who succeeded Núñez, continued his arbitrary methods and ruinous financial expedients. The valetudinarian Sanclemente was selected as Caro's successor to be President in name only, and he immediately resigned his functions into the hands of the Vice-President. The complaints which the Liberals make of the rule of the Clerical Conservative party are grave and numerous. The Government has increased tenfold the taxes bearing upon both natives and foreigners. Fruit, gold, silver, cacao, hides, and rubber, which were formerly exported free of duty, must now pay heavy export duties. Absolute monopolies for the manufacture of salt, matches, cigarettes, and liquors have been sold to different companies, also the rights of the pearl fisheries. A concession for running lotteries was sold, although previously this form of gambling was little practised in Colombia. Bull-fights, cockpits, and gambling-houses were licensed. The endowments of orphan asylums and hospitals were appropriated by the Government. Articles destined for the use of the clergy, convents, and religious institutions of all kinds were made free of duty, and it is charged that, taking advantage of this law, the industrial schools managed by monks have been turned into great manufacturing establishments. The court of audit which formerly examined and made public all the accounts of the Government has not been allowed to exercise its functions freely in recent years, and public contracts, which were formerly given to the lowest bidders, have been privately awarded.

By abolishing obligatory lay education and placing all the schools under the control of the clergy the Government has given the greatest offense to the Liberals, who say that the nation is

into ignorance; and they accuse the Conservatives of having made a compact with the Pope, not only to pay annually \$100,000 in gold to the Vatican, but to submit the legislation, jurisprudence, and administration of the country to the direction of the clergy, and to hand over to the Jesuits all instruction of the young. The Minister of War has suppressed all private teaching, and any teacher or professor who is denounced by a priest is removed. The free university has been handed over to the Jesuits, and large subventions are paid to their other colleges. The cemeteries have been given up to the Church, and recalcant Catholics as well as non-Catholics, native or foreign, can not be buried in them or even outside of them in places to which the priests objected. The Conservatives not only abolished civil marriage, but annulled all the marriages that had been contracted civilly or by any religious rite except that of the Catholic Church during twenty years. The Masonic order has been suppressed. The rights of free assemblage and of free speech are suspended, and freedom of the press can only be exercised subject to the penalty of imprisonment or banishment or to the suppression of an offending newspaper, which the minister can order at any time. Opponents of the Government have under military law been imprisoned, exiled, and even slain by soldiers acting under the verbal orders of the President or his subordinate officials. Secret-service agents are supported for the purpose of watching the Liberals, who complain that their private letters are frequently opened in the post-office. The Liberals are opposed not only to the clericalism of the dominant party, but also to the centralized Government that was established by the Constitution of Aug. 4, 1886, which abolished the sovereignty of the nine states, which became departments administered by governors appointed by the President, although still retaining the management of their own finances and certain other state rights. The Liberals of the neighboring republics are likewise devoted to the principles of federalism and secularism, and therefore are in thorough sympathy with the Colombian Liberals. All three republics formed, for a brief period after gaining their independence from Spain, a single state that was known as Great Colombia. Their population is homogeneous, and political rivalries or jealousy have not disturbed their good relations, boundary disputes, as they have arisen from time to time, having been settled by arbitration. Of each of them the political history has consisted of a long struggle to uproot the clerical rule that is a heritage from Spanish dominion. As a result of clerical rule in Colombia for fifteen years, while public works have been neglected and the public credit ruined, friars and nuns swarm everywhere and live on the fat of the land. The religious orders have gained the upper hand, and what they have accomplished in Colombia they hope to in Venezuela and Ecuador. Hence the Liberals of those republics were impelled to take an active part in the revolutionary uprising in Colombia.

In the summer of 1901 Gen. Uribe Uribe arrived from the United States to take the lead of a fresh insurrection against the Government. Revolutionists gathered early in July at Cocle, and in consequence the Government sent troops to hold Bocas del Toro, where martial law was proclaimed. Venezuelans and Colombians marched across the frontier, and between La Hacha and Guajira, Venezuelan gunboats commanded by Gen. Echeverria, who was a Colombian by birth, hovered on the coast. On July 18 the Government announced that it would suspend payments on ac-

count of war materials it had purchased in order to be able to pay the armed force and civil officials, and would expropriate whatever was necessary for feeding, equipping, and transporting the army, and levy forced loans or impose war contributions in the departments without resorting to national funds. The governors were authorized to proceed in the matter without requiring the approval of the Government, and each governor was held responsible for the suppression of rebellion in his department. A force said to number 6,000 crossed the frontier on July 29 into Venezuela, and was repelled by 10,000 Venezuelans and Colombians assembled there after a fight that lasted all day and part of the next. A few days later another Colombian force, 2,000 strong, crossed the frontier under the command of the Minister of War. Colombian rebels attacked Government troops on the isthmian railroad near Colon, but were driven off. The American yacht *Namouna*, which the Colombian Government had bought to convert into a war vessel, and renamed the General Pinzo, arrived at Colon, and was equipped with guns. Gen. Castro denied that a state of war existed between Venezuela and Colombia, declaring that the two invasions were the work of the Conservative Government of Colombia against the majesty of the nation of Venezuela, not an international attack by the people of Colombia against the people of Venezuela. A section of the Colombians, he said, had attacked Venezuela. This attitude was altered into one more warlike in consequence of the action of the military authorities in Cucuta toward the Venezuelan consul and the invasion of Venezuela by organized Colombian troops who plundered the people. The attention of the Colombian minister was called to this fact, and he explained that troops had crossed the border contrary to express orders to observe neutrality. Venezuelan revolutionists joined the Colombians in incursions into Venezuelan territory and seized the opportunity to raise the standard of revolt against President Castro (see VENEZUELA). Venezuelan troops landed in Colombia and Colombian troops invaded Venezuela, but still a state of war was not recognized. A force of 10,000 Venezuelans was concentrated on the frontier for the avowed purpose of protecting the national honor of Venezuela and the inviolability of her territory, without, however, breaking off commercial and friendly relations with Colombia. The Venezuelan President, after establishing the fact that regular Colombian troops had crossed the frontier, proclaimed martial law, recognized the Colombian rebels as belligerents, directed that his passports should be given to the Colombian minister, who, without waiting for that formality, left the country, and withdrew the exequature of Colombian consuls. The governments of Ecuador and Nicaragua gave assurances that they would remain completely neutral in relation to the internal conflict in Colombia.

A German merchant steamer was detained in the harbor of Cartagena and searched by the Colombian authorities, and Abel Murillo, secretary to Gen. Uribe, was arrested on board in spite of the protests of the captain of the ship, who claimed that the passengers enjoyed the protection of the German flag. German cruisers were ordered to Colon and Panama. When the revolutionists appeared on the Isthmus of Panama the United States gunboat *Machias* was sent to Colon, and subsequently the battle-ship *Iowa* was ordered to Panama, and the *Philadelphia* and the *Ranger* to the Pacific side of the isthmus. The naval commanders had orders to interfere in case the rail-

road or other American property was in danger or communications across the isthmus interrupted. To repel the advance of Colombian revolutionists and their Venezuelan allies Colombian troops were massed on the frontier.

The interest of the United States in the Colombian and Venezuelan broils was chiefly concerned in keeping the route over the Panama isthmus open to peaceful traffic, which the United States has the legal right and the duty to do under the treaty of 1846 with the republic of New Granada, in which the United States guaranteed the complete neutrality of the isthmus, so that free transit from ocean to ocean shall not be interrupted or disturbed. This guarantee was given in consideration of special rights conceded to the United States on the isthmus. Germany possesses valuable commercial interests in both republics.

In the middle of August the Colombian rebels advanced toward Bocas del Toro, looting on the way the Chinese stores at Emperador. They encamped before Bocas del Toro, and demanded the surrender of the town. The Government garrison was reinforced, and took up a position on the opposite side of the lagoon, and rifle fire was exchanged daily between the two lines of entrenchments, 2,000 yards apart. Both sides obtained boats, but neither ventured to attack the other on its own ground. The revolutionists made an attempt to seize the town after the Government troops went into camp outside. The movement was observed by the commander of the troops, who sent out men in several steamboats to intercept their solitary boat, which was compelled to put back in a crippled condition. The troops brought an old cannon into play, but the revolutionists kept their position until Sept. 14, when Col. Gruzo made a night attack in front and rear, having landed his troops unobserved from boats and launches. After a sharp fight the Liberals fled from their island camp, leaving 30 killed and wounded, 40 prisoners, and their guns and ammunition. Two modern cannons that the insurgents had and their other weapons were obtained from Costa Rican and Nicaraguan towns. When the rebellion broke out the Colombian Government placed an interdict on all trade with foreign ports. Colon was the only Colombian port left open. The consular officers of foreign governments threatened to send for gunboats if the ports were not reopened, and soon the embargo was lifted. The United States Government on Aug. 24 proffered its good offices to bring about a reconciliation between the Colombian and Venezuelan governments. The answer of Venezuela placed the responsibility on Colombia. The American minister in Bogotá also gave notice that the United States would be obliged to intervene with force if isthmian traffic were interrupted or threatened. The Colombian Government expressed its willingness to accept the mediation of the United States, if needed, to avert war, and denied having invaded Venezuela, placing the burden of the issue on President Castro.

Gen. Uribe's expedition made a successful landing, raised the Liberal standard, captured some guns at San Cristobal, and pursued the Government troops into the interior after beating them in two battles. In a manifesto Gen. Uribe declared that he was fighting for the union of Colombia, Ecuador, and Venezuela in a Great Colombia.

Gen. Pedro N. Ospina, who succeeded Gen. Pinzon as Minister of War, arranged a conference with those of the Liberal leaders who were not actively engaged in the rebellion, and proposed a plan of pacification according to which the revo-

lutionary army was to be merged in the regular army and a new Government formed in which the Liberals and Conservatives should both be represented, President Marroquin retiring. The acting President had Gen. Ospina arrested on the charge of treason, and appointed Dr. Concha Minister of War.

On Sept. 9 Gen. Davila landed a force of 800 men near La Hacha, which marched on the town while his gunboats threatened La Hacha from the sea, but did not fire upon the town. The Colombian regulars withdrew as the Liberals and Venezuelans advanced, then gathered again in greater numbers, and on Sept. 14 surrounded and defeated Gen. Davila's force, which was caught on both sides of a river with the bridge broken, while José Dolores, an Indian chief, placed his warriors in ambush on the line of retreat to Venezuelan territory. The revolutionary army was dispersed. Gen. Echeverria was killed with a large number of Venezuelans in the decisive engagement at Curuzo. The Colombian Liberals were rallied by Gen. Castillo. Venezuelan troops, 8,000 strong, concentrated on the frontier between San Cristobal and Cucuta, and under the command of Gen. Valencia a Colombian force of 6,000 men was massed against them in the beginning of October. No shots were fired from either side. Meanwhile fresh notes were exchanged between the governments asking explanations. A Cabinet crisis occurred at the end of September, the result of which was that Miguel Abadia Mendez took the portfolio of Foreign Affairs.

In Venezuela troops were organized at Maracaibo for a fresh landing in Colombia, and during the absence of the gunboat Boyaca they seized a position and blockaded Tumaco. Colombian revolutionists under Gen. Avelina Rosas were defeated by the regulars in southern Cauca early in November. President Castro, of Venezuela, was hindered by risings of the hostile party in his own country from giving substantial support to the Colombian Liberals.

Gen. Uribe Uribe, with 6,000 men, was master of the rich coffee-growing department of Santander, where the revolution began. The Liberals overran the department of Bolivar, the Government troops holding only the seaports. The destruction of the railroad from Cartagena to the Magdalena cut off military communications between the ports and the interior. Advancing through the department of Cauca to the Pacific coast, the revolutionists invaded the Isthmus of Panama, where they found some support among the merchants. They were dispersed in small detachments through the northern quarter of Colombia, and the 40,000 Government troops were also widely scattered. The capital and the great mountain plateau on which it is situated was safe from invasion unless the insurgents could obtain river boats enough to transport an army and supplies up the Magdalena. The people of Costa Rica, Nicaragua, and Honduras, as well as the Venezuelans and the Liberals of Ecuador, gave aid and support to the revolutionists. Colon declared for the revolution, and Pinzon threatened to bombard the town. Commandant McCrea, of the Machias, forbade this on Nov. 25 until non-combatants could escape. Colombian troops were landed to attack the rebels in Colon, and United States marines from the Iowa were landed by Capt. Perry to guard the railroad. Gen. Alban, Governor of Panama, with 600 men, attacked the Liberals unsuccessfully at Chorrerra, and then marched against the body that held Empire and Culebra. The Iowa and the Concord at Panama, and the Machias and the Marietta at Colon, had

most American property. French, German, and British war ships were in those ports. (See COLORADO. See also UNITED STATES.)

CONGO, INDEPENDENT STATE OF THE,

The Congo Free State, a nominal independent, neutral, and independent state, was created out of the Congo International Conference of 1884-85, which was founded by King Leopold, of Belgium, in 1884, and exercised sovereign powers recognized by the leading powers. The general act of Berlin, signed on Feb. 26, 1885, recognized the Independent State, with Leopold II, King of the Belgians, as its sovereign. On July 3, 1890, a convention was signed between Belgium and the Congo State, ratified by the two Belgian Chambers on July 25, 1890, providing for annexation to Belgium of the territories of the Independent State after a period of ten years. The seat of the Central Government is at Brussels, where the Secretary of State, Baron Edmond van Eetvelde, directs the administration with the assistance of secretaries in the various departments. Bowa is the headquarters of the local Government, which is generally in charge of a Vice-Governor-General—Major E. Wangermee in 1901. King Leopold, by a will dated Aug. 2, 1889, bequeathed his sovereign rights in the Congo territories after his death to the Belgian state. In the convention of 1890 the Belgian Government agreed to advance to the Congo Free State a sum of 25,000,000 francs, 5,000,000 francs to be paid immediately and 2,000,000 francs annually for a period of ten years. During these ten years the loan should bear no interest, and six months after the term expired the Belgian Government should have the option of annexing the Congo Free State with all the appurtenances, rights, and advantages attaching to the sovereignty of that State, in which case a law would be made to determine the special *regime* under which the territories should then be placed. From the date of the convention the Belgian Government was entitled to receive such information as it desired to have regarding the finances, customs tariff, and economical and commercial situation of the Free State in order to have a clear idea of the financial situation, the only connection of the Free State with Belgium being the personal union of the two crowns. If at the expiration of the ten years the Belgian Government should decide against annexation, the sums advanced would be redeemable after a further period of ten years, during which interest would be charged at the rate of 3½ per cent., and sums accruing from concessions of State lands or mines should be set aside for the repayment of the loan. The preamble of the convention alluded to the principle that the right of option might be extended in exchange for a temporary abandonment of any claim for interest. As there was some popular opposition to colonial enterprise in Belgium, and as the King was not willing to hand over the control of the administration, at any rate without a clear understanding of the conditions on which it would be carried on in the future, he decided, in consultation with his ministers, to postpone annexation until the law defining the special *regime* could be elaborated to the satisfaction of all parties. The Belgian Government therefore passed a law in 1901 reserving the option to be acted upon later in consideration of the remission of all claim for interest for a new period of ten years (see BELGIUM). The convention, which expired in February, 1901, precluded the Free State from contracting other loans outside. Nevertheless the Free State did obtain from an Antwerp bank a loan of 5,000,000 francs at 6 per cent., secured by a mortgage on a large tract of territory in the upper Congo region. The

money was needed to defray the expenses of suppressing the Arab revolt and to pay the cost of expeditions into the Nile valley. In spite of the increasing revenue from ivory and other sources the budget continued to show a deficit, and it became necessary to apply to the Belgian Government. Jules de Burlet, who was Premier, proposed to annex the Congo State at that time, and presented a bill to that effect, but owing to political reasons this was withdrawn and the Belgian Chambers voted to advance, under the same conditions as the former loans, a sum sufficient to pay off the loan contracted with the bank and to meet the deficit. This increased the indebtedness of the Free State to Belgium to about 32,000,000 francs. Since 1895 the financial condition of the Free State has been increasingly prosperous. By virtue of a treaty made with Great Britain and Egypt in 1894 the Free State occupied under lease the enclave of Lado on the upper Nile, in the Bahr el Ghazal province. The lease embraced this entire province, but the sovereignty of the Free State made a promise to the French Government without any consent on the part of Great Britain that the Free State would not profit by the treaty beyond a certain limit. The Lado district was in continuous occupation of the Free State forces until and after the reconquest of the Soudan by the Anglo-Egyptian army, and in 1901, when the whole course of the river Nile was occupied by the British, there were six times as many Congo troops at Lado as there were English. The lease of the whole Bahr el Ghazal was not repudiated by Great Britain when the Congo State in deference to French objections waived its right to claim possession and withdrew its forces to the Lado enclave. On the contrary, it was declared to be in full force by Lord Salisbury, who, by reasserting its validity, intended to affirm the claims of England to this region against the designs of the French Government, which was preparing expeditions to take possession of it and hold it subject only to the right of the Khedive of Egypt and his suzerain, the Sultan of Turkey, to reclaim the province. France having relinquished all pretensions in this quarter, the Congo Free State proposed to Great Britain in the spring of 1901 to exercise its rights under the lease to take possession of and administer the entire Bahr el Ghazal. The negotiations ended in an agreement whereby a part of the Bahr el Ghazal apart from the Lado district was given over to the Congo State during the lifetime of King Leopold, at whose demise all the leased territories will become Anglo-Egyptian possessions. A strip of territory at the eastern extremity of the Congo State which King Leopold leased to Great Britain in 1894 was not occupied, and the rights under the lease were abandoned in deference to the protest of the French and German governments that no part of the Congo territory under the treaties constituting the Free State could be alienated without an international agreement. In September, 1900, a German force seized Belgian stations on this eastern border and compelled the Free State troops to withdraw under threat of hostile action, claiming that the land was within the limits of German East Africa.

Area and Population.—The north bank of the lower Congo belongs to the Independent State from Banana to Manyanga, and from that point the southern bank. In the interiors the territory embraces the entire basin of the Congo, except that the Kwango and Kassai rivers divide it from Portuguese territory on the southwest, and the Congo, from Manyanga to the mouth of the Ubangi, and the latter river throughout its entire course, from

French territory on the northwest. Lake Bangweolo, Lake Moero, Lake Tanganyika, and Lake Albert Edward, and connecting lines, form the eastern boundary and in the northeast, where the meridian of thirty degrees of east longitude and the water parting between the Nile and the Congo make the political boundary, a district in the Anglo-Egyptian sphere leased by arrangement with Great Britain gives access to the Nile. The territories of the Independent State are divided into the districts of Banana, Boma, Matadi, the Cataracts, Stanley Pool, East Kwango, Lake Leopold, Bangala, the Equator, Ubangi, Welle, Stanley Falls, Aruwimi, and Lualaba-Kassai. The entire area is estimated at 900,000 square miles, and the population at 30,000,000.

The number of whites on Jan. 1, 1900, was 1,958, of whom 1,187 were Belgians, 176 Italians, 99 English, 95 Dutch, 81 Swedes, 72 Portuguese, 53 French, 39 Danes, 33 Americans, 25 Norwegians, 13 Swiss, 6 Spaniards, and 30 others. There are 300 missionaries in 76 missions, 180 of the missionaries being Roman Catholics and 120 Protestants.

Finances.—The revenue for 1899 was estimated at 19,966,500 francs, and expenditure at 17,251,975 francs. For 1900 the estimate of revenue was 26,256,500 francs, of which 2,000,000 francs came from the Belgian treasury, 1,000,000 francs from the sovereign, 4,680,000 francs from customs, 3,800,000 francs from transport, 11,200,000 francs from the State domains, 2,950,000 francs from former budgets, and 626,500 from various sources. The expenditure for 1900 was estimated at 27,731,254 francs, of which 110,360 francs were for central administration, 11,050,013 francs for the Department of the Interior, 15,423,681 francs for the Department of Finance, 158,000 francs for the Department of Foreign Affairs and Justice, and 989,200 francs were for contingencies.

The Congo State issued 70,000,000 francs of bonds under a decree in 1888 authorizing the issue of 150,000,000 francs; next 14,000,000 francs at 4 per cent. in 1896; and in 1890 and subsequent years received an advance of 25,000,000 francs from the Belgian Government, to be paid with 3½ per cent. interest after 1901, provided the territory of the State should not be annexed by that date. In 1895 the Belgian Government advanced 6,804,415 francs more.

Military Force.—The defensive force of the Independent State consists of 23 companies of native troops, numbering 11,850 men, commanded by 200 European officers and 241 European non-commissioned officers. At Boma, the station of the Cataracts, and the Equator station, and in the Ubangi-Welle, Aruwimi, and East Kwango districts single companies were kept in 1900, while at Stanley Falls there were six, in the Ubangi-Bomu territory two, and in the territories of the Welle four companies. The army is recruited partly by voluntary enlistment, but by the decree of July 30, 1891, all the natives between the ages of fourteen and thirty are liable to service, and an annual recruit, which was 2,000 men in 1896, is drawn by lot. The period of service is five years. At need all the workmen and employees can be called to arms to form an auxiliary corps.

Commerce and Production.—The general commerce, including the produce of adjacent regions exported by way of the Congo and imports destined for those regions, as well as the exports and imports of the Congo State's own territories, amounted in 1899 to 27,103,000 francs for imports and 39,138,000 francs for exports. The principal article of export is caoutchouc, exports of which amounted to 28,974,000 francs. Next comes ivory,

exports of which were 7,555,000 francs in value; then palm-nuts, exported to the amount of 1,554,000 francs; and palm-oil, of the value of 834,000 francs. The special imports amounted in 1899 to 22,326,000 francs, and special exports to 36,068,000 francs. The values in francs of imports from and exports to various countries in 1899 are given in the following table:

COUNTRIES.	Imports.	Exports.
Belgium.....	16,231,000	33,050,000
Netherlands.....	2,208,000	3,531,000
Great Britain.....	3,364,000	297,000
France.....	2,479,000	52,000
Germany.....	1,632,000	178,000
Portuguese possessions.....	283,000	1,567,000
Portugal.....	201,000	12,000
Other countries.....	705,000	51,000
Total.....	27,103,000	39,138,000

The special imports were valued at 22,325,847 francs, special exports at 36,067,959 francs. The special imports of textiles and clothing were 5,147,610 francs in value; of articles of food, 3,887,912 francs; of steamboats, 2,704,819; of articles of drink, 1,718,627 francs; of metals and metal manufactures, 1,667,391 francs; of machinery, 1,492,310 francs; of arms and ammunition, 932,073 francs. The Government gives a bounty for every area planted with coffee-trees when these have a height of 30 inches. Cacao plantations are similarly encouraged. Enormous numbers of coffee-trees have been set out with the object of getting the reward, but many of the plantations are on unsuitable land and many are unfruitful through neglect. The Congo railroad has fulfilled the highest expectations of its promoters, and, in connection with the steamer service on the navigable waterways, reaching to the farthest confines of the Congo territories, the imports grew from 12,500,000 francs in 1894, and exports nearly trebled in the same time. The ivory trade continues to be large, and rubber exports are increasing. The coffee-plantations are coming into bearing, and spice-plantations are springing up. The bulk of the trade is in the hands of the Belgians, and almost the entire export of rubber goes to Belgium, 2,031,599 kilograms out of a total of 2,113,465 kilograms in 1899. The imports in 1900 reached the total of 32,000,000 francs, and exports rose to 51,000,000 francs.

Railroads, Posts, and Telegraphs.—The railroad connecting Matadi on the lower Congo with Ndolo and Leopoldville on Stanley Pool was opened to traffic on July 6, 1898. It has a length of 260 miles. In Mayumbe a railroad is being built for local traffic, of which twenty miles were completed before the end of 1900. Surveys are in progress for a railroad to connect the head of navigation on the upper Congo with the great lakes. The Government has 4 steamers for the transport service between the mouth of the Congo and Matadi, and more than 100 on the upper Congo. The Belgian Premier planned in case of annexation to purchase the railroad for 70,000,000 francs, 40,000,000 francs representing the debenture shares, and 30,000,000 francs the ordinary shares. Owners of the stock objected so strongly that he withdrew the proposal. A Franco-Belgian syndicate has proposed to build a railroad from Stanley Pool to Tanganyika, with a branch to Lado.

The post-office in 1898 forwarded 104,032 pieces of mail matter in the internal and 343,645 in the international service; in 1899 the numbers were 105,924 for the internal and 332,520 for the inter-

service. The posts cover the Free State from the Atlantic to Lake Tanganyika.

Telegraph lines have a total length of 795 miles.

Navigation.—At the ports of Boma and Bahr-el-Ghazal were entered 192 vessels engaged in foreign commerce, of 309,945 tons, in 1899; cleared, 197, of 379,715 tons. Of the total tonnage entered 191,643 tons and of that cleared 189,993 tons were Belgian, 79,037 tons entered and 85,588 cleared were British, and 65,682 tons entered and 67,112 tons cleared were German. In the coasting trade 440 vessels, of 19,838 tons, were entered, and 451, of 29,557 tons, were cleared.

Native Insurrections.—After the Budja revolt was suppressed by Capt. Verdussen the Batatelas became unruly in the Lualaba and Kassai regions, and on the Welle the Ababuas rose in revolt, cutting off communication with Lado, and attempting to seize the arms stored at Lobokwa, where they suddenly surrounded the garrison of 40 men and killed a native soldier. The sending of reinforcements checked this rebellion. At Sankuru disturbances occurred as a sequel to the operations of Major Malfeyt against rebels at Luluaiberg. Commandant La Haye, with a force of 500 men, started for the Welle in June, and gradually brought the last of the rebels in that region to submission. Agents who were guilty of cruelty to natives in the Katanga district and elsewhere were condemned by the courts. Col. Bartels made a tour of inspection as a special commissioner to report on modifications that might be required in local methods of administration. King Leopold and his officials were determined to root out the abuses that have been charged against the Congo Administration. Foreign missionaries and others who have criticized the Free State Administration condemn the system of leasing public lands for private exploitation, charging that the natives are driven from the best land that they have in cultivation. These private domains in 1900 yielded to the treasury 100,000,000 francs, while the income from the Crown domains was 700,000 francs. In the Mongolla district, where the natives were provoked to revolt by the cruelty of Belgian agents, Capt. Marculier established a chain of military stations. In the Kassai district Capt. de Wulf obtained a decisive victory over the rebellious tribe of Bena-Lulus. Of the Batatelas who revolted against Baron Dhanis in 1895 and have since been pursued by the Free State troops, a band of 300, while encamped north of the river Luama, was attacked by 150 native troops under Capt. Anderson, and after a brief engagement compelled to surrender. There were still 1,000 rebels in the mountains bordering Lake Kassai, where by terrorizing the surrounding district they gained allies. A punitive expedition was sent out in April under the command of Major Malfeyt, who posted himself, with 700 men, at the confluence of the Congo and the Lukuga, while Capt. Savaes, with 150 men, took up a position where the Lualaba enters the Congo, and Major Vandenbroeck, with 200 men, went to Kilwa, on Lake Moero, smaller detachments occupying intervening posts so as to make possible a general enveloping movement and cut off escape either to the north or into British territory on the south. The Batatelas, who had obtained repeating rifles from Belgian and English traders, were joined by other tribes. One section when hard pressed went over the line and surrendered to the Germans, but the main body outnumbered the Free State troops. The insurgent Ababuas in the Welle region were finally brought into subjection in August by Lieut. La Haye, who had 600 men in his command. The re-

volt in the Mongolla district and in the region of the Kassai was checked in September. An important military post was established at Ndobo.

CONGREGATIONALISTS. The following summaries of the Congregational churches in the United States are given in the American Congregational Year-Book for 1901: Number of churches, 5,650; of churches added during the year, 46; of ministers, 5,568; of church-members, 635,791, showing a net gain for the year of 5,118; of members of Sunday-schools, 743,634; of additions on confession during the year, 27,101; of baptisms, 11,518 of adults and 11,837 of infants; amount of benevolent contributions, \$2,212,536, showing a gain of \$77,263; of contributions for home expenditure, \$7,497,930. The contributions for foreign missions were \$501,987, and those for home missions \$1,699,074.

The seven theological seminaries returned 325 undergraduate students.

The American Congregational Association maintains the Congregational House, Boston, is accumulating a library, portraits, and relics of the past, and cares for whatever may illustrate Congregational history and promote the interests of Congregational churches.

The contributions to the Sunday-School and Publishing Society for the year ending Feb. 28, 1901, were \$57,617, and its available income from all sources was \$76,156. It had 20 superintendents, 14 missionaries, and 3 correspondents, and published 6 periodicals, as well as a list of books on religious and Congregational subjects.

The Board of Ministerial Relief returned the Ministerial Relief fund of the National Council at \$118,000; from which an income of about \$5,000 accrued, to be distributed among beneficiaries in portions of from \$25 to \$200 a year. Sixty-four persons and families—disabled ministers, widows, and children—had been thus aided in 1900.

Education Society.—The twenty-fifth annual report of the Congregational Education Society represented that increased sums had been contributed in the West, and that the society had given considerably more to academies and missions than in the previous year; that it had paid all outstanding claims, was clear of debt, and had a small working balance in the treasury; and that in the student department all claims had been promptly paid and a surplus remained. The year had been very successful in New Mexico, where new buildings had been erected at Cabezon and Cubero; and much had been accomplished in Utah, at the Gordon Academy. Work had been set forward at Kingfisher, Eureka, and Chadron. In the department of theological scholarships more men than usual had accepted grants as loans, giving their notes in payment. One hundred and thirty-nine men, or one more than in the previous year, had received scholarships. A large demand from Southern Congregational churches for educated ministers was remarked, and the expediency of establishing an institution in the South was suggested.

Church Building Society.—The forty-eighth annual meeting of the Congregational Church Building Society was held in New York city, Jan. 10. The total receipts for the year 1900 had been \$213,160, of which \$98,471 had been from churches and individuals, \$28,083 from legacies, \$55,304 from loans returned, and the rest from other sources. Loans amounting to \$109,000 had been voted to 49 churches, and grants amounting to \$76,973 to 97 churches. Both loans and grants had been voted to 26 churches. Loans amounting to \$39,158 had been paid to 26 churches, grants of \$60,881 to 70 churches, and both loans and grants

to 15 churches. On parsonage account, \$24,810 had been voted to 50 churches, and \$24,195 paid to 43 churches. It was represented at the National Council of Congregational Churches that during its existence this society had bestowed aid upon more than 3,200 churches and 760 parsonages, and only a very few such organizations had passed out of existence without fulfilling the obligations created by such aid. Already \$3,800 more had been contributed back by aided churches than they had received.

Home Missionary Society.—The seventy-fifth annual meeting of the Congregational Home Missionary Society was held in Boston, Mass., May 14, Gen. O. O. Howard presiding. The Executive Committee reported that the total receipts for the year by the national and auxiliary societies had been \$538,986, of which \$203,701 were by the auxiliary societies. A debt of \$108,544 at the beginning of the year had been reduced to \$63,698. Eighteen hundred and sixty-three missionaries had been employed during the year in 46 States and Territories, and reported 183 new Sunday-schools organized, 147,274 pupils and Bible-class scholars in organizations under the society's care, and 5,113 additions on confession. The society gave its assent to a measure for consolidating the several Congregational missionary anniversaries and the magazines of the societies. This measure provides that two meetings of the benevolent societies be held each year, one in the East and one in the West, one for foreign and one for home work, one in the spring and one in the fall; and that a single monthly magazine covering the work of all the societies be published. A committee was appointed to cooperate with similar committees from the other societies in carrying out the measure.

At an informal meeting of members of this society at which representatives of the auxiliary societies and of the National Society were present, a committee of fifteen was constituted to consider and report some plan for perfecting the relations between the auxiliaries and the national society. Five members of this committee were nominated by the auxiliary societies and five by the Executive Committee, these ten after having been elected by the national society to elect five more; the entire subject of reconstruction to be committed to this committee, to be reported upon by them at the next annual meeting of the national society. These proceedings, on being reported to the society, were approved by it, and the ten committeemen, representing the auxiliaries and the Executive Committee, were appointed. It was agreed, in order to secure a *modus vivendi* between the national society and the auxiliary societies pending the action of the Committee of Fifteen, that the national convention for the purpose of making estimates and apportionments for the work should be continued; that such a convention be called at an early date by the Executive Committee to make estimates and apportionments for the rest of the fiscal year; that the auxiliary societies, whether they have entered into new relations with the national society or not, be invited to participate in the convention; that the question of rebates as provided in the contract of 1898 be left to be adjusted between the Executive Committee of the national society and the several auxiliaries; and that all appeals for funds by the national society within auxiliary States be in harmony with the work of the auxiliaries. The object of the movement was intimated to be the attainment of a close organic union between the auxiliary societies and the national society. Gen. O. O. Howard resigning the presidency

of the society, the Rev. Newell Dwight Hillis was elected to that office.

The adjustment of the relations between the national Home Missionary Society and its auxiliaries has been under discussion since 1893, when a convention of the National Committee of the American Home Missionary Society and representatives of the State societies was held, and a compact was entered into concerning the collection and distribution of funds. Under this compact all contributions of funds for the home missionary cause in auxiliary States were sent directly to the treasuries of those States. Estimates were to be submitted annually in convention by the auxiliaries of expected receipts and of the need for funds for the work in each State, to be passed upon by the convention after the estimates of income and needs of the national society for the same year had been presented; and a scheme of apportioning the funds was arranged. The working of this plan proved not satisfactory to the national society, and, under a provision permitting withdrawal on giving one year's notice, such notice was submitted to the convention in January, 1900, together with a statement of the reasons for taking the step. A substitute form of compact was drafted and submitted to the several societies. Only a few of the auxiliary societies responding favorably to the new proposition, the national committee by resolution expressed its strengthened conviction that the old compact was impracticable, and its desire to co-operate in future with each auxiliary State separately, "in respect to all matters of mutual interest in procuring and appropriating funds and in the prosecution of missionary labors generally." The committee also declared its judgment to be that the change it proposed should "lead to a more simple plan for direct appeals to the churches in all States and largely increased contributions to the treasuries, by which the work of the auxiliary States need not be hindered in the least, while the work will receive wider support than ever hitherto." These resolutions having been presented to a final convention, held in January, 1901, the national committee at its next meeting considered a plan for future co-operation with auxiliary States, and sent to the committees of those States a platform of propositions representing that "the Executive Committee of the national society recognizes that there can be no separation of territory for its field of service, and that it is bound, therefore, to consider the needs for work within the limits of the auxiliary States as carefully as elsewhere, and to that end seeks the counsel and cooperation of the several State societies. While the national society is the direct representative of each and every Congregational church in the country for the administration of this great commission, and as such must appeal to them severally for support, its committee recognizes, also, the demands and needs of the State organizations for their independent work, and suggests that the responsibility for a suitable application of contributions may properly be left with each church to determine, and thus will the constituency in every church become immediately and continue to be always clearly familiar with its individual share in the support of home missions, both locally and over the wide field, which latter, however, will to some extent include, at the discretion of the national society, aid and service to some of the auxiliary States." The maintenance of the annual convention was agreed to, with the understanding that it should receive reports and estimates of receipts and expenditures of the Congre-

gational Home Missionary Society and each auxiliary for the past year and the coming year, and consider all questions of common responsibility and mutual helpfulness. The principal effect of the new plan is considered to be to make the national society free to appeal directly to any Congregational church for funds, leaving with every such church the responsibility for the precise direction of its gifts, and to give a clear recognition and definition of the importance of the work in auxiliary States.

American Missionary Association.—The fifty-fifth annual meeting of the American Missionary Association was held at Oak Park, Ill., Oct. 22 to 24. The Rev. Washington Gladden, D.D., presided. The treasurer reported that the total receipts for the year had been \$351,750, and the expenditures \$353,352. The receipts were \$15,970 more, and the expenditures \$17,523 more than in the previous year. The contributions of the women's societies amounted to \$24,733. For four years the association had reported all obligations paid and no debt at the close, and it had created no new debt for seven years. The report of the Executive Committee mentioned a slight increase in the number of the schools, with more than 1,500 additional pupils, and enlarged church work. The educational work in the South included 6 chartered institutions, 43 normal and graded schools, and 32 common schools, with totals of 474 instructors and 14,668 pupils, 2,078 being boarding pupils. Included in these were 12 mountain schools, with 67 instructors and 2,190 pupils, of whom 463 were boarding pupils. Of these pupils, 94 were classed as theological, 308 as collegiate, 392 as college preparatory, and 1,547 as normal. The higher institutions were Fisk University, Nashville, Tenn.; Talladega College, Talladega, Ala.; Tougaloo University, Tougaloo, Miss.; Straight University, New Orleans, La.; Tillotson College, Austin, Texas; and the J. S. Green College, Demorest, Ga. All of the mountain schools except Lincoln Academy, Kings Mountain, N. C., were among the white people of the hills. The common schools were chiefly parochial schools in rural places where public schools were wanting, and were in close relationship with the churches in the States of North Carolina, Georgia, Florida, Mississippi, Alabama, and Tennessee. The new educational work in Porto Rico consisted of 2 schools, with 8 teachers and 306 pupils. The 228 churches in the South returned 140 ministers and missionaries, with 12,050 church-members, 1,454 additions during the year on profession, 17,347 pupils in Sunday-schools, benevolent contributions of \$2,707, and \$48,859 raised for church purposes. From the Indian missions were returned 20 churches, 52 out-stations, 1,414 church-members, 2,665 pupils in Sunday-schools, 48 white and 53 Indian missionaries and teachers, and contributions of \$2,988 to benevolence and church support. The schools at Santee, Neb., Oahe, S. Dak., Plumb Creek, S. Dak., Fort Berthold and Elbowoods, N. Dak., were attended by 211 pupils. The 21 Chinese missions reported 15 Chinese workers and 46 workers in all, with 1,386 pupils in the schools, 401 of whom had given evidence of having been converted. One hundred and eleven members had been added during the year to the Congregational Association of Christian Chinese. The addition, the largest ever had in one year, brought the number of Chinese converts up to 2,000. Work had been begun among the Japanese in Los Angeles and Fresno, Cal. The Alaskan mission comprised one school, 4 missionaries, and 100 pupils. An amendment to the constitution of

the association was adopted, providing for rotation in office of members of the Executive Committee. A proposition for the election of salaried officers by the Executive Committee instead of at the annual meeting of the association was referred. A proposition for having a joint annual meeting of the six Congregational societies in October was approved, and the Executive Committee was instructed to communicate with the other home societies on the subject. Propositions for the cooperation of the other five societies in the publication of a united magazine, and for the appointment of a single joint treasurer in New York for this society and the Congregational Home Missionary and Church Building Societies, were concurred in. The society recommended the appointment of a committee of the six societies for the promotion of harmony and cooperation in the collection of funds, and to suggest plans for the preservation of gifts and property to the purposes for which they were intended. A resolution was sent by telegraph to President Roosevelt approving of certain courtesies which he had shown to Booker T. Washington, "a justly honored representative of his people." A special report of the Bureau of Woman's Work showed that 451 women had been in the missionary work of the society during the year.

The American Board.—The annual meeting of the American Board of Commissioners for Foreign Missions was held in Hartford, Conn., beginning Oct. 8, the Hon. Samuel C. Capen presiding. The Prudential Committee reported that the total receipts of the year from all sources, including \$2,253 for the debt, had been \$697,371, a decrease from the previous year of \$40,586. The bulk of the deficit was in shrinkage of legacies. The regular donations from individuals, churches, and various societies had been \$509,198, of which \$198,655 had come through the several Woman's Boards (Woman's Board of Missions, Boston, \$127,874; Woman's Board of the Interior, Chicago, \$65,243; Woman's Board of the Pacific, \$5,538). While the total amount of contributions had decreased \$7,338 from the previous year, the gifts for the distinctive work of the board had increased \$8,780. The expenditures had been \$717,081, or \$14,970 less than in the previous year, while the debt had increased by \$19,710 to \$102,341. The general summary of the mission fields gave as the numbers in the 20 missions: Of stations, 97; of out-stations, 1,209; of places for stated preaching, 1,661; of ordained missionaries (17 being physicians), 167; of physicians not ordained, 14 men and 9 women; of other men assistants, 4; of women (including 9 physicians, 168 wives, and 182 unmarried), 350; whole number of laborers from the United States, 544; of native laborers (including 240 pastors, 513 preachers and catechists, 1,930 school-teachers, 293 Bible women, and 507 others), 3,483; making a total of 4,027 American and native laborers; of churches, 505, with 50,892 members, of whom 4,551 had been added during the year; number of members from the first as nearly as could be learned, 157,658; of members of Sunday-schools, 66,601; of persons under instruction, 62,188, including 228 students for the ministry in 17 theological schools and seminary classes, 10,225 pupils in 103 boarding and high schools, and 49,375 pupils in 1,135 common schools; amount of native contributions, so far as reported, \$147,879. In Africa, improved conditions were noted among the Zulus, with steps taken toward the beginning of systematic church organization. In Micronesia, Ponape had been reopened to missionary residence after ten years of virtual exclusion, and Guam, in the Ladrone

Islands, had been occupied as a new missionary center. Indemnity for losses incurred in Turkey during the massacres of 1895 and 1896 had been paid over to the United States Government, and would be distributed as soon as the formalities could be complied with. Increase in the number of native pastors, the average congregations, Sunday-school pupils, churches, and church-members was recorded in western Turkey. In central Turkey a Home Missionary Society had been organized by the native brethren. In European Turkey gain was marked in all the main features of the work. The conditions in China and progress in recovery after the Boxer disturbances were reviewed. In Japan the theological seminary of the Dosisha had been opened again, under a Christian constitution, and the Mission of the United Brethren was cooperating in sustaining it. In Austria a mission house had been dedicated in Vienna, restrictions on the holding of religious meetings had been relaxed, interest in temperance work was increasing, and the popular Protestant movement was growing. The church-membership of the mission had increased 17 per cent. Nine hundred copies of the Sunday-school helps in Bohemian, prepared for the mission there, were called for by Bohemian populations in the United States. In connection with the enterprise called the Forward Movement, there were now 82 churches and 3 individuals supporting 105 missionaries. The Twentieth Century fund was represented to amount, in cash and pledges, to nearly \$100,000. The committee on corporate membership recommended a change in the make-up of the body under which the committee shall be required to choose only one-half instead of three-fourths of the membership of the board from nominations made by the State associations. In an effort to secure contributions and pledges for the payment of the debt of the society, it was announced that \$48,000 had been given by an unknown friend which could be applied for the purpose. Contributions were asked for and the whole of the remaining amount of the debt—\$54,000—was secured in less than an hour.

National Council.—The National Council of Congregational Churches met in its eleventh triennial session at Portland, Me., Oct. 12. The Rev. Amory H. Bradford was chosen moderator. The report of the secretary showed that during the three years since the last preceding meeting of the council there had been gains of 36 churches, 7,485 members, and \$1,023,906 in home expenses, while losses had occurred of 1,211 in children baptized, 13,961 in membership of Sunday-schools, 32,103 in membership of Young People's Societies, and \$547,260 in benevolent contributions. The report of the National Council Ministerial Relief fund represented that the assets had increased to \$125,135, and that 58 persons were receiving relief, in grants ranging from \$20 to \$200. The total receipts on account of the council for three years had been \$52,075, while the expenditures had been such as to leave a balance in bank of \$14,000. The Committee of Fifteen which had been appointed by the previous general council to consider the relations of the six benevolent societies to one another and to the churches made a report embodying recommendations which, as approved by the meeting, urged upon all the importance of laying added emphasis upon the mission work at home and abroad to which Congregationalists are pledged; requested each church to endeavor by a personal canvass to reach all its members with an appeal for some gift to each of the six missionary societies; suggested that the churches make October a missionary month; that

they make provision for instructing the young people in the Sunday-schools and Christian Endeavor Societies in every department of the missionary work; that the missionary knowledge and interest of candidates for ordination and installation be made a subject of faithful inquiry; approved of the appointment of all salaried officers of the six societies by executive boards, of one administrative head, and of a limited representative governing membership for each of the six societies; urged the five home societies to try the experiment of a united annual meeting, allowing the meeting of the American Board to remain unchanged for the present; recommended the institution of an advisory committee of seven members by the executive boards of the five home societies to hold State meetings, and to which all questions of joint action shall be referred—this committee, with the addition of a member from the American Board, to take measures looking to the organization of conference and State missionary committees and to labor for the adoption of definite and systematic plans of benevolence by the churches, and that the committee appoint a secretary of systematic benevolence; that there be one monthly missionary publication devoted to foreign and home work; and that manuals of instruction and information be issued suitable for permanent use in Sunday-schools, Young People's Societies, and other similar organizations. A report on Comity, Federation, and Unity covered the subjects of cultivating closer relations with the brethren in Canada, cooperation with other bodies in general, the observance by the Congregational churches of the principle of comity, and exchange of declarations of good-will with other bodies. The proposition approved by the council of 1898 on federation of churches was again referred to a committee, the members of which were to be chosen with a view to their being able to carry out those plans so far as they might now be found practicable. The committee was requested to provide that proposals for federation, such as have been found advantageous in Great Britain, be referred to other denominations in the United States, either through their own initiative or through the National Federation of Christian Churches and Workers, or such other agencies as might seem available to accomplish the object. The project for establishing foundations of a religious character in connection with the great State universities was approved. The preparation of a system of graded Sunday-school lessons was advised. While not questioning the propriety of solemnizing the marriage of a party who has been shown to be innocent in divorce proceedings the council urged upon the ministers the duty of withholding sanction from those whose divorce has been secured on other than scriptural grounds. A committee was appointed to report to the next council on enrichment of the worship of the churches. A board of fifteen trustees was constituted to have charge of the council's Ministerial Relief fund and its administration. Plans adopted by some of the seminaries for the training of women for service as deaconesses were approved. Approval was also given to the proposed erection of a Pilgrim Memorial Church at Plymouth, Mass.

Congregationalists in Canada.—The fifty-fourth annual meeting of the Congregational Union of Nova Scotia and New Brunswick was held in July. Papers were read and discussed relating to the practicability of present-day preaching, the minister's conversion work, and the prospect of forwarding the work of the home churches. The Woman's Board of Missions occupied three

sessions with business, reports, and presentation of conditions, needs, and possibilities. The young people of the churches received thoughtful consideration, a whole session being devoted to Young People's Societies. Other denominational interests were remembered in addresses, resolutions, and plans of work.

Congregational Union of England and Wales.—The sixty-ninth annual meeting of the Congregational Union of England and Wales was held in London, beginning April 22. The Rev. Dr. Joseph Parker, chairman, in his annual address, spoke in memory of the Rev. James Chalmers, missionary in New Guinea, news of whose murder, with those of his associate, the Rev. Oliver Tomkins, and a number of their helpers, by savages had just been received; in favor of a modification of the coronation oath to rid it of expressions offensive to a large number of the people of the kingdom; in honor of the Christian men who had lifted up their voices in condemnation of the South African War—although he did not agree with them; and bringing forward some objections to the proposed closer union of the country Congregational unions with the national union. The annual report gave an outline of the reports of the special subcommittees upon ministerial settlements and removals, sustentation, the mode of electing the chairman of the union, and the problem of churches in large villages and towns. The Young People's Union had had a year of quiet development. Additions to the Congregational library had been less numerous than in some recent years; progress was making in the examination of manuscripts, and the library was being increasingly used for the purposes of political research. It was set forth in a brief survey of the history of the union that it had seen and helped to promote a degree of cohesion among the Congregational churches at home and a solidarity among men of the same faith and order in other parts of the world which far exceeded the brightest hopes of its earlier days. The union was asked to condone the breach of one of its rules involved by the joint assemblies with the Baptist Union. The business of the publication department had attained a better average than in the previous year. An important change in the method of electing the chairman was made, by which a system of formal nominations is established. A nomination by any twenty-five representative members, acting jointly, is provided for, to be sent in by March 15 of each year. If no nominations are sent in by that date, the committee of the union is empowered to nominate not more than three nor less than two candidates for the chairmanship. A resolution was adopted declaring that "the assembly, deeply deploring the long continuance of the disastrous warfare in South Africa, is most earnestly desirous that no effort may be wanting on the part of his Majesty's Government, not only to bring about a termination of hostilities, but to secure complete and lasting peace. In the opinion of the assembly that object will be most surely realized by the adoption of a magnanimous and conciliatory policy." The report of the Church Aid and Home Missionary Society represented that the contributions from the churches were increasing, the number of contributing churches having been 44 per cent. more than in the previous year, while the gifts from the county unions to the central fund showed a serious decline. The grants for the past year amounted to £4,075—£141 less than were asked for—constituting an amount of pledges considerably larger than the anticipated income. In a review of the five years' work of the society since

its reconstruction, it was shown that while the results of its efforts had been comparatively meager and unsatisfactory, a sum of £5,923 more than in the previous five years had been raised and disbursed; the minimum of pastors' stipends in aided counties had been raised from £60 and even less, per annum, to £90, and in some instances £100; and the sum of £2,152 had been added to the reserve fund, so that the expenses of management were met without touching the ordinary contributions. The amount promised to the Twentieth Century fund of £525,000 amounted at the time of the meeting of the union to £565,704, while £25,416 had been paid to the central fund. The vast preponderance of the subscriptions had been for local objects, and the central fund, for which a large amount was desired, had received comparatively little. Of the 500,000 guineas asked for, and which had been already promised, about half was to be used for distinct or local schemes of church extension, and £150,000 more for the reduction of church debts, leaving not more than £100,000 definitely for home, colonial, and foreign missions, provision for aged pastors, etc. Special effort was urged to increase largely the amount available for those purposes. The report on the subject of ministerial settlements and removals, which had been under the consideration of a special committee, began with the declaration that united action by the denomination as a whole is an indispensable condition to the securing of practical reform. Its recommendations included a provision making the county responsible for admissions to the ministry within their separate areas under rules substantially the same and similarly administered, and an appeal to the governing bodies of the colleges to consider whether some scheme of amalgamation which would not impair efficiency but would effect economy, could not be adopted. It advised that ministers entering the Congregational ministry from other denominations should be required to give satisfactory reports from their colleges and official testimonials as to character, ministerial status, and efficiency; and suggested that no application should be considered until the applicant is in communion with a Congregational church. A course of three years' reading, with annual examinations, was suggested as the test that county unions should apply to ministers without college training seeking recognition. In the case of vacant pastorates, the desirability of inviting a neighboring minister or layman to confer with the officers and to preside at the church and business meetings was emphasized; and it was suggested that no one should be asked to preach "with a view" except after most careful inquiry. For facilitating removals, the committee recommended the appointment of consultative committees by the county unions, to which churches seeking pastors and ministers seeking pastorates should apply; that a central committee, elected by the county unions, should meet at Memorial Hall and help the consultative committees; and that these committees, pledged to secrecy, should keep careful records as to churches and ministers. The assembly expressed its general approval of the recommendations contained in the report, and requested that the county unions be asked to signify their acceptance of the paper and of the rules recommended in an appendix to it; and instructed the General Committee to appoint a special subcommittee, authorized to collect, collate, and report upon such information and suggestions on sustentation as it can obtain. The committee's report further contained a note on the subject of sustentation. While the committee were agreed

as to the necessity for sustentation and for guarding the entrance to the ministry to that end, they were divided as to the lines on which a fund should be established; one section of the committee recommended a scheme for the formation—apart from the Congregational Union—of a voluntary federation of churches pledged to elect only ministers approved by a representative committee of the federating churches; and to adopt and support a sustentation fund. The other section of the committee was of the opinion that any scheme to be effective should be formed by the Congregational Union and worked through the county unions.

Constitutional Readjustment.—The subject of a possible readjustment of Congregational usages in order to give increased strength to the denomination and greater efficiency to its work, and to avoid some of the disadvantages acknowledged to accompany extreme independence of the individual churches and the society organization, has been under discussion in the denominational newspapers for more than a year; and some of the Congregational ministers and laymen of the greatest influence have openly spoken of the introduction of some of the features of the Presbyterian system. A conference held in London, Feb. 26 and 27, for the purpose of considering questions of this nature was attended by delegates representing all parts of England. Among the subjects more prominently brought forward was that of the raising of the standard of the ministry and of the provision of more adequate support for ministers, concerning which it was suggested that a federation should be formed of churches which should confine themselves to a list of ministers approved by the representative body, and should raise a sustentation fund to be used only for persons on that list; it was also proposed that this body, board, or council be constituted of representatives of all the colleges. The constitution of the Congregational unions was mentioned as a source of weakness. Under the present system each county or group of counties has its own union, and these several unions have no connection with one another, or with the Congregational Union of England and Wales, while the last body is destitute of legislative and administrative functions. The Rev. Joseph Parker, chairman of the National Congregational Union, addressing the meeting, said that, searching for the one governing principle which might be made to underlie the schemes and suggestions that were presented, he found it in the idea of "a united Congregational Church." "When a man said 'I will never submit to authority,' he might see the question in another aspect if he were part of the authority. Here was the gist of the question. In anything, absolute freedom was impossible. We must yield something, in order that we may get something better." The feeling of the meeting was expressed by resolution to be that the time had come for stimulating the common life and emphasizing the common interests of Congregationalism by concerted action with regard to entrance to the ministry; a sustentation fund; a retiring fund; and the question of removals. Attention was called during the discussion to the successful operation of the Provident fund of the Scotch Congregationalists, which secures a retiring allowance of £60 per annum to each minister. A resolution was adopted asking the county unions "to discuss the question of a closer and more direct connection with the Congregational Union."

Joint Meeting of the Baptist and Congregational Unions.—Pursuant to arrangements made in accordance with an understanding reached

at the meetings of the Baptist and Congregational Unions in 1900, a joint assembly of the two bodies was held, for the first time, in the City Temple, London, April 23 and 24. The Rev. Joseph Parker, Congregational, was chairman of the session, and said, in opening the meeting, that its purpose was not to discuss the differences between the denominations, but to verify and magnify their bonds of union. The Rev. Dr. Alexander MacLaren then delivered his official address as president of the Baptist Union, on the subject of the Preacher's Office, its themes, its demands, its possibilities. A resolution was adopted expressing deep sorrow at the death of Queen Victoria, devout acknowledgment of God's loving gift of such an exemplary life, sincere condolence with King Edward VII, commending the King and Queen to the prayers of all Christians, grieving that the new reign and the new century began amid the horrors of war, and praying for the speedy settlement of an honorable and lasting peace. The Rev. Principal Rainy, moderator of the United Free Church of Scotland, was introduced, and spoke of the accomplishment of the union of the Free and the United Presbyterian Churches there, and of "the higher criticism." An evening meeting in the Queen's Hall, with Mr. George White, M.P., in the chair, was addressed by Principal Fairbairn, Congregational, the Rev. J. G. Greenhough, Baptist, and the Rev. Dr. Horton, Congregational. At a joint meeting of Baptist and Congregational total abstinents it was shown that all but two of the students of the Congregational colleges and all of those of the Baptist colleges were teetotallers. A resolution was adopted in the joint assembly urging the churches and Sunday-schools to assist in devising and employing means for the reclamation of drunkards, and to aid in legislative or administrative measures for the prevention of drunkenness. The resolution in reference to education affirmed "that any system of public schools, whether primary, secondary, or collegiate, should aim as its sole object at the efficient preparing and equipment of the young for the performance of their duties as citizens, irrespective of the interests of a religious denomination or political party. The curriculum should be framed so as not to violate religious equality or allow of any sectarian or party instruction. The training colleges should be equally open, and on equal terms, to all candidates for the teaching profession. All public schools maintained from public funds should be represented by public management." The annual sermon of the combined Baptist and London Missionary Societies was preached by the Rev. R. Glover. The Rev. Joseph Parker, D.D., delivered his annual address as chairman of the Congregational Union, on the subject of The United Congregational Church. By that term the speaker implied a general organization of the churches somewhat after the plan of the county unions, under which, without sacrificing their independence, they would attain greater cohesion and a higher degree of efficiency for their work. The United Congregational Church, he showed, would, guarding against unworthy beneficiaries, establish a ministerial sustentation fund; would not insist upon a uniform and inflexible way of receiving and recognizing its ministers, but would insist upon some way or some one of several ways; and would preserve the central principle of Congregationalism which finds expression in the individual church, for "the individual church is the primary and indestructible unit of congregationalism"; but "individual churches can be related, vitally and effectively related," as are, under their various constitutions, the

United States, the Swiss cantons, the departments of France, the parts of the United Kingdom, and the Australian colonies. In the United Congregational Church the completest possible unit of Congregationalism would be realized, and with it the truest conception of brotherhood; while the best would be made by it of all the resources of Congregationalism. "Nothing would be allowed to run to waste. The whole line of duty and possibility would be watched by a representative and responsible assembly either as a whole or departmentally." At a meeting held in Albert Hall, the Earl of Aberdeen presiding, the Rev. W. G. Lawes, of New Guinea, spoke of the condition and prospects of the mission and of native Christianity in that country, to which special attention was for the moment directed, on account of the recent murders of missionaries. A United Ladies' Missionary meeting, at which Mrs. S. G. Green presided, was attended by nearly 100 women missionaries of the London and the Baptist Societies, and was addressed by 7 of the number describing the conditions in their several fields.

Autumnal Assembly of the Congregational Union.—The Autumnal Assembly of the Union was held at Manchester, beginning Oct. 15, the autumnal sermon having been preached on the previous evening by the Rev. George Gladstone. The chairman, the Rev. Joseph Parker, D. D., in his opening address, made a further exposition of his scheme for a United Congregational Church. He wanted to interest all the churches in the work of Congregationalism; to do this they needed an ideal, some great uniting policy, some noble and sovereign principle, which they would find in the union he proposed. It should embrace the colleges as schools of the Church, should assume responsibility for its ministers, make provision for them in old age and when honorably retired, and unite under its care the home and foreign missionary and other societies, while the autonomy of the local churches should not be disturbed, and the trust deeds should be free from the incorporation of any theological doctrine. The address was accompanied by a sketch of the line of initial procedure which might be followed in the constitution of the Church, beginning with county conferences, and passing to a larger conference representing all the counties, which should frame a constitution for the United Church, and then to the assembly holding two meetings annually, as now, to constitute the Church. The resolutions unanimously adopted by the assembly expressed to Dr. Parker its sense of the services he had rendered to the Congregational churches by his two addresses as chairman of the union, and especially of the importance of the new ideals he had set before it; and continued: "While not committing itself to any premature approval or disapproval of the proposed 'United Congregational Church,' this assembly deems the proposal to be of such vital importance as to deserve most serious and careful consideration both by the churches represented here and by the county unions. This assembly therefore directs the committee of the Congregational Union of England and Wales to take immediate steps to bring the whole subject before the churches and the county unions for their consideration, and it further instructs the committee that when sufficient time has been allowed for the consideration and discussion of the proposal of its chairman, it shall collect and tabulate the results of the discussion, and shall embody them in a report to be submitted to the Annual Assembly of this union at the earliest possible date." A statement made in behalf of the Church Aid Society showed that 21

out of the 39 counties of England and Wales had received help from it in ministerial support and evangelistic work. In the past year £4,200 had been distributed by it toward the support of 217 pastors and 74 evangelists. Its work was purely supplemental to that of the county unions. It needed £1,000 more to meet the year's expenditure. A report of the Pastors' Retiring fund showed that the average expenditure for the past four years on annuities paid to 173 ministers had been £6,300, with £300 for office expenses. The income from investments had been £4,900, and between £1,100 and £1,200 had been realized from subscriptions, legacies, etc. An average annual deficiency of £500 had been incurred.

The subject of The Supply and Training of Local Preachers was considered at a lay conference. At a women's meeting papers were read on Our Responsibility to the Unreached Classes, and The Claims of the Girls' Guild of the Free Churches. A scheme of maintenance was proposed at a conference on superannuation. A conference was held on the relations of the councils to one another and to the churches. The council of the Twentieth Century fund adopted a scheme of distribution.

Colonial Missionary Society.—The Colonial Missionary Society received during the year covered by its sixty-fifth report, which was presented May 13, £5,236, and had a balance of £409 remaining. The grant made by the Congregational Union and that of the London Missionary Society for three years in aid of native churches in British colonies had been renewed. The report dealt with the work of the society in the various colonies, laying special emphasis on the new work begun in British Columbia and Newfoundland, on the "distressful condition of the colored churches in Jamaica," and on work in South Africa and the Australasian colonies. Mission work had been begun in the gold-fields of Tasmania.

Pastors' Retiring Fund.—The report of the Pastors' Retiring fund showed that £6,384 had been paid in annuities during the year, making £177,019 since the beginning in 1860. The number of annuitants was 173. The investments of the fund approximated, at present rates, £160,350. The pressure of applications was increasing yearly, and rendered an early increase of resources vitally important.

The Pastors' Widows' fund had paid £1,220 to 98 annuitants, making £28,190 paid since the beginning of the fund in 1870.

Chapel-Building Society.—The reports of the English Chapel-Building Society showed that it had, during forty-seven years, aided 818 churches and 37 manse, and had disbursed £215,714. During the past year notes and payments had been made for 35 churches and 11 manse amounting to £8,545. The year's income had been £5,563.

Congregational Historical Society.—The first annual meeting of the Congregational Historical Society was held in London, April 24. The treasurer reported a small balance, and the secretary accounted for the work that had been done. The first volume of the Transactions had been issued, and contained articles on Non-Parochial Registers in Yorkshire, Dr. Watts's Church Book, and From a Diary of the Gurney Family. One hundred and fifty replies had been received to 487 circulars addressed to churches founded prior to 1750, asking for information as to the existence of original records. In several cases existing histories had been presented to the society, and in others promises of forthcoming histories had been made.

London Missionary Society.—The annual meeting of the London Missionary Society was held May 13. The annual report showed that the gross income for the year had been £172,369, while the net income had been £148,203. Of the latter sum, £11,450 were for special purposes, leaving only £136,700 available for general use, while the expenditure had been £150,860. By this means the gross deficiency had been increased to £36,608. This deficiency was mentioned as the weak point in the society's position. The churches had never provided it with the amount required for the maintenance of the 70 additional missionaries sent out on the Forward Movement. Although the directors had kept grants and payments down to the lowest point, the deficiency was increasing from year to year.

Scottish Congregational Union.—The annual business meetings of the Scottish Congregational Union were held in Glasgow, beginning May 7, Mr. John Leith presiding, who was succeeded in the chair by the Rev. W. Hamilton. Reports of the Widows' fund, the Ministers' Provident fund, and the Theological Hall were considered. The Committee on Applications for Aid reported that 51 churches had received aid during the year; that 17 aided churches returned an increase amounting to 80 members, and 27 a decrease of 199. Grants of £1,345 were voted to 48 churches. The Care of Youth Committee reported that 900 children had entered for the examination, compared with 500 in the previous year. The report on foreign missions, it was explained, did not exactly reflect the attitude of the churches of Scotland, as many of the contributions were sent direct to London. Thankfulness was expressed that the churches of the union, with but few exceptions, used unfermented wine at communion services.

South African Congregational Union.—The Annual Assembly of the South African Congregational Union was held at Cape Town, Oct 23 to 31, the Rev. Walter Friend presiding. Three new churches were received into fellowship. The offices of the union were ordered transferred from Port Elizabeth to Cape Town.

CONGRESS. The second session of the Fifty-sixth Congress began Monday, Dec. 3, 1900; and after the usual official notification of the fact, the President sent in his annual message, as follows:

To the Senate and House of Representatives:

At the outgoing of the old and the incoming of the new century you begin the last session of the Fifty-sixth Congress with evidences on every hand of individual and national prosperity and with proof of the growing strength and increasing power for good of republican institutions. Your countrymen will join with you in felicitation that American liberty is more firmly established than ever before, and that love for it and the determination to preserve it are more universal than at any former period of our history.

The republic was never so strong, because never so strongly entrenched in the hearts of the people as now. The Constitution, with few amendments, exists as it left the hands of its authors. The additions which have been made to it proclaim larger freedom and more extended citizenship. Popular government has demonstrated in its one hundred and twenty-four years of trial here its stability and security, and its efficiency as the best instrument of national development and the best safeguard to human rights.

When the Sixth Congress assembled in November, 1800, the population of the United States was 5,308,483. It is now 76,304,799. Then we had 16 States. Now we have 45. Then our territory con-

sisted of 909,050 square miles. It is now 3,846,595 square miles. Education, religion, and morality have kept pace with our advancement in other directions, and while extending its power the Government has adhered to its foundation principles and abated none of them in dealing with our new peoples and possessions. A nation so preserved and blessed gives reverent thanks to God and invokes his guidance and the continuance of his care and favor.

In our foreign intercourse the dominant question has been the treatment of the Chinese problem. Apart from this our relations with the powers have been happy.

The recent troubles in China spring from the antifeign agitation which for the past three years has gained strength in the northern provinces. Their origin lies deep in the character of the Chinese races and in the traditions of their Government. The Taiping rebellion and the opening of Chinese ports to foreign trade and settlement disturbed alike the homogeneity and the seclusion of China.

Meanwhile foreign activity made itself felt in all quarters, not alone on the coast, but along the great river arteries and in the remoter districts, carrying new ideas and introducing new associations among a primitive people which had pursued for centuries a national policy of isolation.

The telegraph and the railway spreading over their land, the steamers plying on their waterways, the merchant and the missionary penetrating year by year farther to the interior, became to the Chinese mind types of an alien invasion, changing the course of their national life and fraught with vague forebodings of disaster to their beliefs and their self-control.

For several years before the present troubles all the resources of foreign diplomacy, backed by moral demonstrations of the physical force of fleets and arms, have been needed to secure due respect for the treaty rights of foreigners and to obtain satisfaction from the responsible authorities for the sporadic outrages upon the persons and property of unoffending sojourners, which from time to time occurred at widely separated points in the northern provinces, as in the case of the outbreaks in Szechuen and Shantung.

Posting of antifeign placards became a daily occurrence, which the repeated reprobation of the imperial power failed to check or punish. These inflammatory appeals to the ignorance and superstition of the masses, mendacious and absurd in their accusations and deeply hostile in their spirit, could not but work cumulative harm. They aimed at no particular class of foreigners; they were impartial in attacking everything foreign.

An outbreak in Shantung, in which German missionaries were slain, was the too natural result of these malevolent teachings. The posting of seditious placards, exhorting to the utter destruction of foreigners and of every foreign thing, continued unrebuked. Hostile demonstrations toward the stranger gained strength by organization.

The sect commonly styled the Boxers developed greatly in the provinces north of the Yang-Tse, and with the collusion of many notable officials, including some in the immediate councils of the Throne itself, became alarmingly aggressive. No foreigner's life outside of the protected treaty ports was safe. No foreign interest was secure from spoliation.

The diplomatic representatives of the powers in Peking strove in vain to check this movement. Protest was followed by demand, and demand by renewed protest, to be met with perfunctory edicts from the Palace and evasive and futile assurances

from the Tsung-li-Yamen. The circle of the Boxer influence narrowed about Peking, and while nominally stigmatized as seditious, it was felt that its spirit pervaded the capital itself, that the imperial forces were imbued with its doctrines, and that the immediate counselors of the Empress Dowager were in full sympathy with the antiforeign movement.

The increasing gravity of the conditions in China and the imminence of peril to our own diversified interests in the empire, as well as to those of all the other treaty governments, were soon appreciated by this Government, causing it profound solicitude. The United States from the earliest days of foreign intercourse with China had followed a policy of peace, omitting no occasions to testify good-will, to further the extension of lawful trade, to respect the sovereignty of its Government, and to insure by all legitimate and kindly but earnest means the fullest measure of protection for the lives and property of our law-abiding citizens and for the exercise of their beneficent callings among the Chinese people.

Mindful of this, it was felt to be appropriate that our purposes should be pronounced in favor of such course as would hasten united action of the powers at Peking to promote the administrative reforms so greatly needed for strengthening the Imperial Government and maintaining the integrity of China, in which we believed the whole Western world to be alike concerned. To these ends I caused to be addressed to the several powers occupying territory and maintaining spheres of influence in China the circular proposals of 1899, inviting from them declarations of their intentions and views as to the desirability of the adoption of measures insuring the benefits of equality of treatment of all foreign trade throughout China.

With gratifying unanimity the responses coincided in this common policy, enabling me to see in the successful termination of these negotiations proof of the friendly spirit which animates the various powers interested in the untrammelled development of commerce and industry in the Chinese Empire as a source of vast benefit to the whole commercial world.

In this conclusion, which I had the gratification to announce as a completed engagement to the interested powers on March 20, 1900, I hopefully discerned a potential factor for the abatement of the distrust of foreign purposes which for a year past had appeared to inspire the policy of the Imperial Government, and for the effective exertion by it of power and authority to quell the critical antiforeign movement in the northern provinces most immediately influenced by the Manchu sentiment.

Seeking to testify confidence in the willingness and ability of the imperial administration to redress the wrongs and prevent the evils we suffered and feared, the marine guard, which had been sent to Peking in the autumn of 1899 for the protection of the legation, was withdrawn at the earliest practicable moment, and all pending questions were remitted, as far as we were concerned, to the ordinary resorts of diplomatic intercourse.

The Chinese Government proved, however, unable to check the rising strength of the Boxers, and appeared to be a prey to internal dissensions. In the unequal contest the antiforeign influences soon gained the ascendancy under the leadership of Prince Tuan. Organized armies of Boxers, with which the imperial forces affiliated, held the country between Peking and the coast, penetrated into Manchuria up to the Russian borders, and through their emissaries threatened a like rising throughout northern China.

Attacks upon foreigners, destruction of their property, and slaughter of native converts were reported from all sides. The Tsung-li-Yamen, already permeated with hostile sympathies, could make no effective response to the appeals of the legations. At this critical juncture, in the early spring of this year, a proposal was made by the other powers that a combined fleet should be assembled in Chinese waters as a moral demonstration, under cover of which to exact of the Chinese Government respect for foreign treaty rights and the suppression of the Boxers.

The United States, while not participating in the joint demonstration, promptly sent from the Philippines all ships that could be spared for service on the Chinese coast. A small force of marines was landed at Taku and sent to Peking for the protection of the American legation. Other powers took similar action, until some 400 men were assembled in the capital as legation guards.

Still the peril increased. The legations reported the development of the seditious movement in Peking and the need of increased provision for defense against it. While preparations were in progress for a larger expedition, to strengthen the legation guards and keep the railway open, an attempt of the foreign ships to make a landing at Taku was met by a fire from the Chinese forts. The forts were thereupon shelled by the foreign vessels, the American admiral taking no part in the attack, on the ground that we were not at war with China and that a hostile demonstration might consolidate the antiforeign elements and strengthen the Boxers to oppose the relieving column.

Two days later the Taku forts were captured after a sanguinary conflict. Severance of communication with Peking followed, and a combined force of additional guards, which was advancing to Peking by the Pei-Ho, was checked at Langfang. The isolation of the legations was complete.

The siege and the relief of the legations has passed into undying history. In all the stirring chapter which records the heroism of the devoted band, clinging to hope in the face of despair, and the undaunted spirit that led their relievers through battle and suffering to the goal, it is a memory of which my countrymen may be justly proud that the honor of our flag was maintained alike in the siege and the rescue, and that stout American hearts have again set high, in fervent emulation with true men of other race and language, the indomitable courage that ever strives for the cause of right and justice.

By June 19 the legations were cut off. An identical note from the Yamen ordered each minister to leave Peking, under a promised escort, within twenty-four hours. To gain time they replied, asking prolongation of the time, which was afterward granted, and requesting an interview with the Tsung-li-Yamen on the following day. No reply being received, on the morning of the 20th the German minister, Baron von Ketteler, set out for the Yamen to obtain a response, and on the way was murdered.

An attempt by the legation guard to recover his body was foiled by the Chinese. Armed forces turned out against the legations. Their quarters were surrounded and attacked. The mission compounds were abandoned, their inmates taking refuge in the British legation, where all the other legations and guards gathered for more effective defense. Four hundred persons were crowded in its narrow compass. Two thousand native converts were assembled in a near-by palace under protection of the foreigners. Lines of defense were strengthened, trenches dug, barricades raised, and

preparations made to stand a siege, which at once began.

From June 20 until July 17, writes Minister Conger, "there was scarcely an hour during which there was not firing upon some part of our lines and into some of the legations, varying from a single shot to a general and continuous attack along the whole line." Artillery was placed around the legations and on the overlooking palace walls, and thousands of 3-inch shot and shell were fired, destroying some buildings and damaging all. So thickly did the balls rain that, when the ammunition of the besieged ran low, five quarts of Chinese bullets were gathered in an hour in one compound and recast.

Attempts were made to burn the legations by setting neighboring houses on fire, but the flames were successfully fought off, although the Austrian, Belgian, Italian, and Dutch legations were then and subsequently burned. With the aid of the native converts, directed by the missionaries, to whose helpful cooperation Mr. Conger awards unstinted praise, the British legation was made a veritable fortress. The British minister, Sir Claude MacDonald, was chosen general commander of the defense, with the secretary of the American legation, Mr. E. G. Squiers, as chief of staff.

To save life and ammunition the besieged sparingly returned the incessant fire of the Chinese soldiery, fighting only to repel attack or make an occasional successful sortie for strategic advantage, such as that of 55 American, British, and Russian marines led by Capt. Myers, of the United States Marine Corps, which resulted in the capture of a formidable barricade on the wall that gravely menaced the American position. It was held to the last, and proved an invaluable acquisition, because commanding the water-gate through which the relief column entered.

During the siege the defenders lost 65 killed, 135 wounded, and 7 by disease—the last all children.

On July 14 the besieged had their first communication with the Tsung-li-Yamen, from whom a message came inviting to a conference, which was declined. Correspondence, however, ensued and a sort of armistice was agreed upon, which stopped the bombardment and lessened the rifle fire for a time. Even then no protection whatever was afforded, nor any aid given, save to send to the legations a small supply of fruit and three sacks of flour.

Indeed, the only communication had with the Chinese Government related to the occasional delivery or despatch of a telegram or to the demands of the Tsung-li-Yamen for the withdrawal of the legations to the coast under escort. Not only are the protestations of the Chinese Government that it protected and succored the legations positively contradicted, but irresistible proof accumulates that the attacks upon them were made by imperial troops, regularly uniformed, armed, and officered, belonging to the command of Jung-Lu, the imperial commander-in-chief. Decrees encouraging the Boxers, organizing them under prominent imperial officers, provisioning them, and even granting them large sums in the name of the Empress Dowager, are known to exist. Members of the Tsung-li-Yamen who counseled protection of the foreigners were beheaded. Even in the distant provinces men suspected of foreign sympathy were put to death, prominent among these being Chang-Yen-Hoon, formerly Chinese minister in Washington.

With the negotiation of the partial armistice of July 14, a proceeding which was doubtless pro-

moted by the representations of the Chinese envoy in Washington, the way was opened for the conveyance to Mr. Conger of a test message sent by the Secretary of State through the kind offices of Minister Wu-Ting-Fang. Mr. Conger's reply, despatched from Peking on July 18 through the same channel, afforded to the outside world the first tidings that the inmates of the legations were still alive and hoping for success.

This news stimulated the preparations for a joint relief expedition in numbers sufficient to overcome the resistance which for a month had been organizing between Taku and the capital. Reinforcements sent by all the cooperating governments were constantly arriving. The United States contingent, hastily assembled from the Philippines or despatched from this country, amounted to some 5,000 men, under the able command first of the lamented Col. Liscum and afterward of Gen. Chaffee.

Toward the end of July the movement began. A severe conflict followed at Tientsin, in which Col. Liscum was killed. The city was stormed and partly destroyed. Its capture afforded the base of operations from which to make the final advance, which began in the first days of August, the expedition being made up of Japanese, Russian, British, and American troops at the outset.

Another battle was fought and won at Yangtsun. Thereafter the disheartened Chinese troops offered little show of resistance. A few days later the important position of Ho-Si-Woo was taken. A rapid march brought the united forces to the populous city of Tung-Chow, which capitulated without a contest.

On Aug. 14 the capital was reached. After a brief conflict beneath the wall the relief column entered and the legations were saved. The United States soldiers, sailors, and marines, officers and men alike, in those distant climes and unusual surroundings, showed the same valor, discipline, and good conduct and gave proof of the same high degree of intelligence and efficiency which have distinguished them in every emergency.

The imperial family and the Government had fled a few days before. The city was without visible control. The remaining imperial soldiery had made on the night of the 13th a last attempt to exterminate the besieged, which was gallantly repelled. It fell to the occupying forces to restore order and organize a provisional administration.

Happily the acute disturbances were confined to the northern provinces. It is a relief to recall and a pleasure to record the loyal conduct of the viceroys and local authorities of the southern and eastern provinces. Their efforts were continuously directed to the pacific control of the vast populations under their rule and to the scrupulous observance of foreign treaty rights. At critical moments they did not hesitate to memorialize the Throne, urging the protection of the legations, the restoration of communication, and the assertion of the imperial authority against the subversive elements. They maintained excellent relations with the official representatives of foreign powers. To their kindly disposition is largely due the success of the consuls in removing many of the missionaries from the interior to places of safety. In this relation the action of the consuls should be highly commended. In Shantung and eastern Chi-Li the task was difficult, but, thanks to their energy and the cooperation of American and foreign naval commanders, hundreds of foreigners, including those of other nationalities than ours, were rescued from imminent peril.

The policy of the United States through all this trying period was clearly announced and scrupu-

lously carried out. A circular note to the powers dated July 3 proclaimed our attitude. Treating the condition in the north as one of virtual anarchy, in which the great provinces of the south and southeast had no share, we regarded the local authorities in the latter quarters as representing the Chinese people, with whom we sought to remain in peace and friendship. Our declared aims involved no war against the Chinese nation. We adhered to the legitimate office of rescuing the imperiled legation, obtaining redress for wrongs already suffered, securing wherever possible the safety of American life and property in China, and preventing a spread of the disorders or their recurrence.

As was then said, "the policy of the Government of the United States is to seek a solution which may bring about permanent safety and peace to China, preserve Chinese territorial and administrative entity, protect all rights guaranteed to friendly powers by treaty and international law, and safeguard for the world the principle of equal and impartial trade with all parts of the Chinese Empire."

Faithful to those professions which, as it proved, reflected the views and purposes of the other co-operating governments, all our efforts have been directed toward ending the anomalous situation in China by negotiations for a settlement at the earliest possible moment. As soon as the sacred duty of relieving our legation and its dependents was accomplished we withdrew from active hostilities, leaving our legation under an adequate guard in Peking as a channel of negotiation and settlement—a course adopted by others of the interested powers. Overtures of the empowered representatives of the Chinese Emperor have been considerably entertained.

The Russian proposition looking to the restoration of the imperial power in Peking has been accepted as in full consonance with our own desires, for we have held and hold that effective reparation for wrongs suffered and an enduring settlement that will make their recurrence impossible can best be brought about under an authority which the Chinese nation reverences and obeys. While so doing we forego no jot of our undoubted right to exact exemplary and deterrent punishment of the responsible authors and abettors of the criminal acts whereby we and other nations have suffered grievous injury.

For the real culprits, the evil counselors who have misled the imperial judgment and diverted the sovereign authority to their own guilty ends, full expiation becomes imperative within the national limits of retributive justice. Regarding this as the initial condition of an acceptable settlement between China and the powers, I said in my message of Oct. 18 to the Chinese Emperor:

"I trust that negotiations may begin so soon as we and the other offended governments shall be effectively satisfied of your Majesty's ability and power to treat with just sternness the principal offenders, who are doubly culpable, not alone toward the foreigners, but toward your Majesty, under whose rule the purpose of China to dwell in concord with the world had hitherto found expression in the welcome and protection assured to strangers."

Taking, as a point of departure, the imperial edict appointing Earl Li-Hung-Chang and Prince Ching plenipotentiaries to arrange a settlement, and the edict of Sept. 25, whereby certain high officials were designated for punishment, this Government has moved, in concert with the other powers, toward the opening of negotiations, which Mr. Conger, assisted by Mr. Rockhill, has been

authorized to conduct on behalf of the United States.

General bases of negotiation formulated by the Government of the French Republic have been accepted with certain reservations as to details, made necessary by our own circumstances, but, like similar reservations by other powers, open to discussion in the progress of the negotiations. The disposition of the Emperor's Government to admit liability for wrongs done to foreign governments and their nationals, and to act upon such additional designation of the guilty persons as the foreign ministers at Peking may be in a position to make, gives hope of a complete settlement of all questions involved, assuring foreign rights of residence and intercourse on terms of equality for all the world.

I regard as one of the essential factors of a durable adjustment the securing of adequate guarantees for liberty of faith, since insecurity of those natives who may embrace alien creeds is a scarcely less effectual assault upon the rights of foreign worship and teaching than would be the direct invasion thereof.

The matter of indemnity for our wronged citizens is a question of grave concern. Measured in money alone, a sufficient reparation may prove to be beyond the ability of China to meet. All the powers concur in emphatic disclaimers of any purpose of aggrandizement through the dismemberment of the empire. I am disposed to think that due compensation may be made in part by increased guarantees of security for foreign rights and immunities, and, most important of all, by the opening of China to the equal commerce of all the world. These views have been and will be earnestly advocated by our representatives.

The Government of Russia has put forward a suggestion, that in the event of protracted divergence of views in regard to indemnities the matter may be relegated to the Court of Arbitration at The Hague. I favorably incline to this, believing that high tribunal could not fail to reach a solution no less conducive to the stability and enlarged prosperity of China itself than immediately beneficial to the powers.

Ratifications of a treaty of extradition with the Argentine Republic were exchanged on June 2 last.

While the Austro-Hungarian Government has in the many cases that have been reported of the arrest of our naturalized citizens for alleged evasion of military service faithfully observed the provisions of the treaty and released such persons from military obligations, it has in some instances expelled those whose presence in the community of their origin was asserted to have a pernicious influence. Representations have been made against this course whenever its adoption has appeared unduly onerous.

We have been urgently solicited by Belgium to ratify the international convention of June, 1899, amendatory of the previous convention of 1890 in respect to the regulation of the liquor trade in Africa. Compliance was necessarily withheld, in the absence of the advice and consent of the Senate thereto. The principle involved has the cordial sympathy of this Government, which in the revisionary negotiations advocated more drastic measures, and I would gladly see its extension, by international agreement, to the restriction of the liquor traffic with all uncivilized peoples, especially in the western Pacific.

A conference will be held at Brussels Dec. 11, 1900, under the convention for the protection of industrial property concluded at Paris March 20, 1883, to which delegates from this country have

been appointed. Any lessening of the difficulties that our inventors encounter in obtaining patents abroad for their inventions and that our farmers, manufacturers, and merchants may have in the protection of their trade-marks is worthy of careful consideration, and your attention will be called to the results of the conference at the proper time.

In the interest of expanding trade between this country and South America, efforts have been made during the past year to conclude conventions with the southern republics for the enlargement of postal facilities. Two such agreements, signed with Bolivia on April 24, of which that establishing the money-order system is undergoing certain changes suggested by the Post-Office Department, have not yet been ratified by this Government. A treaty of extradition with that country, signed on the same day, is before the Senate.

A boundary dispute between Brazil and Bolivia over the territory of Acre is in a fair way of friendly adjustment, a protocol signed in December, 1899, having agreed on a definite frontier and provided for its demarcation by a joint commission.

Conditions in Brazil have weighed heavily on our export trade to that country, in marked contrast to the favorable conditions upon which Brazilian products are admitted into our markets. Urgent representations have been made to that Government on the subject, and some amelioration has been effected. We rely upon the reciprocal justice and good-will of that Government to assure to us a further improvement in our commercial relations.

The convention signed May 24, 1897, for the final settlement of claims left in abeyance upon the dissolution of the commission of 1893 was at length ratified by the Chilean Congress, and the supplemental commission has been organized.

It remains for the Congress to appropriate for the necessary expenses of the commission.

The insurrectionary movement which disturbed Colombia in the latter part of 1899 has been practically suppressed, although guerrillas still operate in some departments. The executive power of that republic changed hands in August last by the act of Vice-President Marroquin in assuming the reins of government during the absence of President San Clemente from the capital. The change met with no serious opposition, and, following the precedents in such cases, the United States minister entered into relations with the new de facto Government on Sept. 17.

It is gratifying to announce that the residual questions between Costa Rica and Nicaragua growing out of the award of President Cleveland in 1888 have been adjusted through the choice of an American engineer, Gen. E. P. Alexander, as umpire to run the disputed line. His task has been accomplished to the satisfaction of both contestants.

A revolution in the Dominican Republic toward the close of last year resulted in the installation of President Jimenez, whose government was formally recognized in January. Since then final payment has been made of the American claim in regard to the Ozama bridge.

The year of the exposition has been fruitful in occasions for displaying the good-will that exists between this country and France. This great competition brought together from every nation the best in natural productions, industry, science, and the arts, submitted in generous rivalry to a judgment made all the more searching because of that rivalry. The extraordinary increase of exportations from this country during the past three years and the activity with which our inventions

and wares had invaded new markets caused much interest to center upon the American exhibit, and every encouragement was offered in the way of space and facilities to permit of its being comprehensive as a whole and complete in every part.

It was, however, not an easy task to assemble exhibits that could fitly illustrate our diversified resources and manufactures. Singularly enough our national prosperity lessened the incentive to exhibit. The dealer in raw materials knew that the user must come to him; the great factories were contented with the phenomenal demand for their output, not alone at home, but also abroad, where merit had already won a profitable trade.

Appeals had to be made to the patriotism of exhibitors to induce them to incur outlays promising no immediate return. This was especially the case where it became needful to complete an industrial sequence or illustrate a class of processes. One manufacturer after another had to be visited and importuned, and at times, after a promise to exhibit in a particular section had been obtained, it would be withdrawn, owing to pressure of trade orders, and a new quest would have to be made.

The installation of exhibits, too, encountered many obstacles and involved unexpected cost. The exposition was far from ready at the date fixed for its opening. The French transportation lines were congested with offered freight. Belated goods had to be hastily installed in unfinished quarters with whatever labor could be obtained in the prevailing confusion. Nor was the task of the commission lightened by the fact that, owing to the scheme of classification adopted, it was impossible to have the entire exhibit of any one country in the same building or more than one group of exhibits in the same part of any building. Our installations were scattered on both sides of the Seine and in widely remote suburbs of Paris, so that additional assistants were needed for the work of supervision and arrangement.

Despite all these drawbacks the contribution of the United States was not only the largest foreign display, but was among the earliest in place and the most orderly in arrangement. Our exhibits were shown in 101 out of 121 classes, and more completely covered the entire classification than those of any other nation. In total number they ranked next after those of France, and the attractive form in which they were presented secured general attention.

A criterion of the extent and success of our participation and of the thoroughness with which our exhibitors were organized is seen in the awards granted to American exhibitors by the international jury—namely, grand prizes, 240; gold medals, 597; silver medals, 776; bronze medals, 541; and honorable mentions, 322—2,476 in all, being the greatest total number given to the exhibit of any exhibiting nation, as well as the largest number in each grade. This significant recognition of merit in competition with the chosen exhibits of all other nations and at the hands of juries almost wholly made up of representatives of France and other competing countries is not only most gratifying, but is especially valuable, since it sets us to the front in international questions of supply and demand, while the large proportion of awards in the classes of art and artistic manufactures afforded unexpected proof of the stimulation of national culture by the prosperity that flows from natural productiveness joined to industrial excellence.

Apart from the exposition several occasions for showing international good-will occurred. The inauguration in Paris of the Lafayette monument,

presented by the school children of the United States, and the designing of a commemorative coin by our mint and the presentation of the first piece struck to the President of the republic, were marked by appropriate ceremonies, and the Fourth of July was especially observed in the French capital.

Good-will prevails in our relations with the German Empire. An amicable adjustment of the long-pending question of the admission of our life-insurance companies to do business in Prussia has been reached. One of the principal companies has already been readmitted and the way is opened for the others to share the privilege.

The settlement of the Samoan problem, to which I adverted in my last message, has accomplished good results. Peace and contentment prevail in the islands, especially in Tutuila, where a convenient administration that has won the confidence and esteem of the kindly disposed natives has been organized under the direction of the commander of the United States naval station at Pago-Pago.

An imperial meat-inspection law has been enacted for Germany. While it may simplify the inspections, it prohibits certain products heretofore admitted. There is still great uncertainty as to whether our well-nigh extinguished German trade in meat products can revive under its new burdens. Much will depend upon regulations not yet promulgated, which we confidently hope will be free from the discriminations which attended the enforcement of the old statutes.

The remaining link in the new lines of direct telegraphic communication between the United States and the German Empire has recently been completed, affording a gratifying occasion for exchange of friendly congratulations with the German Emperor.

Our friendly relations with Great Britain continue. The war in southern Africa introduced important questions. A condition unusual in international wars was presented in that while one belligerent had control of the seas, the other had no ports, shipping, or direct trade, but was only accessible through the territory of a neutral. Vexatious questions arose through Great Britain's action in respect to neutral cargoes, not contraband in their own nature, shipped to Portuguese South Africa, on the score of probable or suspected ultimate destination to the Boer states.

Such consignments in British ships, by which alone direct trade is kept up between our ports and southern Africa, were seized in application of a municipal law prohibiting British vessels from trading with the enemy without regard to any contraband character of the goods, while cargoes shipped to Delagoa Bay in neutral bottoms were arrested on the ground of alleged destination to the enemy's country. Appropriate representations on our part resulted in the British Government agreeing to purchase outright all such goods shown to be the actual property of American citizens, thus closing the incident to the satisfaction of the immediately interested parties, although, unfortunately, without a broad settlement of the question of a neutral's right to send goods not contraband *per se* to a neutral port adjacent to a belligerent area.

The work of making certain provisional boundary points, for convenience of administration, around the head of Lynn Canal, in accordance with the temporary arrangement of October, 1899, was completed by a joint survey in July last. The *modus vivendi* has so far worked without friction, and the Dominion Government has provided rules and regulations for securing to our

citizens the benefit of the reciprocal stipulation that the citizens or subjects of either power found by that arrangement within the temporary jurisdiction of the other shall suffer no diminution of the rights and privileges they have hitherto enjoyed. But however necessary such an expedient may have been to tide over the grave emergencies of the situation, it is at best but an unsatisfactory makeshift which should not be suffered to delay the speedy and complete establishment of the frontier line to which we are entitled under the Russo-American treaty for the cession of Alaska.

In this relation I may refer again to the need of delicately marking the Alaskan boundary where it follows the one hundred and forty-first meridian. A convention to that end has been before the Senate for some two years, but as no action has been taken I contemplate negotiating a new convention for a joint determination of the meridian by telegraphic observations. These, it is believed, will give more accurate and unquestionable results than the sidereal methods heretofore independently followed, which, as is known, proved discrepant at several points on the line, although not varying at any place more than 700 feet.

The pending claim of R. H. May against the Guatemalan Government has been settled by arbitration, Mr. George F. B. Jenner, British minister at Guatemala, who was chosen as sole arbitrator, having awarded \$143,750.73 in gold to the claimant.

Various American claims against Haiti have been or are being advanced to the resort of arbitration.

As the result of negotiations with the Government of Honduras in regard to the indemnity demanded for the murder of Frank H. Pears in Honduras, that Government has paid \$10,000 in settlement of the claim of the heirs.

The assassination of King Humbert called forth sincere expressions of sorrow from this Government and people, and occasion was fitly taken to testify to the Italian nation the high regard here felt for the memory of the lamented ruler.

In my last message I referred at considerable length to the lynching of five Italians at Tallulah. Notwithstanding the efforts of the Federal Government, the production of evidence tending to inculpate the authors of this grievous offense against our civilization, and the repeated inquests set on foot by the authorities of the State of Louisiana, no punishments have followed. Successive grand juries have failed to indict. The representations of the Italian Government in the face of this miscarriage have been most temperate and just.

Setting the principle at issue high above all consideration of merely pecuniary indemnification, such as this Government made in the three previous cases, Italy has solemnly invoked the pledges of existing treaty and asked that the justice to which she is entitled shall be meted in regard to her unfortunate countrymen in our territory with the same full measure she herself would give to any American were his reciprocal treaty rights contemned.

I renew the urgent recommendations I made last year that the Congress appropriately confer upon the Federal courts jurisdiction in this class of international cases where the ultimate responsibility of the Federal Government may be involved, and I invite action upon the bills to accomplish this which were introduced in the Senate and House. It is incumbent upon us to remedy the statutory omission which had led, and may again lead, to such untoward results. I have

pointed out the necessity and the precedent for legislation of this character. Its enactment is a simple measure of previsory justice toward the nations with which we as a sovereign equal make treaties requiring reciprocal observance.

While the Italian Government naturally regards such action as the primary and, indeed, the most essential element in the disposal of the Tallulah incident, I advise that, in accordance with precedent and in view of the improbability of that particular case being reached by the bill now pending, Congress make gracious provision for indemnity to the Italian sufferers in the same form and proportion as heretofore.

In my inaugural address I referred to the general subject of lynching in these words:

"Lynching must not be tolerated in a great and civilized country like the United States; courts, not mobs, must execute the penalties of the law. The preservation of public order, the right of discussion, the integrity of courts, and the orderly administration of justice must continue forever the rock of safety upon which our Government securely rests."

This I most urgently reiterate and again invite the attention of my countrymen to this reproach upon our civilization.

The closing year has witnessed a decided strengthening of Japan's relations to other states. The development of her independent, judicial, and administrative functions under the treaties which took effect July 17, 1899, has proceeded without international friction, showing the competence of the Japanese to hold a foremost place among modern peoples.

In the treatment of the difficult Chinese problems Japan has acted in harmonious concert with the other powers, and her generous cooperation materially aided in the joint relief of the beleaguered legations in Peking and in bringing about an understanding preliminary to a settlement of the issues between the powers and China. Japan's declarations in favor of the integrity of the Chinese Empire and the conservation of open world trade therewith have been frank and positive. As a factor for promoting the general interests of peace, order, and fair commerce in the far East, the influence of Japan can hardly be overestimated.

The valuable aid and kindly courtesies extended by the Japanese Government and naval officers to the battle-ship Oregon are gratefully appreciated.

Complaint was made last summer of the discriminatory enforcement of a bubonic quarantine against Japanese on the Pacific coast and of interference with their travel in California and Colorado under the health laws of those States. The latter restrictions have been adjudged by a Federal court to be unconstitutional. No recurrence of either cause of complaint is apprehended.

No noteworthy incident has occurred in our relations with our important southern neighbor. Commercial intercourse with Mexico continues to thrive, and the two governments neglect no opportunity to foster their mutual interests in all practicable ways.

Pursuant to the declaration of the Supreme Court that the awards of the late joint commission in the La Abra and Weil claims were obtained through fraud, the sum awarded in the first case, \$403,030.08, has been returned to Mexico, and the amount of the Weil award will be returned in like manner.

A convention indefinitely extending the time for the labors of the United States and Mexican International (Water) Boundary Commission has been signed.

It is with satisfaction that I am able to an-

nounce the formal notification at The Hague, on Sept. 4, of the deposit of ratifications of the Convention for the Pacific Settlement of International Disputes by sixteen powers—namely, the United States, Austria, Belgium, Denmark, England, France, Germany, Italy, Persia, Portugal, Roumania, Russia, Siam, Spain, Sweden and Norway, and the Netherlands. Japan also has since ratified the convention.

The Administrative Council of the Permanent Court of Arbitration has been organized, and has adopted rules of order and a constitution for the International Arbitration Bureau. In accordance with Article XXIII of the convention, providing for the appointment by each signatory power of persons of known competency in questions of international law as arbitrators, I have appointed as members of this court Hon. Benjamin Harrison, of Indiana, ex-President of the United States; Hon. Melville W. Fuller, of Illinois, Chief Justice of the United States; Hon. John W. Griggs, of New Jersey, Attorney-General of the United States, and Hon. George Gray, of Delaware, a judge of the circuit court of the United States.

As an incident of the brief revolution in the Mosquito district of Nicaragua early in 1899, the insurgents forcibly collected from American merchants duties upon imports. On the restoration of order the Nicaraguan authorities demanded a second payment of such duties on the ground that they were due to the titular Government and that their diversion had aided the revolt.

This position was not accepted by us. After prolonged discussion a compromise was effected under which the amount of the second payments was deposited with the British consul at San Juan del Norte in trust until the two governments should determine whether the first payments had been made under compulsion to a *de facto* authority. Agreement as to this was not reached, and the point was waived by the act of the Nicaraguan Government in requesting the British consul to return the deposits to the merchants.

Menacing differences between several of the Central American states have been accommodated, our ministers rendering good offices toward an understanding.

The all-important matter of an interoceanic canal has assumed a new phase. Adhering to its refusal to reopen the question of the forfeiture of the contract of the Maritime Canal Company, which was terminated for alleged non-execution in October, 1899, the Government of Nicaragua has since supplemented that action by declaring the so-styled Eyre-Cragin option void for non-payment of the stipulated advance. Protests in relation to these acts have been filed in the State Department and are under consideration. Deeming itself relieved from existing engagements, the Nicaraguan Government shows a disposition to deal freely with the canal question either in the way of negotiations with the United States or by taking measures to promote the waterway.

Overtures for a convention to effect the building of a canal under the auspices of the United States are under consideration. In the meantime, the views of the Congress upon the general subject, in the light of the report of the commission appointed to examine the comparative merits of the various trans-Isthmian ship-canal projects, may be awaited.

I commend to the early attention of the Senate the convention with Great Britain to facilitate the construction of such a canal and to remove any objection which might arise out of the convention commonly called the Clayton-Bulwer Treaty.

The long-standing contention with Portugal, growing out of the seizure of the Delagoa Bay Railway, has been at last determined by a favorable award of the tribunal of arbitration at Berne, to which it was submitted. The amount of the award, which was deposited in London awaiting arrangements by the governments of the United States and Great Britain for its disposal, has recently been paid over to the two governments.

A lately signed convention of extradition with Peru as amended by the Senate has been ratified by the Peruvian Congress.

Another illustration of the policy of this Government to refer international disputes to impartial arbitration is seen in the agreement reached with Russia to submit the claims on behalf of American sealing vessels seized in Bering Sea to determination by Mr. T. M. C. Asser, a distinguished statesman and jurist of the Netherlands.

Thanks are due to the Imperial Russian Government for the kindly aid rendered by its authorities in eastern Siberia to American missionaries fleeing from Manchuria.

Satisfactory progress has been made toward the conclusion of a general treaty of friendship and intercourse with Spain, in replacement of the old treaty, which passed into abeyance by reason of the late war. A new convention of extradition is approaching completion, and I should be much pleased were a commercial arrangement to follow. I feel that we should not suffer to pass any opportunity to reaffirm the cordial ties that existed between us and Spain from the time of our earliest independence, and to enhance the mutual benefits of that commercial intercourse which is natural between the two countries.

By the terms of the treaty of peace the line bounding the ceded Philippine group in the southwest failed to include several small islands lying westward of the Sulus, which have always been recognized as under Spanish control. The occupation of Sibutu and Cagayan Sulu by our naval forces elicited a claim on the part of Spain, the essential equity of which could not be gainsaid. In order to cure the defect of the treaty by removing all possible ground of future misunderstanding respecting the interpretation of its third article, I directed the negotiation of a supplementary treaty, which will be forthwith laid before the Senate, whereby Spain quits all title and claim of title to the islands named as well as to any and all islands belonging to the Philippine Archipelago lying outside the lines described in said third article, and agrees that all such islands shall be comprehended in the cession of the archipelago as fully as if they had been expressly included within those lines. In consideration of this cession the United States is to pay to Spain the sum of \$100,000.

A bill is now pending to effect the recommendation made in my last annual message that appropriate legislation be had to carry into execution Article VII of the treaty of peace with Spain, by which the United States assumed the payment of certain claims for indemnity of its citizens against Spain. I ask that action be taken to fulfil this obligation.

The King of Sweden and Norway has accepted the joint invitation of the United States, Germany, and Great Britain to arbitrate claims growing out of losses sustained in the Samoan Islands in the course of military operations made necessary by the disturbances in 1899.

Our claims upon the Government of the Sultan for reparation for injuries suffered by American citizens in Armenia and elsewhere give promise of early and satisfactory settlement. His Majesty's

good disposition in this regard has been evinced by the issuance of an irade for rebuilding the American college at Harpoot.

The failure of action by the Senate at its last session upon the commercial conventions then submitted for its consideration and approval, although caused by the great pressure of other legislative business, has caused much disappointment to the agricultural and industrial interests of the country, which hoped to profit by their provisions. The conventional periods for their ratification having expired, it became necessary to sign additional articles extending the time for that purpose. This was requested on our part, and the other governments interested have concurred with the exception of one convention, in respect to which no formal reply has been received.

Since my last communication to the Congress on this subject special commercial agreements under the third section of the tariff act have been proclaimed with Portugal, with Italy, and with Germany. Commercial conventions under the general limitations of the fourth section of the same act have been concluded with Nicaragua, with Ecuador, with the Dominican Republic, with Great Britain on behalf of the island of Trinidad, and with Denmark on behalf of the island of St. Croix. These will be early communicated to the Senate. Negotiations with other governments are in progress for the improvement and security of our commercial relations.

The policy of reciprocity so manifestly rests upon the principles of international equity and has been so repeatedly approved by the people of the United States that there ought to be no hesitation in either branch of the Congress in giving to it full effect.

This Government desires to preserve the most just and amicable commercial relations with all foreign countries, unmoved by the industrial rivalries necessarily developed in the expansion of international trade. It is believed that the foreign governments generally entertain the same purpose, although in some instances there are clamorous demands upon them for legislation specifically hostile to American interests. Should these demands prevail I shall communicate with the Congress with the view of advising such legislation as may be necessary to meet the emergency.

The exposition of the resources and products of the Western Hemisphere to be held at Buffalo next year promises important results not only for the United States but for the other participating countries. It is gratifying that the Latin-American states have evinced the liveliest interest, and the fact that an international American congress will be held in the city of Mexico while the exposition is in progress encourages the hope of a larger display at Buffalo than might otherwise be practicable. The work of preparing an exhibit of our national resources is making satisfactory progress under the direction of different officials of the Federal Government, and the various States of the Union have shown a disposition toward the most liberal participation in the enterprise.

The Bureau of the American Republics continues to discharge, with the happiest results, the important work of promoting cordial relations between the United States and the Latin-American countries, all of which are now active members of the International Union. The Bureau has been instrumental in bringing about the agreement for another international American congress, which is to meet in the city of Mexico in October, 1901. The bureau's future for another

term of ten years is assured by the international compact, but the congress will doubtless have much to do with shaping new lines of work and a general policy. Its usefulness to the interests of Latin-American trade is widely appreciated, and shows a gratifying development.

The practical utility of the consular service in obtaining a wide range of information as to the industries and commerce of other countries, and the opportunities thereby afforded for introducing the sale of our goods, have kept steadily in advance of the notable expansion of our foreign trade, and abundant evidence has been furnished, both at home and abroad, of the fact that the consular reports, including many from our diplomatic representatives, have to a considerable extent pointed out ways and means of disposing of a great variety of manufactured goods which otherwise might not have found sale abroad.

Testimony of foreign observers to the commercial efficiency of the consular corps seems to be conclusive, and our own manufacturers and exporters highly appreciate the value of the services rendered, not only in the printed reports, but also in the individual efforts of consular officers to promote American trade. An increasing part of the work of the Bureau of Foreign Commerce, whose primary duty it is to compile and print the reports, is to answer inquiries from trade organizations, business houses, etc., as to conditions in various parts of the world, and, notwithstanding the smallness of the force employed, the work has been so systematized that responses are made with such promptitude and accuracy as to elicit flattering encomiums. The experiment of printing the consular reports daily for immediate use by trade bodies, exporters, and the press, which was begun in January, 1898, continues to give general satisfaction.

It is gratifying to be able to state that the surplus revenues for the fiscal year ended June 30, 1900, were \$79,527,060.18. For the six preceding years we had only deficits, the aggregate of which from 1894 to 1899, inclusive, amounted to \$283,022,991.14. The receipts for the year from all sources, exclusive of postal revenues, aggregated \$567,240,851.89, and expenditures for all purposes, except for the administration of the postal department, aggregated \$487,713,791.71. The receipts from customs were \$233,164,871.16, an increase over the preceding year of \$27,036,389.41. The receipts from internal revenue were \$295,327,926.76, an increase of \$21,890,765.25 over 1899. The receipts from miscellaneous sources were \$38,748,053.97, as against \$36,394,976.92 for the previous year.

It is gratifying also to note that during the year a considerable reduction is shown in the expenditures of the Government. The War Department expenditures for the fiscal year 1900 were \$134,774,767.78, a reduction of \$95,066,486.69 over those of 1899. In the Navy Department the expenditures were \$55,953,077.72 for the year 1900, as against \$63,942,104.25 for the preceding year, a decrease of \$7,989,026.53. In the expenditures on account of Indians there was a decrease in 1900 over 1899 of \$2,630,604.38; and in the civil and miscellaneous expenses for 1900 there was a reduction of \$13,418,065.74.

Because of the excess of revenues over expenditures the Secretary of the Treasury was enabled to apply bonds and other securities to the sinking-fund to the amount of \$56,544,556.06. The details of the sinking-fund are set forth in the report of the Secretary of the Treasury, to which I invite attention. The Secretary of the Treasury estimates that the receipts for the current fiscal

year will aggregate \$580,000,000 and the expenditures \$500,000,000, leaving an excess of revenues over expenditures of \$80,000,000. The present condition of the Treasury is one of undoubted strength. The available cash balance Nov. 30 was \$139,303,794.50. Under the form of statement prior to the financial law of March 14 last there would have been included in the statement of available cash gold coin and bullion held for the redemption of United States notes.

If this form were pursued, the cash balance, including the present gold reserve of \$150,000,000, would be \$289,303,794.50. Such balance Nov. 30, 1899, was \$296,495,301.55. In the general fund, which is wholly separate from the reserve and trust funds, there was on Nov. 30, \$70,090,073.15 in gold coin and bullion, to which should be added \$22,957,300 in gold certificates subject to issue, against which there is held in the Division of Redemption gold coin and bullion, making a total holding of free gold amounting to \$93,047,373.15.

It will be the duty as I am sure it will be the disposition of the Congress to provide whatever further legislation is needed to insure the continued parity under all conditions between our two forms of metallic money, silver and gold.

Our surplus revenues have permitted the Secretary of the Treasury since the close of the fiscal year to call in the funded loan of 1891 continued at 2 per cent., in the sum of \$25,364,500. To and including Nov. 30, \$23,458,100 of these bonds have been paid. This sum, together with the amount which may accrue from further redemptions under the call, will be applied to the sinking-fund.

The law of March 14, 1900, provided for refunding into 2-per-cent. thirty-year bonds, payable, principal and interest, in gold coin of the present standard value, that portion of the public debt represented by the 3-per-cent. bonds of 1908, the 4-per-cents. of 1907, and the 5-per-cents. of 1904, of which there was outstanding at the date of said law \$839,149,930. The holders of the old bonds presented them for exchange between March 14 and Nov. 30 to the amount of \$364,943,750. The net saving to the Government on these transactions aggregates \$9,106,166.

Another effect of the operation, as stated by the Secretary, is to reduce the charge upon the Treasury for the payment of interest from the dates of refunding to Feb. 1, 1904, by the sum of more than \$7,000,000 annually. From Feb. 1, 1904 to July 1, 1907, the annual interest charge will be reduced by the sum of more than \$5,000,000, and for the thirteen months ending Aug. 1, 1908, by about \$1,000,000. The full details of the refunding are given in the annual report of the Secretary of the Treasury.

The beneficial effect of the financial act of 1900, so far as it relates to a modification of the national banking act, is already apparent. The provision for the incorporation of national banks with a capital of not less than \$25,000 in places not exceeding 3,000 inhabitants has resulted in the extension of banking facilities to many small communities hitherto unable to provide themselves with banking institutions under the national system. There were organized from the enactment of the law up to and including Nov. 30, 369 national banks, of which 266 were with capital less than \$50,000, and 103 with capital of \$50,000 or more.

It is worthy of mention that the greater number of banks being organized under the new law are in sections where the need of banking facilities has been most pronounced. Iowa stands first, with 30 banks of the smaller class, while Texas, Oklahoma, Indian Territory, and the middle and

Western sections of the country have also availed themselves largely of the privileges under the new law.

A large increase in national-bank note circulation has resulted from the provision of the act which permits national banks to issue circulating notes to the par value of the United States bonds deposited as security instead of only 90 per cent. thereof, as heretofore. The increase in circulating notes from March 14 to Nov. 30 is \$77,-889,570.

The party in power is committed to such legislation as will better make the currency responsive to the varying needs of business at all seasons and in all sections.

Our foreign trade shows a remarkable record of commercial and industrial progress. The total of imports and exports for the first time in the history of the country exceeded \$2,000,000,000. The exports are greater than they have ever been before, the total for the fiscal year 1900 being \$1,394,483,082, an increase over 1899 of \$167,459,780, an increase over 1898 of \$163,000,752, over 1897 of \$343,489,526, and greater than 1896 by \$511,876,144.

The growth of manufactures in the United States is evidenced by the fact that exports of manufactured products largely exceed those of any previous year, their value for 1900 being \$433,-851,756, against \$339,592,146 in 1899, an increase of 28 per cent.

Agricultural products were also exported during 1900 in greater volume than in 1899, the total for the year being \$835,858,123, against \$784,776,142 in 1899.

The imports for the year amounted to \$849,941,-184, an increase over 1899 of \$152,792,695. This increase is largely in materials for manufacture, and is in response to the rapid development of manufacturing in the United States. While there was imported for use in manufactures in 1900 material to the value of \$79,768,972 in excess of 1899, it is reassuring to observe that there is a tendency toward decrease in the importation of articles manufactured ready for consumption, which in 1900 formed 15.17 per cent. of the total imports, against 15.54 per cent. in 1899 and 21.09 per cent. in 1896.

I recommend that the Congress at its present session reduce the internal-revenue taxes imposed to meet the expenses of the war with Spain in the sum of \$30,000,000. This reduction should be secured by the remission of those taxes which experience has shown to be the most burdensome to the industries of the people.

I specially urge that there be included in whatever reduction is made the legacy tax on bequests for public uses of a literary, educational, or charitable character.

American vessels during the past three years have carried about 9 per cent. of our exports and imports. Foreign ships should carry the least, not the greatest, part of American trade. The remarkable growth of our steel industries, the progress of shipbuilding for the domestic trade, and our steadily maintained expenditures for the navy have created an opportunity to place the United States in the first rank of commercial maritime powers.

Besides realizing a proper national aspiration this will mean the establishment and healthy growth along all our coasts of a distinctive national industry, expanding the field for the profitable employment of labor and capital. It will increase the transportation facilities, and reduce freight charges on the vast volume of products brought from the interior to the seaboard for ex-

port, and will strengthen an arm of the national defense upon which the founders of the Government and their successors have relied. In again urging immediate action by the Congress on measures to promote American shipping and foreign trade, I direct attention to the recommendations on the subject in previous messages, and particularly to the opinion expressed in the message of 1899:

"I am satisfied the judgment of the country favors the policy of aid to our merchant marine, which will broaden our commerce and markets and upbuild our sea-carrying capacity for the products of agriculture and manufacture, which, with the increase of our navy, mean more work and wages to our countrymen, as well as a safeguard to American interests in every part of the world."

The attention of the Congress is invited to the recommendation of the Secretary of the Treasury in his annual report for legislation in behalf of the revenue-cutter service, and favorable action is urged.

In my last annual message to the Congress I called attention to the necessity for early action to remedy such evils as might be found to exist in connection with combinations of capital organized into trusts, and again invite attention to my discussion of the subject at that time, which concluded with these words:

"It is apparent that uniformity of legislation upon this subject in the several States is much to be desired. It is to be hoped that such uniformity, founded in a wise and just discrimination between what is injurious and what is useful and necessary in business operations, may be obtained, and that means may be found for the Congress, within the limitations of its constitutional power, so to supplement an effective code of State legislation as to make a complete system of laws throughout the United States adequate to compel a general observance of the salutary rules to which I have referred.

"The whole question is so important and far-reaching that I am sure no part of it will be lightly considered, but every phase of it will have the studied deliberation of the Congress, resulting in wise and judicious action."

Restraint upon such combinations as are injurious and which are within Federal jurisdiction should be promptly applied by the Congress.

In my last annual message I dwelt at some length upon the condition of affairs in the Philippines. While seeking to impress upon you that the grave responsibility of the future government of those islands rests with the Congress of the United States, I abstained from recommending at that time a specific and final form of government for the territory actually held by the United States forces and in which as long as insurrection continues the military arm must necessarily be supreme. I stated my purpose, until the Congress shall have made the formal expression of its will, to use the authority vested in me by the Constitution and the statutes to uphold the sovereignty of the United States in those distant islands as in all other places where our flag rightfully floats, placing, to that end, at the disposal of the army and navy all the means which the liberality of the Congress and the people have provided. No contrary expression of the will of the Congress having been made, I have steadfastly pursued the purpose so declared, employing the civil arm as well toward the accomplishment of pacification and the institution of local governments within the lines of authority and law.

Progress in the hoped-for direction has been fa-

vorable. Our forces have successfully controlled the greater part of the islands, overcoming the organized forces of the insurgents and carrying order and administrative regularity to all quarters. What opposition remains is for the most part scattered, obeying no concerted plan of strategic action, operating only by the methods common to the traditions of guerrilla warfare, which, while ineffective to alter the general control now established, are still sufficient to beget insecurity among the populations that have felt the good results of our control and thus delay the conferment upon them of the fuller measures of local self-government, of education, and of industrial and agricultural development which we stand ready to give to them.

By the spring of this year the effective opposition of the dissatisfied Tagals to the authority of the United States was virtually ended, thus opening the door for the extension of a stable administration over much of the territory of the archipelago. Desiring to bring this about, I appointed in March last a civil commission composed of the Hon. William H. Taft, of Ohio; Prof. Dean C. Worcester, of Michigan; the Hon. Luke I. Wright, of Tennessee; the Hon. Henry C. Ide, of Vermont; and Prof. Bernard Moses, of California. The aims of their mission and the scope of their authority are clearly set forth in my instructions of April 7, 1900, addressed to the Secretary of War to be transmitted to them:

"In the message transmitted to the Congress on the 5th of December, 1899, I said, speaking of the Philippine Islands: 'As long as the insurrection continues the military arm must necessarily be supreme. But there is no reason why steps should not be taken from time to time to inaugurate governments essentially popular in their form as fast as territory is held and controlled by our troops. To this end I am considering the advisability of the return of the commission, or such of the members thereof as can be secured, to aid the existing authorities and facilitate this work throughout the islands.'

"To give effect to the intention thus expressed, I have appointed Hon. William H. Taft, of Ohio; Prof. Dean C. Worcester, of Michigan; Hon. Luke I. Wright, of Tennessee; Hon. Henry C. Ide, of Vermont; and Prof. Bernard Moses, of California, commissioners to the Philippine Islands to continue and perfect the work of organizing and establishing civil government already commenced by the military authorities, subject in all respects to any laws which the Congress may hereafter enact.

"The commissioners named will meet and act as a board, and the Hon. William H. Taft is designated as president of the board. It is probable that the transfer of authority from military commanders to civil officers will be gradual and will occupy a considerable period. Its successful accomplishment and the maintenance of peace and order in the meantime will require the most perfect cooperation between the civil and military authorities in the island, and both should be directed during the transition period by the same executive department. The commission will therefore report to the Secretary of War, and all their action will be subject to your approval and control.

"You will instruct the commission to proceed to the city of Manila, where they will make their principal office, and to communicate with the military governor of the Philippine Islands, whom you will at the same time direct to render to them every assistance within his power in the performance of their duties. Without hampering them by too specific instructions, they should in general be

enjoined, after making themselves familiar with the conditions and needs of the country, to devote their attention in the first instance to the establishment of municipal governments, in which the natives of the islands, both in the cities and in the rural communities, shall be afforded the opportunity to manage their own local affairs to the fullest extent of which they are capable and subject to the least degree of supervision and control which a careful study of their capacities and observation of the workings of native control show to be consistent with the maintenance of law, order, and loyalty.

"The next subject in order of importance should be the organization of government in the larger administrative divisions corresponding to counties, departments, or provinces, in which the common interests of many or several municipalities falling within the same tribal lines, or the same natural geographical limits, may best be subserved by a common administration. Whenever the commission is of the opinion that the condition of affairs in the islands is such that the central administration may safely be transferred from military to civil control they will report that conclusion to you, with their recommendations as to the form of central government to be established for the purpose of taking over the control.

"Beginning with the 1st day of September, 1900, the authority to exercise, subject to my approval, through the Secretary of War, that part of the power of government in the Philippine Islands which is of a legislative nature is to be transferred from the military governor of the islands to this commission, to be thereafter exercised by them in the place and stead of the military governor, under such rules and regulations as you shall prescribe, until the establishment of the civil central government for the islands contemplated in the last foregoing paragraph, or until Congress shall otherwise provide. Exercise of this legislative authority will include the making of rules and orders, having the effect of law, for the raising of revenue by taxes, customs duties, and imposts; the appropriation and expenditure of public funds of the islands; the establishment of an educational system throughout the islands; the establishment of a system to secure an efficient civil service; the organization and establishment of courts; the organization and establishment of municipal and departmental governments, and all other matters of a civil nature for which the military governor is now competent to provide by rules or orders of a legislative character.

"The commission will also have power during the same period to appoint to office such officers under the judicial, educational, and civil service systems and in the municipal and departmental governments as shall be provided for. Until the complete transfer of control the military governor will remain the chief executive head of the government of the islands, and will exercise the executive authority now possessed by him and not herein expressly assigned to the commission, subject, however to the rules and orders enacted by the commission in the exercise of the legislative powers conferred upon them. In the meantime the municipal and departmental governments will continue to report to the military governor and be subject to his administrative supervision and control, under your direction, but that supervision and control will be confined within the narrowest limits consistent with the requirement that the powers of government in the municipalities and departments shall be honestly and effectively exercised and that law and order and individual freedom shall be maintained.

"All legislative rules and orders, establishments of government, and appointments to office by the commission will take effect immediately, or at such times as they shall designate, subject to your approval and action upon the coming in of the commission's reports, which are to be made from time to time as their action is taken. Wherever civil governments are constituted under the direction of the commission such military posts, garrisons, and forces will be continued for the suppression of insurrection and brigandage and the maintenance of law and order as the military commander shall deem requisite, and the military forces shall be at all times subject, under his orders, to the call of the civil authorities for the maintenance of law and order and the enforcement of their authority.

"In the establishment of municipal governments the commission will take as the basis of their work the governments established by the military governor under his order of Aug. 8, 1899, and under the report of the board constituted by the military governor by his order of Jan. 29, 1900, to formulate and report a plan of municipal government, of which his Honor Cayetano Arellano, president of the Audiencia, was chairman, and they will give to the conclusions of that board the weight and consideration which the high character and distinguished abilities of its members justify.

"In the constitution of departmental or provincial governments they will give especial attention to the existing government of the island of Negros, constituted, with the approval of the people of that island, under the order of the military governor of July 22, 1899, and after verifying, so far as it may be practicable, the reports of the successful working of that government, they will be guided by the experience thus acquired so far as it may be applicable to the condition existing in other portions of the Philippines. They will avail themselves, to the fullest degree practicable, of the conclusions reached by the previous commission to the Philippines.

"In the distribution of powers among the governments organized by the commission, the presumption is always to be in favor of the smaller subdivision, so that all the powers which can properly be exercised by the municipal government shall be vested in that government, and all the powers of a more general character which can be exercised by the departmental government shall be vested in that government, and so that in the governmental system, which is the result of the process, the central government of the islands, following the example of the distribution of the powers between the States and the National Government of the United States, shall have no direct administration except of matters of purely general concern, and shall have only such supervision and control over local governments as may be necessary to secure and enforce faithful and efficient administration by local officers.

"The many different degrees of civilization and varieties of custom and capacity among the people of the different islands preclude very definite instruction as to the part which the people shall take in the selection of their own officers; but these general rules are to be observed: That in all cases the municipal officers, who administer the local affairs of the people, are to be selected by the people, and that wherever officers of more extended jurisdiction are to be selected in any way, natives of the islands are to be preferred, and if they can be found competent and willing to perform the duties, they are to receive the offices in preference to any others.

"It will be necessary to fill some offices for the present with Americans which after a time may well be filled by natives of the islands. As soon as practicable a system for ascertaining the merit and fitness of candidates for civil office should be put in force. An indispensable qualification for all offices and positions of trust and authority in the islands must be absolute and unconditional loyalty to the United States, and absolute and unhampered authority and power to remove and punish any officer deviating from that standard must at all times be retained in the hands of the central authority of the islands.

"In all the forms of government and administrative provisions which they are authorized to prescribe the commission should bear in mind that the government which they are establishing is designed not for our satisfaction, or for the expression of our theoretical views, but for the happiness, peace, and prosperity of the people of the Philippine Islands, and the measures adopted should be made to conform to their customs, their habits, and even their prejudices, to the fullest extent consistent with the accomplishment of the indispensable requisites of just and effective government.

"At the same time the commission should bear in mind, and the people of the islands should be made plainly to understand, that there are certain great principles of government which have been made the basis of our governmental system which we deem essential to the rule of law and the maintenance of individual freedom, and of which they have, unfortunately, been denied the experience possessed by us; that there are also certain practical rules of government which we have found to be essential to the preservation of these great principles of liberty and law, and that these principles and these rules of government must be established and maintained in their islands for the sake of their liberty and happiness, however much they may conflict with the customs or laws of procedure with which they are familiar.

"It is evident that the most enlightened thought of the Philippine Islands fully appreciates the importance of these principles and rules, and they will inevitably within a short time command universal assent. Upon every division and branch of the government of the Philippines, therefore, must be imposed these inviolable rules:

"That no person shall be deprived of life, liberty, or property without due process of law; that private property shall not be taken for public use without just compensation; that in all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, to be informed of the nature and cause of the accusation, to be confronted with the witnesses against him, to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense; that excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishment inflicted; that no person shall be put twice in jeopardy for the same offense, or be compelled in any criminal case to be a witness against himself; that the right to be secure against unreasonable searches and seizures shall not be violated; that neither slavery nor involuntary servitude shall exist except as a punishment for crime; that no bill of attainder or ex-post-facto law shall be passed; that no law shall be passed abridging the freedom of speech or of the press, or the rights of the people to peaceably assemble and petition the Government for a redress of grievances; that no law shall be made respecting an establishment of religion, or prohibiting the free exercise thereof, and that the free exercise and enjoyment of relig-

ious profession and worship without discrimination or preference shall forever be allowed.

"It will be the duty of the commission to make a thorough investigation into the titles to the large tracts of land held or claimed by individuals or by religious orders; into the justice of the claims and complaints made against such landholders by the people of the island or any part of the people, and to seek by wise and peaceable measures a just settlement of the controversies and redress of wrongs which have caused strife and bloodshed in the past. In the performance of this duty the commission is enjoined to see that no injustice is done; to have regard for substantial rights and equity, disregarding technicalities so far as substantial right permits, and to observe the following rules:

"That the provision of the treaty of Paris pledging the United States to the protection of all rights of property in the islands, and as well the principle of our own Government which prohibits the taking of private property without due process of law, shall not be violated; that the welfare of the people of the islands, which should be a paramount consideration, shall be attained consistently with this rule of property right; that if it becomes necessary for the public interest of the people of the islands to dispose of claims to property which the commission finds to be not lawfully acquired and held, disposition shall be made thereof by due legal procedure, in which there shall be full opportunity for fair and impartial hearing and judgment; that if the same public interests require the extinguishment of property rights lawfully acquired and held, due compensation shall be made out of the public treasury therefor; that no form of religion and no minister of religion shall be forced upon any community or upon any citizen of the islands; that, upon the other hand, no minister of religion shall be interfered with or molested in following his calling, and that the separation between state and church shall be real, entire, and absolute.

"It will be the duty of the commission to promote and extend, and, as they find occasion, to improve, the system of education, already inaugurated by the military authorities. In doing this they should regard as of first importance the extension of a system of primary education which shall be free to all, and which shall tend to fit the people for the duties of citizenship and for the ordinary avocations of a civilized community. This instruction should be given in the first instance in every part of the islands in the language of the people. In view of the great number of languages spoken by the different tribes, it is especially important to the prosperity of the islands that a common medium of communication may be established, and it is obviously desirable that this medium should be the English language. Especial attention should be at once given to affording full opportunity to all the people of the islands to acquire the use of the English language.

"It may be well that the main changes which should be made in the system of taxation and in the body of the laws under which the people are governed, except such changes as have already been made by the military government, should be relegated to the civil government which is to be established under the auspices of the commission. It will, however, be the duty of the commission to inquire diligently as to whether there are any further changes which ought not to be delayed, and if so, they are authorized to make such changes, subject to your approval. In doing so they are to bear in mind that taxes which tend to penalize or repress industry and enterprise are to be avoided; that provisions for taxation should be

simple, so that they may be understood by the people; that they should affect the fewest practicable subjects of taxation which will serve to the general distribution of the burden.

"The main body of the laws which regulate the rights and obligations of the people should be maintained with as little interference as possible. Changes made should be mainly in procedure, and in the criminal laws to secure speedy and impartial trials, and at the same time effective administration and respect for individual rights.

"In dealing with the uncivilized tribes of the islands the commission should adopt the same course followed by Congress in permitting the tribes of our North American Indians to maintain their tribal organization and government, and under which many of those tribes are now living in peace and contentment, surrounded by a civilization to which they are unable or unwilling to conform. Such tribal governments should, however, be subjected to wise and firm regulation, and, without undue or petty interference, constant and active effort should be exercised to prevent barbarous practices and introduce civilized customs.

"Upon all officers and employees of the United States, both civil and military, should be impressed a sense of the duty to observe not merely the material but the personal and social rights of the people of the islands, and to treat them with the same courtesy and respect for their personal dignity which the people of the United States are accustomed to require from each other.

"The articles of capitulation of the city of Manila on the 13th of August, 1898, concluded with these words:

"This city, its inhabitants, its churches and religious worship, its educational establishments, and its private property of all descriptions, are placed under the special safeguard of the faith and honor of the American army."

"I believe that this pledge has been faithfully kept. As high and sacred an obligation rests upon the Government of the United States to give protection for property and life, civil and religious freedom, and wise, firm, and unselfish guidance in the paths of peace and prosperity to all the people of the Philippine Islands. I charge this commission to labor for the full performance of this obligation, which concerns the honor and conscience of their country, in the firm hope that through their labors all the inhabitants of the Philippine Islands may come to look back with gratitude to the day when God gave victory to American arms at Manila and set their land under the sovereignty and the protection of the people of the United States."

Coincidentally with the entrance of the commission upon its labors I caused to be issued by Gen. MacArthur, the military governor of the Philippines, on June 21, 1900, a proclamation of amnesty in generous terms, of which many of the insurgents took advantage, among them a number of important leaders.

This commission, composed of eminent citizens representing the diverse geographical and political interests of the country, and bringing to their task the ripe fruits of long and intelligent service in educational, administrative, and judicial careers, made great progress from the outset. As early as Aug. 21, 1900, it submitted a preliminary report, which will be laid before the Congress, and from which it appears that already the good effects of returning order are felt; that business, interrupted by hostilities, is improving as peace extends; that a larger area is under sugar cultivation than ever before; that the customs revenues are greater than at any time during the Spanish rule; that economy

and efficiency in the military administration have created a surplus fund of \$6,000,000, available for needed public improvements; that a stringent civil-service law is in preparation; that railroad communications are expanding, opening up rich districts, and that a comprehensive scheme of education is being organized.

Later reports from the commission show yet more encouraging advance toward insuring the benefits of liberty and good government to the Filipinos, in the interest of humanity and with the aim of building up an enduring, self-supporting, and self-administering community in those far Eastern seas. I would impress upon the Congress that whatever legislation may be enacted in respect to the Philippine Islands should be along those generous lines. The fortune of war has thrown upon this nation an unsought trust which should be unselfishly discharged, and devolved upon this Government a moral as well as material responsibility toward these millions whom we have freed from an oppressive yoke.

I have on another occasion called the Filipinos "the wards of the nation." Our obligation as guardian was not lightly assumed; it must not be otherwise than honestly fulfilled, aiming first of all to benefit those who have come under our fostering care. It is our duty so to treat them that our flag may be no less beloved in the mountains of Luzon and the fertile zones of Mindanao and Negros than it is at home; that there as here it shall be the revered symbol of liberty, enlightenment, and progress in every avenue of development.

The Filipinos are a race quick to learn and to profit by knowledge. He would be rash who, with the teachings of contemporaneous history in view, would fix a limit to the degree of culture and advancement yet within the reach of these people if our duty toward them be faithfully performed.

The civil government of Porto Rico provided for by the act of the Congress approved April 12, 1900, is in successful operation. The courts have been established. The governor and his associates, working intelligently and harmoniously, are meeting with commendable success.

On the 6th of November a general election was held in the island for members of the Legislature, and the body elected has been called to convene on the first Monday of December.

I recommend that legislation be enacted by the Congress conferring upon the Secretary of the Interior supervision over the public lands in Porto Rico, and that he be directed to ascertain the location and quantity of lands the title to which remained in the Crown of Spain at the date of cession of Porto Rico to the United States, and that appropriations necessary for surveys be made, and that the methods of the disposition of such lands be prescribed by law.

On the 25th of July, 1900, I directed that a call be issued for an election in Cuba for members of a constitutional convention to frame a constitution as a basis for a stable and independent government in the island. In pursuance thereof the military governor issued the following instructions:

"Whereas the Congress of the United States by its joint resolution of April 20, 1898, declared—

"That the people of the island of Cuba are, and of right ought to be, free and independent.

"That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of the island to its people."

"And whereas the people of Cuba have established municipal governments, deriving their authority from the suffrages of the people given under just and equal laws, and are now ready, in like manner, to proceed to the establishment of a general government which shall assume and exercise sovereignty, jurisdiction, and control over the island:

"Therefore, it is ordered that a general election be held in the island of Cuba on the third Saturday of September, in the year nineteen hundred, to elect delegates to a convention to meet in the city of Havana at twelve o'clock noon, on the first Monday of November, in the year nineteen hundred, to frame and adopt a constitution for the people of Cuba, and as a part thereof to provide for and agree with the Government of the United States upon the relations to exist between that Government and the Government of Cuba, and to provide for the election by the people of officers under such constitution and the transfer of government to the officers so elected.

"The election will be held in the several voting precincts of the island under and pursuant to the provisions of the electoral law of April 18, 1900, and the amendments thereof."

The election was held on the 15th of September, and the convention assembled on the 5th of November, 1900, and is now in session.

In calling the convention to order, the military governor of Cuba made the following statement:

"As military governor of the island, representing the President of the United States, I call this convention to order.

"It will be your duty, first, to frame and adopt a constitution for Cuba, and when that has been done to formulate what in your opinion ought to be the relations between Cuba and the United States.

"The constitution must be adequate to secure a stable, orderly, and free government.

"When you have formulated the relations which in your opinion ought to exist between Cuba and the United States, the Government of the United States will doubtless take such action on its part as shall lead to a final and authoritative agreement between the people of the two countries to the promotion of their common interests.

"All friends of Cuba will follow your deliberations with the deepest interest, earnestly desiring that you shall reach just conclusions, and that by the dignity, individual self-restraint, and wise conservatism which shall characterize your proceedings the capacity of the Cuban people for representative government may be signally illustrated.

"The fundamental distinction between true representative government and dictatorship is that in the former every representative of the people, in whatever office, confines himself strictly within the limits of his defined powers. Without such restraint there can be no free constitutional government.

"Under the order pursuant to which you have been elected and convened, you have no duty and no authority to take part in the present government of the island. Your powers are strictly limited by the terms of that order."

When the convention concludes its labors I will transmit to the Congress the constitution as framed by the convention for its consideration and for such action as it may deem advisable.

I renew the recommendation made in my special message of Feb. 10, 1899, as to the necessity for cable communication between the United States and Hawaii, with extension to Manila. Since then circumstances have strikingly emphasized this need. Surveys have shown the entire feasibility

of a chain of cables which at each stopping place shall touch on American territory, so that the system shall be under our own complete control. Manila once within telegraphic reach, connection with the systems of the Asiatic coast would open increased and profitable opportunities for a more direct cable route from our shores to the Orient than is now afforded by the transatlantic, continental, and transasian lines. I urge attention to this important matter.

The present strength of the army is 100,000 men—65,000 regulars and 35,000 volunteers. Under the act of March 2, 1899, on the 30th of June next the present volunteer force will be discharged and the regular army will be reduced to 2,447 officers and 29,025 enlisted men.

In 1888 a board of officers convened by President Cleveland adopted a comprehensive scheme of coast-defense fortifications, which involved the outlay of something over \$100,000,000. This plan received the approval of the Congress, and since then regular appropriations have been made and the work of fortifications has steadily progressed.

More than \$60,000,000 have been invested in a great number of forts and guns, with all the complicated and scientific machinery and electrical appliances necessary for their use. The proper care of this defensive machinery requires men trained in its use. The number of men necessary to perform this duty alone is ascertained by the War Department, at a minimum allowance, to be 18,420.

There are 58 or more military posts in the United States other than the coast-defense fortifications.

The number of these posts is being constantly increased by the Congress. More than \$22,000,000 have been expended in building and equipment, and they can only be cared for by the regular army. The posts now in existence and others to be built provide for accommodations for, and if fully garrisoned require, 26,000 troops. Many of these posts are along our frontier or at important strategic points, the occupation of which is necessary.

We have in Cuba between 5,000 and 6,000 troops. For the present our troops in that island can not be withdrawn or materially diminished, and certainly not until the conclusion of the labors of the constitutional convention now in session and a government provided by the new constitution shall have been established and its stability assured.

In Porto Rico we have reduced the garrisons to 1,636, which includes 879 native troops. There is no room for further reduction here.

We will be required to keep a considerable force in the Philippine Islands for some time to come. From the best information obtainable we will need there for the immediate future from 45,000 to 60,000 men. I am sure the number may be reduced as the insurgents shall come to acknowledge the authority of the United States, of which there are assuring indications.

It must be apparent that we will require an army of about 60,000, and that during present conditions in Cuba and the Philippines the President should have authority to increase the force to the present number of 100,000. Included in this number authority should be given to raise native troops in the Philippines up to 15,000, which the Taft Commission believe will be more effective in detecting and suppressing guerrillas, assassins, and ladrones than our own soldiers.

The full discussion of this subject by the Secretary of War in his annual report is called to your earnest attention.

I renew the recommendation made in my last

annual message that the Congress provide a special medal of honor for the volunteers, regulars, sailors, and marines on duty in the Philippines who voluntarily remained in the service after their terms of enlistment had expired.

I favor the recommendation of the Secretary of War for the detail of officers from the line of the army when vacancies occur in the adjutant-general's department, inspector-general's department, quartermaster's department, subsistence department, pay department, ordnance department, and signal corps.

The army can not be too highly commended for its faithful and effective service in active military operations in the field and the difficult work of civil administration.

The continued and rapid growth of the postal service is a sure index of the great and increasing business activity of the country. Its most striking new development is the extension of rural free delivery. This has come almost wholly within the last year. At the beginning of the fiscal year 1899-1900 the number of routes in operation was only 391, and most of these had been running less than twelve months. On the 15th of November, 1900, the number had increased to 2,614, reaching into 44 States and Territories, and serving a population of 1,801,524. The number of applications now pending and awaiting action nearly equals all those granted up to the present time, and by the close of the current fiscal year about 4,000 routes will have been established, providing for the daily delivery of mails at the scattered homes of about 3,500,000 of rural population.

This service ameliorates the isolation of farm life, conduces to good roads, and quickens and extends the dissemination of general information. Experience thus far has tended to allay the apprehension that it would be so expensive as to forbid its general adoption or make it a serious burden. Its actual application has shown that it increases postal receipts, and can be accompanied by reductions in other branches of the service, so that the augmented revenues and the accomplished savings together materially reduce the net cost. The evidences which point to these conclusions are presented in detail in the annual report of the Postmaster-General, which, with its recommendations, is commended to the consideration of the Congress. The full development of this special service, however, requires such a large outlay of money that it should be undertaken only after a careful study and thorough understanding of all that it involves.

Very efficient service has been rendered by the navy in connection with the insurrection in the Philippines and the recent disturbance in China.

A very satisfactory settlement has been made of the long-pending question of the manufacture of armor-plate. A reasonable price has been secured and the necessity for a Government armor plant avoided.

I approve of the recommendations of the Secretary for new vessels and for additional officers and men which the required increase of the navy makes necessary. I commend to the favorable action of the Congress the measure now pending for the erection of a statue to the memory of the late Admiral David D. Porter. I commend also the establishment of a national naval reserve and of the grade of vice-admiral. Provision should be made, as recommended by the Secretary, for suitable rewards for special merit. Many officers who rendered the most distinguished service during the recent war with Spain have received in return no recognition from the Congress.

The total area of public lands as given by the

Secretary of the Interior is approximately 1,071,881,662 acres, of which 917,135,880 acres are undisposed of and 154,745,782 acres have been reserved for various purposes. The public lands disposed of during the year amount to 13,453,887.96 acres, including 62,423.09 acres of Indian lands, an increase of 4,271,474.80 acres over the preceding year. The total receipts from the sale of public lands during the fiscal year were \$4,379,758.10, an increase of \$1,309,620.76 over the preceding year.

The results obtained from our forest policy have demonstrated its wisdom and the necessity in the interest of the public for its continuance and increased appropriations by the Congress for the carrying on of the work. On June 30, 1900, there were 37 forest reserves, created by presidential proclamations under section 24 of the act of March 3, 1891, embracing an area of 46,425,529 acres.

During the past year the Olympic Reserve, in the State of Washington, was reduced 265,040 acres, leaving its present area at 1,923,840 acres. The Prescott Reserve, in Arizona, was increased from 10,240 acres to 423,680 acres, and the Big Horn Reserve, in Wyoming, was increased from 1,127,680 acres to 1,180,800 acres. A new reserve, the Santa Ynez, in California, embracing an area of 145,000 acres, was created during this year. On Oct. 10, 1900, the Crow Creek Forest Reserve, in Wyoming, was created, with an area of 56,320 acres.

At the end of the fiscal year there were on the pension roll 993,529 names, a net increase of 2,010 over the fiscal year 1899. The number added to the rolls during the year was 45,344. The amount disbursed for army pensions during the year was \$134,700,597.24, and for navy pensions \$3,761,533.41, a total of \$138,462,130.65, leaving an unexpended balance of \$5,542,768.25 to be covered into the Treasury, which shows an increase over the previous year's expenditure of \$107,077.70. There were 684 names added to the rolls during the year by special acts passed at the first session of the Fifty-sixth Congress.

The act of May 9, 1900, among other things provides for an extension of income to widows pensioned under said act to \$250 per annum. The Secretary of the Interior believes that by the operations of this act the number of persons pensioned under it will increase and the increased annual payment for pensions will be between \$3,000,000 and \$4,000,000.

The Government justly appreciates the services of its soldiers and sailors by making pension payments liberal beyond precedent to them, their widows and orphans.

There were 36,540 letters patent granted, including reissues and designs, during the fiscal year ended June 30, 1900; 1,660 trade-marks, 682 labels, and 93 prints registered. The number of patents which expired was 19,988. The total receipts for patents were \$1,358,228.35. The expenditures were \$1,247,827.58, showing a surplus of \$110,400.77.

The attention of the Congress is called to the report of the Secretary of the Interior touching the necessity for the further establishment of schools in the Territory of Alaska, and favorable action is invited thereon.

Much interesting information is given in the report of the Governor of Hawaii as to the progress and development of the islands during the period from July 7, 1898, the date of the approval of the joint resolution of the Congress providing for their annexation, up to April 30, 1900, the date of the approval of the act providing a government for the Territory, and thereafter.

The last Hawaiian census, taken in the year 1896, gives a total population of 109,020, of which 31,019 were native Hawaiians. The number of Americans reported was 8,485. The results of the Federal census, taken this year, show the islands to have a total population of 154,001, showing an increase over that reported in 1896 of 44,981, or 41.2 per cent.

There has been marked progress in the educational, agricultural, and railroad development of the islands.

In the Territorial act of April 30, 1900, section 7 of said act repeals chapter xxxiv of the civil laws of Hawaii, whereby the Government was to assist in encouraging and developing the agricultural resources of the republic, especially irrigation. The Governor of Hawaii recommends legislation looking to the development of such water-supply as may exist on the public lands, with a view of promoting land settlement. The earnest consideration of the Congress is invited to this important recommendation and others, as embodied in the report of the Secretary of the Interior.

The director of the census states that the work in connection with the twelfth census is progressing favorably. This national undertaking, ordered by the Congress each decade, has finally resulted in the collection of an aggregation of statistical facts to determine the industrial growth of the country, its manufacturing and mechanical resources, its richness in mines and forests, the number of its agriculturists, their farms and products, its educational and religious opportunities, as well as questions pertaining to sociological conditions.

The labors of the officials in charge of the bureau indicate that the four important and most desired subjects—namely, population, agricultural, manufacturing, and vital statistics—will be completed within the limit prescribed by the law of March 3, 1899.

The field work incident to the above inquiries is now practically finished, and as a result the population of the States and Territories, including the Hawaiian Islands and Alaska, has been announced. The growth of population during the last decade amounts to over 13,000,000, a greater numerical increase than in any previous census in the history of the country.

Bulletins will be issued as rapidly as possible giving the population by States and Territories, by minor civil divisions. Several announcements of this kind have already been made, and it is hoped that the list will be completed by Jan. 1. Other bulletins giving the results of the manufacturing and agricultural inquiries will be given to the public as rapidly as circumstances will admit.

The director, while confident of his ability to complete the different branches of the undertaking in the allotted time, finds himself embarrassed by the lack of a trained force properly equipped for statistical work, thus raising the question whether in the interest of economy and a thorough execution of the census work there should not be retained in the Government employ a certain number of experts, not only to aid in the preliminary organization prior to the taking of the decennial census, but in addition to have the advantage in the field and office work of the bureau of trained assistants to facilitate the early completion of this enormous undertaking.

I recommend that the Congress at its present session apportion representation among the several States as provided by the Constitution.

The Department of Agriculture has been extending its work during the past year, reaching farther for new varieties of seeds and plants; co-

operating more fully with the States and Territories in research along useful lines; making progress in meteorological work relating to lines of wireless telegraphy and forecasts for ocean-going vessels; continuing inquiry as to animal disease; looking into the extent and character of food adulteration; outlining plans for the care, preservation, and intelligent harvesting of our woodlands; studying soils that producers may cultivate with better knowledge of conditions, and helping to clothe desert places with grasses suitable to our arid regions. Our island possessions are being considered that their peoples may be helped to produce the tropical products now so extensively brought into the United States. Inquiry into methods of improving our roads has been active during the year; help has been given to many localities, and scientific investigation of material in the States and Territories has been inaugurated. Irrigation problems in our semiarid regions are receiving careful and increased consideration.

An extensive exhibit at Paris of the products of agriculture has made the peoples of many countries more familiar with the varied products of our fields and their comparative excellence.

The collection of statistics regarding our crops is being improved, and sources of information are being enlarged, to the end that producers may have the earliest advices regarding crop conditions. There has never been a time when those for whom it was established have shown more appreciation of the services of the department.

In my annual message of Dec. 5, 1898, I called attention to the necessity for some amendment of the alien-contract law. There still remain important features of the rightful application of the eight-hour law for the benefit of labor and of the principle of arbitration, and I again commend these subjects to the careful attention of the Congress.

That there may be secured the best service possible in the Philippine Islands, I have issued, under date of Nov. 30, 1900, the following order:

"The United States Civil Service Commission is directed to render such assistance as may be practicable to the Civil Service Board, created under the act of the United States Philippine Commission, for the establishment and maintenance of an honest and efficient civil service in the Philippine Islands, and for that purpose to conduct examinations for the civil service of the Philippine Islands upon the request of the Civil Service Board of said islands, under such regulations as may be agreed upon by the said board and the said United States Civil Service Commission."

The Civil Service Commission is greatly embarrassed in its work for want of an adequate permanent force for clerical and other assistance. Its needs are fully set forth in its report. I invite attention to the report, and especially urge upon the Congress that this important bureau of the public service, which passes upon the qualifications and character of so large a number of the officers and employees of the Government, should be supported by all needed appropriations to secure promptness and efficiency.

I am very much impressed with the statement made by the heads of all the departments of the urgent necessity of a hall of public records. In every departmental building in Washington, so far as I am informed, the space for official records is not only exhausted, but the walls of rooms are lined with shelves, the middle floor space of many rooms is filled with file cases, and garrets and basements, which were never intended and are unfitted for their accommodation, are crowded with

them. Aside from the inconvenience, there is great danger, not only from fire, but from the weight of these records upon timbers not intended for their support. There should be a separate building especially designed for the purpose of receiving and preserving the annually accumulating archives of the several executive departments. Such a hall need not be a costly structure, but should be so arranged as to admit of enlargement from time to time. I urgently recommend that the Congress take early action in this matter.

I transmit to the Congress a resolution adopted at a recent meeting of the American Bar Association concerning the proposed celebration of John Marshall Day, Feb. 4, 1901. Fitting exercises have been arranged, and it is earnestly desired by the committee that the Congress may participate in this movement to honor the memory of the great jurist.

The transfer of the Government to this city is a fact of great historical interest. Among the people there is a feeling of genuine pride in the capital of the republic.

It is a matter of interest in this connection that in 1800 the population of the District of Columbia was 14,093; to-day it is 278,718. The population of the city of Washington was then 3,210; to-day it is 218,196.

The Congress having provided for "an appropriate national celebration of the Centennial Anniversary of the Establishment of the Seat of Government in the District of Columbia," the committees authorized by it have prepared a program for the 12th of December, 1900, which date has been selected as the anniversary day. Deep interest has been shown in the arrangements for the celebration by the members of the committees of the Senate and House of Representatives, the committee of governors appointed by the President, and the committees appointed by the citizens and inhabitants of the District of Columbia generally. The program, in addition to a reception and other exercises at the executive mansion, provides commemorative exercises to be held jointly by the Senate and House of Representatives in the hall of the House of Representatives, and a reception in the evening at the Corcoran Gallery of Art in honor of the governors of the States and Territories.

In our great prosperity we must guard against the danger it invites of extravagance in Government expenditures and appropriations; and the chosen representatives of the people will, I doubt not, furnish an example in their legislation of that wise economy which in a season of plenty husbands for the future. In this era of great business activity and opportunity caution is not untimely. It will not abate, but strengthen, confidence. It will not retard, but promote, legitimate industrial and commercial expansion. Our growing power brings with it temptations and perils requiring constant vigilance to avoid. It must not be used to invite conflicts, nor for oppression, but for the more effective maintenance of those principles of equality and justice upon which our institutions and happiness depend. Let us keep always in mind that the foundation of our Government is liberty; its superstructure peace.

WILLIAM MCKINLEY.

EXECUTIVE MANSION, Dec. 3, 1900.

The Apportionment.—Dec. 20, 1900, Mr. Hopkins, of Illinois, reported from the Committee on the Census a bill for the apportionment of Representatives in Congress among the several States, under the twelfth census. It was as follows:

"Be it enacted, etc., That after the 3d of March,

1903, the House of Representatives shall be composed of 357 members, to be apportioned among the several States as follows:

"Alabama, 9; Arkansas, 6; California, 7; Colorado, 2; Connecticut, 4; Delaware, 1; Florida, 2; Georgia, 11; Idaho, 1; Illinois, 23; Indiana, 12; Iowa, 11; Kansas, 7; Kentucky, 10; Louisiana, 7; Maine, 3; Maryland, 6; Massachusetts, 13; Michigan, 12; Minnesota, 8; Mississippi, 7; Missouri, 15; Montana, 1; Nebraska, 5; Nevada, 1; New Hampshire, 2; New Jersey, 9; New York, 35; North Carolina, 9; North Dakota, 1; Ohio, 20; Oregon, 2; Pennsylvania, 30; Rhode Island, 2; South Carolina, 6; South Dakota, 2; Tennessee, 10; Texas, 15; Utah, 1; Vermont, 2; Virginia, 9; Washington, 2; West Virginia, 5; Wisconsin, 10; Wyoming, 1.

"SEC. 2. That whenever a new State is admitted to the Union the Representative or Representatives assigned to it shall be in addition to the number 357.

"SEC. 3. That in each State entitled under this apportionment, the number to which such State may be entitled in the Fifty-eighth and each subsequent Congress shall be elected by districts composed of contiguous and compact territory and containing as nearly as practicable an equal number of inhabitants. The said districts shall be equal to the number of Representatives to which such State may be entitled in Congress, no one district electing more than one Representative.

"SEC. 4. That in case of an increase in the number of Representatives which may be given to any State under this apportionment such additional Representative or Representatives shall be elected by the State at large, and the other Representatives by the districts now prescribed by law until the Legislature of such State, in the manner herein prescribed, shall redistrict such State; and if there be no increase in the number of Representatives from a State the Representatives thereof shall be elected from the districts now prescribed by law until such State be redistricted as herein prescribed by the Legislature of said State; and if the number hereby provided for shall in any State be less than it was before the change hereby made, then the whole number to such State hereby provided for shall be elected at large, unless the Legislatures of said States have provided or shall otherwise provide before the time fixed by law for the next election of Representatives therein.

"SEC. 5. That all acts and parts of acts inconsistent with this act are hereby repealed."

Mr. Burleigh, of Maine, brought in a minority measure, enlarging the membership of the House to 386, and making a different distribution of Representatives. A bill was also introduced by Mr. Crumpacker, of Indiana, granting to every State a full proportion of membership according to population, except South Carolina, North Carolina, Mississippi, and Louisiana, in which representation was to be cut down, under the provisions of the fourteenth amendment to the Constitution, on the ground that they have disfranchised 40 per cent. of their people.

The matter was taken up in the House on Jan. 4, 1901; and on that day Mr. Shattuc, of Ohio, presented the following substitute:

"Whereas, The continued enjoyment of full representation in this House by any State which has, for reasons other than participation in rebellion or other crime, denied to any of the male inhabitants thereof, being twenty-one years of age and citizens of the United States, the right to vote for Representatives in Congress, presidential electors, and other specified officers, is in direct violation

of the fourteenth amendment to the Constitution of the United States, which declares that in such case 'the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State,' and is an invasion of the rights and dignity of this House and of its members, and an infringement upon the rights and privileges in this House of other States and their Representatives; and

"Whereas, The States of Massachusetts, Maine, Connecticut, Delaware, California, Louisiana, Mississippi, North Carolina, South Carolina, Wyoming, Oregon, and other States do, by the provisions of the constitutions and statutes of said States, and for reasons other than participation in rebellion or other crime, deny the right to vote for members of Congress and presidential electors, as well as the executive and judicial officers of such States and members of the Legislatures thereof, to male inhabitants twenty-one years of age and over and citizens of the United States; and such denial in certain of the said States extends to more than one-half of those who prior to the last apportionment of representation were entitled to vote in such States; and

"Whereas, In order that the apportionment of membership of the House of Representatives may be determined in a constitutional manner: Therefore, be it

"Resolved by the House of Representatives, That the director of the census is hereby directed to furnish this House, at the earliest possible moment, the following information:

"First. The total number of male citizens of the United States over twenty-one years of age in each of the several States of the Union."

"Second. The total number of male citizens of the United States over twenty-one years of age who, by reason of State constitutional limitations or State legislation, are denied the right of suffrage, whether such denial exists on account of illiteracy, on account of pauperism, on account of polygamy, or on account of property qualifications, or for any other reason.

"Resolved further, That the Speaker of the House of Representatives is hereby authorized and directed to appoint a select committee of five members from the membership of the Census Committee of the House of Representatives, who shall investigate the question of the alleged abridgment of the elective franchise for any of the causes mentioned in all the States of the Union in which constitutional or legislative restrictions on the right of suffrage are claimed to exist, and that such committee report its findings within twenty days from the date of the adoption of this resolution to the said Census Committee, and that within one week after the said report shall have been received by the Census Committee the Census Committee shall return a bill to the House of Representatives providing for the apportionment of the membership of the House of Representatives based on the provisions of the fourteenth amendment to the Constitution of the United States."

Mr. Hopkins, in presenting the argument for the majority measure, as reported, began by giving various reasons against an increase in the membership of the House of Representatives, and declared that his committee had determined upon 357, the number under the former apportionment, as a limit beyond which it would not be well to go. Having chosen that number as a basis, the committee adopted, he said, the method recommended by Gen. Walker in 1881:

"Some time before the convening of Congress

the director of the census was directed, in accordance with the custom established for many years, to prepare tables not only for the guidance of the Committee on the Census, but also for the benefit of members and Senators. The experts in that department have prepared a table, called an apportionment table, in which they commence with 350 members and give the figures up to 400 members, inclusive. They first give the constitutional population of every State in the Union, and then the constitutional population of the entire United States. By means of these tables we can take any of these figures presented, and if we settle upon any number as the membership of this House, can easily determine the representation that will be allotted thereby to any of the States.

"As I have stated, the majority of the committee in preparing their bill selected first 357, and then in order to determine the membership to be allotted to each State under this new apportionment they divided the constitutional population of the United States—74,565,906—by 357, getting a quotient of 208,868, so that under the proposition of the majority of the committee the population of a Congressional district should aggregate 208,868. Taking that number as a divisor, we then took the population of the various States and made the division. For example, dividing the population of Alabama—1,828,697—by 208,868, it gave to the State of Alabama 8 members, with a decimal fraction of 0.755, representing a population of 157,753.

"That process was carried out with every State, the aggregate number reached by this process being 335 members, so that by this process we apportion among the several States of the Union 335 members. Now, in order to reach the 357 members, we find that there are 22 members still to be allotted; but we also find that, by the division made in the manner that I have indicated, there were major and minor fractions in the 45 different States aggregating 4,595,126.

"Under the old rule that was adopted and maintained in this country up to 1840 that population of 4,595,126 would have gone unrepresented, excepting the 4 States that under the Constitution are entitled to 1 member each; but under the policy that has been adopted during the last sixty years these major fractions were represented. It was found, however, that there were major fractions for 25 States instead of 22, including the 4 States that under the Constitution are entitled to 1 member each. How was that to be remedied? Under this apportionment 335 members had been assigned to the several States, each on the same ratio that was accorded to its sister States, leaving, as I said, 22 members to be assigned, as I have already stated.

"Now, what was the most equitable and just way to dispose of these fractions? The four million and odd thousands that I have mentioned would be entitled only to 22 members, on the ratio that we have already divided among the other States. That aggregation of fractions would not be entitled to 25 members, but only to 22. Now, it would not be in accordance with the requirements of the Constitution to give a greater representation to a fraction than to the integral numbers. It would not be just and proper to take this population that is represented by these various fractions and give them an increased representation. Then what is the most equitable and just way to dispose of the 22 members that represent the fractional numbers?

"Why, Mr. Speaker, there is but one way, and that way was pointed out many years ago by Prof. Walker, superintendent of the ninth and

tenth censuses. Prof. Walker not only agreed fully with the masterly argument that was made by Mr. Webster upon the subject, that we should take an arbitrary number for the membership of the House and have the fractions represented, but he insisted that where such an anomaly existed as we find exists at the present time the only just and proper way would be to take the State with the largest major fraction, and give to that State one of the 22 members, then take the next State that had the next highest major fraction and give to it a member, and so on until the 22 members are disposed of in the manner that I have indicated.

"Now, these 22 members represent, as I have said, all the fractions, including the population of the 4 States with 1 member each; but it is more equitable and just to apportion an additional member to the State with the highest major fraction than it would be to one with a lower major fraction, because when we come to this question of fractions (which frequently occurs, as you will find by going through these figures), one State may have a major fraction of a thousand or two above the moiety number, and another State just reach the dividing line. Where would you make the division there?

"Now, I call the attention of the members of the House to this to show that in making this apportionment as has been provided by the Committee on the Census we have been unable to deal out strict and exact justice to all States, but, as Mr. Webster said, the Constitution does not require that. It only requires us to do that as nearly as it is possible to do it in making these divisions. And I submit that when gentlemen come to study these figures as the Committee on the Census have studied them they will readily find that no other apportionment could be made and still preserve the harmony and integrity of the bill."

Mr. Hopkins went on to discuss the operation of this system in detail, and attempted to justify the result of it as shown in the bill; but various members took up specific cases of its failure in practise, however beautiful in theory. Mr. Shafroth, of Colorado, said:

"Mr. Speaker, it seems to be apparent from the questions which have been propounded to the chairman of the committee that there is something radically wrong in the formation of this bill. A bill which provides for representation in this House for the next ten years by the people of the various States of the Union should be most carefully framed.

"I have attempted to look into the inequalities of the measure, and I find that they result from the error of adopting a defective system. The system which has been adopted by the chairman of the committee in the formulation of this bill works gross injustice to a number of States in the Union. I call attention first to the wrong which is done to the State of Colorado, because that is perhaps the most apparent. We find, according to the tables that are sent to us by the director of the census and upon which this bill is framed, that even if this House is reduced to the membership of 350 Colorado is entitled to an additional member.

"If it is fixed at 351, she is entitled to an additional member. If fixed at 353, or 354, or 355, or 356, she is entitled to an additional member. But if the number 357 is picked out, then she is not entitled to an additional member. If the membership of the House goes beyond that to any extent—if it is 358 or 359 or any number up to 400—then she is entitled to an additional member. Out of the two sets of tables that are sent to this House

by the director of the census, tabulating 100 illustrations, 50 under one system and 50 under another, there is but one number by which Colorado fails to get an additional member, and that is the number fixed by the committee that has brought the bill into this House.

"Now, Mr. Speaker, I maintain that any bill which is predicated upon a system that admits of an injustice of that kind is radically wrong. I want to call attention to the fact that if the representation is fixed at 213,000 inhabitants and for each major fraction of that number, Colorado is entitled to an additional member. If it is placed at 212,000, or 211,000, or 210,000, or 209,000 and major fraction, she is entitled to an additional member. But if it is fixed at 208,868 and major fraction, she is not. Can any man, according to principles of justice, explain that paradox satisfactorily? Is there any justice in a system that works such a wrong as that?

"It may be that the system works out in mathematics that way; but no man can say it is just that a State which is entitled to an additional member, when its people are entitled to it, according to an apportionment of 213,000, is not entitled to it when that number is reduced to 208,000. There is no justice or fairness in selecting that number, and that is the only number by which Colorado fails to get the representation to which she is entitled.

"Now, that is one illustration only as to how this system works. It also works the same with some other States. It works so with the State of Maine. Upon a certain apportionment Maine is entitled to maintain 4 members in this House, and yet upon an increased membership of the House it is entitled to but 3. If the membership is placed at 383, 384, or 385, Maine is entitled to 4 Representatives, but if fixed at 386, she is entitled to only 3. If placed at 387 or 388, she is again entitled to 4 members; but if fixed at 389 or 390, she is entitled to only 3. 'Now you see it and now you don't.' Any system that works an injustice of that kind can not be defended by anybody upon principles of equity or fairness. If the State of Maine is entitled to 4 members upon the ratio of 1 Representative to each 194,689 inhabitants and major fraction, she is unquestionably entitled to the same number upon the ratio of 1 member to each 191,194 inhabitants and major fraction.

"It is done by means of a system which does not recognize that all major fractions are entitled to representation. The details of it are uninteresting. I went to the Census Bureau and told them there must be a mistake in their first set of tables. I saw the gentleman in charge of this compilation. He looked at it and said, 'Colorado entitled to an additional member at 350 or 351, and not entitled to one at a membership of 357? That must be a mistake.' He looked at it further and said, 'I don't know whether it is a mistake or not.' He ran over the column of figures, recalculated it, and at last said, 'No; it is no mistake.' There may be no mistake, but it shows the injustice and unfairness of a bill predicated upon such a system.

"He explained it on the same theory that the gentleman from Illinois attempted to—the shifting of the major fraction upon change of ratio. But he did not claim that it was fair. In fact, he said that it showed a serious defect in the system, and that the bureau had not recommended any system."

Mr. Littlefield, of Maine, discussed at some length the contention that a further increase of the membership would lessen the working capacity of the House and impair its character. He argued that if there were more members, representing

smaller districts, there would be more opportunity for each one, liberated to some extent from the calls of his constituents, to attend to public affairs. He said:

"Now, I desire to call attention for a few moments to the objections raised by the majority of the committee to increasing the size of this House. As I remember the statement of the gentleman from Illinois, it was based largely on inconvenience. The report of the committee says it is kept at its present size by reason of economy and despatch in business. The suggestion is made that the House has grown unwieldy; that it is incapable of properly performing its functions. The distinguished chairman of the committee does not make the statement in that broad language, but he substantially states that it is inconvenient, that we are adding trouble, as a reason why the basis of representation should not be increased, but should be continued at its present size, as a reason why there should be a reversal of the policy of the republic in this beginning of the twentieth century.

"It is a singular fact that this is not the first time that the argument of an unwieldy character, overgrown size, and disorderly body has been addressed to the House. For many a year it has been the fashion to denounce the House of Representatives as one of the most disorderly bodies in the world, and as being incapable of properly transacting business. The suggestion is made that no man is heard, no man can take a part in debate and receive the attention of the members, on account of the size of this great body.

"As long ago as 1842—sixty years ago—with a House of 240 members in size, 117 less than the present size, the same conditions were supposed to exist. I quote now briefly from a speech made by Mr. Wise in discussing an apportionment bill, in which he says that—

"'Never since he had held a seat in this House had it been so inefficient a body as it was at this moment. The deterioration had been constant, as well in the despatch of business as in the manner and the matter of its debate, owing, as he believed, to its overgrown size.'

"Mr. Johnson said the Senate had stigmatized the House as a bear-garden, and contended, for that reason, that its number must be reduced. Mr. Pickens, in making an answer to some suggestions to the gentleman from Massachusetts, Mr. Adams, said that instead of meeting here for consultation and legitimate discussion, if the House was increased in size, it would be a body thrown into confusion, and from its very numbers it would be imbecile for all the purposes laid down in the Constitution.

"He further said that—

"'He knew not what the reasons were which had influenced the other body, but for himself he was influenced by a fear that this House, if a large body, would degenerate into a mob and break down the barriers laid down in the Constitution.'

"Now, the gentleman from Illinois does not draw anything like so harrowing a picture of the condition of this House as was drawn by these great statesmen sixty years ago. Yet this House still lives; it still exists as a deliberative body; and there never was a time when it could transact its business with greater despatch than it can this very minute under the rules that now govern it. We here have simply an illustration of the fact that these difficulties and changes are not only largely exaggerated, but to a great degree imaginary.

"Let me go a little further and read another quotation.

"Mr. Bowne submitted that—

"There was no necessity for this House to be told that they were not to be enlarged because they were a disorderly, inefficient body, that they were growing into disrepute with the public, and to lecture them as if they were a set of schoolboys coming here to learn the first rudiments of political science."

"These were the reasons urged against increasing the size of the House when it had only 240 members. What would those gentlemen say if they could sit here in this House, with a membership of 357, deliberately acting as representatives of the people and legislating, as suggested by the gentleman from Illinois?"

"In 1882, twenty years ago, Mr. Herbert stated as a reason why the House should not be increased that 'we all know that gentlemen now sit here for a whole Congress and do not know all of their fellow members even by sight.'"

"Mr. Springer thought that an increase of over 293 would make it necessary to remove the desks and make other arrangements for seating the members. And members of the House were referred to in 1882, twenty years ago, by a distinguished member of the Senate, as sitting here as 'a dumb, influential herd.'"

"Mr. Morrill said in the Senate:

"I appeal to the knowledge of Senators who were in the House twenty years ago, when order was maintained there and the Speaker sat in his chair."

"It seems that after 1842 there was a period twenty years later when order was maintained here notwithstanding the size of the House had been increased, and notwithstanding terrible forebodings of the statesmen of that generation. But, continues Mr. Morrill (this is twenty years ago):

"Now the Speaker has to stand up all the time and speak in a stentorian voice and constantly be rapping on his desk to maintain order in a little circle round about the chair; and it is a fact that very few members are able to participate understandingly in the transaction of business."

"That is a description of this House twenty years ago, when it had 325 members. And now the chairman of this committee is not able, with his knowledge of this House and its deliberations, to draw anything like so drastic a picture of the conditions which he thinks may afflict us if the membership is increased; and certainly the extreme conditions thus described do not exist today with a larger membership."

"The gentleman says that men are sent here to legislate. I agree with him. But, I ask, why is it that members of this House have no information in detail about the river and harbor appropriation bill except such items as happen to concern their districts, their special harbor, or their special brook that is to be improved under that great bill? Why is it that none of them understood the provisions or knew the terms of the bill appropriating \$145,000,000 that passed this House in eleven minutes during this session?"

"Why is it that so few members of this House understood fully the details of the bill that passed before the recess giving to two great railroads that enter this capital cash and property ranging in value anywhere from \$4,000,000 to \$6,000,000? Is it because the House is too large, or because the constituencies are too large? I submit to the candid consideration of members of this House that it is by reason of the size of the constituencies that the members of this House are not able to give the time to independent investigation, so that they may know whether a report that a committee brings into this House is wise or unwise."

"How is the time of members of this House occupied? Is it occupied in legislation upon this floor, or is it occupied from early morning in reading over the last mail that reaches every member voicing the wants of his constituents, 99 per cent. of whose demands are aside from any legislation upon this floor? Or is it because the members are obliged to read their correspondence and, in the exercise of ordinary courtesy, to answer it, and then to visit department after department during the morning hours and during the hours this House is in session? Or is it because members are obliged to look out for needy constituents who desire to be injected into office, and who, once injected, desire to be promoted or to have their salaries increased, and are not willing to rest upon a letter written to a head of a department asking him to increase the salary or promote the needy applicant, but must insist upon a member making a personal visit to the head of the department and pressing the claims of his constituents?"

"It is not the size of the House that prevents members from having an intelligent understanding of the legislation pending before this body; it is the size of the constituencies. Mediums of communication—fast mails, telegraphs, telephones, etc.—do what? They simply concentrate in intensified volume these applications and demands of every intelligent constituency upon the Representatives that sit here. What is the remedy of the gentleman from Illinois to enable this House to more intelligently legislate? Not, he says, that men may make speeches, not that they may take part in debate, but, that they may know what is going on in this House, increase the burden that now prevents this result."

Mr. Shattuc, of Ohio, took up the issue raised in his resolutions given above. He quoted the second section of the fourteenth amendment:

"Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male members of such State, being twenty-one years of age and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State."

He then argued for the absolute and literal enforcement of this constitutional provision in all the States. He said:

"When in former Congresses, before which the question of apportionment came, it was urged that the right to vote in certain Southern States was being denied by the operations of the Kuklux Klan—through what the Senator from South Carolina and the Democratic custodian of the Declaration of Independence defends as a system of 'fraud and intimidation'—the point was made by the Democratic members that these denials, these abridgments of the electorates, were the acts of individuals and not of States, and that in consequence the fourteenth amendment was not applicable and could not become so until the States acted. Congress seemed to take that view, for nothing was done. But within the last decade, in the picturesque words of the same statesman I have quoted, the politicians in these States 'grew tired' of their bloody work. They sought to do by pro-

cess of law what they had theretofore done in defiance of the law. In 4 of these States in the past ten years they have placed amendments in their constitutions and have placed laws upon their statute books that disfranchised from 40 to 50 per cent. of the voters of their States. The defense employed in the seventies, that the abridgment of the electorate was the act of individuals and not of the State, no longer holds good. In 4 of the Southern States the denial of the right to vote to 40 or 50 per cent. of the male members, twenty-one years of age or over, and citizens of the United States, is no longer the act of individuals, but of the States.

"The doubts and quibbles of former years can not be said to exist now to obstruct the application of the provisions of the fourteenth amendment. The very argument that was presented then to defend, to-day convicts. To my mind, the first cause which led former Congresses to refrain from action has now entirely disappeared in these four instances. Coming to the second cause, we find that in 1870 there were 3 States that had abridged their electorates—California, Connecticut, and Massachusetts. In these 3 States there was a constitutional provision for an educational qualification, which disfranchised a certain percentage of the electorate—namely, the illiterates. But in those States the percentage of illiteracy is very light, averaging about 6 per cent. The basis of representation would hardly have been affected in those States had the fourteenth amendment been conformed with. An examination into the election laws of the various States reveals an astonishing tendency at this time to abridge their electorates. When the Congress which adopted the existing apportionment discussed the matter ten years ago but three States had abridged their electorate by action of the State, and in these the percentage of disfranchised males was but 6 per cent. But since that time similar policies have been adopted by other States, and to-day we face the fact that 10 of the 45 States of this Union have abridged their electorates, and that in these the percentage of males, twenty-one years of age and over, disfranchised, averages over 20 per cent. The constitutions of several other States permit such an abridgment. Besides, there are other States preparing to adopt these policies and to disfranchise thousands of men who to-day hold the right of franchise.

"In view of this remarkable tendency, it is inconceivable that Congress can longer permit the fourteenth amendment to remain a dead letter, and to pass a bill making an apportionment based solely upon the population and neglecting the proviso which applies to all States which have abridged their electorate. We will not review the past by any discussion of the question as to whether the provisions of the fourteenth amendment should have been made effective when the last apportionment was made ten years ago. We find to-day conditions existing which make its enforcement imperative. I do not propose to discuss at this time whether the reasons given for these abridgments by the people of the various States are valid or not, though I have pronounced views on the subject, and shall no doubt take occasion to express them in this House at some future time. I do not propose to enter into any long discussion on the rights of man at this time, for such a discussion could only befog the situation and render our duty less clear. I am simply pointing out the conditions as they exist; I am simply pointing out that the time has come when the tendency of the States to abridge their electorates has grown to such proportions as to de-

mand that this Congress shall proceed in a constitutional manner in making the new apportionment. I do not say that States have not the right to establish educational qualifications for their electors, but I do maintain that when they have done so they must pay the penalty prescribed in the Constitution, and have their representation abridged proportionately. I do not say that we shall punish only Louisiana; I do not say that we shall punish only Massachusetts; I do not say that we shall punish only California; but I do say and insist, as the representative of a State in which every male member twenty-one years of age and over is guaranteed the sacred right of franchise, that there is a constitutional remedy prescribed for their acts, and I do demand that that remedy be applied.

"In order that some understanding of the question may be gained, I will briefly sketch the character of the electoral qualifications in the States comprising each of our 4 great geographical subdivisions. In the 11 States comprising the North Atlantic division—Maine, New Hampshire, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Vermont, Rhode Island, Delaware, and Maryland—are to be found 4 States which require an educational qualification for suffrage. These are Connecticut and Massachusetts, which adopted the requirement in the middle of the century, and Maine and Delaware, which have adopted it within the last decade. An attempt to place an educational provision in the new Rhode Island Constitution resulted in its rejection by the people in 1899. The old property qualifications which existed formerly in several of these States have been swept away, Rhode Island, a dozen years ago, being the last State to wipe them out as a requisite to suffrage. The demand for a poll-tax has also grown in disfavor in this section. In Pennsylvania, however, a man must have paid a State or county tax within two years to be eligible to vote. In Massachusetts before a man can register, he must prove that he has been assessed to the payment of a poll-tax. In New Hampshire a man who has been excused at his own request from the payment of a tax may not vote unless he first make a tender of the amount of the tax.

"In the Central Northern States—Ohio, Indiana, Illinois, Wisconsin, Iowa, Michigan, Minnesota, Missouri, Kansas, Nebraska, and Kentucky—are to be found no abridgment of the electorate. On the contrary, we find extensions not found in the Southern or Atlantic States in regard to Indian citizenship and suffrage. Michigan and Wisconsin grant a vote to Indians not in the tribal relation. Minnesota admits to the suffrage persons of mixed white and Indian blood who have adopted the customs and habits of civilization, and also pure-blooded Indians who, upon examination before any district court of the State, may prove that they have adopted the language, habits, and customs of civilization and shall be pronounced by the court capable of enjoying the rights of citizenship within the State. It may be interesting to note that the number of Indians and half-breeds in Minnesota entitled to vote under this provision is 1,342. Another peculiarity is the extension of the right of suffrage on State affairs in five of those States—Indiana, Wisconsin, Missouri, Kansas, and Nebraska—to aliens. There are no poll-tax requirements in the States of this division. Indiana alone of this division disqualifies United States soldiers, sailors, and marines from the right of suffrage.

"In the Western division of States—California, Oregon, Nevada, Colorado, North Dakota, South

Dakota, Montana, Washington, Idaho, Wyoming, and Utah—we again find a multitude of diverse provisions for an abridgment of the electorate, seemingly dependent upon local conditions. California and Nevada exclude all natives of China; Idaho, 'Chinese or persons of Mongolian descent not born in the United States.' Oregon, 'No negro, Chinaman, or mulatto shall have the right of suffrage,' the disqualification so far as it refers to negroes and mulattoes being obsolete. Washington, Idaho, and North Dakota specifically exclude from suffrage Indians who have not renounced the tribal relation. The Constitution of Idaho disqualifies any person 'who is a bigamist or polygamist, or is living in what is known as a patriarchal, plural, or celestial marriage,' or who 'in any manner teaches, advises, counsels, or contributes to the support of any order, organization, association, corporation, or society' which gives countenance to them. Wyoming has a constitutional limitation of the suffrage to those who can read the Constitution. California requires that voters be able to read the Constitution and write their names.

"In 1896 Washington adopted an amendment disqualifying future applicants for the suffrage who should not be able to speak and read the English language, but the amendment is not in force, as the Legislature has passed no law prescribing a method by which this ability may be determined.

"The Colorado Constitution authorizes the General Assembly to prescribe an educational qualification, stipulating, however, that no qualified voter shall be thereby deprived of the right to vote. North Dakota last year adopted a constitutional amendment providing not only that 'the Legislature shall by law establish an educational test as a qualification,' but also that it 'may prescribe penalties for failing, neglecting, or refusing to vote at any general election.'

"In none of these States is the payment of a poll-tax made a prerequisite to voting, although Nevada's Constitution authorizes such a requirement. The precedent established in the New England States of requiring educational qualifications of the elector during the past decade developed rapidly in the Southern mind, seeking eagerly for some method to shake off the so-called negro problem. It developed in various forms, as will be shown later, but nowhere to the extent of wholesale disfranchisement as in 4 of the States—Mississippi, Louisiana, South Carolina, and North Carolina. Even in the South these 4 States occupy a position of their own in this matter which requires discussion.

"Mississippi led the way. She had refused to accept a suggestion from President Johnson that the ballot be given to negroes who possessed a little property and who could read and write, and was forced to accept a Constitution which not only admitted to the suffrage all male citizens of the United States possessing certain age and residence qualifications, but which also prohibited the imposing of any property or educational qualifications before 1885. Accordingly, a few years after this proscription had expired we find her naturally turning to a new Constitution in which the desired changes could be made. It is consequently no surprise that the Constitution adopted in 1890 contains the qualification for an educational test, in the requirement that on and after Jan. 1, 1892, every elector, in addition to the other qualifications, should be 'able to read any section of the Constitution of this State, or . . . to understand the same when read to him, or give a reasonable interpretation thereof.' (Article XII, section 244, Constitution of Mississippi.) The payment of a

poll-tax is also required. This provision was upheld in the State courts and in the Supreme Court of the United States, in which it was held that—

"The provisions . . . in section 2 . . . of the Constitution of Mississippi, making the ability to read any section of the Constitution, or to understand it when read, as a necessary qualification of a legal voter . . . do not amount to a denial of the equal protection of the law secured by the fourteenth amendment to the Constitution, and it has not been shown that their administration was evil, but only that evil was possible under them."

"Encouraged by the decision of the Mississippi courts (for the United States Supreme Court decision was not rendered until April 25, 1898), South Carolina called a constitutional convention for a similar purpose. Its convention of 1895 adopted substantially the same provisions for immediate effect, but only as a temporary measure. Up to Jan. 1, 1898, all males of voting age—

"Who can read any section of this Constitution submitted to them by the registration officer, or understand and explain it when read to them by the registration officer, shall be entitled to register and become (permanent) electors."

"After that period these qualifications were replaced for all new applicants for registration by the following:

"The applicant must be able to read and write any section of the Constitution submitted to him by the registration officer, or show that he owns and has paid taxes collectable during the previous year on property within the State assessed at \$300 or more."

"Inspired by the success of Mississippi and South Carolina in abridging the negro vote by these measures, in 1898 Louisiana called a constitutional convention to deal with the matter. As South Carolina had exceeded Mississippi by providing a property qualification, so Louisiana outdid both by making a new contribution to this class of legislation. The educational test was made more rigorous by requiring the writing out of an application for registration, involving an elaborate formula of 75 words, while the property option was made the same as fixed by South Carolina. Then came the new provision, which allowed three months and a half for any man to secure his registration as a voter for life who, while possessing neither the property nor the educational qualifications, could prove that—

"On Jan. 1, 1867, or any date prior thereto, he was entitled to vote under the Constitution or statutes of any State of the United States wherein he then resided, or that he was the son or grandson of some such person not less than twenty-one years of age at the date of the adoption of this Constitution."

"North Carolina followed in August, 1900, by adopting an amendment to the Constitution which requires that the candidate for registration shall be able to read and write any section of the Constitution in the English language, unless he registers as one who was a legal voter on or before Jan. 1, 1867, or as 'a lineal descendant of any such person.' The payment of a poll-tax for the previous year is required, but no property qualification. 'Lineal descendants' are allowed until Dec. 1, 1908, for their registration.

"Two other Southern States—Alabama and Virginia—are preparing to call conventions for the purpose of effecting similar abridgments of the electorate. Georgia defeated the proposition, but in the new Legislature a bill for the same purpose has been introduced.

"In 1890 in Mississippi the colored males of voting age were 150,436 and the white males of

voting age 121,504, a total electorate of 271,940. The workings of the new Constitution reduced the registered colored electors to 16,234 and the registered white electors to 109,337, or a total electorate of 125,571. This is an abridgment of 146,369, or 54 per cent.

"There is a vagueness to these statistics, because it is not shown how many voters eligible to register under the new law failed for reasons other than legal to do so. They show, however, the extent of the abridgment.

"In 1897, under the operations of the old law in Louisiana, we find there was a registration of 164,088 white electors and 130,344 colored electors. Under the new law the registration in 1898 was 74,133 white and 62,402 colored electors. This is an abridgment of the 294,432 voters of 1897 to 136,535, or of 157,897, or 53 per cent.

"Having shown a general abridgment, irrespective of sectional lines, of the electorate in a number of the States, it is of moment to inquire into the manner in which the applications of the penalizing provisions of the fourteenth amendment would affect the representation in Congress. It is the purpose of my resolution to secure information through official channels that is needed. Estimates can be made from incomplete and scattered data, but these are not sufficient for Congress to act upon. From such as have been available I estimate the proportion [percentage?] of males over twenty-one and citizens of the United States who have been disfranchised by the action of the States to be as follows: California, 7.7; Connecticut, 5.3; Delaware, 14.3; Louisiana, 45.8; Maine, 5.5; Massachusetts, 6.2; Mississippi, 40; North Carolina, 35.7; South Carolina, 45; Wyoming, 3.4.

"The Committee on Census has prepared majority and minority reports to this House on this matter. To my mind neither answers the requirements of the Constitution. The majority report is one which is absolutely in defiance of the Constitution in that it makes population alone the basis of representation, while it ignores the fact that in 10 States the electorates have been abridged an average of 21 per cent. The minority report is defective in that, while it is based upon the fourteenth amendment, the information which Congress must have upon the matter before it can proceed has not as yet been gathered. It is incomplete, and therefore unsatisfactory; but it is far preferable to the other, because it attempts, though in a crude fashion, to comply with the requirements of the Constitution."

Mr. Burleigh, in advocating an increase in the membership of the House of Representatives, said:

"I know that there is always a tendency in a legislative body, especially among those who have had long experience in its service and who have been more or less entrusted with the direction of its affairs, to guard jealously its powers and privileges, to be distrustful of changes, and to cling tenaciously to the old-established order of things. While this feeling is not unnatural, it may readily be carried to extremes, and when it reaches a point where those who entertain it are willing to overlook or ignore the facts of progress it may easily become an impediment or a menace to the public welfare. The movement for a contracted House of Representatives—an assembly making no attempt to keep pace with the nation's growth and needs—has had, so far as I have observed, its source and its inspiration in this Capitol and not with the American people. The people of this country demand and they ought to have adequate and efficient representation here, and every measure that tends to widen

the distance between the individual citizen and his Representative in Washington is a contraction of popular power and privilege, and out of harmony with the spirit of our institutions.

"So far from being a source of weakness a strong popular assembly is a source of strength, as the experience of other nations has amply demonstrated. I submit the following table, showing the representation in a number of the leading countries of the world and the ratio which it bears in each instance to population:

COUNTRY.	Population.	Membership in lower house.	Membership in upper house.	Ratio of representation to actual population.
England.....	37,888,439	670	479	53,392
France.....	38,517,975	584	300	65,955
Germany.....	52,279,901	397	58	124,505
Italy.....	29,699,785	508	390	57,000
Spain.....	17,550,216	431	360	50,000
Canada.....	4,329,875	213	81	22,688
United States.....	76,304,799	357	90	213,739

"The comparisons afforded by these figures are certainly striking. We have been so accustomed to think of our land as the home of liberty, and so gradual has been the official usurpation of popular power, that it is somewhat startling for us to come face to face with the fact that there is not to-day a single constitutional monarchy in all Europe whose people do not enjoy vastly more power in national legislation than is possessed by the citizens of the United States. Take a member of the English House of Commons, a member of the French Chamber of Deputies, a member of the lower house of the Spanish Cortes, and a member of the Italian Chamber of Deputies, and their combined constituency is but 226,347—only 17,479 more than the bill reported by the gentleman from Illinois purposes to give to a single Representative of the great American people!"

Mr. Crumpacker made a speech in behalf of his own measure, in which he strengthened the appeal to general principles and to the provisions of the fourteenth amendment by specific illustrations and citations from election statistics. In closing he said:

"Whenever an attempt is made to consider any measure that affects the race question in the South, the unworthy cry of 'sectionalism' is raised. I am only insisting upon the enforcement of the plain mandate of the Constitution, and for that I make no apology to any person or State. Is the Constitution sectional? Are human rights local? If they are, I am justly subject to the reproach of 'sectionalism.' Gentlemen who recently talked themselves into a frenzy of passion over fancied transgressions of the charter of government, ought to willingly assent to the enforcement of its plain provisions in their own States. Gentlemen who hysterically urged the intervention of the Government to protect an inferior race against tyranny and oppression in the distant islands of the sea, should not protest so vehemently upon the suggestion that an inferior race be accorded its plain constitutional rights at home.

"But the question is not sectional. Every State in the Union is vitally interested in it. Inequality is injustice; therefore, it is unjust that one voter in Mississippi should exercise as much power in national affairs as four voters in New York; it is unjust that one vote in South Carolina should count for as much as ten votes in Indiana.

"Besides this, each State is powerfully affected by the customs and institutions in every other

State. Intercourse between the States must be free and unrestricted. Take the industrial situation, for instance. Under existing conditions the standard of living among the colored people of the South is low, and the rate of wages on the same basis. The colored laborer is completely at the mercy of the employer. He is unable to initiate and maintain labor organizations for the protection of his own interests.

"In the State of South Carolina to-day there is a qualified condition of industrial serfdom. Farm laborers are compelled by the penal laws of the State to carry out their contracts of employment, however unjust and unfair they may be. They must perform all 'the labor reasonably required' of them by the contract or go to jail. If any one shall knowingly employ a laborer in any kind of service who is under contract of labor with another, he, too, is liable to fine and imprisonment, though the workman or his family may be on the verge of starvation. Can labor be independent and progressive where such laws exist? Could such laws exist in any State where labor has the freedom of the ballot?

"In recent years a new impulse has been given to manufacturing industries in States where colored labor is abundant. With the natural resources and cheap tractable labor, the field is peculiarly inviting to capital. The employer is free from the annoyances that labor organizations sometimes give in other sections, and with simplified machinery and the coercive force of penal laws, the negro becomes as efficient a factory hand in many lines as the white man. Capital will continue to be attracted by such favorable conditions, and the products of cheap, servile toil will continue to be sold in competition with the products of intelligent, independent labor in other sections of the country. The strength and glory of our civilization abide in the comfortable but unpretentious homes of the independent wage-earners. Shall those homes be invaded by the blighting hand of servility? Shall intelligent labor be debased by such unjust and unholy competition?

"Already cotton-mills in New England have been compelled to reduce wages in order to compete with the cheap labor of Alabama and Georgia. Tariffs can not be imposed for protection, but colored labor must be educated and elevated. The negro must be given political power as fast as he can safely use it if his industrial independence is to be achieved. This is the only remedy. Have other States no interest in this question? Has organized labor no concern about it?

"If the right of suffrage was taken from the white laborer, his independence would soon be lost and the legal safeguards for his protection would disappear from the statute-books. Citizenship is an empty husk without the power to protect and enforce it, and that power is the ballot. The late Mr. Blaine truthfully said, respecting the negro:

"Without the right of citizenship his freedom could be maintained only in name, and without the elective franchise his citizenship would have no legitimate and no authoritative protection."

"No one questions the superiority of the white race, but that superiority is grounded in the rugged virtues of justice and humanity. It is surely no credit to American manhood to bind and shackle a helpless race to avoid the temporary embarrassments that would attend its proper development. Equal rights for all is the strongest sentiment in the American heart.

"I rejoice at the evidences of a stronger bond of unity between all sections of the country; but the ties, if they are to be permanent, must be based upon everlasting principles of right. The

Constitution is the measure of the rights and responsibilities of the States in their mutual relations, and all its essential provisions must be observed."

"Let justice be supreme; give virtue the palm, whether it be in the white man or the black man. Pass suffrage laws as you will, but make them apply to all alike. Give the ebony-hued citizen the same opportunity in the struggles of life as the Anglo-Saxon, and you will have appeased justice and satisfied the conscience of the American people."

The discussion on the right of States to restrict suffrage by imposing qualifications upon voters led to some bitter recriminations, and had in it something of old-fashioned political acrimony. To indicate the drift of the argument, it may be said that the Southern members of Congress met the plea for general justice, and the natural right of the negroes to vote, by the declaration that restriction of the suffrage is absolutely necessary to the security of Southern communities, and that the issue is one involving the very existence of decent and honest government. They met the constitutional argument against restriction of the suffrage, except under penalty of decrease in representation under the terms of the fourteenth amendment, by citing the fifteenth amendment, as modifying the scope of that which preceded it, and allowing restriction of the suffrage for reasons favored at the North, but now adopted as available pretexts at the South. Mr. Kitchin, of North Carolina, said:

"As is well known, immediately after the war, when the fourteenth amendment was adopted, it had in view negro suffrage throughout the South, but it did not attempt to compel it. It held forth an inducement to the States to grant it. That inducement is found in the fourteenth amendment, in the second section, the penalty of reduced representation being declared against States that refused the right of suffrage to the negro race. President Lincoln never wanted negroes to become voters. He recognized that the white race is superior to the black one, and, as he said in his speech at Charlestown, these two races could not live upon terms of equality, that there were physical differences which would prevent them from so living, and since that was a fact he declared himself in favor of assigning the superior position to the white race.

"That sound view was not altogether obliterated when the fourteenth amendment was adopted. But in the days of reconstruction, and as I believe in hostility to the white people of the South, the opinion grew that negro suffrage should be forced upon the people of the eleven Southern States, and so the fifteenth amendment was presented and compelled to be adopted throughout the South by means that can not be approved by honest men, while great States in the North were voting their disapproval of it. Without the compulsory and vicious means used in the South it would not have been adopted. However, as Mr. Boutwell, who had charge of the fifteenth amendment while pending in this body, said, it was designed to carry out the powers placed in Congress by the fifth section of the fourteenth amendment.

"It prescribed that the right to vote should not be denied or abridged on account of race, color, or previous condition of servitude. That was the ultimate purpose of the second section of the fourteenth amendment, which had the penalty of reduction of representation in it. Mr. Speaker, that being the purpose of the fourteenth amendment, and the fifteenth amendment being the enforcement of that purpose, then unless a State violates

the fifteenth amendment Congress has no power to act against her under a fair and reasonable interpretation of these two articles of the Constitution construed together. Mr. Blaine, in his Twenty Years of Congress, says:

"When therefore the nation by subsequent change in its Constitution declared that the State shall not exclude the negro from the right of suffrage, it neutralized and surrendered the contingent right it before held to exclude him from the basis of apportionment. Congress is thus plainly deprived by the fifteenth amendment of certain powers over representation in the South which it previously possessed under the provisions of the fourteenth amendment."

"When the fifteenth amendment says that the States shall not deny or abridge the right to vote on account of race, color, or previous condition of servitude, the mentioning of these three conditions, in my judgment, is an exclusion of all others, and is tacit permission to the States for any other cause than race, color, or previous condition of servitude to abridge or deny the right of suffrage without penalty. The United States Constitution in no wise deprives a State of the right to prescribe qualifications for her voters, nor does it, in my judgment, impose any penalty upon the exercise of that right, and the true meaning of the fifteenth amendment is that if a citizen has the qualifications prescribed by a State, then his right to vote shall not be denied on account of race, color, or previous condition. But I call the attention of the gentleman from Indiana to this proposition, that when the State of Massachusetts has an educational qualification, and the State of Pennsylvania a tax-paying qualification, it is not a denial of the right of suffrage.

"If the gentleman from Indiana will consider, he will find a vast distinction between a denial of a right and the qualifying of that right. The Supreme Court of the United States held that the act of Congress which excludes from the mails newspapers, etc., containing advertisements of lotteries and other lottery information does not abridge the freedom of the press. It is certainly a qualification of it. We frequently have rights which are absolute in themselves, and yet in order to enjoy them we must qualify ourselves. Requiring those who desire appointments to stand a civil-service examination is not a denial of the right to hold office. When we say that a man must be registered before he can vote it is not a denial of the right to vote. We merely tell him that he has the right, but before he can exercise it he must qualify by registering. The law may tell him that he must pay his poll-tax before he can exercise the right he already has. Massachusetts tells him that he must be able to read and write before he can exercise this right, and when Massachusetts imposes the educational qualification upon a voter she has not denied him the right to vote, she has not abridged his right to vote, because, as I gather from the dictionaries, abridgment means to cut off. It practically means the same thing as to deny. You have not cut off a man's right, you have not denied the man's right to vote when you prescribe reasonable qualifications.

"The late Senator Charles Sumner in debating suffrage admitted that knowledge was a proper qualification for a voter. Hon. George S. Boutwell, in answer to a direct question, said that the fifteenth amendment would not prevent property or educational qualifications.

"Mr. Speaker, the State of North Carolina, which has been so greatly misrepresented here, in my judgment, has not denied the right to vote

on account of race, color, or previous condition of servitude. But I will not now discuss this, as during the last session I fully discussed the North Carolina amendment. She has prescribed reasonable qualifications. Chief among them is the educational test, the test that Massachusetts, Wyoming, Connecticut, and other States have. After 1908 no one registers under the so-called 'grandfather' clause for the first time.

"Mr. Speaker, I think that there is a bitter sectional spirit in this proposition to reduce the representation of North Carolina and other States. While the great majority of business men in the North, and, I believe, its best and most patriotic statesmen, bear no sectional spirit hostile to the South, this proposition has shown that many men in the North still are ready to arouse sectionalism and create prejudice against the South. The time has not yet come when the Republican party can be considered the friend of the South. Let those who have thought so consider this proposition and be undeceived. Yet I rejoice that many of the ablest Republican leaders in this House do not encourage this proposition."

Mr. Wilson, of South Carolina, said:

"I want now to talk to the gentleman from Indiana a while. I can not make an argument in full, as I intended, for I have not the time, and I shall thereby be prevented from elaborating the subject as I should wish; but I shall cite him to decisions of the Supreme Court of this country by which he will understand that his ridiculous bill can not for a moment be sustained by that tribunal.

"His bill accords to every State its full number of Representatives except South Carolina, North Carolina, Mississippi, and Louisiana, and from each of these four Southern States he takes three Representatives, his reason for such arbitrary proceeding being that each of these States has denied the right of suffrage to at least 40 per cent. of its inhabitants, and consequently its representation must, under the second clause of the fourteenth amendment to the Constitution, be reduced to that extent.

"That clause provides that when the right to vote at any election for Representatives in Congress, etc., is denied to any male inhabitants of a State twenty-one years of age and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of congressional representation therein shall be reduced in proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

"The right to vote does not come from the United States, but from the State. The United States Constitution nowhere confers that right. That is explicitly decided in *Minor vs. Happersett* (21 Wall., 166) and *United States vs. Reese* (92 U. S., 215).

"The fifteenth amendment, which declares that the right of citizens of the United States to vote shall not be denied or abridged by the United States or any State on account of race, color, or previous condition of servitude, does not confer the right to vote. Its only meaning, purpose, and effect was this: Before its adoption preference in suffrage could be given by a State to one race over another; a State could have entirely disfranchised the negro. But now, since its adoption, if citizens of one race having certain qualifications are permitted to vote, those of another having the same qualifications must be. The right to vote, therefore, comes from the State, but the fifteenth amendment forbids any discrimination on account

of race. So says United States *vs.* Cruikshank (92 U. S., 544).

"The fourteenth amendment did not change the relations of the State and Federal governments, as held in *re* Kemmler (136 U. S. 436). It did not attempt to confer the right of suffrage upon the negro, but citizenship only, which does not include the right to vote. A woman is a United States citizen, but can not vote. That amendment simply tried to force the States to accord suffrage to the negro by imposing the penalty of loss of representation in Congress, which I have already stated as the second clause. But unfortunately for the bill of the gentleman from Indiana, Congress did not rest content with the fourteenth amendment, but followed it up with the fifteenth, which declared it to be out of the power of a State to disfranchise the negro as such—the very thing which the fourteenth amendment declares shall cut down the State's representation.

"The only thing, therefore, which can reduce a State's number of Representatives is declared by the fifteenth amendment to be an impossible thing; and the gentleman is left high and dry by the last amendment of the Constitution."

Jan. 8 the first section of the Burleigh, or minority bill, was substituted for the first section of the Hopkins, or majority bill, by a vote of 166 yeas to 102 nays, 77 members not voting and 10 answering present. The bill as amended was passed the same day by a vote of 132 yeas to 109 nays, 108 not voting and 6 answering present. The measure was reported in the Senate without amendment Jan. 11, and passed without division or discussion, and it was approved by the President Jan. 16. It is as follows:

"*Be it enacted, etc.,* That after the 3d day of March, 1903, the House of Representatives shall be composed of 386 members, to be apportioned among the several States as follows: Alabama, 9; Arkansas, 7; California, 8; Colorado, 3; Connecticut, 5; Delaware, 1; Florida, 3; Georgia, 11; Idaho, 1; Illinois, 25; Indiana, 13; Iowa, 11; Kansas, 8; Kentucky, 11; Louisiana, 7; Maine, 4; Maryland, 6; Massachusetts, 14; Michigan, 12; Minnesota, 9; Mississippi, 8; Missouri, 16; Montana, 1; Nebraska, 6; Nevada, 1; New Hampshire, 2; New Jersey, 10; New York, 37; North Carolina, 10; North Dakota, 2; Ohio, 21; Oregon, 2; Pennsylvania, 32; Rhode Island, 2; South Carolina, 7; South Dakota, 2; Tennessee, 10; Texas, 16; Utah, 1; Vermont, 2; Virginia, 10; Washington, 2; West Virginia, 5; Wisconsin, 11; and Wyoming, 1.

"SEC. 2. That whenever a new State is admitted to the Union the Representative or Representatives assigned to it shall be in addition to the number 386.

"SEC. 3. That in each State entitled under this apportionment, the number to which such State may be entitled in the Fifty-eighth and each subsequent Congress shall be elected by districts composed of contiguous and compact territory and containing as nearly as practicable an equal number of inhabitants. The said districts shall be equal to the number of the Representatives to which such State may be entitled in Congress, no one district electing more than one Representative.

"SEC. 4. That in case of an increase in the number of Representatives which may be given to any State under this apportionment, such additional Representative or Representatives shall be elected by the State at large, and the other Representatives by the districts now prescribed by law until the Legislature of such State, in the manner herein prescribed, shall redistrict such State; and if there be no increase in the number of Repre-

sentatives from a State the Representatives thereof shall be elected from the districts now prescribed by law until such State be redistricted as herein prescribed by the Legislature of said State; and if the number hereby provided for shall in any State be less than it was before the change hereby made, then the whole number to such State hereby provided for shall be elected at large, unless the Legislatures of said States have provided or shall otherwise provide before the time fixed by law for the next election of Representatives therein.

"SEC. 5. That all acts and parts of acts inconsistent with this act are hereby repealed."

The Cuban and Philippine Policy.—The most important action taken by the Congress in the way of determining national policy was the adoption of two amendments to the army appropriation bill, one dealing with Cuba and the other with the Philippine Islands. This method of securing the passage of measures deemed urgent by a Congressional majority, in cases where separate bills might encounter opposition and fail through delay, was much in vogue at one time; but it fell into disrepute, and was abandoned for years. Little can be said in defense of the revival of the old device, which is essentially fraudulent, as it incorporates in a money bill matter not at all germane to it.

The Cuban amendment was reported, Feb. 25, in the Senate, by Mr. Platt, of Connecticut, from the Committee on Relations with Cuba; and it was to be added to the clause in the army appropriation bill as it had passed the House, providing \$14,000,000 for the pay of enlisted men and \$1,000,000 for additional pay for length of service. It was the last of a series of provisos. The text of it is as follows:

"*Provided further,* That in fulfilment of the declaration contained in the joint resolution approved April 20, 1898, entitled 'For the recognition of the independence of the people of Cuba, demanding that the Government of Spain relinquish its authority and government in the island of Cuba, and to withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect,' the President is hereby authorized to 'leave the government and control of the island of Cuba to its people' so soon as a government shall have been established in said island under a constitution which, either as a part thereof or in an ordinance appended thereto, shall define the future relations of the United States with Cuba, substantially as follows:

"I. That the Government of Cuba shall never enter into any treaty or other compact with any foreign power or powers which will impair or tend to impair the independence of Cuba, nor in any manner authorize or permit any foreign power or powers to obtain by colonization or for military or naval purposes or otherwise lodgment in or control over any portion of said island.

"II. That said Government shall not assume or contract any public debt to pay the interest upon which and to make reasonable sinking-fund provision for the ultimate discharge of which the ordinary revenues of the island, after defraying the current expenses of government, shall be inadequate.

"III. That the Government of Cuba consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with

respect to Cuba imposed by the treaty of Paris on the United States, now to be assumed and undertaken by the Government of Cuba.

"IV. That all acts of the United States in Cuba during its military occupancy thereof are ratified and validated, and all lawful rights acquired thereunder shall be maintained and protected.

"V. That the Government of Cuba will execute, and as far as necessary extend, the plans already devised or other plans to be mutually agreed upon, for the sanitation of the cities of the island, to the end that a recurrence of epidemic and infectious diseases may be prevented, thereby assuring protection to the people and commerce of Cuba, as well as to the commerce of the southern ports of the United States and the people residing therein.

"VI. That the Isle of Pines shall be omitted from the proposed constitutional boundaries of Cuba, the title thereto being left to future adjustment by treaty.

"VII. That to enable the United States to maintain the independence of Cuba, and to protect the people thereof, as well as for its own defense, the Government of Cuba will sell or lease to the United States lands necessary for coaling or naval stations at certain specified points, to be agreed upon with the President of the United States.

"VIII. That by way of further assurance the Government of Cuba will embody the foregoing provisions in a permanent treaty with the United States."

The design of this amendment was to influence the Cuban Constitutional Convention to make concessions virtually acknowledging the suzerainty of the United States; and, while professing to repeat and carry out the self-denying joint resolution of April 20, 1898, it smoothes the way to a new policy, if it seems advisable. Several amendments to the amendment were proposed, and defeated; the declaration, as originally reported, was adopted, Feb. 27, by a vote of 43 yeas to 20 nays; not voting, 25. The discussion was brief, and it brought out nothing of importance.

Feb. 25, the amendment in regard to the government of the Philippines was proposed during the consideration of the army appropriation bill in the Senate. It was originally offered by Mr. Spooner, of Wisconsin, adopted by the committee in charge of the appropriation, and amended and passed by the Senate Feb. 27, by a vote of 45 yeas to 27 nays; not voting, 16. The discussion was not prolonged; but various propositions looking to less arbitrary methods were offered and rejected. The amendment as finally passed was as follows:

"All military, civil, and judicial powers necessary to govern the Philippine Islands, acquired from Spain by the treaties concluded at Paris on the 10th day of December, 1898, and at Washington on the 7th day of November, 1900, shall, until otherwise provided by Congress, be vested in such person and persons and shall be exercised in such manner as the President of the United States shall direct, for the establishment of civil government and for maintaining and protecting the inhabitants of said islands in the free enjoyment of their liberty, property, and religion: *Provided*, That all franchises granted under the authority hereof shall contain a reservation of the right to alter, amend, or repeal the same.

"Until a permanent government shall have been established in said archipelago full reports shall be made to Congress on or before the first day of each regular session of all legislative acts and proceedings of the temporary government instituted under the provisions hereof; and full reports of the acts and doings of said government, and as to the

condition of the archipelago and of its people, shall be made to the President, including all information which may be useful to the Congress in providing for a more permanent government: *Provided*, That no sale or lease or other disposition of the public lands or the timber thereon or the mining rights therein shall be made: *And provided further*, That no franchise shall be granted which is not approved by the President of the United States, and is not in his judgment clearly necessary for the immediate government of the islands and indispensable for the interests of the people thereof, and which can not, without great public mischief, be postponed until the establishment of permanent civil government; and all such franchises shall terminate one year after the establishment of such permanent civil government."

The House of Representatives, on March 1, adopted, with reference to these amendments, the usual expedient for rushing through legislation; and a privileged report was made from the Committee on Rules, to the effect that it be in order to take the army appropriation bill from the table immediately, and move concurrence in the Senate amendments in gross; that the previous question be considered as ordered after two hours' discussion; and that a vote be then taken without delay or intervening motion. On this report the previous question was called, and ordered by a vote of 130 yeas to 120 nays; present 4, and not voting 90. Under the rules, fifty minutes were allowed for the discussion of the report, and at the end of that time it was adopted by a vote of 145 yeas to 127 nays; present 4, and not voting 77. The two hours' debate on concurring in the Senate amendments followed.

In the nature of the case there could be little in the discussion beyond a mere expression of opinion. Mr. Gibson, of Tennessee, said:

"Mr. Speaker, the provisions of this bill in reference to Cuba and the Philippines are wise and salutary both for the people of the United States and for the people of those islands.

"First, as to Cuba, the Senate amendment is timely and prudent. While we stand pledged to recognize the independence of Cuba, we do not stand pledged to allow it to become again the seat of disorder, the propagator of the plague, the prey of foreign powers, and the base of attack upon our own country; and in giving Cuba her independence we must couple with the gift such conditions that, while not harming her, will make us safe. We propose that Cuba's independence shall be a shield to protect her and not a sword to hurt us.

"Speaking for myself, I feel free to say that when I voted three years ago that the people of Cuba were 'free and independent' I did not so vote because I believed it, but because it was embedded in a resolution requiring Spain to leave the island and directing the President of the United States to drive her out if she refused to go; and I, along with many other members of this House, swallowed the bitter with the sweet, voting for what we did not believe, to get what we wanted—that is, to force Spain to leave Cuba.

"I do not believe that the Cubans are fit for self-government, and so I do not want us to turn the island completely over to them until they demonstrate their capacity to rule their island wisely and well, so that life, liberty, property, and the pursuit of happiness shall be secured to all under good laws properly administered.

"Indeed, if the people of Cuba are wise and prudent, they would be glad to have our Government exercise a sort of mild guardianship for a short time; and the fact that so many of their

leaders seem devoid of all gratitude to the United States for the many millions of dollars we have spent in their behalf makes me suspicious of what Cuba's fate may be when wholly committed to their hands.

"I want Cuba fairly treated; but I want my own country fairly treated also. What have we done for Cuba? We found her people dying of starvation in prison pens, or slaughtered by a merciless foreign soldiery; and we have driven out these soldiers, opened the prison doors, and made every Cuban free, and fed them generously from our own table. We found the Cubans deprived of all voice in their own government, and we have turned their oppressors out of power and given all of the municipal offices to the Cubans themselves.

"We found Cuba desolated by fire and sword from one end of the island to the other, and we have brought peace and law and order, and opened to every man full opportunity to honorably and easily earn his own living. In a word, Mr. Speaker, we found Cuba a hell, and we are fast converting it into a paradise.

"And shall we have no right to guard this island and see to it that disorder shall not take the place of order, and see to it that the island, by unwise treaties, be not given over to our enemies, and to see to it that the yellow fever does not use its shores as a base from which to invade our country and destroy our people?

"This is all that the Senate amendment proposes to do, and if we should let Cuba go out of our hands without guarantees for our own protection, we should be derelict in duty, false to our own people, and deficient in that foresight which belongs to prudent statesmanship.

"Next, as to the Philippines. The Senate amendment proposes to give the President general authority to govern the Philippine Islands. I do not propose to discuss this amendment in detail. It is sufficient for me to call attention to the fact that it is, in substance, the same as the authority given by Congress to President Jefferson to govern Louisiana, and to President Monroe to govern Florida; and if it was no crime in those Congresses to grant such power, surely it can be no crime in this Congress. Jefferson was the founder of the Democratic party, and James Monroe was one of its great apostles, and yet it was deemed all right in their day to grant them full power to govern Louisiana and Florida, then newly acquired foreign territory."

Mr. Lentz, of Ohio, said:

"Mr. Speaker, to be or not to be free is the question Cuba is asking in the beginning of 1901, just as she was asking this question about three years ago. But when she was asking it in 1898 she had in mind the question of freedom from a hereditary despot. To-day asking it she has in mind the tyranny of a majority, and that majority having been secured by bribery and falsehood and other means of corrupting the voters of the land. To lie or not to lie is the question before the American people. We told Cuba and the world that our war against Spain was neither for conquest nor for the acquisition of territory, but purely in the cause of liberty and humanity. In that declaration we gave the Filipinos, just as much as the Cubans, a bond that we would use our strong arm to secure for them the right of self-government. Why is it that those who are now fattening in the land because this Government keeps its bond to pay principal and interest on Government debts express no concern or solicitude whatever that this solemn bond should be kept, as we pledged ourselves to do on that night when we

declared that the people of Cuba 'are, and of right ought to be, free.'

"I am not alone concerned about the justice of our own character and reputation in this betrayal of the people of Cuba and of the Philippine Islands, but I am much more concerned about the gradual dry-rot that is taking place in the American conscience. We could afford to be guilty of sacrificing unnecessarily some of our young manhood, but we can not afford to violate practically all of the ten commandments in this brutal and murderous warfare which we are making in the Philippine Islands. The lack of moral growth and the absolute hardening and degrading of American conscience that is manifest to-day is the greatest menace to American liberty and American progress that this republic has ever seen. The encroachment made upon liberty by Nicholas Biddle and his greedy associates in the days of Andrew Jackson and the threatened destruction of the Union by the slavocracy in the day of Abraham Lincoln are diseases of minor importance when compared with the tyranny and criminal aggression now manifest in every act and every word of those who favor the present policy of the Federal Government."

Mr. Littlefield, of Maine, who may be considered as representing more moderate opinions, said:

"Mr. Speaker, this bill, as the House is compelled to act upon it, is a striking illustration of a most vicious and iniquitous practise in national legislation. An army bill which must be passed in order to provide for absolutely necessary expenditures comes down from the Senate with a large number of amendments which originated in the Senate, and in order to pass the bill under the rule just adopted we are compelled to vote for all the amendments whether they do or do not meet our approval. This is a method invariably adopted for securing the passage of obnoxious measures which otherwise would not meet with the approval of the House. The principal measure is simply used as a vessel to sustain cargoes that otherwise would sink of their own weight.

"This bill has two amendments of great moment, of far-reaching consequences, that have never been considered by any committee on the part of the House, and must be accepted after only two hours of debate. One relates to the Philippine Archipelago, one to Cuba. While I have grave doubts as to our constitutional right to delegate legislative power, as is clearly contemplated by the Philippine amendment, I should vote for the bill with this amendment if I could do so without at the same time being obliged to vote for the Cuban amendment, in which I do not believe. The Philippine amendment contemplates a change from military rule to civil rule, and is an advance over existing conditions. It does not add to, but limits executive power.

"I am firmly of the opinion that the person or persons that may discharge the duties devolved upon them by this amendment will be restrained and controlled therein by all of the constitutional limitations and guarantees protecting life, liberty, and property. I do not for a moment believe that they can, even if they desired, exercise absolute, arbitrary, autocratic power. We may have occasion to remember that by this amendment we legislate for the Philippines. While I should vote for this amendment if it stood alone, I believe that a form of Territorial government following the lines of the Territorial governments created for Louisiana in 1804 and Florida in 1822, would, from every consideration, be much more desirable. It would commit us to nothing to which this amendment does not commit us, and it could not

fail to be a much more potent influence in securing peace in the archipelago—a consummation certainly most 'devoutly to be wished.'

"The Cuban amendment does not seem to me to be in accord with the solemnly declared and frequently reiterated policy of the republic relative to Cuba. Besides this, it practically assumes grave responsibilities which do not now exist. The position which the republic now sustains to Cuba is, I believe, fairly and truthfully stated by the Supreme Court in the opinion in the Neely case, in which the court says unanimously, speaking through Mr. Justice Harlan:

"The legislative and executive branches of the Government, by the joint resolutions of April 20, 1898, expressly disclaimed any purpose to exercise sovereignty, jurisdiction, or control over Cuba, 'except for the pacification thereof,' and asserted the determination of the United States, that object being accomplished, to leave the government and control of Cuba to its own people. All that has been done in relation to Cuba has had that end in view; and, so far as the court is informed by the public history of the relations of this court with that island, nothing has been done inconsistent with the declared object of the war with Spain."

"Again, giving a perspicuous judicial statement of the clear duty of the United States in this exigency:

"But as between the United States and Cuba, that island is territory held in trust for the inhabitants in Cuba, to whom it rightfully belongs, and to whose exclusive control it will be surrendered when a stable government shall have been established by their voluntary action."

"The Cuban amendment, which is said to contain our ultimatum to Cuba, does not, in my opinion, contemplate surrendering 'exclusive control' of Cuba to the 'inhabitants of Cuba,' for whom the territory is now 'held in trust,' when a stable government shall have been established by their voluntary action'; but, on the contrary, it seems to me that it clearly intends to perpetuate our control over the island and its inhabitants."

The motion to concur in the Senate amendments was carried by a vote of 161 yeas to 127 nays; present 4, not voting 51. The army appropriation bill was approved by the President March 2, 1901.

Tax Reduction.—A measure to amend "the act to provide ways and means to meet war expenditures and for other purposes," passed June 18, 1898, and to reduce taxation thereunder, was reported in the House by Mr. Payne, of New York, chairman of the Committee on Ways and Means, early in the session. It was designed to cut down the revenue to the extent of \$30,000,000 a year. The Democratic minority held the opinion that the reduction should be at \$70,000,000; and there was, moreover, a sharp difference of opinion as to the particular taxes to be abolished or reduced. Mr. Payne, after explaining the scope of the measure, and giving in detail the reasons for the various changes proposed, said:

"Now, Mr. Speaker, I submit to the House and to the committee with confidence that we have done the right thing and gone to the last dollar that we should go in this bill in the reduction of war revenue. The minority of the committee say that we should make a reduction of \$70,000,000. They do not give any reason for it. They do not present any bill to the House in their report as a substitute for the one we have presented here.

"It is only a short time ago that the minority of the committee contended that all this war-revenue tax should go, and in place thereof there

should be an income tax to be levied upon the incomes of the country, overlooking the fact that there is now upon the statute-books the Wilson income-tax law, which has never been repealed because the decision of the Supreme Court has destroyed it, and forgetting that if the new income-tax law went before the Supreme Court to-day they would have the same court and the same decision that they had on the Wilson bill. Why, they have even dared to pose before the country—a portion of them—in favor of going into a lawsuit to raise revenues to supply the deficiencies in the Treasury which the \$105,000,000 reduction would leave, in order to get enough revenue to run the Government.

"Well, now, this side does not believe in any such financial legislation as that. They propose in their report to take more of the tax off beer. They gave no reason for it. And they would take the tax off tobacco until they reduce the revenue by \$70,000,000. I do not know but what that is the Democratic doctrine. I remember under the Wilson bill that we met a deficiency every 30th day of June. I do not know but what that is the financing of the Democratic party when they come in here to-day and ask us to face a deficiency in June, 1902, by taking off \$70,000,000 of revenue.

"Oh, they say, the revenues are increasing. Yes, but the increased revenue is because of the increased prosperity of the country. You have been predicting that the time would soon come when that prosperity would cease. Still you propose to reduce the war taxation on the theory that that prosperity is to continue during the next four years. Well, I believe it will, so far as our domestic matters are concerned, and any internal arrangement confined to the people of this country. I believe it will continue four years as it has in the past; but there may be some complications abroad that will stop it, and you do not take that into consideration.

"I do not want to see any deficit in the revenues of the country. Gentlemen say you have a large surplus in the Treasury. So we have—\$140,000,000; not all available—probably \$120,000,000 of it available. They say that will be increased by the 30th of June. So it will. But is it a part of your statesmanship to foster and keep that in the Treasury against a future deficiency, and then go to work deliberately and create that deficiency? Gentlemen must remember that this decrease in the revenue laws does not begin until the first of the next year, and it will operate only for a reduction upon the remainder of the fiscal year and have small effect upon the amount of money in the Treasury up to the 30th of June next. It is for the future that we are looking out. It is for the years 1902 and 1903, and when we look to them I believe we have gone to the limit of safety in reducing the war-taxes. We are unwilling for the committee to go any further in that reduction and run any risk on that account.

"What are we going to do with the money in the Treasury? We are going to adopt the good old-fashioned Republican way of paying debts with the money in the Treasury."

It was proposed to amend the bill by removing the tax on tea; and in support of that policy Mr. Glynn, of New York, said:

"This demand for a reduction of the tax on tea, Mr. Chairman, comes from every cottage in the land, from every breakfast table, every dinner table, every supper table, from every tea party, where the neighborhood is roasted, friends criticized, and the world remodeled over a steaming cup of tea. It also comes from the circles of the

four hundred, whose five o'clock teas are losing their pinkish tint on account of the extra 10 cents a pound put on tea by the war-revenue act.

"Right here and now, Mr. Chairman, I desire to call the attention of the members of this House to a few scientific facts. Prof. Johnstone says that 'tea exhilarates without sensibly intoxicating.' The beverage doing that is a good beverage and is entitled to such legislation as will give the people the greatest amount of it for the least money. Prof. Johnstone also says that 'tea excites the brain, increases activity, and produces wakefulness.' Now, the beverage doing that is good for a Congressman to drink in large quantities, and should be as cheap as possible. For the sake of his constituents a Congressman needs a clear brain and lots of activity, and for his own sake he needs some beverage to keep him awake during some of the ponderous Websterian speeches in this House, and for this reason, again, am I in favor of cutting down the tax on tea.

"Moreover, Mr. Chairman, it needs no argumentation to prove that the ladies of our land— young maids, old maids, and housewives—are in favor of reducing this tax on tea. The young maids because it makes cheaper the beverage of their society spree and social *tête-à-têtes*; the old maids—and God bless them, for Robert Louis Stevenson was right when he called them the dearest dears on earth—because it makes less expensive their matutinal sipping and their night-cap quaffing of the drink that makes them dream of those saddest words of tongue or pen, 'It might have been'; and the housewives, as one of them wrote me the day before yesterday, because the tea-leaves with which she keeps down the dust when she sweeps her parlor carpet are costing too much, and the tax on leaves used to keep down the dust ought to be lowered, instead of a tax being kept on to raise 'the dust' for a useless surplus.

"Do not think, Mr. Chairman, I am trying to make a funny speech, but if any comparison can serve to show the inconsistency of some of the reductions proposed in this bill I do not intend to hesitate in making use of them. Just think of it! The proposition is made to abolish the \$100 tax placed on the proprietors of a circus, and to keep the tax of 10 cents a pound on tea. In other words, the committee proposes to take the tax off the elephant that 'walks around the ring' and the monkey that 'chatters in the cage,' and to keep the tax on the cup of tea consumed at meals. No one has heard of the price of admission to circuses being raised by the war-tax, and even if it were the people could stand it, for the circus, like Christmas, comes but once a year, while tea time comes three times a day. If we need revenue, would it not be well to keep the tax on circuses, and to place it on things like the circus, and allow tea to go free.

"Yes, Mr. Chairman, between tea and the circus, I am in favor of tea, and I want to remind those who differ with me that part of the revenue we lose on free tea will come back to us through the tax which we have lately placed on oleomargarine. This House did a good thing for the farming interests of the country when it voted to place a tax on oleo. It would duplicate this good act by doing something to relieve the tax on tea.

"It is useless to contend that the tea trade of the country is in favor of this tax being kept on tea. Why, sir, nearly every tea merchant and wholesale grocer in my district has petitioned me to urge an abolition of the tax on tea. Does that look as if the tea trade of the country is in favor of the tax?

"Only this morning, sir, I received a letter from a large tea importer in which he states that a continuation of this tax will ruin his business, and urges a fight for the reduction of the tax. Does that look as if the trade favored the tax on tea? Do the people want it, think you, gentlemen of the majority of the Ways and Means Committee? Is any one of you bold enough to contend that the people at large are in favor of this tax? If so you are brave enough to argue that the people are anxious to pay 10 cents a pound more for tea than they would have to pay for it were this tax abolished. This tax was imposed as a war measure.

"The majority tell us that the war is over. If it is, the war-tax should go, especially upon the articles consumed the most by the masses in everyday life. As a nation we are crying for trade with China and Japan, but yet we persist in placing a large tax upon the article of which they raise most, of which we raise little or none, and which our people use every day of their lives. It is proposed to do away with the taxes on proprietary medicines, telephone and telegraph messages, bank checks, bills of exchange, etc.; it is proposed to reduce the tax on beer.

"Of all these am I in favor. In fact, I would go further than this bill proposes to go in the reduction of the tax on beer. Every fair-minded person must admit that beer is paying a pretty heavy proportion of taxation. Outside of the war-tax added for the Spanish War beer pays into the United States Treasury \$40,000,000 a year. On account of the additional Spanish War tax beer has lately been paying a tax of \$80,000,000—a sum which is one-third of the whole war-tax and one-fourth of the internal-revenue taxes. Beer undoubtedly should pay a large tax, but it seems hardly fair that any one industry should be obliged to bear such a large share of taxation. Now, as to tea, Mr. Chairman, I believe in abolishing the tax completely. But some of the gentlemen of this House argue that we need the revenue produced by the tax on tea. I contend that we have no such need.

"At the present time this country has an annual excess of revenue of \$80,000,000 above the present immense expenditures, a reserve fund of \$150,000,000, and a balance of \$140,000,000 in the Treasury. With this grand showing there is no necessity for keeping the war-taxes as high as the majority contend. Moreover, Mr. Chairman, it should be remembered, when considering the provisions of this bill, that the surplus in the Treasury would have been increased \$20,000,000 or \$30,000,000 more were it not for the large amount paid out of the Treasury during the past six months. We should abolish all possible of these war-taxes not only to relieve the people, but also to prevent a piling up in the Treasury of current funds which should be in circulation for the good of the business interests of the country.

"Now, Mr. Chairman, if this bill becomes a law in its present shape, its friends admit that on June 30, 1902, there will be a surplus in the United States Treasury of \$206,000,000. This seems to be conservatism run wild. A surplus, and a fair one, we should have at all times, but at no time should it be allowed to grow so large that its creating is a burden upon the people, and a useless withdrawal into the United States Treasury of money that ought to be in circulation through the business channels of the country. It has been said that the people less governed are the best governed, and this assertion is most forceful when applied to the payment of taxes. The less of them the better, and only so much of them as is neces-

sary for a proper maintenance of the Government, its protection, its welfare, and its safety should be collected. For none of these is needed such an abundance of taxes as piles up a useless surplus."

The bill passed the House of Representatives Dec. 15, 1900, and it was reported in the Senate with an amendment by way of substitute which passed Feb. 6, 1901. The House disagreed with the Senate amendments, and a conference committee was appointed. A report was made Feb. 28, and adopted. It retained the form of the original House bill, but accepted some of the changes of rates made in the Senate amendments. The measure was approved by the President, March 2, 1901, in the following form:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1 of the act entitled 'An Act to provide ways and means to meet war expenditures, and for other purposes,' approved June 13, 1898, is hereby amended so as to read as follows:

*"That there shall be paid, in lieu of the tax of \$1 now imposed by law, a tax of \$1.60 on all beer, lager beer, ale, porter, and other similar fermented liquors, brewed or manufactured and sold, or stored in warehouse, or removed for consumption or sale, within the United States, by whatever name such liquors may be called, for every barrel containing not more than 31 gallons; and at a like rate for any other quantity or for the fractional parts of a barrel authorized and defined by law. And section 3339 of the Revised Statutes is hereby amended accordingly: *Provided*, That in lieu of or in addition to the present requirements of law in that respect, all stamps used for denoting the tax upon fermented liquors or other taxes may, in the discretion of the Commissioner of Internal Revenue, be canceled by perforations to be made in such manner and form as the commissioner may by regulations prescribe."*

"SEC. 2. That section 2 of said act is hereby amended so as to read as follows:

"SEC. 2. That special taxes shall be, and hereby are, imposed annually as follows—that is to say:

*"1. Bankers using or employing a capital not exceeding the sum of \$25,000 shall pay \$50; when using or employing a capital exceeding \$25,000, for every additional \$1,000 in excess of \$25,000, \$2, and in estimating capital surplus shall be included. The amount of such annual tax shall in all cases be computed on the basis of the capital and surplus for the preceding fiscal year. In the case of bankers who were not in business in the preceding fiscal year the tax shall be computed on the capital at the time of commencing business. Every person, firm, or company, and every incorporated or other bank, having a place of business where credits are opened by the deposit or collection of money or currency, subject to be paid or remitted upon draft, check, or order, or where money is advanced or loaned on stocks, bonds, bullion, bills of exchange, or promissory notes, or where stocks, bonds, bullion, bills of exchange, or promissory notes are received for discount or sale, shall be a banker under this act: *Provided*, That any savings-bank having no capital stock, and whose business is confined to receiving deposits and loaning or investing the same for the benefit of its depositors, and which does no other business of banking, shall not be subject to this tax."*

"2. Brokers shall pay \$50. Every person, firm, or company, whose business it is to negotiate purchases or sales of stocks, bonds, exchange, bullion, coined money, bank-notes, promissory notes, or other securities for themselves or others,

*shall be regarded as a broker: *Provided*, That any person having paid the special tax as a banker shall not be required to pay the special tax as a broker."*

"3. Pawnbrokers shall pay \$20. Every person, firm, or company whose business or occupation it is to take or receive, by way of pledge, pawn, or exchange, any goods, wares, or merchandise, or any kind of personal property whatever, as security for the repayment of money loaned thereon, shall be deemed a pawnbroker."

"4. Custom-house brokers shall pay \$10. Every person, firm, or company whose occupation it is, as the agent of others, to arrange entries and other custom-house papers, or transact business at any port of entry relating to the importation or exportation of goods, wares, or merchandise, shall be regarded as a custom-house broker."

*"5. Proprietors of theaters, museums, and concert halls in cities having more than 25,000 population as shown by the last preceding United States census, shall pay \$100. Every edifice used for the purpose of dramatic or operatic or other representations, plays, or performances, for admission to which entrance money is received, not including halls rented or used occasionally for concerts or theatrical representations, shall be regarded as a theater: *Provided*, That whenever any such edifice is under lease at the passage of this act, the tax shall be paid by the lessee, unless otherwise stipulated between the parties to said lease."*

*"6. The proprietor or proprietors of circuses shall pay \$100. Every building, space, tent, or area where feats of horsemanship or acrobatic sports or theatrical performances are exhibited shall be regarded as a circus: *Provided*, That no special tax paid in one State, Territory, or the District of Columbia shall exempt exhibitions from the tax in another State, Territory, or the District of Columbia, and but one special tax shall be imposed for exhibitions within any one State, Territory, or District."*

*"7. Proprietors or agents of all other public exhibitions or shows for money not enumerated in this section shall pay \$10: *Provided*, That a special tax paid in one State, Territory, or the District of Columbia shall not exempt exhibitions from the tax in another State, Territory, or the District of Columbia, and but one special tax shall be required for exhibitions within any one State, Territory, or the District of Columbia."*

"8. Proprietors of bowling-alleys and billiard rooms shall pay five dollars for each alley or table. Every building or place where bowls are thrown or where games of billiards or pool are played, and that are open to the public with or without price, shall be regarded as a bowling-alley or a billiard room, respectively."

"SEC. 3. That the internal-revenue tax on cigars weighing more than 3 pounds per 1,000 shall be \$3 per 1,000; and the tax on cigars weighing not more than 3 pounds per 1,000 shall be 18 cents per pound, and on cigarettes weighing not more than 3 pounds per 1,000 and of a wholesale value or price of not more than \$2 per 1,000 shall be 18 cents per pound; and the tax on cigarettes weighing not more than 3 pounds per 1,000 and of a wholesale value or price of more than \$2 per 1,000 shall be 36 cents per pound; and all such cigars and cigarettes weighing not more than 3 pounds per 1,000 shall for purposes of taxation be held and considered as weighing 3 pounds."

"SEC. 4. That there shall be allowed a discount of 20 per centum on all sales by collectors to

manufacturers of tobacco and snuff upon the stamps provided for the payment of internal-revenue taxes upon manufactured tobacco and snuff: *Provided*, That in addition to the packages of smoking tobacco now authorized by law there shall be packages of 2 ounces, 3 ounces, and 4 ounces: *And provided further*, That on all original and unbroken factory packages of smoking and manufactured tobacco and snuff, and cigars, held by manufacturers or dealers at the time such discount or reduction of tax shall go into effect, upon which the tax has been paid, there shall be allowed a drawback or rebate of the full amount of such discount or reduction of tax, but the same shall not apply in any case where the claim has not been presented within sixty days following the date of the reduction; and no claim shall be allowed or drawback paid for a less amount than \$10. It shall be the duty of the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, to adopt such rules and regulations and to prescribe and furnish such blanks and forms as may be necessary to carry this section into effect.

"SEC. 5. That section 6 of said act is hereby amended by striking out the words 'medicines, preparations, matters, and things,' in the last paragraph of said section, and inserting in lieu thereof the word 'wines,' so that the section as amended shall read as follows:

"ADHESIVE STAMPS.

"SEC. 6. That on and after the 1st day of July, 1898, there shall be levied, collected, and paid, for and in respect of the several bonds, debentures, or certificates of stock and of indebtedness, and other documents, instruments, matters, and things mentioned and described in Schedule A of this act, or for or in respect of the vellum, parchment, or paper upon which such instruments, matters, or things, or any of them, shall be written or printed by any person or persons, or party who shall make, sign, or issue the same, or for whose use or benefit the same shall be made, signed, or issued, the several taxes or sums of money set down in figures against the same, respectively, or otherwise specified or set forth in the said schedule.

"And there shall also be levied, collected, and paid, for and in respect to the wines mentioned and described in Schedule B of this act, manufactured, sold, or removed for sale, the several taxes or sums of money set down in words or figures against the same, respectively, or otherwise specified or set forth in Schedule B of this act."

"SEC. 6. That section 9 of said act is hereby amended by striking out the proviso, so that the section as amended shall read as follows:

"SEC. 9. That in any and all cases where an adhesive stamp shall be used for denoting any tax imposed by this act, except as hereinafter provided, the person using or affixing the same shall write or stamp thereupon the initials of his name and the date upon which the same shall be attached or used, so that the same may not again be used. And if any person shall fraudulently make use of an adhesive stamp to denote any tax imposed by this act without so effectually canceling and obliterating such stamp, except as before mentioned, he, she, or they shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not less than \$50 nor more than \$500, or be imprisoned not more than six months, or both, at the discretion of the court."

"SEC. 7. That section 13 of said act is hereby amended by striking out the words 'Schedule A of,' and also by inserting in the first proviso,

after the words 'bonds, debentures, or certificates of stock or of indebtedness,' the words 'or any instrument, document, or paper of any kind or description whatsoever mentioned in Schedule A of this act'; so that said section as amended shall read as follows:

"SEC. 13. That any person or persons who shall register, issue, sell, or transfer, or who shall cause to be issued, registered, sold, or transferred, any instrument, document, or paper of any kind or description whatsoever mentioned in this act, without the same being duly stamped, or having thereupon an adhesive stamp for denoting the tax chargeable thereon, and canceled in the manner required by law, with intent to evade the provisions of this act, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding \$50, or by imprisonment not exceeding six months, or both, in the discretion of the court; and such instrument, document, or paper, not being stamped according to law, shall be deemed invalid and of no effect: *Provided*, That hereafter, in all cases where the party has not affixed to any instrument the stamp required by law thereon at the time of issuing, selling, or transferring the said bonds, debentures, or certificates of stock or of indebtedness, or any instrument, document, or paper of any kind or description whatsoever mentioned in Schedule A of this act, and he or they, or any party having an interest therein, shall be subsequently desirous of affixing such stamp to said instrument, or, if said instrument be lost, to a copy thereof, he or they shall appear before the collector of internal revenue of the proper district, who shall, upon the payment of the price of the proper stamp required by law, and of a penalty of ten dollars, and, where the whole amount of the tax denoted by the stamp required shall exceed the sum of \$50, on payment also of interest, at the rate of 6 per centum on said tax from the day on which said stamp ought to have been affixed, affix the proper stamp to such bond, debenture, certificate of stock or of indebtedness or copy, or instrument, document or paper of any kind or description whatsoever mentioned in Schedule A of this act, and note upon the margin thereof the date of his so doing and the fact that such penalty has been paid; and the same shall thereupon be deemed and held to be as valid to all intents and purposes as if stamped when made or issued: *And provided further*, That where it shall appear to said collector, upon oath or otherwise, to his satisfaction, that any such instrument has not been duly stamped, at the time of making or issuing the same, by reason of accident, mistake, inadvertence, or urgent necessity, and without any wilful design to defraud the United States of the stamp, or to evade or delay the payment thereof, then and in such case, if such instrument, or, if the original be lost, a copy thereof, duly certified by the officer having charge of any records in which such original is required to be recorded, or otherwise duly proved to the satisfaction of the collector, shall, within twelve calendar months after the making or issuing thereof, be brought to the said collector of internal revenue to be stamped, and the stamp tax chargeable thereon shall be paid, it shall be lawful for the said collector to remit the penalty aforesaid and to cause such instrument to be duly stamped. And when the original instrument, or a certified or duly proved copy thereof, as aforesaid, duly stamped so as to entitle the same to be recorded, shall be presented to the clerk, register, recorder, or other officer having charge of the original record, it shall be lawful for such

officer, upon the payment of the fee legally chargeable for the recording thereof, to make a new record thereof, or to note upon the original record the fact that the error or omission in the stamping of said original instrument has been corrected pursuant to law; and the original instrument or such certified copy, or the record thereof, may be used in all courts and places in the same manner and with like effect as if the instrument had been originally stamped: *And provided further*, That in all cases where the party has not affixed the stamp required by law upon any such instrument issued, registered, sold, or transferred at a time when and at a place where no collection district was established, it shall be lawful for him or them, or any party having an interest therein, to affix the proper stamp thereto, or, if the original be lost, to a copy thereof. But no right acquired in good faith before the stamping of such instrument, or copy thereof, as herein provided, if such record be required by law, shall in any manner be affected by such stamping as aforesaid.

"SEC. 8. That Schedule A of said act is hereby amended so as to read as follows:

"SCHEDULE A.—STAMP TAXES.

"1. Bonds, debentures, or certificates of indebtedness issued after the 1st day of July, anno Domini 1898, by any association, company, or corporation, on each \$100 of face value or fraction thereof, 5 cents, and on each original issue, whether on organization or reorganization, of certificates of stock by any such association, company, or corporation, on each \$100 of face value or fraction thereof, 5 cents, and on all sales, or agreements to sell, or memoranda of sales or deliveries or transfers of shares or certificates of stock in any association, company, or corporation, whether made upon or shown by the books of the association, company, or corporation, or by any assignment in blank, or by any delivery, or by any paper or agreement or memorandum or other evidence of transfer or sale whether entitling the holder in any manner to the benefit of such stock, or to secure the future payment of money or for the future transfer of any stock, on each hundred dollars of face value or fraction thereof, 2 cents: *Provided*, That in case of sale where the evidence of transfer is shown only by the books of the company the stamp shall be placed upon such books; and where the change of ownership is by transfer certificate the stamp shall be placed upon the certificate; and in cases of an agreement to sell or where the transfer is by delivery of the certificate assigned in blank there shall be made and delivered by the seller to the buyer a bill or memorandum of such sale, to which the stamp shall be affixed; and every bill or memorandum of sale or agreement to sell before mentioned shall show the date thereof, the name of the seller, the amount of the sale, and the matter or thing to which it refers. And any person or persons liable to pay the tax as herein provided, or any one who acts in the matter as agent or broker for such person or persons, who shall make any such sale, or who shall in pursuance of any such sale deliver any such stock, or evidence of the sale of any such stock or bill or memorandum thereof, as herein required, without having the proper stamps affixed thereto, with intent to evade the foregoing provisions, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not less than \$500 nor more than \$1,000, or be imprisoned not more than six months, or both, at the discretion of the court.

"2. Upon each sale, agreement of sale, or

agreement to sell any products or merchandise at any exchange, or board of trade, or other similar place, either for present or future delivery, for each \$100 in value of said sale or agreement of sale or agreement to sell, 1 cent, and for each additional \$100 or fractional part thereof in excess of \$100, 1 cent: *Provided*, That on every sale or agreement of sale or agreement to sell as aforesaid there shall be made and delivered by the seller to the buyer a bill, memorandum, agreement, or other evidence of such sale, agreement of sale, or agreement to sell, to which there shall be affixed a lawful stamp or stamps in value equal to the amount of the tax on such sale. And every such bill, memorandum, or other evidence of sale or agreement to sell shall show the date thereof, the name of the seller, the amount of the sale, and the matter or thing to which it refers; and any person or persons liable to pay the tax as herein provided, or any one who acts in the matter as agent or broker for such person or persons, who shall make any such sale or agreement of sale, or agreement to sell, or who shall, in pursuance of any such sale, agreement of sale, or agreement to sell, deliver any such products or merchandise without a bill, memorandum, or other evidence thereof as herein required, or who shall deliver such bill, memorandum, or other evidence of sale, or agreement to sell, without having the proper stamps affixed thereto, with intent to evade the foregoing provisions, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not less than \$500 nor more than \$1,000, or be imprisoned not more than six months, or both, at the discretion of the court: *Provided*, That no bill, memorandum, agreement, or other evidence of such sale, or agreement of sale, or agreement to sell, in case of products or merchandise actually delivered to, and while in vessel, boat, or car, and actually in course of transportation, shall be subject to this tax, provided such bill, memorandum, agreement, or other evidence of such sale, or agreement of sale, or agreement to sell shall be accompanied by bills of lading or vouchers showing that the said products are actually in course of transportation as aforesaid.

"3. From and after the 1st day of April, 1901, every person, association, copartnership, or corporation who or which shall in his, its, or their own behalf, or as agent, engage in the business of making or offering to make contracts, agreements, trades, or transactions respecting the purchase or sale, or purchase and sale, of any grain, provisions, raw or unmanufactured cotton, stock, bonds, or other securities wherein both parties thereto, or such person, association, copartnership, or corporation above named, contemplate or intend that such contracts, agreements, trades, or transactions shall be or may be closed, adjusted, or settled according or with reference to the public market quotations of prices made on any board of trade or exchange upon which the commodities or securities referred to in said contracts, agreements, trades, or transactions are dealt in, and without a *bona fide* transaction on such board of trade or exchange, or wherein both parties, or such person, association, copartnership, or corporation above named, shall contemplate or intend that such contracts, agreements, trades, or transactions shall be or may be deemed closed or terminated when the public market quotations of prices made on such board of trade or exchange for the articles or securities named in such contracts, agreements, trades, or transactions shall reach a certain figure, and every person, association, copartnership, and corporation who or which shall in his or its own behalf or as agent conduct what is commonly known

as a "bucket shop" shall pay a stamp tax of 2 cents on each \$100 in value or fraction thereof, of the merchandise covered or pretended to be covered, and also a tax of 2 cents on each \$100 on the face value or fraction thereof, of all stocks, bonds, or other securities covered or pretended to be covered by each and all of such contracts, agreements, trades, or transactions: *Provided however*, That the payment of any tax imposed by this paragraph shall not be held or construed to exempt any such person, association, copartnership, or corporation from any penalty or punishment provided by the laws of any State for carrying on such business, or the making of such contracts, agreements, trades, or transactions within such State, or in any manner to authorize the commencement or continuance of such business or the making of any such contracts, agreements, trades, or transactions contrary to the laws of such State, or in any place prohibited by municipal law; and on or before the first day of April, 1901, every such person, association, copartnership, or corporation, as aforesaid, shall, for each office or place of business and for each branch office or place of business, wherever established, pay a special tax of \$12.50, and on or before the first day of July, 1901, and annually thereafter, for every such office or branch office, a special tax of \$50, and such taxes shall be in addition to all other special taxes imposed by this act. Every person, association, copartnership, or corporation proposing to engage in or continue the business aforesaid shall, before commencing such business, file with the collector or proper deputy collector of the district in which it is proposed to carry on such business a notice in writing under oath, and in such form as the Commissioner of Internal Revenue may prescribe, stating the name of the person, association, copartnership, or corporation intending to engage in such business, the names of the members of any such association or copartnership, and the names of the officers of any such corporation, together with the residences of all the individuals whose names are thus required, and the place (including street number) where such business is to be carried on, and it shall be the duty of the collector of internal revenue to keep in his office a book in which shall be recorded a complete copy of all such notices, and such book shall be open to public inspection. Every person, association, copartnership, or corporation conducting or transacting the business aforesaid shall keep or cause to be kept just and true books of account, wherein shall be plainly and legibly recorded on the day of the making of every such contract, agreement, trade, or transaction a complete and exact specification thereof, including the date thereof, the other party thereto, and the quantity, price, and the gross amount in value of each article or commodity covered or pretended to be covered by each such contract, agreement, trade, or transaction, and such books shall at all reasonable times and hours be subject to the inspection of the collector, deputy collector, and the inspector of internal revenue or any duly authorized agent of the Internal Revenue Department, and every such person, association, copartnership, or corporation shall deliver to the other party to each such contract, agreement, trade, or transaction, at the time of making the same, a written memorandum also containing the complete and exact specification thereof, above referred to, to which the proper stamp shall be, before delivery, affixed. Every person, association, copartnership, or corporation who shall, in his or their own behalf, or as agent, engage in or continue in the business hereinbefore defined without having filed the notice herein required, or who shall fail or refuse to keep any such

book or make any return, report, or affidavit required as aforesaid, or shall make a false, fraudulent, or partial return, report, or affidavit, or shall fail or refuse to deliver a written memorandum, as hereinbefore required, or shall in any other respect violate any of the provisions of this paragraph, shall, besides being liable for the amount of the tax or taxes herein prescribed, be deemed guilty of a misdemeanor, and upon conviction thereof shall, for each and every such offense, pay a fine of not less than \$500 nor more than \$5,000, or be imprisoned not less than three months nor more than two years, or both, in the discretion of the court. All provisions of law now in force relating to the collection, recovery, and enforcement of taxes, fines, and penalties imposed under the law concerning internal revenue and not inconsistent with the provisions of this paragraph shall extend and apply to the recovery and enforcement of the taxes, fines, and penalties imposed by this paragraph.

"4. Bill of exchange (inland), draft, or order for the payment of any sum of money, otherwise than at sight or on demand, and for each renewal of the same, for a sum not exceeding \$100, 2 cents; and for each additional \$100 or fractional part thereof in excess of \$100, 2 cents.

"5. Bill of exchange (foreign) or letter of credit (including orders by telegraph or otherwise for the payment of money issued by express or other companies or any person or persons), drawn in but payable out of the United States, if drawn singly or otherwise than in a set of 3 or more, according to the custom of merchants and bankers, shall pay for a sum not exceeding \$100, 2 cents, and for each \$100 or fractional part thereof in excess of \$100, 2 cents. If drawn in sets of 2 or more: For every bill of each set, where the sum made payable shall not exceed \$100, or the equivalent thereof, in any foreign currency in which such bill may be expressed, according to the standard of value fixed by the United States, 1 cent; and for each \$100 or fractional part thereof in excess of \$100, 1 cent. Excepting that bills of exchange drawn against the value of products or merchandise actually exported to foreign countries shall not be subject to this tax, provided that such bills of exchange shall be accompanied by proper invoices, and receipts, bills of lading, or vouchers, showing that goods of a value at least equal to the amount for which said bill of exchange may be drawn shall have been exported.

"6. Freight: It shall be the duty of every railroad or steamboat company, carrier, or corporation, or person whose occupation is to act as such, except persons, companies, or corporations engaged in carrying on a local or other express business, to issue to the shipper or consignor, or his agent, or person from whom any goods are accepted for transportation, a bill of lading, manifest, or other evidence of receipt and forwarding for each shipment received for carriage and transportation, whether in bulk or boxes, bales, packages, bundles, or not so enclosed or included; and there shall be duly attached and canceled, as in this act provided, to each of said bills of lading, manifests, or other memorandum, and to each duplicate thereof, a stamp of the value of 1 cent: *Provided*, That but one bill of lading shall be required on bundles or packages of newspapers when enclosed in one general bundle at the time of shipment. Any failure to issue such bill of lading, manifest, or other memorandum, as herein provided, shall subject such railroad or steamboat company, carrier, or corporation, or person to a penalty of \$50 for each offense, and no such bill of lading, manifest, or other memorandum shall

be used in evidence unless it shall be duly stamped as aforesaid.

"7. Bond: For indemnifying any person or persons, firm, or corporation who shall have become bound or engaged as surety for the payment of any sum of money, or for the due execution or performance of the duties of any office or position, and to account for money received by virtue thereof, 50 cents.

"8. Certificate of profits, or any certificate or memorandum showing an interest in the property or accumulations of any association, company, or corporation, and on all transfers thereof, on each \$100 of face value or fraction thereof, 2 cents.

"9. Contract: Broker's note, or memorandum of sale of any goods or merchandise, stocks, bonds, exchange, notes of hand, real estate, or property of any kind or description issued by brokers, or persons acting as such, for each note or memorandum of sale, not otherwise provided for in this act, 10 cents.

"10. Conveyance: Deed, instrument, or writing, whereby any lands, tenements, or other realty shall be sold, granted, assigned, transferred, or otherwise conveyed to or vested in the purchaser or purchasers, or any other person or persons, by his, her, or their direction, when the consideration or value exceeds \$2,500, and does not exceed \$3,000, 25 cents, and for each additional \$500 or fractional part thereof in excess of \$3,000, 25 cents.

"11. Entry of any goods, wares, or merchandise at any custom-house, either for consumption or warehousing, not exceeding \$100 in value, 25 cents. Exceeding \$100 and not exceeding \$500 in value, 50 cents. Exceeding \$500 in value, \$1.

"12. Entry for the withdrawal of any goods or merchandise from customs bonded warehouse, 50 cents.

"13. Passage tickets: Ticket, order, contract, or certificate for passage by any vessel from any port in the United States to a foreign port, costing \$50, 50 cents; and for each \$50 or any part thereof in addition thereto, 50 cents."

"SEC. 9. That Schedule B of said act is hereby amended so as to read as follows:

"SCHEDULE B.

"Sparkling or other wines, when bottled for sale, upon each bottle containing 1 pint or less, 1 cent. Upon each bottle containing more than 1 pint, 2 cents."

"SEC. 10. That section 29 of said act is hereby amended by adding at the end of said section the following: *Provided*, That nothing in this section shall be construed to apply to bequests or legacies for uses of a religious, literary, charitable, or educational character, or for the encouragement of art, or to legacies or bequests to societies for the prevention of cruelty to children, including all bequests or legacies of such character on which the tax imposed had not been paid or collected on the first day of March, 1901: *And provided further*, That the provisions of this act and of the act hereby amended shall not be held to apply to any estate where the testator or intestate died before June 13, 1898,' so that said section as amended shall read as follows:

"LEGACIES AND DISTRIBUTIVE SHARES OF PERSONAL PROPERTY.

"SEC. 29. That any person or persons having in charge or trust, as administrators, executors, or trustees, any legacies or distributive shares arising from personal property, where the whole amount of such personal property as aforesaid shall exceed the sum of \$10,000 in actual value, passing, after the passage of this act, from any person pos-

sessed of such property, either by will or by the intestate laws of any State or Territory, or any personal property or interest therein, transferred by deed, grant, bargain, sale, or gift, made or intended to take effect in possession or enjoyment after the death of the grantor or bargainer, to any person or persons, or to any body or bodies, politic or corporate, in trust or otherwise, shall be, and hereby are, made subject to a duty or tax, to be paid to the United States, as follows—that is to say: Where the whole amount of said personal property shall exceed in value \$10,000 and shall not exceed in value the sum of \$25,000 the tax shall be:

"1. Where the person or persons entitled to any beneficial interest in such property shall be the lineal issue or lineal ancestor, brother, or sister to the person who died possessed of such property, as aforesaid, at the rate of 75 cents for each and every \$100 of the clear value of such interest in such property.

"2. Where the person or persons entitled to any beneficial interest in such property shall be the descendant of a brother or sister of the person who died possessed, as aforesaid, at the rate of \$1.50 for each and every \$100 of the clear value of such interest.

"3. Where the person or persons entitled to any beneficial interest in such property shall be the brother or sister of the father or mother, or a descendant of a brother or sister of the father or mother, of the person who died possessed, as aforesaid, at the rate of \$3 for each and every \$100 of the clear value of such interest.

"4. Where the person or persons entitled to any beneficial interest in such property shall be the brother or sister of the grandfather or grandmother, or a descendant of the brother or sister of the grandfather or grandmother, of the person who died possessed, as aforesaid, at the rate of \$4 for each and every \$100 of the clear value of such interest.

"5. Where the person or persons entitled to any beneficial interest in such property shall be in any other degree of collateral consanguinity than is hereinbefore stated, or shall be a stranger in blood to the person who died possessed, as aforesaid, or shall be a body politic or corporate at the rate of \$5 for each and every \$100 of the clear value of such interest: *Provided*, That all legacies or property passing by will, or by the laws of any State or Territory, to husband or wife of the person died possessed, as aforesaid, shall be exempt from tax or duty.

"Where the amount or value of said property shall exceed the sum of \$25,000, but shall not exceed the sum or value of \$100,000, the rates of duty or tax above set forth shall be multiplied by $1\frac{1}{2}$; and where the amount or value of said property shall exceed the sum of \$100,000, but shall not exceed the sum of \$500,000, such rates of duty shall be multiplied by 2; and where the amount or value of said property shall exceed the sum of \$500,000, but shall not exceed the sum of \$1,000,000, such rates of duty shall be multiplied by $2\frac{1}{2}$; and where the amount or value of said property shall exceed the sum of \$1,000,000, such rates of duty shall be multiplied by 3: *Provided*, That nothing in this section shall be construed to apply to bequests or legacies for uses of a religious, literary, charitable, or educational character, or for the encouragement of art, or to legacies or bequests to societies for the prevention of cruelty to children, including all bequests or legacies of such character on which the tax imposed had not been paid or collected on the first day of March, 1901. *And provided fur-*

ther, That the provisions of this act and of the act hereby amended shall not be held to apply to any estate where the testator or intestate died before June 13, 1898.'

"SEC. 11. That section 30 of said act is hereby amended so as to read as follows:

"SEC. 30. That the tax or duty aforesaid shall be due and payable in one year after the death of the testator and shall be a lien and charge upon the property of every person who may die as aforesaid for twenty years, or until the same shall, within that period, be fully paid to and discharged by the United States; and every executor, administrator, or trustee having in charge or trust any legacy or distributive share, as aforesaid, shall give notice thereof, in writing, to the collector or deputy collector of the district where the deceased grantor or bargainer last resided within thirty days after he shall have taken charge of such trust, and every executor, administrator, or trustee, before payment and distribution to the legatees, or any parties entitled to beneficial interest therein, shall pay to the collector or deputy collector of the district of which the deceased person was a resident, or in which the property was located in case of non-residents, the amount of the duty or tax assessed upon such legacy or distributive share, and shall also make and render to the said collector or deputy collector a schedule, list, or statement, in duplicate, of the amount of such legacy or distributive share, together with the amount of duty which has accrued, or shall accrue, thereon, verified by his oath or affirmation, to be administered and certified thereon by some magistrate or officer having lawful power to administer such oaths, in such form and manner as may be prescribed by the Commissioner of Internal Revenue, which schedule, list, or statement shall contain the names of each and every person entitled to any beneficial interest therein, together with the clear value of such interest, the duplicate of which schedule, list, or statement shall be by him immediately delivered, and the tax thereon paid to such collector; and upon such payment and delivery of such schedule, list, or statement said collector or deputy collector shall grant to such person paying such duty or tax a receipt or receipts for the same in duplicate, which shall be prepared as hereinafter provided. Such receipt or receipts, duly signed and delivered by such collector or deputy collector, shall be sufficient evidence to entitle such executor, administrator, or trustee to be credited and allowed such payment by every tribunal which, by the laws of any State or Territory, is, or may be, empowered to decide upon and settle the accounts of executors and administrators. And in case such executor, administrator, or trustee shall refuse or neglect to pay the aforesaid duty or tax to the collector or deputy collector, as aforesaid, within the time hereinbefore provided, or shall neglect or refuse to deliver to said collector or deputy collector the duplicate of the schedule, list, or statement of such legacies, property, or personal estate, under oath, as aforesaid, or shall neglect or refuse to deliver the schedule, list, or statement of such legacies, property, or personal estate, under oath, as aforesaid, or shall deliver to said collector or deputy collector a false schedule or statement of such legacies, property, or personal estate, or give the names and relationship of the persons entitled to beneficial interests therein untruly, or shall not truly and correctly set forth and state therein the clear value of such beneficial interest, or where no administration upon such property or personal estate shall have

been granted or allowed under existing laws, the collector or deputy collector shall make out such lists and valuation as in other cases of neglect or refusal, and shall assess the duty thereon; and the collector shall commence appropriate proceedings before any court of the United States, in the name of the United States, against such person or persons as may have the actual or constructive custody or possession of such property or personal estate, or any part thereof, and shall subject such property or personal estate, or any portion of the same, to be sold upon the judgment or decree of such court, and from the proceeds of such sale the amount of such tax or duty, together with all costs and expenses of every description to be allowed by such court, shall be first paid, and the balance, if any, deposited according to the order of such court, to be paid under its direction to such person or persons as shall establish title to the same. The deed or deeds, or any proper conveyance of such property or personal estate, or any portion thereof, so sold under such judgment or decree, executed by the officer lawfully charged with carrying the same into effect, shall vest in the purchaser thereof all the title of the delinquent to the property or personal estate sold under and by virtue of such judgment or decree, and shall release every other portion of such property or personal estate from the lien or charge thereon created by this act. And every person or persons who shall have in his possession, charge, or custody any record, file, or paper containing, or supposed to contain, any information concerning such property or personal estate, as aforesaid, passing from any person who may die, as aforesaid, shall exhibit the same at the request of the collector or deputy collector of the district, and to any law officer of the United States, in the performance of his duty under this act, his deputy or agent, who may desire to examine the same. And if any such person, having in his possession, charge, or custody any such records, files, or papers, shall refuse or neglect to exhibit the same on request, as aforesaid, he shall forfeit and pay the sum of \$500: *Provided*, That in all legal controversies where such deed or title shall be the subject of judicial investigation, the recital in said deed shall be *prima facie* evidence of its truth, and that the requirements of the law had been complied with by the officers of the Government: *And provided further*, That in case of wilful neglect, refusal, or false statement by such executor, administrator, or trustee, as aforesaid, he shall be liable to a penalty of not exceeding \$1,000, to be recovered with costs of suit. Any tax paid under the provisions of sections 29 and 30 shall be deducted from the particular legacy or distributive share on account of which the same is charged.'

"SEC. 12. That from and after the passage of this act the Secretary of the Treasury, upon the recommendation of the Commissioner of Internal Revenue, is authorized to appoint a competent person, at an annual salary of \$3,000, whose special duty it shall be to conduct such investigations as may be necessary to secure the efficient enforcement of the tax imposed upon legacies and distributive shares of personal property by this act, and the Commissioner of Internal Revenue may also from time to time assign one or more special agents to aid in such investigations.

"SEC. 13. That section 35 of said act is hereby amended so as to read as follows:

"SEC. 35. That for the purposes of this act the words 'mixed flour' shall be taken and construed to mean the food product resulting from the grinding or mixing together of wheat, or

wheat flour, as the principal constituent in quantity, with any other grain, or the product of any other grain, or other material, except such material, not exceeding 5 per centum in quantity, and not the product of any grain, as is commonly used for baking purposes: *Provided*, That when the product resulting from the grinding or mixing together of wheat or wheat flour with any other grain, or the product of any other grain, of which wheat or wheat flour is not the principal constituent as specified in the foregoing definition, is intended for sale, or is sold, or offered for sale as wheat flour, such product shall be held to be mixed flour within the meaning of this act.

"SEC. 14. That section 18 of said act is hereby repealed.

"SEC. 15. That the provisions of this act shall take effect on and after the first day of July, 1901, except where otherwise expressly provided."

The Army Bill.—Early in the session the House took up and passed a substitute for the Senate bill to increase the efficiency of the military establishment of the United States. The main point of discussion was an amendment, offered by Mr. Littlefield, of Maine, to abolish the army canteen. Mr. Grosvenor, of Ohio, said:

"I have a grave apprehension that the adoption of this amendment will do harm and not good. I am going to vote for the amendment, and I am going to state my reasons for it. I am satisfied that no amount of testimony, though one should rise from the dead, will disabuse the minds of the vast majority of the people of this country upon this question.

"I know very well that it was believed—firmly believed and distinctly understood—that the adoption of the prohibition law in the State of Maine a great many years ago was going to create a condition of absolute immunity from the evils caused by the sale of liquor in that State, and consequently be a great moral object-lesson that was to sweep over the country; and yet I have lived to see the time when the object-lesson of Maine is a warning to statesmanship from one end of the country to the other. No man now seriously believes that the attempts at State prohibition can be successful, and local option of towns or municipal corporations, with taxation and stringent limitations, is the best course.

"The result in Maine does not stand alone. The same is true of the results in Kansas and in Iowa, and the same will be true of every other State that relinquishes the regulation of and the taxation and partial prohibition of liquor traffic and which substitutes the attempt at prohibition. But the people of this country have the impression firmly fixed that we will have a temperate army, a virtuous military army, if this canteen is only abolished. I think the experiment must be tried. They will not hear the testimony of men who say that it is a great modification of the saloon.

"All the saloon features have long ago been eliminated from the army canteen. Therefore the people of the country have the impression that drunkenness will be eliminated, in the absolute teeth of the testimony that if you drive out the sale of light wines and beer in the canteen the soldier will go and get drunk on the outside of the limits of the camp or reservation. There is not a saloon-keeper in the United States of America to-day resident near an army post who does not favor the abolition of the canteen in the army—not one. I can take you to a city where they are now standing ready to come down upon the army posts so soon as the canteen is abolished.

"I am going to vote to abolish it, and if good comes from it, if temperance comes from it, and if sobriety in the army comes out of the result, I shall thank God that I had the privilege of voting for it. If I am mistaken, and good comes from it, nobody will be more willing to testify to it than I will. If no good comes from it, and we discover that we made a mistake in overriding all the opinions of the army officers of the country, all that I have heard from, then we can easily retrace our steps.

"But when there is such an uprising, such a great moral determination among the people of this country, I am willing that the experiment shall be made, and this, too, even in the light of the unreasonable criticism which has been made of the Attorney-General and the false and malicious attacks upon the President, all of which have been utterly without foundation. I overlook the false and scandalous assaults upon the President by a petty preacher, a petty candidate for office, a peregrinating libeler who traveled over the country during the recent campaign and impugned the motives of the President of the United States. While I condemn these things, I vote for the amendment with the hope that good shall come of it."

Mr. Parker, of New Jersey, arguing against the policy of the amendment, said:

"Mr. Chairman, I do not sympathize with the views of the man who decides to vote for this amendment in order to please any general sentiment which through ignorance has grown up among the people of the United States, and thereby knowingly votes to hurt the soldier. We are trustees for the soldier. We are charged to speak and act for his temperance and his good order, and when we abolish the canteen system of the post exchange, temperance in the army will have received almost a death blow.

"The adoption of this amendment, we think, would be a calamity to the cause of temperance. None greater could befall that cause in the army and in the Soldiers' Home than the prohibition of the canteen feature of the post exchange. This is not a matter of theory, but one of actual experience. Soldiers, as well as every one else, resent interference with their personal freedom. To adopt this amendment means that those who would otherwise drink beer in moderation under the eyes of their fellows will go outside where they will get strong drink, and that all the evils that once existed will be renewed.

"In old times we had the sutler's canteen, the sutler being employed by the Government to sell liquors as desired, and at that time the army was a whisky-drinking army. Later we had the post-trader system, where the post-trader, a private individual, was licensed to sell whisky to soldiers, and then we also had a whisky-drinking army. It was an army in which pay-day meant absence from the post of half of the command, men imprisoned by the score in the guardhouse, men who overstayed their leave, and men who were fleeced by dive-keepers on all sides.

"There were rows of liquor saloons at the gates of every post, where vile liquor and sometimes vile drugs were dispensed, and where all the abominations that are annexed to such places were put in the way of the young men who were in the army. At last an experiment was tried; at first at but one post. It spread gradually through the army until it has become a matter of regulation in all posts and is called the post exchange.

"This post-exchange system is one developed for and by Americans. By the army regulations, of which I annex an abstract, the post exchange

is to combine the features of reading and recreation rooms, a cooperative store, and a restaurant in order to supply the troops at reasonable prices with the articles of ordinary use, wear, and consumption not supplied by the Government, and to afford them means of rational recreation and amusement, while through exchange profits it provides means for improving the messes. Buildings are ordered to be set apart or rented at every post for the exchange. An officer is put in charge of the management and a non-commissioned officer of firmness, not an outsider, is made exchange steward. The exchange is superintended by a council of officers, with a subcommittee of non-commissioned officers. Rules of order are prescribed, prohibiting gambling and restricting the entry of civilians.

"The sale and use of ardent spirits . . . is strictly prohibited. But on the recommendation of the exchange council the commanding officer may permit beer and light wines to be sold at the canteen by the drink whenever he is satisfied that giving to the troops the opportunity of obtaining such beverages within the post limits will prevent them from resorting for strong intoxicants to places without such limits and tends to promote temperance and discipline among them.

"The canteen must be in a separate room, preferably in a separate building. The sale of beer is limited to week days, the beer to be consumed upon the premises, and treating is not permitted.

"In the cooperative store the goods are got at cheap prices, and lunchroom prices are made as small as possible. Sales are made on credit, and the profits applied, 5 per cent. to the band, a part to gardens, reading-room, and gymnastic appliances, and the rest to company funds, which enable the soldiers to get better meals and comforts, or returned in dividends.

"Such an exchange was first undertaken as an experiment in Vancouver barracks in 1880, but was not established in the army till 1889, and came into full use in the year 1891.

"This is the American system that treats the soldier as entitled to his home and his reading-room, where he may meet his friends and do what he wishes, always in moderation. It has attracted attention abroad. It is recommended by Gen. Roberts in place of the sutler's canteen system. By it the soldier has his club. It is, by regulation, attached to every post. There is thus established a building in which there are reading-rooms, newspapers; a cooperative store for the sale to the soldiers of what they need and can not get in the ordinary rations.

"There is a refreshment saloon for coffee and tea and for food at odd times when the soldier can not get meals or comes in from guard-duty and wants something to eat. Generally there is provided a gymnasium. It pays something toward the regimental band, in which they all have pride. It supplies the material for polo, football, and other games, and all this is done by saying to those who wish to have a drink, 'Do not go outside; come in here and buy among your friends in your own club.' Without the profits of these sales it could not be supported. But nothing except beer and light wines are sold—no heavy intoxicants—and there is no treating. The results have been marvelous."

The amendment was adopted by a vote of 159 yeas to 51 nays; and the House substitute passed Dec. 6, 1900, by a vote of 171 yeas to 133 nays; absent, 4; not voting, 48.

The Senate made various amendments to the House substitute, and then agreed to it, as amended, by a vote of 43 yeas to 23 nays; not

voting, 21. There was a long debate over the matter, and the main points covered were the policy of having a large army, the adoption of a declaratory provision as to the national policy in the Philippines, and the good and evil results of the army canteen. The first two points have been discussed at great length in Congress at every opportunity. The third is somewhat more unusual there, and a mass of argument and illustrative material was gathered; so that the Senate debate is valuable for reference, but not to be represented by either summary or quotation. There were two conference committees; and the second report was agreed to Jan. 29 and Jan. 31. The President approved the measure Feb. 2, 1901. The full text of it is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the approval of this act the army of the United States, including the existing organizations, shall consist of 15 regiments of cavalry, a corps of artillery, 30 regiments of infantry, 1 lieutenant-general, 6 major-generals, 15 brigadier-generals, an adjutant-general's department, an inspector-general's department, a judge-advocate-general's department, a quartermaster's department, a subsistence department, a medical department, a pay department, a corps of engineers, an ordnance department, a signal-corps, the officers of the Record and Pension Office, the chaplains, the officers and enlisted men of the army on the retired list, the professors, corps of cadets, the army detachments and band at the United States Military Academy, Indian scouts as now authorized by law, and such other officers and enlisted men as may hereinafter be provided for: *Provided*, That when a vacancy shall occur through death, retirement, or other separation from active service in the office of storekeeper, now provided for by law in the quartermaster's department and ordnance department, respectively, said office shall cease to exist.

"SEC. 2. That each regiment of cavalry shall consist of 1 colonel, 1 lieutenant-colonel, 3 majors, 15 captains, 15 first lieutenants, and 15 second lieutenants; 2 veterinarians, 1 sergeant-major, 1 quartermaster-sergeant, 1 commissary-sergeant, 3 squadron sergeants-major, 2 color-sergeants with rank, pay, and allowances of squadron sergeant-major, 1 band, and 12 troops organized into 3 squadrons of 4 troops each. Of the officers herein provided, the captains and lieutenants not required for duty with the troops shall be available for detail as regimental and squadron staff-officers and such other details as may be authorized by law or regulations. Squadron adjutants shall receive \$1,800 per annum and the allowances of first lieutenants; squadron quartermasters and commissaries shall receive \$1,600 per annum and the allowances of second lieutenants. Each cavalry band shall be organized as now provided by law. Each troop of cavalry shall consist of 1 captain, 1 first lieutenant, 1 second lieutenant, 1 first sergeant, 1 quartermaster-sergeant, 6 sergeants, 6 corporals, 2 cooks, 2 farriers and blacksmiths, 1 saddler, 1 wagoner, 2 trumpeters, and 43 privates; the commissioned officers to be assigned from among those hereinbefore authorized, *Provided*, That the President, in his discretion, may increase the number of corporals in any troop of cavalry to 8, and the number of privates to 76, but the total number of enlisted men authorized for the whole army shall not at any time be exceeded.

"SEC. 3. That the regimental organization of the artillery arm of the United States Army is

hereby discontinued, and that arm is constituted and designated as the artillery corps. It shall be organized as hereinafter specified and shall belong to the line of the army.

"SEC. 4. That the artillery corps shall comprise two branches—the coast artillery and the field artillery. The coast artillery is defined as that portion charged with the care and use of the fixed and movable elements of land and coast fortifications, including the submarine mine and torpedo defenses; and the field artillery as that portion accompanying an army in the field, and including field and light artillery proper, horse artillery, siege artillery, mountain artillery, and also machine-gun batteries: *Provided*, That this shall not be construed to limit the authority of the Secretary of War to order coast artillery to any duty which the public service demands or to prevent the use of machine or other field-guns by any other arm of the service under the direction of the Secretary of War.

"SEC. 5. That all officers of artillery shall be placed on one list, in respect to promotion, according to seniority in their several grades, and shall be assigned to coast or to field artillery according to their special aptitude for the respective services.

"SEC. 6. That the artillery corps shall consist of a chief of artillery, who shall be selected and detailed by the President from the colonels of artillery, to serve on the staff of the general officer commanding the army, and whose duties shall be prescribed by the Secretary of War; 14 colonels, 1 of whom shall be the chief of artillery; 13 lieutenant-colonels, 39 majors, 195 captains, 195 first lieutenants, 195 second lieutenants; and the captains and lieutenants provided for in this section not required for duty with batteries or companies shall be available for duty as staff-officers of the various artillery garrisons and such other details as may be authorized by law and regulations: 21 sergeants-major, with the rank, pay, and allowances of regimental sergeants-major of infantry; 27 sergeants-major, with the rank, pay, and allowances of battalion sergeants-major of infantry; 1 electrician sergeant to each coast artillery post having electrical appliances; 30 batteries of field artillery, 126 batteries of coast artillery, and 10 bands organized as now authorized by law for artillery regiments: *Provided*, That the aggregate number of enlisted men for the artillery, as provided under this act, shall not exceed 18,920, exclusive of electrician sergeants.

"SEC. 7. That each company of coast artillery shall be organized as is now prescribed by law for a battery of artillery: *Provided*, That the enlisted strength of any company may be fixed, under the direction of the Secretary of War, according to the requirements of the service to which it may be assigned: *And provided*, That first-class gunners shall receive \$2 a month, and second-class gunners \$1 per month in addition to their pay.

"SEC. 8. That each battery of field artillery shall be organized as is now prescribed by law, and the enlisted strength thereof shall be fixed under the direction of the Secretary of War.

"SEC. 9. That the increase herein provided for the artillery shall be made as follows: Not less than 20 per centum before July 1, 1901, and not less than 20 per centum each succeeding twelve months until the total number provided for shall have been attained. All vacancies created or caused by this act shall be filled by promotion according to seniority in the artillery arm. Second lieutenants of infantry or cavalry may, in the discretion of the President, be transferred to the artillery arm, taking rank therein according to date

of commission, and such transfers shall be subject to approval by a board of artillery officers appointed to pass upon the capacity of such officers for artillery service: *Provided*, That the increase of officers of artillery shall be only in proportion to the increase of men.

"SEC. 10. That each regiment of infantry shall consist of 1 colonel, 1 lieutenant-colonel, 3 majors, 15 captains, 15 first lieutenants, and 15 second lieutenants; 1 sergeant-major, one quartermaster-sergeant, 1 commissary-sergeant, 3 battalion sergeants-major, 2 color sergeants, with rank, pay, and allowances of battalion sergeants-major, 1 band, and 12 companies, organized into 3 battalions of 4 companies each. Of the officers herein provided, the captains and lieutenants not required for duty with the companies shall be available for detail as regimental and battalion staff-officers and such other details as may be authorized by law or regulations. Battalion adjutants shall receive \$1,800 per annum and the allowances of first lieutenants, mounted; battalion quartermasters and commissaries shall receive \$1,600 per annum and the allowances of second lieutenants, mounted. Each infantry band shall be organized as now provided by law. Each infantry company shall consist of 1 captain, 1 first lieutenant, 1 second lieutenant, 1 first sergeant, 1 quartermaster-sergeant, 4 sergeants, 6 corporals, 2 cooks, 2 musicians, 1 artificer, and 48 privates, the commissioned officers to be assigned from those hereinbefore authorized: *Provided*, That the President, in his discretion, may increase the number of sergeants in any company of infantry to 6, the number of corporals to 10, and the number of privates to 127, but the total number of enlisted men authorized for the whole army shall not, at any time, be exceeded.

"SEC. 11. That the enlisted force of the corps of engineers shall consist of 1 band and 3 battalions of engineers. The engineers band shall be organized as now provided by law for bands of infantry regiments. Each battalion of engineers shall consist of 1 sergeant-major, 1 quartermaster-sergeant, and 4 companies. Each company of engineers shall consist of 1 first sergeant, 1 quartermaster-sergeant, with the rank, pay, and allowances of sergeant, 8 sergeants, 10 corporals, 2 musicians, 2 cooks, 38 first-class and 38 second-class privates: *Provided*, That the President may, in his discretion, increase the number of sergeants in any company of engineers to 12, the number of corporals to 18, the number of first-class privates to 64, and the number of second-class privates to 64, but the total number of enlisted men authorized for the whole army shall not, at any time, be exceeded: *And provided*, That officers detailed from the corps of engineers to serve as battalion adjutants and battalion quartermasters and commissaries shall, while so serving, receive the pay and allowances herein authorized for battalion staff-officers of infantry regiments.

"SEC. 12. That the President is authorized to appoint, by and with the advice and consent of the Senate, chaplains in the army, at the rate of 1 for each regiment of cavalry and infantry in the United States service and 12 for the corps of artillery, with the rank, pay, and allowances of captains of infantry: *Provided*, That no person shall be appointed a chaplain in the regular army who shall have passed the age of forty years, nor until he shall have established his fitness as required by existing law: *And provided*, That the office of post chaplain is abolished, and the officers now holding commissions as chaplains, or who may hereafter be appointed chaplains, shall be assigned to regiments or to the corps of artillery.

Chaplains may be assigned to such stations as the Secretary of War shall direct, and they may be transferred, as chaplains, from one branch of the service or from one regiment to another by the Secretary of War, without further commission. When serving in the field, chaplains shall be furnished with necessary means of transportation by the quartermaster's department.

"SEC. 13. That the adjutant-general's department shall consist of 1 adjutant-general with the rank of major-general, and when a vacancy shall occur in the office of adjutant-general on the expiration of the service of the present incumbent, by retirement or otherwise, the adjutant-general shall thereafter have the rank and pay of a brigadier-general, 5 assistant adjutants-general with the rank of colonel, 7 assistant adjutants-general with the rank of lieutenant-colonel, and 15 assistant adjutants-general with the rank of major: *Provided*, That all vacancies created or caused by this section shall, as far as possible, be filled by promotion according to seniority of officers of the adjutant-general's department.

"SEC. 14. That the inspector-general's department shall consist of 1 inspector-general with the rank of brigadier-general, 4 inspectors-general with the rank of colonel, 4 inspectors-general with the rank of lieutenant-colonel, and 8 inspectors-general with the rank of major: *Provided*, That all vacancies created or caused by this section shall be filled, as far as possible, by promotion according to seniority of officers of the inspector-general's department.

"SEC. 15. That the judge-advocate-general's department shall consist of 1 judge-advocate-general with the rank of brigadier-general, 2 judge-advocates with the rank of colonel, 3 judge-advocates with the rank of lieutenant-colonel, 6 judge-advocates with the rank of major, and for each geographical department or tactical division of troops not provided with a judge-advocate from the list of officers holding permanent commissions in the judge-advocate-general's department one acting judge-advocate with the rank, pay, and allowances of captain, mounted. Promotions to vacancies above the grade of major, created or caused by this act, shall be made, according to seniority, from officers now holding commission in the judge-advocate-general's department. Vacancies created or caused by this act in the grade of major may be filled by appointment of officers holding commissions as judge-advocate of volunteers since April 21, 1898. Vacancies which may occur thereafter in the grade of major in the judge-advocate-general's department shall be filled by the appointment of officers of the line, or of persons who have satisfactorily served as judge-advocates of volunteers since April 21, 1898, or of persons from civil life who at date of appointment are not over thirty-five years of age and who shall pass a satisfactory examination to be prescribed by the Secretary of War.

"Acting judge-advocates provided for herein shall be detailed from officers of the grades of captain or first lieutenant of the line of the army who while so serving shall continue to hold their commissions in the arm of the service to which they permanently belong. Upon completion of a tour of duty not exceeding four years they shall be returned to the arm in which commissioned, and shall not be again detailed until they shall have completed two years' duty with the arm of the service in which commissioned.

"SEC. 16. That the quartermaster's department shall consist of 1 quartermaster-general with the rank of brigadier-general, 6 assistant quartermasters-general with the rank of colonel, 9 deputy

quartermasters-general with the rank of lieutenant-colonel, 20 quartermasters with the rank of major, 60 quartermasters with the rank of captain, mounted; the military storekeeper now provided for by law, and 150 post quartermaster-sergeants: *Provided*, That all vacancies in the grade of colonel, lieutenant-colonel, and major created or caused by this section shall be filled by promotion according to seniority, as now prescribed by law. That to fill original vacancies in the grade of captain created by this act in the quartermaster's department the president is authorized to appoint officers of volunteers commissioned in the quartermaster's department since April 21, 1898: *Provided further*, That the President is authorized to continue in service, during the present emergency, for duty in the Philippine Islands and on transports, 24 captains and assistant quartermasters of volunteers. This authority shall extend only for the period when their services shall be absolutely necessary.

"SEC. 17. That the subsistence department shall consist of 1 commissary-general with the rank of brigadier-general, 3 assistant commissaries-general with the rank of colonel, 4 deputy commissaries-general with the rank of lieutenant-colonel, 9 commissaries with the rank of major, 27 commissaries with the rank of captain, mounted, and the number of commissary-sergeants now authorized by law, who shall hereafter be known as post commissary-sergeants: *Provided*, That all vacancies in the grades of colonel, lieutenant-colonel, and major, created or caused by this section, shall be filled by promotion, according to seniority, as now prescribed by law. That to fill original vacancies in the grade of captain, created by this act, in the subsistence department, the President is authorized to appoint officers of volunteers commissioned in the subsistence department since April 21, 1898.

"SEC. 18. That the medical department shall consist of 1 surgeon-general with the rank of brigadier-general, 8 assistant surgeons-general with the rank of colonel, 12 deputy surgeons-general with the rank of lieutenant-colonel, 60 surgeons with the rank of major, 240 assistant surgeons with the rank of captain or first lieutenant, the hospital corps, as now authorized by law, and the nurse corps: *Provided*, That all vacancies in the grades of colonel, lieutenant-colonel, and major created or caused by this section shall be filled by promotion according to seniority, subject to the examination now prescribed by law: *And provided*, That the period during which any assistant surgeon shall have served as a surgeon or assistant surgeon in the volunteer army during the war with Spain or since shall be counted as a portion of the five years' service required to entitle him to rank of captain: *And provided also*, That nothing in this section shall affect the relative rank for promotion of any assistant surgeon now in the service, or who may be hereafter appointed therein, as determined by the date of his appointment or commission and as fixed in accordance with existing law and regulations: *Provided further*, That in emergencies the surgeon-general of the army, with the approval of the Secretary of War, may appoint as many contract surgeons as may be necessary, at a compensation not to exceed \$150 a month. That on or after the passage of this act the President may appoint for duty in the Philippine Islands, 50 surgeons of volunteers with the rank and pay of major, and 150 assistant surgeons of volunteers with the rank and pay of captain, mounted, for a period of two years: *Provided*, That so many of these volunteer medical officers as are not required

shall be honorably discharged the service whenever in the opinion of the Secretary of War their services are no longer necessary: *Provided further*, That assistant surgeons in the volunteer army of the United States, commissioned by the President as captains, in accordance with the provisions of an act for increasing the efficiency of the army of the United States, and for other purposes, approved March 2, 1899, shall be entitled to the pay of a captain, mounted, from the date of their acceptance of such commission, as prescribed by law: *Provided*, That the surgeon-general of the army, with the approval of the Secretary of War, be, and he is hereby, authorized to employ dental surgeons to serve the officers and enlisted men of the regular and volunteer army, in the proportion of not to exceed 1 for every 1,000 of said army, and not exceeding 30 in all. Said dental surgeons shall be employed as contract dental surgeons under the terms and conditions applicable to army contract surgeons, and shall be graduates of standard medical or dental colleges, trained in the several branches of dentistry, of good moral and professional character, and shall pass a satisfactory professional examination. *Provided*, That 3 of the number of dental surgeons to be employed shall be first appointed by the surgeon-general, with the approval of the Secretary of War, with reference to their fitness for assignment, under the direction of the surgeon-general, to the special service of conducting the examinations and supervising the operations of the others; and for such special service an extra compensation of \$60 a month will be allowed: *Provided further*, That dental college graduates now employed in the hospital corps who have been detailed for a period of not less than twelve months to render dental service to the army and who are shown by the reports of their superior officers to have rendered such service satisfactorily may be appointed contract dental surgeons without examination: *Provided*, That the Secretary of War be authorized to appoint in the hospital corps, in addition to the 200 hospital stewards now allowed by law, 100 hospital stewards: *Provided*, That men who have served as hospital stewards of volunteer regiments or acted in that capacity during and since the Spanish-American War for more than six months may be appointed hospital stewards in the regular army: *And provided further*, That all men so appointed shall be of good moral character and shall have passed a satisfactory mental and physical examination.

"SEC. 19. That the nurse corps (female) shall consist of one superintendent, to be appointed by the Secretary of War, who shall be a graduate of a hospital training-school having a course of instruction of not less than two years, whose term of office may be terminated at his discretion, whose compensation shall be \$1,800 per annum, and of as many chief nurses, nurses, and reserve nurses as may be needed. Reserve nurses may be assigned to active duty when the emergency of the service demands, but shall receive no compensation except when on such duty: *Provided*, That all nurses in the nurse corps shall be appointed or removed by the surgeon-general, with the approval of the Secretary of War; that they shall be graduates of hospital training-schools, and shall have passed a satisfactory professional, moral, mental, and physical examination: *And provided*, That the superintendent and nurses shall receive transportation and necessary expenses when traveling under orders; that the pay and allowances of nurses, and of reserve nurses, when on active service, shall be \$40 per month when on duty in the United States and \$50 per month

when without the limits of the United States. They shall be entitled to quarters, subsistence, and medical attendance during illness, and they may be granted leaves of absence for thirty days, with pay, for each calendar year; and, when serving as chief nurses, their pay may be increased by authority of the Secretary of War, such increase not to exceed \$25 per month. Payments to the nurse corps shall be made by the pay department.

"SEC. 20. That the grade of veterinarian of the second class in cavalry regiments, United States army, is hereby abolished, and hereafter the two veterinarians authorized for each cavalry regiment and the one veterinarian authorized for each artillery regiment shall receive the pay and allowances of second lieutenants, mounted. Such number of veterinarians as the Secretary of War may authorize shall be employed to attend animals pertaining to the quartermaster's or other departments not directly connected with the cavalry and artillery regiments, at a compensation not exceeding \$100 per month.

"SEC. 21. That the pay department shall consist of 1 paymaster-general with the rank of brigadier-general, 3 assistant paymasters-general with the rank of colonel, 4 deputy paymasters-general with the rank of lieutenant-colonel, 20 paymasters with the rank of major, and 25 paymasters with the rank of captain, mounted: *Provided*, That all vacancies in the grade of colonel and lieutenant-colonel created or caused by this section shall be filled by promotion according to seniority, as now prescribed by law, and no more appointments to the grade of major and paymaster shall be made until the number of majors and paymasters is reduced below 20: *And provided*, That persons who have served in the volunteer army since April 21, 1898, as additional paymasters may be appointed to positions in the grade of captain, created by this section. So long as there remain surplus majors an equal number of vacancies shall be held in the grade of captain, so that the total number of paymasters authorized by this section shall not be exceeded at any time.

"SEC. 22. That the corps of engineers shall consist of 1 chief of engineers with the rank of brigadier-general, 7 colonels, 14 lieutenant-colonels, 28 majors, 40 captains, 40 first lieutenants, and 30 second lieutenants. The enlisted force provided in section 11 of this act and the officers serving therewith shall constitute a part of the line of the army: *Provided*, That the chief of engineers shall be selected as now provided by law, and hereafter vacancies in the corps of engineers in all other grades above that of second lieutenant shall be filled, as far as possible, by promotion according to seniority from the corps of engineers: *And provided also*, That vacancies remaining in the grades of first and second lieutenant may be filled by transfer of officers of the regular army, subject to such professional examination as may be approved by the Secretary of War. Vacancies in the grade of second lieutenant not filled by transfer shall be left for future promotions from the corps of cadets at the United States Military Academy.

"SEC. 23. That the ordnance department shall consist of 1 chief of ordnance with the rank of brigadier-general, 4 colonels, 6 lieutenant-colonels, 12 majors, 24 captains, and 24 first lieutenants, the ordnance storekeeper, and the enlisted men, including ordnance sergeants, as now authorized by law. All vacancies created or caused by this section shall, as far as possible, be filled by promotion according to seniority as now prescribed by law.

"SEC. 24. That the signal-corps shall consist of 1 chief signal-officer with the rank of brigadier-general, 1 colonel, 1 lieutenant-colonel, 4 majors, 14 captains, 14 first lieutenants, 80 first-class sergeants, 120 sergeants, 150 corporals, 250 first-class privates, 150 second-class privates, and 10 cooks: *Provided*, That vacancies created or caused by this section shall be filled by promotion of officers of the signal-corps according to seniority, as now provided by law. Vacancies remaining after such promotions may be filled by appointment of persons who have served in the volunteer signal-corps since April 21, 1898: *Provided*, That the President is authorized to continue in service during the present emergency, for duty in the Philippine Islands, 5 volunteer signal-officers with the rank of first lieutenant and 5 volunteer signal-officers with the rank of second lieutenant. This authority shall extend only for the period when their services may be absolutely necessary.

"SEC. 25. That the officers of the Record and Pension Office of the War Department shall be a chief of said office with the rank of brigadier-general and an assistant chief of said office with the rank of major: *Provided*, That any person appointed to be chief of the Record and Pension Office after the passage of this act shall have the rank of colonel.

"SEC. 26. That so long as there remain any officers holding permanent appointments in the adjutant-general's department, the inspector-general's department, the quartermaster's department, the subsistence department, the pay department, the ordnance department, and the signal-corps, including those appointed to original vacancies in the grades of captain and first lieutenant under the provisions of sections 16, 17, 21, and 24 of this act, they shall be promoted according to seniority in the several grades, as now provided by law, and nothing herein contained shall be deemed to apply to vacancies which can be filled by such promotions or to the periods for which the officers so promoted shall hold their appointments, and when any vacancy, except that of the chief of the department or corps, shall occur, which can not be filled by promotion as provided in this section, it shall be filled by detail from the line of the army, and no more permanent appointments shall be made in those departments or corps after the original vacancies created by this act shall have been filled. Such details shall be made from the grade in which the vacancies exist, under such system of examination as the President may from time to time prescribe.

"All officers so detailed shall serve for a period of four years, at the expiration of which time they shall return to duty with the line, and officers below the rank of lieutenant-colonel shall not again be eligible for selection in any staff department until they shall have served two years with the line.

"That when vacancies shall occur in the position of chief of any staff corps or department the President may appoint to such vacancies, by and with the advice and consent of the Senate, officers of the army at large not below the rank of lieutenant-colonel, and who shall hold office for terms of four years. When a vacancy in the position of chief of any staff corps or department is filled by the appointment of an officer below the rank now provided by law for said office, said chief shall, while so serving, have the same rank, pay, and allowances now provided for the chief of such corps or department. And any officer now holding office in any corps or department who shall hereafter serve as chief of a staff corps or department and shall subsequently be retired,

shall be retired with the rank, pay, and allowances authorized by law for the retirement of such corps or department chief: *Provided*, That so long as there remain in service officers of any staff corps or department holding permanent appointments, the chief of such staff corps or department shall be selected from the officers so remaining therein.

"SEC. 27. That each position vacated by officers of the line, transferred to any department of the staff for tours of service under this act, shall be filled by promotion in the line until the total number detailed equals the number authorized for duty in each staff department. Thereafter vacancies caused by details from the line to the staff shall be filled by officers returning from tours of staff-duty. If under the operation of this act the number of officers returned to any particular arm of the service at any time exceeds the number authorized by law in any grade, promotions to that grade shall cease until the number has been reduced to that authorized.

"SEC. 28. That vacancies in the grade of field-officers and captain, created by this act, in the cavalry, artillery, and infantry shall be filled by promotion according to seniority in each branch, respectively. Vacancies existing after the promotions have been made shall be provided for as follows: A sufficient number shall be reserved in the grade of second lieutenant for the next graduating class at the United States Military Academy.

"Persons not over forty years of age who shall have at any time served as volunteers subsequent to April 21, 1898, may be ordered before boards of officers for such examination as may be prescribed by the Secretary of War, and those who establish their fitness before these examining boards may be appointed to the grades of first or second lieutenant in the regular army, taking rank in the respective grades according to seniority as determined by length of prior commissioned service; but no person appointed under the provisions of this section shall be placed above another in the same grade with longer commissioned service, and nothing herein contained shall change the relative rank of officers heretofore commissioned in the regular army.

"Enlisted men of the regular army or volunteers may be appointed second lieutenants in the regular army to vacancies created by this act, provided that they shall have served one year, under the same conditions now authorized by law for enlisted men of the regular army.

"SEC. 29. That to fill vacancies occurring from time to time in the several organizations serving without the limits of the United States with trained men, the President is authorized to enlist recruits in numbers equal to 4 per centum in excess of the total strength authorized for such organizations.

"SEC. 30. That the President is authorized to maintain the enlisted force of the several organizations of the army at their maximum strength as fixed by this act during the present exigencies of the service, or until such time as Congress may hereafter otherwise direct: *Provided*, That in the event of the enlistment of a soldier in the army for the period required by law, and after the expiration of one year of service, should either of his parents die, leaving the other solely dependent upon the soldier for support, such soldier may, upon his own application, be honorably discharged from the service of the United States upon due proof being made of such condition to the Secretary of War.

"SEC. 31. That the Secretary of War is authorized to detach from the army at large such num-

ler of enlisted men as may be necessary to perform duty at the various recruiting stations, and while performing such duty one member of each party shall have the rank, pay, and allowances of sergeant, and one the rank, pay, and allowances of corporal of the arm of the service to which they respectively belong.

"SEC. 32. That when the exigencies of the service of any officer who would be entitled to promotion upon examination require him to remain absent from any place where an examining board could be convened, the President is hereby authorized to promote such officer, subject to examination, and the examination shall take place as soon thereafter as practicable. If upon examination the officer be found disqualified for promotion, he shall, upon the approval of the proceedings by the Secretary of War, be treated in the same manner as if he had been examined prior to promotion.

"SEC. 33. The President of the United States is hereby authorized to select from the brigadier-generals of volunteers 2 volunteer officers, without regard to age, and, by and with the advice and consent of the Senate, appoint them brigadier-generals, United States army, for the purpose of placing them on the retired list.

"And the President is also hereby authorized to select from the retired list of the army an officer not above the rank of brigadier-general who may have distinguished himself during the war with Spain, in command of a separate army, and to appoint, by and with the advice and consent of the Senate, the officer so selected to be major-general, United States army, with the pay and allowances established by law for officers of that grade on the retired list.

"SEC. 34. That all officers who have served during the war with Spain, or since, as officers of the regular or volunteer army of the United States, and have been honorably discharged from the service by resignation or otherwise, shall be entitled to bear the official title and, upon occasions of ceremony, to wear the uniform of the highest grade they have held by brevet or other commission in the regular or volunteer service.

"SEC. 35. That the Secretary of War be, and he is hereby, authorized and directed to cause preliminary examinations and surveys to be made for the purpose of selecting four sites with a view to the establishment of permanent camp grounds for instruction of troops of the regular army and National Guard, with estimates of the cost of the sites and their equipment with all modern appliances, and for this purpose is authorized to detail such officers of the army as may be necessary to carry on the preliminary work; and the sum of \$10,000 is hereby appropriated for the necessary expense of such work, to be disbursed under the direction of the Secretary of War: *Provided*, That the Secretary of War shall report to Congress the result of such examination and surveys, and no contract for said sites shall be made nor any obligation incurred until Congress shall approve such selections and appropriate the money therefor.

"SEC. 36. That when in his opinion the conditions in the Philippine Islands justify such action the President is authorized to enlist natives of those islands for service in the army, to be organized as scouts, with such officers as he shall deem necessary for their proper control, or as troops or companies, as authorized by this act, for the regular army. The President is further authorized, in his discretion, to form companies, organized as are companies of the regular army, in squadrons or battalions, with officers and non-commissioned officers corresponding to similar organizations in

the cavalry and infantry arms. The total number of enlisted men in said native organizations shall not exceed 12,000, and the total enlisted force of the line of the army, together with such native force, shall not exceed at any one time 100,000.

"The majors to command the squadrons and battalions shall be selected by the President from captains of the line of the regular army, and while so serving they shall have the rank, pay, and allowances of the grade of major. The captains of the troops or companies shall be selected by the President from first lieutenants of the line of the regular army, and while so serving they shall have the rank, pay, and allowances of captain of the arm to which assigned. The squadron and battalion staff-officers, and first and second lieutenants of companies, may be selected from the non-commissioned officers or enlisted men of the regular army of not less than two years' service, or from officers or non-commissioned officers or enlisted men serving, or who have served, in the volunteers subsequent to April 21, 1898, and officers of those grades shall be given provisional appointments for periods of four years each, and no such appointments shall be continued for a second or subsequent term unless the officer's conduct shall have been satisfactory in every respect. The pay and allowances of provisional officers of native organizations shall be those authorized for officers of like grades in the regular army. The pay, rations, and clothing allowances to be authorized for the enlisted men shall be fixed by the Secretary of War, and shall not exceed those authorized for the regular army.

"When, in the opinion of the President, natives of the Philippine Islands shall, by their services and character, show fitness for command, the President is authorized to make provisional appointments to the grades of second and first lieutenants from such natives, who, when so appointed, shall have the pay and allowances to be fixed by the Secretary of War, not exceeding those of corresponding grades of the regular army.

"SEC. 37. That the President is authorized to organize and maintain one provisional regiment of not exceeding three battalions of infantry, for service in Porto Rico, the enlisted strength thereof to be composed of natives of that island as far as practicable. The regiment shall be organized as to numbers as authorized for infantry regiments of the regular army. The pay, rations, and clothing allowances to be authorized for the enlisted men shall be fixed by the Secretary of War, and shall not exceed those authorized for the regular army. The field-officers shall be selected from officers of the next lower grades in the regular army and shall, while so serving in the higher grade, have the rank, pay, and allowances thereof. The company and regimental and battalion staff-officers shall be appointed by the President. The President may, in his discretion, continue with their own consent the volunteer officers and enlisted men of the Porto Rico regiment, whose terms of service expire by law July 1, 1901. Enlistments for the Porto Rico regiment shall be made for periods of three years, unless sooner discharged. The regiment shall be continued in service until further directed by Congress.

"SEC. 38. The sale of or dealing in, beer, wine, or any intoxicating liquors by any person in any post exchange or canteen or army transport or upon any premises used for military purposes by the United States, is hereby prohibited. The Secretary of War is hereby directed to carry the provisions of this section into full force and effect.

"SEC. 39. That nothing in this act shall be held or construed so as to discharge any officer

from the regular army or to deprive him of the commission which he now holds therein.

"SEC. 40. That the President be, and he is hereby, authorized to prescribe the kinds and quantities of the component articles of the army ration, and to direct the issue of substitutive equivalent articles in place of any such components whenever, in his opinion, economy and a due regard to the health and comfort of the troops may so require.

"SEC. 41. That the distinctive badges adopted by military societies of men who served in the armies and navies of the United States during the Spanish-American War and the incident insurrection in the Philippines may be worn upon all occasions of ceremony by officers and men of the army and navy of the United States who are members of said organizations in their own right.

"SEC. 42. That all laws and parts of laws inconsistent with the provisions of this act be, and the same are hereby, repealed."

Military Justice.—A measure to prevent the failure of military justice was passed by the House of Representatives Dec. 4, 1900, amended and passed by the Senate Feb. 16, 1901, modified after conference, and approved by the President March 2, 1901. Mr. Parker, of New Jersey, explained the scope of the bill, on its consideration by the House. He said:

"Mr. Speaker, this bill is well named a bill to prevent the failure of military justice. It was originally prepared by the War Department for the relief of the military courts and of the soldier. Every section has received very careful attention from the committee. The substance of the measure may be stated very briefly.

"At present, by statute, a military court may subpoena a witness to come before it, but when that witness appears there is no provision of law by which he can be compelled to testify. Military courts have no power to punish for contempt. In the present state of public feeling it was not thought advisable to give that power to military courts, but it was thought right that in such cases, in order to prevent the failure of justice, the military court might present the facts to the United States civil court, and that the man who refuses to attend and to testify might be tried and convicted of an offense against the United States.

"It will readily be seen that in cases, especially of stealing, embezzling, etc., where other parties who are not soldiers have been privy to the offense, justice will often fail as regards the soldier himself unless evidence can be compelled.

"The second section is directed to a curious anomaly. In the old days it was thought advisable to provide that courts-martial should sit only between the hours of eight in the morning and three in the afternoon. The result is that proceedings are often delayed by this provision. This bill repeals that section of the Articles of War.

"The third section gives to military officers who are appointed to conduct investigations the power to swear witnesses. At present officers of the Treasury Department or the Post-Office Department have the right to administer oaths; but an officer of the army, intent on the same course of investigation, has no such power, but must go to a notary public; and if he happen to be in Alaska or in any of the Western Territories, he may be unable to find an officer to take an affidavit. This bill simply gives a military officer the same power which belongs to other officers of the Government.

"The fourth section, Mr. Speaker, is one that tends most to the relief of the soldier himself; and I desire to call the special attention of the

members present to it. For the past ten or fifteen years there has existed in the army what has been called a summary court, which, in part, takes the place of a general court-martial, and has jurisdiction of small infractions of discipline and trifling offenses committed by the soldier. Under the court-martial system, a soldier who is accused of some trifling infraction of duty must wait sometimes even as long as three or four months before the court can be convened, and is subjected to great inconvenience, and often to imprisonment for the entire time.

"Of course, until the question of guilt or innocence can be tried by the court-martial, the soldier is under certain restraints according to the rules of the service. To avoid this condition, and for the punishment of slight offenses, like being late at quarters or failure to respond to roll-call, it is thought desirable to enlarge the jurisdiction and scope of the powers of these summary courts. By the present law the commanding officer of the post or of a detachment of troops might appoint a summary court to try small offenders and inflict punishment not exceeding confinement in the guard-house or labor for one month and the forfeiture of one month's pay.

"In the case of a non-commissioned officer, he might be reduced to the ranks in addition to the other punishment provided. The pending bill amends the jurisdiction given to such officers who are detailed to try these offenses, and is believed to be in the interest of the service as well as of the soldier himself. The amendment provides for cases that where there are several small offenses that might be tried together, or where the penalty is increased by reason of its being the second offense, under the law as it stands the accused is often kept waiting trial for months, in the more remote garrisons, and is sometimes forced to go long distances to a court-martial. To prevent these evils the jurisdiction of the summary court is extended to punishment for three months and forfeiture of three months' pay, but with the express proviso, which the committee added by amendment, that in case of trial by summary court the penalty shall not exceed one month, as heretofore, unless the accused himself, before the trial, waives his right to a trial by a court-martial and consents in writing to trial by the summary court.

"The fifth section of the bill is an amendment to the sixtieth article of war, which provides for the punishment of high crimes and misdemeanors in officers and men, such as embezzlement, stealing, frauds committed against the United States, and crimes of like character. The article provides that the party convicted shall be punished by fine or imprisonment, or by such other punishment as the court-martial may adjudge. This bill adds the words 'or by any or all of said penalties.'

"It will be recalled by members present that in the progress of a famous military trial within the last year, which involved what was believed to be the embezzlement of many thousands of dollars on the part of an officer of engineers, it was contended that only a fine or imprisonment could be awarded, and that on conviction of the fraud a guilty officer could not be punished by fine and imprisonment and by such other punishment as the court-martial may adjudge, but only by one of them, and that if both fine and imprisonment should be awarded the sentence would be illegal. It was therefore deemed necessary to add the words 'or by any or all of said penalties,' so that the full limit of punishment that the law evidently intended could be awarded in such cases. This new section provides that under this article

of war, on conviction, any or all of such penalties may be invoked."

The text of the measure as approved is as follows:

"That every person not belonging to the army of the United States who, being duly subpoenaed to appear as a witness before a general court-martial of the army wilfully neglects or refuses to appear, or refuses to qualify as a witness or to testify or produce documentary evidence which such person may have been legally subpoenaed to produce, shall be deemed guilty of a misdemeanor, for which such person shall be punished, on information, in the district court of the United States; and it shall be the duty of the United States district attorney, on the certification of the facts to him by the general court-martial, to file an information against and prosecute the person so offending, and the punishment of such person, on conviction, shall be a fine of not more than \$500 or imprisonment not to exceed six months, or both, at the discretion of the court: *Provided*, That this shall not apply to persons residing beyond the State, Territory, or District in which such general court-martial is held, and that the fees of such witness, and his mileage at the rates provided for witnesses in the United States district court for said State, Territory, or District shall be duly paid or tendered said witness, such amounts to be paid by the pay department of the army out of the appropriation for compensation of witnesses: *Provided*, That no witness shall be compelled to incriminate himself or to answer any questions which may tend to incriminate or degrade him.

"SEC. 2. That article 94, section 1342, of the Revised Statutes of the United States be, and the same is hereby, repealed.

"SEC. 3. That section 183 of the Revised Statutes of the United States be, and the same is hereby, amended so as to read as follows:

"SEC. 183. Any officer or clerk of any of the departments lawfully detailed to investigate frauds on, or attempts to defraud, the Government, or any irregularity or misconduct of any officer or agent of the United States, and any officer of the army detailed to conduct an investigation, and the recorder, and, if there be none, the presiding officer of any military board appointed for such purpose, shall have authority to administer an oath to any witness attending to testify or depose in the course of such investigation."

"SEC. 4. That article 83, section 1342, of the Revised Statutes of the United States be, and the same is hereby, amended to read as follows:

"ARTICLE 83. Regimental and garrison courts-martial and summary courts detailed under existing laws to try enlisted men shall not have power to try capital cases or commissioned officers, but shall have power to award punishment not to exceed confinement at hard labor for three months or forfeiture of three months' pay, or both, and in addition thereto, in the case of non-commissioned officers reduction to the ranks and in the case of first-class privates reduction to second-class privates: *Provided*, That a summary court shall not adjudge confinement and forfeiture in excess of a period of one month, unless the accused shall before trial consent in writing to trial by said court, but in any case of refusal to so consent, the trial may be had either by general, regimental, or garrison court-martial, or by said summary court, but in case of trial by said summary court without consent as aforesaid, the court shall not adjudge confinement or forfeiture of pay for more than one month."

"SEC. 5. That article 60, section 1342, of the

Revised Statutes of the United States be, and the same is hereby, amended by inserting after the words 'shall, on conviction thereof, be punished by fine or imprisonment, or by such other punishment as a court-martial may adjudge,' the words 'or by any or all of said penalties.'"

Hazing.—No subject attracted more general attention during the session than hazing at West Point. It was reported that Oscar L. Booz, of Bristol, Pa., had died from the effect of injuries received at the hands of his comrades while a cadet at the Military Academy, from June 20 until Oct. 4, 1898; and the House of Representatives ordered an investigation into the practise of hazing. A resolution was introduced Dec. 4, 1900, directing the Secretary of War to investigate the Booz case, and report to Congress. Dec. 11 the Committee on Military Affairs submitted a report containing the statement of the Secretary of War that he had ordered an investigation and had detailed Gen. Brooke and Cols. Gillespie and Clous to act in the matter. A statement from Col. Mills, superintendent at West Point, as to the Booz case was also submitted. A resolution was then passed by the House directing the Secretary of War to report the results of the military investigation, and also providing for a special committee, consisting of five members, to examine into and report upon the practise of hazing. The report of this committee contained the following interesting summary of the hazing devices commonly in use at West Point:

"They are divided into three general classes:

"1. Things done professedly for the good of fourth-class men or of the service.

"2. Things done to punish fourth-class men for violations of the upper-class code.

"3. Things done apparently without purpose, except to annoy, or for the mere amusement of upper-class men.

"Chief among the first of these classes is—

"**Bracing.**—This consists in requiring the fourth-class man to throw his shoulders back until the blades meet, draw his chin in, to a wholly unnatural degree, draw his abdomen up, and so walk that his toes touch the ground before his heels. It is claimed this is done to give a military carriage; but it has the contrary effect. It is such an exaggeration of the attitude of a soldier and is so irksome that when relieved from constraint the inevitable tendency is to more than normal relaxation and a slouchy carriage. The upper-class men have required the fourth-class men to brace at all times on the company streets, in camp, and frequently on other occasions, and this has on more than one occasion resulted in the victim fainting. Some doubt is cast upon the absolute belief upon the part of cadets that bracing is necessary to a good military bearing and that it is their duty to practise it to attain that end, as they never brace an upper-class man, no matter how slouchy he may be. Bracing is prohibited at the academy and has been frequently severely punished, but has been constantly and defiantly persisted in up to the time of the hearing by your committee.

"Under the like claim as to their motives the upper-class men have deprived fourth-class men of the privileges accorded them by the authorities, such as having Saturday afternoon leave, and have ordered fourth-class men to abstain from reading and letter-writing except on Sunday.

"The following are some of the second class of annoyances which have been imposed on fourth-class men:

"**Eagling.**—This consists in the fourth-class man standing on his toes with his arms extended,

dropping down to a sitting posture, rising part way, waving his arms like wings, again depressing his body to a sitting posture, rising in like manner, and continuing this during the period or for the number of times required. A fourth-class man has frequently been required to eagle 100 and 200 times, and in some cases 300 to 400 times, and in at least one case above 600 times.

"Wooden willying."—This consists in a fourth-class man taking the regulation gun and drawing it up to the position of 'fire'; then dropping it to the position of 'ready,' and continuing this to the period or number of times required. This has frequently been required 100 to 200 times.

"Doing footballs."—This consists in lying on the back and, without bending the knees, drawing the legs up until they are at right angles with the body and then dropping them to the earth, continuing this for such period or number of times as may be required. A lower-class man has frequently been required to do this from 75 to 100 times.

"Choo-chooing."—This consists in lying on the back and working both legs and arms in imitation of the motion of the wheels of a locomotive.

"Dipping."—This consists in placing one's body face down, with his hands and toes on the ground, or with the toes on the ground and the hands on a bucket, box, or the like, holding the body as straight as possible, and raising and lowering it by the use of the arms alone.

"Taking plebe's rest."—This consists in standing on the toe of one foot, say the left, and raising the right leg up, resting the right elbow on the knee and the chin in the right hand.

"Stretching."—This consists in hanging by the hands from a bar or rail on the canvas shelf in the tent, known as the stretcher, with the legs bent at the knees, so as to be sure and have no support from below. A fourth-class man is frequently required to hang this way until he drops from exhaustion.

"Holding out gun."—This consists in holding out both arms in front and at right angles with the body and supporting upon the hands a regulation gun.

"Swimming to Newburg."—This consists in lying face down and working the hands and feet as if swimming.

"Sitting on bayonet."—This consists in assuming, while on one's feet, a sitting posture, with the bayonet standing, point up, under him, so that if through weariness he allows his body to sink down he will be punctured with the bayonet.

"Holding out Indian clubs."

"Holding out dumb-bells."

"Holding out the cleaning box."

"Sweating."—This consists in putting a fourth-class man in a tent with sides and back down and making him put on his rain coat, and frequently wrap himself in the bedclothing, and remain there any time required up to about half an hour. This is done in July and August, and has more than once resulted in the fourth-class man fainting.

"Soirées."—It has been a common practise to call several fourth-class men into a tent at one time, between supper and tattoo, and put them through numerous forms of exercising, usually making them eagle, wooden willy, do footballs, and hang on the stretcher. These meetings have been known as soirées.

"Requiring the taking of hot sauce."—For a long time there has been kept at the academy, in connection with the mess, what is known as tropical sauce, which is similar to tabasco sauce. It is commonly known at the academy as hell sauce. Sometimes it is spoken of as pepper-sauce in the evidence, but it is much stronger than ordinary

pepper-sauce. It contains a large amount of oil of capsicum, and is intended for use in soup and other foods, and by reason of its highly irritant character is not fit for use by itself, when undiluted. It has with great frequency been administered as a punishment to fourth-class men at mess both while in camp and in barracks, and at some times at places other than the mess, in doses usually from two to five drops, but quite often in doses of fifteen drops, and in some cases between one and two teaspoonfuls.

"Eating quinine."—Cadets have been required to chew up as high as four quinine pills at a time, and, after thoroughly masticating, swallow them.

The following are some of the third class of annoyances which have been imposed:

"Qualifying."—This consists in requiring a fourth-class man to eat, at one sitting, an extraordinary amount of some otherwise unobjectionable article, such as molasses, prunes, peach-pie, or cabbage. In qualifying on molasses a cadet must usually eat at one time a soup plate full. In qualifying on prunes he has been made to eat as high as 130. A number of cadets have become nauseated by this process.

"Feet inspection."—This consists in going to a fourth-class man's bed with a candle and pulling the covers off his feet and inspecting them, and while doing so, intentionally, but apparently by accident, dropping hot grease from the candle on the bare feet.

"Dragging a man out of bed."—This is usually done by taking hold of the bed and dragging it and its occupant into the company street; but it has been done by taking the victim by the heels and dragging him out.

"Throwing sentinel in the ditch while on duty."

"Sliding on soaped floor."—This is done in the bath-room, and the fourth-class man is made, while naked, to slide over the floor after it has been soaped.

"Standing on head in bath-tub filled with water."—In this the fourth-class man is usually required, while standing as indicated, to recite something, and, as a result, the water runs into his nose and mouth and strangles him.

"Standing on head in tent between tattoo and taps."—Whenever an upper-class man puts his foot into a fourth-class man's tent between tattoo and taps the lower-class man must at once stand on his head; and some upper-class men require fourth-class men, while in this position, to recite something and make a left-hand salute with the right foot. Of late, to avoid being caught, it has been the practise of the upper-class men from in or across the company street to say, 'My foot is in your tent,' and thereupon the fourth-class man must act as if the foot were in fact there.

"Standing orders."—When these orders are given, a fourth-class man is required to stand up the entire day except while at mess and sink.

"Pillow fights."—These, harmless in themselves, are a serious wrong, because the upper-class men order the fourth-class men to engage in them at night, and then the latter are charged with demerits for making a disturbance in camp, and thus lose standing in their class.

"Cold baths in the company street."—A fourth-class man is required to entirely strip himself and run down the company street while parties on the sides throw cold water on him. The indecency of this performance needs no comment.

Many of the things done by the upper-class men are boyish pranks and are known as 'funny formations,' but even these are frequently conducted in such a way as to outrage the noblest feelings of the heart.

"Philip H. Sheridan, Jr., was compelled to ride a broomstick up and down the company street, saying, 'Turn, boys, turn; we are going back,' in mockery of his illustrious father's achievement at Winchester.

"Your committee feel that a sufficient number of the methods used to harass and annoy have been named and explained to enable the House to understand their general nature. As this system grew and became more and more oppressive it became necessary to have some effective means to coerce obedience to these unlawful behests of upper-class men, and to meet this demand a system of fighting has gradually grown up which is shocking in its character. Each of the upper classes has a regular fighting committee, and whenever it is reported, for example, to the president of the third class that some fourth-class man has refused to obey any of the unlawful and illegal orders of an upper-class man, or has in some other important respect violated the upper-class code, all of which, it must be borne in mind, is in direct conflict with the regulations and rules of the academy, the president calls his fighting committee together, and, if it thinks the charge true, it orders the fourth-class man called out and names the man who is to whip him."

The report closed with a stringent measure for the suppression of hazing, recommended by the committee as necessary, though the cooperation of the superintendent was assured, and the pledges of the cadets at West Point had been given to discontinue hazing. No separate bill on the subject was passed, however, but a prohibition and a penalty were put into the appropriation bill for the support of the Military Academy for the year ending June 30, 1902. That measure had been prepared early and passed the House of Representatives Dec. 20, 1900, and it was amended by the Senate and passed Feb. 6, 1901. The chief amendment was a section against hazing. The House did not concur, and a conference committee was appointed and a report adopted, adding to the appropriation bill the greater part of the measure recommended by the special committee of the House, which had investigated the matter. After a second conference the Senate amendment, slightly changed, was adopted, Feb. 27 and 28, and the appropriation bill was approved by the President March 2.

There was no extended debate on the subject, though the usual suggestions in favor of hazing as a means of discipline were brought forward, for the evidence seemed to be conclusive that the practises which prevailed at West Point had degenerated into something akin to bullying and brutality; and the popular sentiment against their continuance made its influence felt in Congress. The clause in the appropriation bill is as follows:

"Provided further, That the superintendent of the Military Academy shall make such rules, to be approved by the Secretary of War, as will effectually prevent the practise of hazing; and any cadet found guilty of participating in or encouraging or countenancing such practise shall be summarily expelled from the academy and shall not thereafter be reappointed to the corps of cadets or be eligible for appointment as a commissioned officer in the army or navy or marine corps until two years after the graduation of the class of which he was a member."

Increase of the Navy.—In the naval appropriation bill the following provision was made, authorizing the Secretary of the Navy to prepare for the building of new vessels:

"That, for the purpose of further increasing the

naval establishment of the United States, in accordance with the latest improvements in the construction of ships and the production of armor and armament therefor, the Secretary of the Navy is hereby directed to prepare the plans and specifications of two seagoing battle-ships and two armored cruisers, carrying the most suitable armor and armament for vessels of their class, and to submit to Congress a general description of such battle-ships and cruisers on the first Monday in December next; and said Secretary, in preparing said plans and description, shall review and further consider the questions whether said ships should be sheathed or unsheathed; what should be the weight and extent of the armor therefor; what should be the form and location of the turrets; whether any changes should be made in the number and kind of guns of the various sizes heretofore constituting the armament of similar ships; what, if any, torpedo-tubes should be built into large ships; to what extent electricity should be used for auxiliary purposes, and all other questions which have arisen and are now pending among naval architects and ordnance experts concerning the construction of battle-ships and cruisers under modern conditions; and said secretary shall, to such an extent as he may deem expedient, report to Congress in connection with said description his opinion upon the foregoing questions; and the Secretary of the Navy is hereby authorized to exercise his discretion as to the sheathing and coppering of naval vessels herein and heretofore authorized to be built."

In the discussion of the appropriation bill the old question as to the price of armor-plate came up. At the first session of the Congress it was provided, in authorizing the construction of new vessels, that \$4,000,000 should be appropriated for a Government establishment for the manufacture of armor-plate, in case the Secretary of the Navy could not secure from the two great corporations engaged in the business such armor-plate of the best quality at a reasonable and equitable price. These firms had set \$545 a ton as their minimum price, but the Secretary of the Navy, after the declaration of this policy, made contracts at a reduction of \$90 a ton. Mr. Butler, Senator from North Carolina, argued that even that rate was \$150 too much, and he criticized sharply the transactions between the armor-plate makers and the Government. He said:

"Mr. President, on the last page of the bill, page 75, beginning at line 6, there is an innocent-looking little paragraph, covering only a few lines, but it winds up at the end with an appropriation of \$4,000,000 for armor-plate.

"Mr. President, that is not all of it, either. If the amount that we have contracted for had been provided for in this bill, the item would have read \$16,564,550, which is the amount of the contract, and which we might as well pay now or pay in the next bill. Sixteen million five hundred and sixty-four thousand five hundred and fifty dollars is the required amount. And yet, with this enormous appropriation for this one item, to-day the Senate is absolutely precluded from considering the matter as far as action on the 36,000 tons of armor and over which is already contracted for under the last naval bill is concerned.

"Why? Because unwisely, as I think, when the last naval appropriation bill was before the Senate, we not only authorized the Secretary of the Navy to contract for this armor-plate, but we left him *carte-blanc* authority to contract for it at any price he saw fit, or at any figure that the armor trust might hold him up to. We not only, in my opinion, put him where he had to agree to

an exorbitant price, but, as I called to the attention of the Senate at that time, we established a most unwise and dangerous precedent when we surrendered and abdicated legislative power and responsibility and invested it in the hands of a secretary or the head of a bureau.

"Now, Mr. President, we are in for it for \$16,564,550, when a good price to these companies for the same armor would be at least \$5,000,000 less. Here goes a donation, a contribution to this armor trust of the modest sum of, at least, \$5,000,000 above a fair—a good profit. I say that because the official reports of the Secretary of the Navy on an official investigation authorized by Congress show it.

"I admit that the price paid for the armor of the Kearsarge and the Kentucky was \$589.13 per ton, but the armor for these vessels was contracted for by the act of March 2, 1895, before this question had been brought squarely to the attention of the Senate. There seems to have been very little discussion of the subject in Congress up to that time. But since that time the matter has been fully discussed at each session of Congress, and since Congress has been informed as to the facts it has each time decided that \$300 a ton was a fair price. We have done that year after year, and yet, strange to say, every year since that time we have paid more than \$400 a ton.

"Now, that is an anomaly; but yet it happened in this way: The Senate would say, 'The armor trust is holding us up because here are three battle-ships in the stocks waiting for armor; but if we do not finish them we are subject to fines and penalties which we have fixed in a contract; we may need these vessels; there may be a war, and we had better be held up by the throat by this armor trust and let them rob us for enough for these three battle-ships for the present'; and the Senate then would solemnly vote that 'hereafter we will not pay more than \$300 a ton.' The Secretary of the Navy would go on and make contracts for the next vessels authorized, and then report at the next session of Congress that he could not get armor at \$300 a ton, and therefore the vessels were on the stocks; the vessels were finished excepting the armor, and that we ought to submit to this robbery one more time to get enough for these vessels waiting for armor.

"Mr. President, that same thing has gone on over and over every year for the last five or six years. Now, why is it that the Senate and the Congress has allowed itself to be put into this ridiculous attitude—has allowed itself to be played with by this great armor trust? Is it a fact that we have been powerless? Is it a fact that we did not have the power or the capability to prevent it? No, Mr. President, the whole trouble lies in the fact that Congress has never yet had the courage, when fixing the price of armor, to say in the same law that if they will not furnish the armor for \$300 a ton, which is a profit of \$75 a ton on every ton to the factories, then we will build an armor-plate factory and make it ourselves.

"Every Senator on this floor knows that if we had put a clause like that in the first bill, six years ago, we would have got every pound of armor that we needed for \$300 a ton. And yet, for some reason, some strange reason never expressed, for some inscrutable purpose, by some mysterious method of reasoning, or refusing to reason, we have each year said, 'the next year we will not pay more than \$300,' but voted down the provision that if they do not make it for that price we will build an armor-plate factory. Our action in refusing to provide for a Government

armor-plate factory, in the event the trust refuses to furnish armor at \$300 a ton, has been an invitation to the armor-plate trust to refuse to furnish the armor and wait for us to surrender to them.

"Those of us who have tried to save the Government from being robbed by this great trust have each year pointed out that we would never be free from their clutches until we did make such a provision; and we pointed out, as far back as five years ago, that we might have a war in the near future, and in the case of a war we would still be more at the mercy of this trust than then, because in that case we might have to pay a much larger price on account of the exigencies of the situation, and not having time to build an armor-plate factory. The only reason why they did not make us pay more a ton than we have in the last war is because the war did not last long enough for them to get a pull at us.

"Am I justified in saying this about the men who own and control this great trust? I do not know a single one of them personally. They may be good men to their wives and children; they may be model husbands; they may sit in the amen corner of the church on Sunday and say 'Amen' as piously and more so than anybody else in it; they may be as upright and correct in their daily lives as most men, but I do know that their judgment is worth nothing, or that they deliberately tried to rob Congress with a false statement of facts."

Miscellaneous.—Two important measures were passed for the allotment of Indian lands, and both were approved March 1, 1901. They provided for the distribution of land in severalty, town sites, municipal corporations, and various reserved tracts. The act dealing with the Cherokee tribe set forth the main purpose as follows:

"All lands belonging to the Cherokee tribe of Indians in Indian Territory, except as herein reserved, shall be appraised at their true value, considering location and fertility of soil in each case, excluding improvements placed by allottee on the lands selected by him: *Provided, however,* That in cases where a citizen holding lands in excess of his rightful share has failed to sell or remove the buildings and fences from said excessive holding on or before the 1st day of July, 1901, the value of the buildings and fences shall be added to the value of the land by the appraisement committee. The appraisement shall be made under the direction of the Dawes Commission by such number of committees of appraisement as may be deemed sufficient to expedite the work, one member of each committee to be appointed by said commission and one by the principal chief, and if the members of any committee fail to agree as to the value of any tract of land, the value thereof shall be determined by said commission. The committees shall make report of their work to the commission as may be required. The commission shall prepare reports of the same in duplicate, and transmit them to the Secretary of the Interior for his approval, and when approved one copy shall be furnished the principal chief and one copy returned to the office of the commission for its use in making allotments as herein provided. All lands of said tribe, except as herein provided, shall be allotted by said commission among the citizens of the tribe entitled to share therein, so as to give to each an equal share of the whole, in value, as nearly as may be, in manner following: There shall be allotted to each citizen 80 acres of land (boundaries to conform to the Government survey as nearly as may be) which may be selected by him, so as to include improvements which belong to him. Eighty acres of land,

valued at \$6.50 cents per acre, shall constitute a standard allotment, and shall be the measure for the equalization of values; and any allottee selecting lands of less value than such standard may select other lands, not lawfully held or occupied by any other citizen, which, at their appraised value, will make his allotment equal in value to the standard so fixed." The act dealing with the Creek tribe was shaped with the same design: "All lands belonging to the Creek tribe of Indians in the Indian Territory, except town sites and lands herein reserved for Creek schools and public buildings, shall be appraised at their true value, excluding only lawful improvements or lands in actual cultivation. The appraisement shall be made under direction of the Dawes Commission by such number of committees, with necessary assistance, as may be deemed necessary to expedite the work, one member of each committee to be appointed by the principal chief; and if the members of any committee fail to agree as to the value of any tract of land, the value thereof shall be fixed by said commission. Each committee shall make report of its work to said commission, which shall from time to time prepare reports of same, in duplicate, and transmit them to the Secretary of the Interior for his approval, and when approved one copy thereof shall be returned to the office of said commission for its use in making allotments as herein provided. All lands of said tribe, except as herein provided, shall be allotted among the citizens of the tribe by said commission so as to give each an equal share of the whole in value, as nearly as may be, in manner following: There shall be allotted to each citizen 160 acres of land—boundaries to conform to the Government survey—which may be selected by him so as to include improvements which belong to him. One hundred and sixty acres of land, valued at \$6.50 cents per acre, shall constitute the standard value of an allotment, and shall be the measure for the equalization of values, and any allottee receiving lands of less than such standard value may, at any time, select other lands, which, at their appraised value, are sufficient to make his allotment equal in value to the standard so fixed."

In the sundry civil service appropriation bill it was provided: "That the commission authorized by the act entitled 'An Act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1898, and for other purposes,' approved June 4, 1897, to revise and codify the criminal and penal laws of the United States, is hereby directed to revise and codify, in accordance with the terms and provisions of said act and the acts supplementary thereto, all laws of the United States of a permanent and general nature in force at the time when the same shall be reported. That in performing this duty the said commission shall bring together all statutes and parts of statutes relating to the same subjects, shall omit redundant and obsolete enactments, and shall make such alterations as may be necessary to reconcile the contradictions, supply the omissions, and amend the imperfections of the original text; and may propose and embody in such revision changes in the substance of existing law; but all such changes shall be clearly set forth in an accompanying report, which shall briefly explain the reasons for the same. That the said commission shall arrange such revision under titles, chapters, and sections, or other suitable divisions and subdivisions, with head notes briefly expressive of the matter contained in such division, and with marginal notes so drawn as to point to the con-

tents of the text, and with references to the original text from which each section is compiled, and to the decisions of the courts of the United States explaining or construing the same; and shall provide by an index for an easy reference to every portion of such revision. That when the commission have completed such revision in accordance herewith, it shall cause a copy of the same, in print, to be submitted to Congress, that the statutes so revised and codified may be re-enacted if Congress shall so determine."

The following amendments to the Revised Statutes were made: Sections 183; 1111; 1225; 1319; 1338; 1342, article 60; 1342, article 83; 4427; 4472; 4708; 5153; 5546; 1342, article 94. Section 1278 was repeated.

The following acts were passed:

For the relief of settlers under the public land laws on lands within the indemnity limits of the grant to the Great Northern Pacific Railroad Company.

For the construction of a steam revenue cutter for service in the harbor of Boston.

To supplement existing laws relating to the disposition of lands.

To amend an "Act temporarily to provide revenue and a civil government for Porto Rico, and for other purposes."

Authorizing the Attorney-General, upon the request of the Secretary of the Interior, to appear in suits brought relative to school lands.

To provide for ports of entry and delivery in the Territory of Hawaii.

To amend the act for a civil government for the territory of Alaska.

Granting a charter to the General Federation of Women's Clubs.

Ratifying the agreement between Tennessee and Virginia with reference to the boundary-line of said States.

Providing for leaves of absence to certain employees of the Government.

To authorize the Secretary of the Navy to loan naval equipment to certain military schools.

To confirm to the city of Albuquerque, New Mexico, the "Ville de Albuquerque land grant."

For the preparation of plans or designs for a memorial or statue of Gen. Ulysses S. Grant in the city of Washington.

Requiring common carriers engaged in interstate commerce to make full reports of all accidents to the Interstate Commerce Commission.

Providing that entrymen under the homestead laws, who have served in the United States army, navy, or marine corps during the Spanish war or the Philippine insurrection, shall have certain service deducted from the time required to perfect title under homestead laws, and for other purposes.

Granting permission to the Indians on the Grand Portage Indian Reservation, in the State of Minnesota, to cut and dispose of the timber on their several allotments on said reservation.

To provide for celebrating the one hundredth anniversary of the purchase of the Louisiana territory by the United States by holding an international exhibition of arts, industries, manufactures, and the products of the soil, mine, forest, and sea in the city of St. Louis, in the State of Missouri, and for other purposes.

To restore to the public domain a small tract of the White Mountain Apache Indian Reservation, in the Territory of Arizona.

For the protection of birds, game, and fish in the District of Columbia.

For the reward of enlisted men in the navy or marine corps.

To incorporate the Society of American Florists and Ornamental Horticulturists within the District of Columbia.

Granting homesteaders on the abandoned Fort Fetterman Military Reservation, in Wyoming, the right to purchase one quarter section of public land on said reservation as pasture or grazing land.

Extending the mining laws to saline lands.

Supplementary to an act entitled "An Act to prohibit the coming of Chinese persons into the United States," approved May 5, 1892, and fixing the compensation of commissioners in such cases.

For beacon lights at Point Dums, Colorado; Point No Point, Chesapeake Bay; Hambrook Bar, Maryland; Cambridge, Maryland; Grubbs Landing, Delaware; and Hillsboro Point, Florida.

Extending immediate transportation privilege to Everett, Wash.; Fall River, Mass.; Honolulu, Hawaii; Milwaukee, Wis.; New Bedford, Mass.; Saginaw, Mich.

The construction of bridges was authorized across Alabama river, at Montgomery, Ala.; Arkansas river, near Pine Bluff, Ark.; Clinch river, Kingston, Tenn.; Choctawhatchee river, Geneva County, Alabama; Cumberland river, Carthage, and Nashville, Tenn.; Delaware river, Trenton, N. J.; Devil's lake, North Dakota; Little river, near Big lake, Arkansas; Lavaca Bay, near Nobles Point, Texas; Lumber river, Lumberton, N. C.; Manatee river and Gasparilla Sound, Florida; Mississippi river at Grays Point, Mo.; Mississippi river, Burlington, Iowa; Mississippi river, St. Louis, Mo.; Monongahela river, North Charleroi, Pa.; Monongahela river, Port Vue, Pa.; Nehalem Bay and river, Oregon; Pearl river, Monticello, Miss.; Red river, Fargo, N. Dak.; Red river, Hooks Ferry, Texas; Red river, Turnbolls island, Louisiana; Rock river, Henry County, Illinois; St. Joseph river, St. Joseph, Mich.; Tombigbee river, near Demopolis, Ala.; Warrior river, between Walker and Jefferson Counties, Alabama; Yalobusha river, Grenada County, Mississippi.

Various acts were passed dealing with the affairs of the District of Columbia; others making provisions for United States courts at different points; together with a multitude of private bills.

Appropriations.—The appropriations for the second session of the Fifty-sixth Congress, covering the year closing June 30, 1902, were as follows: Agriculture, \$4,578,400; army, \$115,735,649.10; diplomatic and consular, \$1,850,228.76; District of Columbia, \$8,504,969.94; fortification, \$7,364,011; Indian, \$9,596,221.09; legislative, etc., \$24,600,753.85; Military Academy, \$747,653.68; navy, \$78,653,973.75; pension, \$145,245,230; post-office, \$123,782,688.75; sundry civil, \$62,553,108.21; total, \$583,212,888.13. Deficiencies, \$14,340,574.94; total, \$597,553,463.07. Miscellaneous, \$8,000,000; total regular annual appropriations, \$605,553,463.07. Permanent annual appropriations, \$124,358,220; grand total regular and permanent annual appropriations, \$729,911,683.07.

The grand total of appropriations by the Congress for two years was \$1,440,062,545. The amount appropriated by the Fifty-fifth Congress was \$1,568,212,637. Mr. Cannon, of Illinois, in commenting upon the expenditures provided for, said: "Of the total appropriations made at this session, at least \$30,000,000 will not, in the light of past experience, be expended. This considerable margin between actual expenditures and appropriations made by Congress indicates a sum total of expenditures during the fiscal year 1902 of not exceeding \$699,911,683.07; and this sum includes \$53,000,000 on account of the sinking-

fund requirements for the fiscal year 1902, which, of course, under the terms of the law, will be met only to such extent as surplus revenues in the Treasury may permit. After meeting the fullest ordinary requirements of the public service under the appropriations which have been made, there will surely remain sufficient revenue for 1902 to meet not less than \$30,000,000 of the requirements of the sinking-fund, amounting in all, as stated, to \$53,000,000; and from other surplus money in the Treasury the whole sinking-fund obligations for the year can and will be met, if deemed expedient by the Secretary of the Treasury. The large deficiencies provided for during the fiscal year 1899 by the first regular session of the Fifty-fifth Congress, amounting to \$349,772,389.96, were designed almost in their entirety to cover the expenses of the military and naval establishments during the fiscal years 1899 and 1900, incident to the war with Spain. The most marked increase indicated in the appropriations for ordinary expenses of the Government made for the two years 1901 and 1902 at the two sessions of this Congress over those of the two preceding years, 1899 and 1900, provided for by the Fifty-fifth Congress, is for the postal service. This is the one branch of the public service that can not be restrained in its growth. It registers with precision and exactness the welfare of the nation and the agricultural, industrial, and commercial condition of the country. That the growth of the postal service for the two years provided for by this Congress is nearly 8 per cent. greater than was the growth of the appropriations made therefor by the Fifty-fifth Congress over that provided for by the Fifty-fourth Congress is a source of congratulation. It is an axiomatic truth in economic science that in order to reduce taxes public expenditures must first be retrenched. Acting upon this philosophy, the appropriations, as I have shown, have been reduced \$128,150,091.89 by this Congress under those provided for by its predecessor, and this has rendered possible a reduction of taxes in the sum of \$41,000,000."

Mr. Livingston, of Georgia, compared the appropriations with those made by the Fifty-fourth Congress, and he took a more gloomy view. He said: "The Fifty-sixth Congress (the one just closed) is the first Congress appropriating for the support of the Government since the close of the so-called Spanish-American War. The difference between the appropriations made by the Fifty-sixth Congress and those made by the Fifty-fourth Congress amounts to \$395,482,272.08. During the session just closed the demands of the people, through their representatives, for the construction of the Nicaragua Canal, have gone unheeded; for new public buildings they have been persistently denied. The river and harbor bill has been permitted to fail. The payment of just claims of honest people against the Government has not been provided for. It is doubtless conceived to be wisdom on the part of the leadership of the dominant party in Congress and the Administration to have denied these just demands of the people in order to provide for this enormous increase in expenditures that is almost wholly required in order to support the increased military establishment that has been inaugurated under the policy of the Republican party. Notwithstanding the heavy taxation of the people and the enormous sums that are collected each year to be poured in the Federal Treasury, the public works and internal improvements of every character throughout the country have practically been denied by this Congress. The most casual examination of this table makes comment practically un-

necessary. It shows that the army for each of the two years prior to the Spanish-American War cost a little over \$23,000,000, and but little more than \$46,000,000 for the two years covered by the Fifty-fourth Congress, while for the army for each of the two years since that war, 1901 and 1902, it costs nearly \$115,000,000, or \$230,000,000 for the two years, exclusive of deficiencies that have been provided for in large sums out of appropriations made for expenses of the Spanish War during the Fifty-fifth Congress. The navy cost for the years 1897 and 1898, respectively, \$30,562,000 and \$33,000,000, or \$63,562,000 for the two years, while for the years 1901 and 1902 these appropriations amount to \$65,140,000 and \$78,653,000, respectively, or nearly \$144,000,000 for the two years. For the payment of pensions the appropriations show an average annual increase of nearly \$4,000,000 for the current and next fiscal year over the years 1897 and 1898, or nearly \$8,000,000 for the two years. In a word, this table shows that the price to the people of the policy of this administration that has been thrust upon them by the Republican party is in round numbers \$400,000,000 within a period of two years, and the half that is contemplated has not yet been put in operation. The ship-subsidy measure, that has been deferred but not abandoned, will cost \$180,000,000 more, to say nothing of the lesser schemes."

These different interpretations of a few simple figures illustrate admirably the effect of partizan opinion on the mental processes of really able politicians, not meaning to be at all unfair. And the perusal of a debate in Congress opens strange vistas into human nature and historic possibilities.

CONNECTICUT. (See under UNITED STATES.)

COSTA RICA, a republic in Central America. The Congress is a single chamber of 21 representatives, elected for four years by electoral colleges, the members of which are elected by the votes of all self-supporting adult males. The President is elected for four years, and may be chosen for successive terms. The President for the term beginning May 8, 1898, is Rafael Iglesias. The Vice-Presidents are D. Iglesias Llorente, J. B. Quiros, Federico Tindoc, and Ascencion Esquivel. The Cabinet was composed as follows in the beginning of 1901: Secretary of State, having charge of the Departments of Foreign Affairs, Worship, Public Instruction, Public Charity, and Justice, J. A. Facio; Secretary of the Interior, Police, and Public Works, Ricardo Pacheco; Secretary of Finance, Juan B. Quiros; Secretary of War and Marine, José Astua Aquilar.

Area and Population.—The area of the republic is about 23,000 square miles. The population was estimated at 310,000 in 1899. San José, the capital, has about 25,000 inhabitants. In 1892 there were 6,289 foreigners, and about 1,000 immigrants have been added for each year since. There were 1,763 marriages, 13,012 births, and 9,925 deaths in 1897.

Finances.—The revenue in 1900 was 8,228,292 pesos, and expenditure 7,448,120 pesos. Of the revenue 3,388,000 pesos came from customs and 2,400,000 pesos from excise. Of the expenditure 4,926,310 pesos were for the general administration and 979,652 pesos for interest on the debt.

The internal debt in 1900 amounted to 6,916,072 colons. The colon is the new unit of value under the act of Oct. 26, 1896, adopting the gold standard, while continuing the legal tender of the existing silver currency, and establishing the ratio of 26½ to 1. The new subsidiary silver, coined at this ratio, will be legal tender up to 10 colons. The value of the colon is 46.5 cents in United States currency. Pieces of 2, 5, 10, and 20 colons

are coined. The money in circulation at present is principally paper, worth in exchange something less than the colon on the gold value of the silver peso. The new metallic currency was first put into circulation on July 16, 1900. There have been 5,000,000 colons coined, and the national silver currency amounts to about 1,000,000 colons. The foreign debt, amounting to £2,085,000, under an arrangement made with the creditors in March, 1897, will be reduced at the rate of £10,000 a year from 1917. The interest, on the plea of the depreciation of silver, was lowered to 3 per cent. on £525,000, and 2½ per cent. on £1,475,000.

Commerce and Production.—The total value of imports in 1899 was \$4,136,707 in gold, and of exports \$4,929,955. The export of coffee was \$2,943,000; of bananas, \$1,173,000; of woods, \$292,000; of precious metals, \$267,000; of hides and skins, \$109,000; of gum, \$106,000. The quantity of coffee exported was 33,807,000 pounds; of bananas, 2,962,770 bunches. Corn, rice, and potatoes are raised for food. The cultivation of cacao has been introduced. The working of gold and silver mines has almost ceased. The prosperity of the country depends almost solely on the coffee-crop, which is constantly increasing. The banana industry is developing rapidly, and also rubber-plantations, which require 7 or 8 years before any profits can be obtained. The Government in April, 1901, increased by 50 per cent. the duties on all importations, promising as an offset a reduction in the export duty on coffee, 1 cent a pound, a serious burden on producers, which by a later decree was abolished from Sept. 1, 1901. Imports in 1900 were exceptionally heavy.

Navigation.—During 1898 the ports of Limon and Punta Arenas were visited by 449 vessels, including 26 steamers which call monthly at Limon, 10 of them at Punta Arenas. The merchant navy consisted of 2 sailing vessels, of 551 tons, and 3 steamers, of 600 tons.

Railroads, Posts, and Telegraphs.—The railroads completed at the end of 1899 had a length of 162 miles. A railroad from Limon to Alajuela, 137 miles, is being carried through to the Pacific coast. In the middle of 1900 there remained only 21 miles to be completed between San José and the new port of Tiveves on the Pacific.

The number of internal letters, etc., that passed through the post-office in 1898 was 1,552,287; the number sent and received in the international service, 848,015.

The telegraphs in 1899 had 880 miles of wire. The number of messages was 342,572. There were 200 miles of telephone lines.

CRETE, an island in the Mediterranean, formerly a Turkish vilayet, since Dec. 21, 1898, an autonomous province under the suzerainty of the Porte, and under the administration of a high commissioner of France, Great Britain, Italy, and Russia. Georgios, Prince of Greece, born June 24, 1869, second son of the King of the Hellenes, was nominated High Commissioner. The Constitution was adopted on April 28, 1899. The legislative body is the Boule, the members of which are elected for two years in single districts in the proportion of 1 to 5,000 inhabitants, excepting ten members appointed by the Prince, making a total of 73 members. The Boule meets biennially. The members of the Prince's council, who are nominated by him and have the right to speak in the Chamber, but not to vote, were in the beginning of 1901 as follow: Finance, Constantinos M. Fournis; Interior, Manoussos R. Koundouros; Public Instruction and Worship, Nicolas G. Yamalakis; Justice and Foreign Affairs, Eleutheros C. Venzelos.

Area and Population.—The area of the island is 3,326 square miles. The population on June 17, 1900, was 307,369, of whom 267,266 were Orthodox Greeks, 33,281 Mohammedans, 726 Israelites, and 6,096 foreigners. Among the foreigners were 3,593 Greeks and 1,071 Turks. Canea, the capital, had 20,972 inhabitants; Candia, 22,331; Rethymo, 9,311. The population of the several departments was: Heracleion, 92,958; Canea, 76,354; Laseithi, 53,165; Rethymo, 59,835; Sphakia, 25,057. The Greek orthodox population of the island was by 62,256 persons more numerous than in 1881, while the Mussulman element showed a decline of 39,955, the total population having increased by 22,890.

Finances.—The budget for the financial year ending Sept. 13, 1900, made the receipts 5,274,118 drachmas, of which 1,524,320 drachmas were derived from direct taxation, 1,312,894 drachmas from taxes on consumption, 124,000 drachmas from monopolies, 802,671 drachmas from fees and dues, 137,848 drachmas from domains and public property, 125,748 drachmas from education receipts, 519,840 drachmas from other ordinary resources, and 726,797 drachmas advanced by the powers. The budget of expenditures was 5,274,118 drachmas, of which 729,300 drachmas were for justice, 1,230,960 drachmas for the interior, 1,382,240 drachmas for communications and public safety, 913,270 drachmas for public instruction and worship, and 1,018,348 drachmas for finance. There was a floating debt of 1,364,000 drachmas. The military force is a militia, service in which is obligatory on all Cretans. The powers promised to advance 4,000,000 drachmas, and of this Italy had paid 1,000,000 drachmas, Russia 352,500 drachmas, and France and Great Britain 12,500 drachmas each before Sept. 13, 1900. The financial condition of the island improved so greatly that it was found unnecessary to raise the loan of 4,000,000 drachmas authorized by the Boule in 1900. There was, however, no money for carrying out public works that the people demanded. The Boule neglected to appropriate funds to indemnify foreigners who had suffered losses during the civil war, although the powers had fixed the amount of the indemnities to be paid. In April, 1901, the Cretan Government received a fresh communication from the powers calling for immediate measures, and stating that the chamber had no right to discuss their decision. The money borrowed from the powers was being used for coinage purposes, and against this the English consul protested. A convention was signed in August by the Cretan Government and a delegate of the Ottoman Debt Commission by which the latter renounced all rights in the island in return for the payment of 1,500,000 drachmas and the concession of the salt monopoly for twenty years.

Commerce and Production.—The principal article of export is olive-oil. Minor exports are soap, carobs, raisins, wine, almonds, lemons, chestnuts, oranges, skins, cheese, animals, and cocoons. Many sheep and goats are kept. In 1899 the value of imports was 12,351,105 drachmas, and of exports 6,600,198 drachmas.

Political Affairs.—Successive generations of Christian Cretans have periodically risen in arms against Ottoman rule, proclaimed annexation to Greece, and fought valorously the Turkish nizams with the battle-cry of union or death. Members of every family found their death in these struggles, and thereby hallowed the hope of union so that no Cretan would be hardy enough to predict a different destiny for his island. The Greeks of Hellas, too, who have given their blood in this

cause, regard it as not less sacred. The Cretan insurrection of 1897 involved the Hellenes in the disastrous war with Turkey, which the Hellenes boldly undertook as soon as the six great powers occupied the principal towns of Crete, compelling both the Hellenes and the Turkish troops eventually to evacuate the island and the inhabitants to cease their sanguinary conflict. The powers imposed on Crete the present international *régime*, which was manifestly designed to be a stepping-stone to union, although they announced before proceeding to the intervention which saved Greece from the worst consequences of defeat that neither victor nor vanquished would be allowed to profit by the war. Cretan autonomy was recognized. A Greek prince was called to take the executive authority as High Commissioner of the intervening powers. Although Prince Georgios took office in the last days of 1898, it was not until the month of July, 1899, that the Government was handed over to him by the foreign officers who were in charge of the separate provinces. As a ruler he gave general satisfaction both to the Cretans and to the powers who gave him his commission. As a Greek prince he was bound to seize every opportunity to hasten annexation, and Greek and Cretan politicians, in view of the undecided and provisional status in which Crete was left, could not do otherwise than strive restlessly for the speedy realization of this object. The time, the manner, and the conditions of union depended on the decision of the powers; but indecision has always marked their course in the Eastern question, and their habit has been to allow a decision to be snatched from them by a *fait accompli*. This experience renders the Eastern peoples more headstrong and uneasy, and none of them are so restive and impatient as the Hellenes, who have seen their hopes of aggrandizement dashed by the unruly action of upstart nations, while their own ambitious enterprises have earned but small territorial advantages, and made them poor and on the whole weaker. The moment was not opportune for reopening the Cretan question when Prince Georgios, late in 1900, made the tour of the capitals of the protecting powers to press for union with Greece at the expiration of his commission in November, 1901. The early withdrawal of Germany and Austria from the joint control indicated sufficiently the difficulty of bringing about an agreement of the great powers. The very satisfactory nature of the Prince's rule showed that Crete could go on longer under the makeshift arrangement without detriment. After taking hold of the Government he manifested executive ability of no mean order, which he had developed as an officer of the Greek navy. He proceeded with the disarmament of the people, instituted courts that by the impartiality and justice of their decisions won respect for both the law and the judges, created a gendarmerie which under the training of Italian carabinieri curbed the crime and turbulence for which Cretans have always been notorious, established everywhere an efficient local administration, brought about better relations between the Cretans and the Mussulman population, and even attempted, though with indifferent success, to repatriate the Mussulmans who had fled from the island. The threat of retiring at the expiration of his mandate was the only lever with which Prince Georgios could expect to bring any pressure to bear upon the four powers, except his representation of the critical state of mind on the island, where the people were so excited that the new Boule shortly to be elected would be likely to proclaim union with Greece and bring about an uprising for its ac-

complishment. In St. Petersburg alone was he received with much show of sympathy, and in that capital he obtained a vague platonic approval of annexation at some more fitting moment. In London he met with a decided rebuff; in Rome, with a consequential negative in courteous form; in Paris, with a discouraging reply that indicated the real sentiments of Russia. As an alternative to immediate open annexation to the Hellenic Kingdom he suggested a veiled annexation through the substitution of Greek troops for the international garrison. The powers promised to take his proposals under advisement, and to give him a concerted reply. Accordingly a conference was held in Rome between the representatives of England, France, and Russia accredited to that capital and the Italian Minister of Foreign Affairs. Their formal decision was delivered to the Prince on Feb. 22, 1901, in the shape of a unanimous declaration of the four powers. In this document they stated that, while ready to examine with sympathy every proposition made to them with the object of ameliorating the condition of the island, they could not in the existing circumstances sanction any modification of the political situation in the sense indicated by the *exposé* of Prince Georgios. He was requested to discourage all manifestations in the island looking to a change in the *status quo*, as such manifestations could not in any degree be taken into consideration by the powers.

One of the most prominent Cretan politicians proposed the establishment of an autonomous principality. The Cretan Constitution, of which M. Venezelos, who brought forward this proposal in a meeting of the Prince's Council, was one of the chief framers, contemplated such a development. His colleague, M. Koundouros, in 1899 advocated a permanent principality hereditary in the male line of Prince Georgios. That would be the solution most pleasing to the Sultan, and Hellenes suspected that their own King and the Russian imperial family were not averse to seeing Prince Georgios the founder of a separate dynasty. That was not the idea of M. Venezelos, who intended to suggest a transitory autonomy, though probably with the view of preserving for Crete, when the island shall be merged eventually in the Hellenic Kingdom, the advantages of its superior economic and financial conditions by reserving a large measure of local self-government, as is the desire of all intelligent Cretans. The proposal of M. Venezelos, when made public by one of his enemies, brought upon his head a storm of denunciation, and the Prince dismissed from his Council the man so decried as a renegade and a traitor to the cause of Hellenism.

The elections for the Boule were held in April. Noisy demonstrations in favor of union with Greece were held everywhere, but this question furnished no issue, for there was none who would care to oppose the earliest possible union without reserve. Neither were there any opponents of the Prince, who was the standard-bearer of the holy cause. The Prince's ministers, however, were the objects of universal reprobation. They were charged with incompetence, favoritism, corruption, and extravagance. They were accused of wasting the public funds on useless objects, yet taking no steps to provide the public works for which the people clamored. The elections resulted in a complete victory for the Opposition party, which elected 53 members, besides 4 Mussulmans, while only 6 Ministerialists were returned, and these so dubious that after the Chamber met they went over to the Opposition, leaving the Prince's Council without one trusty supporter. The

friends of M. Venezelos and ex-President Spakianakis secured 30 seats. Prince Georgios appointed 10 members whose votes he could control.

The Chamber was convened on June 1. The ministers, who held office at the Prince's pleasure, showed no intention of resigning. The Prince in his opening speech promised that means would be provided for the institution of public works and the encouragement of agriculture. He transmitted the injunction of the powers, recommending the Cretans to rely on their sincere desire to take into account the legitimate wishes of the people and to abstain from premature and inopportune demonstrations. The Prince expressed the sentiment that the Cretans would appreciate the generous solicitude of the powers, and as soon as he had left the hall a resolution was offered expressing gratitude to the powers, and requesting them to crown their noble and philanthropic work by granting union with Greece. The newly elected members wished to remove the conception formed outside of Crete that they were less eager than their predecessors for union, or that they upheld the transitional scheme of M. Venezelos. The president of the Chamber put the resolution and declared it carried by the loud acclamations with which it was greeted, shutting off Deputies who rose to speak, including the Mussulmans, whose objections were afterward set down in writing and handed to the consuls. The Moslems were satisfied with the rule of Prince Georgios, but strongly opposed to union, mainly because they dreaded any change involving the departure of the international troops. There were only 33,000 left in Crete, and these began to make preparations to migrate when the Athenian and Cretan press confidently announced early in the year that the powers had decided in favor of union. The lot of these Moslems was not untroubled, notwithstanding the protection of the Prince and of the consuls, but it was tolerable, and this wealthy and industrious minority who once formed the ruling caste, now adapted themselves modestly to Christian supremacy, even refraining from electing their true proportion of Deputies, submitting to the arbitrary suppression of their electoral rights, and in many cases voting for Christians in order to keep on good terms with their neighbors, only resisting the pressure that was frequently exerted on them to induce them to change their religion.

Prince Georgios took it upon himself to present to the consuls the resolution of the Boule in favor of union with Greece, and the consuls, acting on instructions from their governments, returned the document into his hands. The relations between the High Commissioner and the representatives of the powers became strained in consequence of their refusal to accept the address of the Boule praying for union. On June 18 an identical declaration of the four guaranteeing powers was delivered to Prince Georgios, in which the powers declared their firm resolve to maintain the *status quo* established under their auspices, taking into consideration the general political situation, and that of Crete in particular, as well as the engagements they had contracted with the Sultan. They considered this situation to be best adapted to the interests of the country, its condition being far from normal, notwithstanding the progress already effected, and they appealed to the Prince to continue to exercise the mandate they had confided to him, and desired to know his intentions as soon as possible in view of the gravity of the interests at stake. In presenting this declaration the consuls conveyed the verbal explanations that any infringement of the rights of the Sultan might

endanger the peace of the East by subjecting Greece once more to the hostility of Turkey; that the present arrangement tended, in the opinion of the powers, to the material and moral progress of Crete owing to the exemption of the island from heavy taxation and to the simplicity and justice of its administration; and that any alteration introduced so soon might prove injurious to public tranquillity by awakening the slumbering fears of the Moslem population. The Prince replied in July, agreeing to accept a further mandate after the expiration of the three years for which he was originally appointed High Commissioner. In the address in reply to the Prince's speech, the Boule promised that the Cretan people would abstain from steps calculated to cause excitement or to disturb public order. The dissatisfaction of the Assembly with the Prince's Council was manifested as soon as M. Fournis asked for its approval of the budget for 1898. Documents referring to numerous objectionable acts were demanded for the information of committees charged with the investigation of the entire past administration. Whenever the Councilors appeared before the Assembly they had to listen to censures of their inefficiency, extravagance, and neglect of public works. When the Prince asked to have the right of appointing mayors entrusted to him instead of their being elected by the people, thereby removing a cause of popular excitement and dissension, the Boule passed the desired measure, though by a narrow majority. His desire for an unrestricted press censorship was not gratified. In the beginning of August the Councilor of Public Instruction resigned. A. Voreades was appointed to the place. On Sept. 10 the Prince relieved the Councilors of Justice and Finance of their functions, leaving only one member of the original Council still in office, the Councilor of the Interior.

CUBA, an island in the West Indies, formerly a Spanish colony, occupied by United States troops in December, 1898, and administered by a military Governor-General appointed by the President of the United States pending the establishment by the Cubans of a settled government capable of fulfilling international obligations. By the preliminaries of peace between Spain and the United States, signed on Aug. 12, 1898, confirmed by the definitive treaty of peace concluded at Paris on Dec. 10, 1898, Spain relinquished all sovereign rights over Cuba. The United States Government assumed the obligations for the protection of life and property for the time that the military occupation lasts, and the Governor-General, who is commander-in-chief of the United States forces in the island, controls every branch of the civil as well as of the military administration. The military governors appointed for Havana and each of the provinces report to him and act under his instructions. Brig.-Gen. Leonard Wood succeeded Major-Gen. John R. Brooke as Governor-General on Dec. 20, 1899. He is assisted in civil affairs by a Cabinet composed in the beginning of 1901 as follows: Agriculture, Commerce, and Industry, Perfecto Lacoste; Justice, Señor Berreiro; Public Instruction, Señor Varona.

The commander of the department of eastern Cuba, with headquarters at Santiago, was Col. Samuel M. Whitside; of the department of western Cuba, with headquarters at Quemados, Brig.-Gen. Fitzhugh Lee. The island is divided for administrative purposes into the provinces of Pinar del Rio, Havana, Matanzas, Santa Clara, Puerto Principe, and Santiago. The provinces are subdivided into 132 municipal districts, and these into nearly 1,200 barrios.

Area and Population.—The area of Cuba is estimated at 45,872 square miles. A census taken by the United States military authorities on Oct. 16, 1899, makes the population of the island at that date 1,572,797, compared with 1,631,687 at the census of 1887, 1,509,291 in 1877, 1,396,630 in 1861, 1,007,624 in 1841, 704,487 in 1827, 528,798 in 1817, 272,301 in 1792, and 172,620 in 1774. The number of colored inhabitants in 1899 was 553,443, or 32.1 per cent., compared with 528,798 in 1887, 485,897 in 1877, 603,046 in 1861, 589,333, being 58.5 per cent. of the population, in 1841, 393,435 in 1827, 314,983 in 1817, 118,741 in 1792, and 75,180, or 43.8 per cent. of the population, in 1774. The number of whites and others having no negro blood was 1,067,354 in 1899, compared with 1,102,889 in 1887, 1,023,394 in 1877, 793,484 in 1861, 418,291 in 1841, 311,051 in 1827, 257,380 in 1817, 153,559 in 1792, and 96,440 in 1774. The effect of the war of 1895-'98, in which two-thirds of the wealth of the island was destroyed, was to decrease the population about 12 per cent. Of the total population 89 per cent. were born in Cuba, 8 per cent. in Spain, and 3 per cent. in other countries. In the city of Havana 20 per cent. of the inhabitants were of Spanish birth. The total male population of voting age in 1899 was 417,993, of whom 290,905 were Cuban citizens, 76,669 were still in suspense, 9,500 claimed Spanish citizenship, and 40,919 were foreign and unknown citizens. Of these potential voters 70 per cent. were Cuban citizens, 2 per cent. were Spanish citizens, 18 per cent. had not elected between Cuban and Spanish citizenship, and 10 per cent. were citizens of other countries or of unknown citizenship. Among the Cuban citizens 59 per cent. were illiterate; among the Spanish, 12 per cent.; among those in suspense, 22 per cent.; among the foreigners, 65 per cent. Of the persons of foreign or unknown citizenship half were Chinese, etc., and most of the rest were of Spanish birth. Of the Cuban citizens only 220 whites and about as many colored were born outside of Cuba. Of those of Cuban birth 184,471 were white and 106,214 colored. The total foreign population was 172,535, of whom 129,240 were Spaniards, 14,863 Chinese, 12,953 African negroes, 6,444 Americans, 1,968 Spanish-Americans, 1,279 French, 731 British, 501 Italians, 284 Germans, and 4,272 from other countries. Of the foreigners 82 per cent. were males, and over one-third lived in Havana, the great majority being Spanish workmen attracted to Cuba by high wages. The African negroes were slaves smuggled into the island, most of them obtained from Arab slave-traders in the Congo region before the abolition of the slave-trade in 1884. The total number of native whites in 1899 was 910,299; blacks, 520,300; persons of mixed blood, 270,805; foreign whites, 142,198; Chinese, 14,857. In regard to citizenship, 1,296,367 were Cuban, 20,478 Spanish, 175,811 undecided, 79,526 foreign, and 616 unknown. The total population comprised 815,205 males and 757,592 females. Of the native white population, 447,372 were males and 462,926 females; of the foreign white population, 115,760 were males and 26,458 females; of the negroes, 111,898 were males and 122,740 females; of the mixed races, 125,500 were males and 145,305 females; of the Chinese, 14,694 were males and 163 females. Of the total population 1,108,709 persons were single, 246,351 married, and 131,787 living together by mutual consent. The number of widows was 85,112. Of the total population 47.1 per cent. lived in cities and towns of over 1,000 inhabitants. The population of Havana province was 424,304; of Matanzas, 202,444; of Pinar del Rio, 173,064;

of Puerto Principe, 88,234; of Santa Clara, 356,536; of Santiago, 327,715. The city of Havana had 235,981 inhabitants; Santiago de Cuba, 43,090; Matanzas city, 36,374; Cienfuegos, 30,038; Puerto Principe, 25,102; Cardenas, 21,940; Manzanillo, 14,464; Guanabacoa, 13,965; Santa Clara, 13,763; Sagua la Grande, 12,728; Sancti Spiritus, 12,696; Regla, 11,363; Trinidad, 11,120; Pinar del Rio, 8,880; San Antonio de los Baños, 8,178; Guines, 8,179. The aggregate population of these cities was 507,831; of other towns of over 1,000 inhabitants, 233,442; of country districts, 831,524. The density of population for the whole island was 35.7 to the square mile, ranging from 153 in Havana, which is as thickly populated as Connecticut, to 55 in Matanzas, 37 in Santa Clara, 35 in Pinar del Rio, 26 in Santiago, and 8 in Puerto Principe, which is about the same as in Texas. The Cubans are an industrious people, and they begin to work at an early age, 97 per cent. of the male population over fifteen years of age and 17 per cent. of the boys below that age being engaged in productive occupations. The women, especially the whites, seldom work outside of their own houses. The census shows that 292,331 males and 6,866 females are employed in agriculture, mining, and fishing, a total of 299,197, or 48.1 per cent. of the total number engaged in gainful occupations; 95,769 males and 46,167 females, 141,936 in all, were employed in personal and domestic service, being 22.8 per cent. of the total productive population; 93,034 persons, 14.9 per cent. of the total, comprising 82,012 males and 11,022 females, were employed in manufactures; 79,427, being 12.8 per cent. of the total, comprising 78,766 males and 661 females, were engaged in commerce and transportation; and 8,736, or 1.4 per cent. of the total, comprising 7,096 males and 1,640 females, followed the professions. Under the Spanish *régime* education was neglected. In 1861 the illiterates constituted 70 per cent. of the white and 95 per cent. of the colored population. In 1887, of 1,102,889 whites, 715,575, or 64 per cent., could not read, and among 528,798 colored the number was 463,782, or 87 per cent. Under the military administration of the United States great attention was given to education, and a new system of public schools was organized. In 1899 there were 1,004,884 persons, or 63.9 per cent. of the total population, unable to read, 33,003, or 2.1 per cent., able to read but not to write; 514,340, or 32.7 per cent., able to read and write, but without superior education; and 19,158, or 1.2 per cent., possessing a higher education. Of the white population 208,962 males, or 47.4 per cent., and 191,363 females, or 51.5 per cent., and of the colored 142,729 males, or 73.8 per cent., and 147,506 females, or 70.4 per cent., were unable to read.

Finances.—The revenue for the financial year 1899 was estimated before the Spanish evacuation at \$26,359,650 in silver, of which \$14,705,000 were derived from customs. The expenditure was estimated at \$26,356,731, of which \$12,574,709 were for the debt, \$5,574,708 for war, and \$2,645,150 for the executive authority. The revenue for the calendar year 1900 was \$16,938,925, of which \$15,697,361 were derived from customs, \$777,236 from internal taxes, \$318,923 from postal service, and \$144,705 from various sources. The expenditures were \$2,422,577 for the military department, including rural guards, \$2,333,709 for finance, \$1,738,821 for public works, \$1,345,911 for State and government, \$665,951 for justice, \$594,567 for public instruction, and \$199,998 for agriculture; total, \$9,301,534, besides which \$8,019,090 were given in supplementary grants to municipalities, making the total disbursements \$17,320,621. This leaves

a deficit of \$381,699, which was met from the surplus of the preceding year. For civil government, finance, justice, instruction, and public works the expenditures were a sixth heavier than the average under the Spanish Government, but the total was then a third greater, even including the extraordinary grants to municipalities, as the military expenses exceeded all the others except the debt, which consumed nearly half the revenue. The average rate of customs duties, which produce 90 per cent. of the revenue, is 21 per cent. on all merchandise and 22½ per cent. on dutiable merchandise, but is not leviable *ad valorem* except in the case of a few articles. On jerked beef the duty amounts to 31½ per cent.; on breadstuffs, 21 per cent.; on fresh and preserved meats, 19½ per cent.; on dairy-products, 15½ per cent.; on wines and spirits, 70½ per cent.; on beer, 25½ per cent.; on cotton goods, 30½ per cent.; on iron and steel, 15 per cent.; on machinery, 14 per cent.

By the Constitution adopted by the Cuban Convention on Feb. 21, 1901, all liability for Cuban bonds issued under Spanish rule was repudiated. These bonds, of which £23,328,000, paying 6 per cent., were issued prior to 1890 and between £9,000,000 and £10,000,000, paying 5 per cent., were guaranteed by the Spanish Government and secured on the Cuban revenues, and the interest is now paid by the Spanish Government. Havana has a debt of £1,918,640, and proposes to raise £3,000,000 for sewerage and other improvements.

Commerce and Production.—Cuba is mainly an agricultural country. Prior to the war of independence which began in 1895 there were 90,960 plantations, farms, orchards, and cattle-ranges, valued at \$200,000,000. In 1899 there were only 60,711 farms having an average size of 143 acres, the average area under cultivation being 13 acres. The devastation of the war has been in a large degree repaired by the industry of the people, especially in the sugar-growing provinces, where the planters and manufacturers have resuscitated the sugar business without extraneous aid except the rations that the United States Government distributed among the starving agricultural population. They have learned economical methods of production from their poverty, so that the output of the island promises in a few years to reach 1,500,000 tons per annum, enough to supply the entire needs of the United States. The crop of 1901 was 600,000 tons, twice that of 1900, and new plantings will bring the crop of 1902 up to 800,000 or 900,000 tons. Although the principal crop of the island, sugar does not cover more than 2,000,000 acres, not a fifth of the area that can be made suitable for its cultivation. The exports of sugar for the year ending July 31, 1900, were 263,835 tons.

Of the entire area of Cuba 30 per cent. was occupied by farms in 1899, but only 10 per cent. of the farms, or 3 per cent. of the surface of the island, was under cultivation. Of the cultivated area 40.7 per cent. was owned and tilled by whites, 44.2 per cent. was rented by whites, 2.8 per cent. was owned by colored cultivators, and 8.2 per cent. was rented to colored tenants. The large estates, exceeding 325 acres, are not numerous, being only 0.5 per cent. of the total number of holdings, yet they contain 27 per cent. of the total cultivated area, while farms of less than 8 acres, constituting 63.5 per cent. of the total number, contain only 15.5 per cent., farms between 8 and 16 acres, constituting 19.2 per cent. of the total number, contain 12.5 per cent., and 16.1 per cent. is in farms between 32 and 100 acres, 5.1 per cent. of the total number.

The tobacco crop in the province of Pinar del

Rio, where the plants are sheltered from destructive winds by the Sierra de los Organos, and where the soil has some peculiar quality or the ferments in the air some virtue not found elsewhere, is grown with great care, the plants, which cost about \$1.50 a thousand, being protected with pains from insects and weeds, cultivated frequently, kept free from suckers, and topped either high or low, in one case leaving 8 or 10, in the other 18 or 20 leaves, which are cut in pairs in January, dried during three or four weeks, sweated for some time, being sprayed with water to give them a darker color and perhaps a better flavor, and then sorted and packed for market in bales of 50 kilograms. A second crop is grown from suckers, which is suitable for fillers. The production of this Vuelta Abajo tobacco before the war was 260,000 bales a year, and the cost of production is \$47 a bale. The consumption in Havana was 140,000 bales, leaving 120,000 bales for export, mostly to Key West and New York. Of the partidos leaf, grown in Havana province, 70,000 bales were raised, of which 60,000 were exported to Key West. The average production of the Remedios tobacco of Santa Clara was 130,000 bales, and the export 100,000 bales. Santiago produced 100,000 bales of the coarse Gibara tobacco, of which 60,000 bales were used by the regies of Europe and the remainder smoked in the district. The average tobacco crop has been 560,000 bales of 110 pounds, of which 340,000 bales were exported, three-fourths of this to the United States, and the rest was manufactured into cigars and cigarettes in Havana or consumed in the country. The export of cigars increased from 91,812,000 in 1898, the year of the war, to 215,236,371 in 1899, of which about 38,000,000 went to the United States, 64,000,000 to Great Britain, 72,000,000 to Russia, Germany, Austria, and Italy, and 11,000,000 to Spain and France. The exports of cigarettes were 11,529,688; of leaf tobacco, 15,388,806 pounds from Havana and about 8,000,000 pounds from other ports. The value of cigar exports was about \$11,650,000; of leaf tobacco, \$8,800,000. The exports of leaf in 1900 were \$9,720,266, of which over \$8,000,000 went to the United States and nearly \$1,000,000 to Germany. The value of cigar exports was \$11,599,985, of which the United States took \$4,503,962, England \$3,964,063, Germany \$836,231. The cigarettes exported were \$305,889, Spain taking over a third.

The eastern parts of Cuba are adapted to the cultivation of coffee, an industry that once flourished, having been introduced by planters who emigrated from Santo Domingo. Hurricanes in 1843 and 1846, the competition of Brazil and Java, and the profits in the sugar industry caused a great decline, although the Cuban coffee was of as good a flavor and the trees as productive as could be found in the West Indies or South America. In 1894 there were 191 plantations, most of them in Santiago province. In 1900 the crop amounted to 130,000 bags of 134½ pounds, not nearly enough for home consumption. The cultivation of cacao in Cuba was rendered unproductive by the devastations of war and excessive taxes. Oranges were shipped to the United States until the development of orange cultivation in Florida and afterward in California. The Cuban oranges are delicate and juicy, and shaddockes, limes, lemons, pineapples, olives, coconuts, and other fruits grow in perfection. Bananas were shipped in large quantities to the United States before the last war from the plantations in Puerto Principe and Santiago.

Few countries are better suited to stock-raising

than Cuba, where grass is abundant at all seasons and running water is found everywhere in the grazing regions. The berries of the palm trees are an unfailing food supply for hogs. Once it was an important industry, but it was killed by the frequent revolutions and the tax of 10 per cent. that the Spanish Government imposed. Duties of \$85 a head on horses, \$10 on cows, \$8 on calves, and \$7 on hogs, and the seizure of stock on military requisitions, prevented recovery. The last war stripped Cuba of live-stock. In 1899 there were 400,000 cattle imported, and in 1900 there were 290,000. The island is being rapidly restocked with domestic animals. The cattle imports for breeding were 60,690 in 1899 and 85,225 in 1900, the greater part being oxen for draft and food. Of horses, asses, and mules about 10,000 were imported in 1899 and 17,000 in 1900. The Government in 1900 distributed for breeding purposes 762 cattle and 65 horses. The number of draft oxen at the census of October, 1899, was 164,948, nearly all of them having been imported since the beginning of the year. The number of range cattle was 211,702. Further importations and the natural increase of 20 per cent. per annum make the total number of cattle on Dec. 31, 1900, about 550,000. All owners are obliged by a recent law to register their cattle before the municipal authorities. There were 88,001 horses, 18,474 mules, 1,842 asses, 9,982 sheep, 18,564 goats, and 358,868 hogs on Oct. 16, 1899.

The forests, covering 13,000,000 acres, or nearly half the area of the island, are rich in timber and cabinet woods and in forest produce. The Government owns 1,250,000 acres of forests. The Cuban pine, which is the commonest forest tree in the interior, affords excellent lumber. The royal palm is the most useful of 30 species of palm growing on the island, its leaves forming the roof and its trunk providing the walls of the cabins of the poor. The more valuable woods are mahogany, ebony, granadilla, majuga, cedar, walnut, ceiba, lignum-vitæ, and oak. The forests are found mainly in the eastern parts of the island, in the provinces of Santiago and Puerto Principe. Iron ore, found at the base of the Sierra Maestra, between Guantanamo and Santiago de Cuba, is of the hematite variety, rich and easy to work. Until the industry was stopped by the war in 1895 about 3,000,000 tons had been exported, nearly all of it to the United States. Copper has not been mined since 1868, although a rich deposit was formerly worked at El Cobre in Santiago province, and discoveries have been made in other parts of the island. Asphaltum is found in various places, that taken from beds near Santa Clara being used to make gas for lighting the city. The plains of Puerto Principe are covered with parana and guinea grass, which affords excellent and abundant pasturage for cattle. In Santa Clara, Matanzas, and Havana they have been brought up to a high state of cultivation, and, owing to the richness of the soil, the equable temperature, and abundant rainfall, form one of the most productive regions of the earth. In the Vuelta Abajo, west of Havana, the unrivaled Cuban tobacco is raised. The total value of rural property, as assessed by the Spanish Government, was \$184,724,836, of a renting value of \$25,679,452, about 14 per cent. City property was valued at \$138,917,060, the rental at \$14,608,850, a little over 10 per cent. The war and antecedent causes left a mortgage indebtedness of 58 per cent. of the assessed value on rural and 79 per cent. on urban property.

The total value of imports in 1899 was \$64,343,000, and of exports \$43,880,820. The total im-

ports of merchandise in the year ending June 30, 1900, were valued at \$71,681,187, and exports at \$45,228,346. The trade with the principal countries, including gold and silver, was as follows:

COUNTRIES.	Imports.	Exports.
United States.....	\$34,347,008	\$36,912,629
Great Britain.....	11,955,153	4,354,817
Spain.....	11,387,658	1,006,546
France.....	4,130,416	2,929,278
Germany.....	2,629,654	2,297,545
Colombia.....	2,136,658	113,184
Porto Rico.....	1,611,237	81,580
Uruguay.....	1,308,647	100,166
Canada.....	44,154	234,642

The imports of agricultural implements were \$441,794, two-thirds of them from the United States and the rest mostly from England; imports of cattle were \$10,326,304, three-tenths from the United States, nearly the same from Mexico, and over a fifth from Colombia; imports of flour and wheat were \$2,154,702, practically the whole coming from the United States; imports of coffee were \$1,697,796, more than half from Porto Rico and the rest mostly brought from New York; imports of cotton manufactures were \$6,688,841, of which England supplied about 45 per cent., Spain 30 per cent., the United States 12 per cent., France 9 per cent.; imports of iron were \$1,015,256, a little over two-thirds from the United States and less than a third from Great Britain; imports of shoes were \$2,283,083, three-fourths from Great Britain and one-fifth from the United States; imports of engines were \$116,626, practically all American engines; imports of sugar and distilling machinery, nearly all of it American, \$252,340; imports of olive-oil were \$759,334, nearly all Spanish; imports of crude petroleum were \$759,334; imports of paints and colors were \$264,383, more of them from England than from the United States; imports of paper were \$779,517, from Spain, United States, Germany, and France; imports of meat, salted and pickled, were \$2,998,519, nearly half of it from the United States, and over two-fifths from Uruguay; imports of lard and tallow were \$2,542,158, practically all of it from the United States; imports of rice were \$3,414,388, the main part from England and some from German ports; imports of silk manufactures were \$490,307, over three-fifths from France; imports of potatoes, \$884,211, seven-tenths from the United States; imports of wines and cordials were \$2,354,187, practically all coming from Spain; imports of woolen knit goods, coming from England and Germany, were \$736,551. The exports of wood and manufactures thereof in 1900 were \$649,959, of which \$404,396 went to the United States; of rum, \$189,024, about \$100,000 going to England; of iron ore, nearly all of it to the United States, \$637,846; of cacao, mostly to the United States, \$281,211.

Navigation.—During 1899 the port of Havana was visited by 3,488 vessels, of 2,272,000 tons; Cienfuegos by 394 vessels, of 473,302 tons. In 1900 there were 3,276 vessels, of 2,078,126 tons, entered and 3,226, of 2,079,802 tons, cleared at Havana. The largest tonnage was American, after which came the Spanish, British, Cuban, Norwegian, German, and French.

Railroads, Posts, and Telegraphs.—There are 950 miles of railroad, of which 551 miles belong to English companies.

The telegraph lines have a total length of 2,300 miles. Telegraphs and telephones are the property of the Government, but the telephones are leased for a limited time to a company. Cables connect Havana with Santiago de Cuba and

Cienfuegos, with Jamaica, Porto Rico, and other West Indian islands and Panama, with Florida, and with Hayti, Venezuela, and Brazil.

The postal service has been reestablished and extended by the American military government. The expenses considerably exceed the income.

The Constitutional Convention.—By the joint resolution, declaring that the people of Cuba are and of right ought to be free and independent, adopted by the United States Congress on April 13, and approved by the President on April 20, 1898, the United States disclaimed any intention to exercise sovereignty, jurisdiction, or control over the island except for the pacification thereof, and asserted the determination to leave the government and control of the island to its people when that was accomplished. The President of the United States on July 25, 1900, directed that a call be issued for the election of members of a Constitutional Convention to frame a Constitution on a basis for a stable and independent government. The military Governor ordered such election to be held, and it was duly held on Sept. 15, 1900. The convention assembled at Havana on Nov. 5, 1900. The military Governor informed the delegates that it was their duty to frame and adopt a Constitution, which must be adequate to secure a stable, orderly, and free government, and in the second place to formulate the relations which in their opinion ought to exist between Cuba and the United States, after which the Government of the United States would doubtless take such action as would lead to a final and authoritative agreement between the people of the two countries to the promotion of their common interests.

The Constitution was completed and accepted by the convention on Feb. 11, and was signed on Feb. 21. A committee, composed of Diego Tamayo, Gonzalo de Quesada, Juan Gualberto Gomez, Enrique Villuendas, and Manuel Ramon Silva, was appointed after the practical completion of the Constitution to prepare a project concerning relations to the United States. Suggestions of what President McKinley thought those relations should be were communicated to the committee by the military Governor, but these were not heeded. The project submitted by the committee and adopted by the convention on Feb. 27 practically placed the United States on the same footing as all other foreign powers. It was declared that there should be no treaty with any power impairing the independence of Cuba or allowing any military or naval occupation of any part of the island. No naval stations were to be conceded to any foreign power, and Cuba should not serve as a base of war operations against the United States or any other foreign power. These were the demands of President McKinley as against third powers, not against the United States. He stipulated for the cession of naval stations to the United States, claimed the Isle of Pines as American territory on the ground that it was only administratively connected with Cuba by the Spanish Government, and demanded a financial supervision over the Cuban Government and control of its foreign policy wherever the interests of the United States or the independence of Cuba were involved. Other conditions that President McKinley formulated on behalf of the United States were accepted. The acts of the military government were declared to be valid. Cuba acknowledged all obligations imposed by the treaty of Paris. The basis of commercial relations with the United States was to be reciprocity with a tendency to free trade. Meanwhile the Platt amendment, embodying the President's

demands, was adopted by the United States Senate. The convention was made to understand that these demands of the United States must be conceded before the military government would cease, the American troops be withdrawn, and the independent Cuban Government inaugurated. The majority of the convention, having declared for complete independence of any control by the United States, was extremely reluctant to recede from the position taken. Business men and those whose property interests were largest desired to see the American control greater than was demanded by the United States Government. Immediate annexation was the desire of an important section of society, and a vast number looked for ultimate annexation. The preponderant sentiment of the convention and of the people was, however, in favor of the greatest possible independence for the present, whatever the subsequent destiny of Cuba may be. The leaders of the convention, while prepared eventually to make all necessary concessions, wished to temporize, and to secure such modifications in the American demands as could be secured. A commission was sent to Washington to discuss the subject with the American Government. Señor Capote and his fellow delegates were informed that the Platt amendment must be accepted without alteration. They asked to have the meaning of the amendment explained. Secretary Root told the delegates that the traditional policy of the United States toward Cuba followed for eighty years and the special responsibilities assumed by expelling Spain entail intervention in Cuba if it should be necessary either for self-defense or for the protection of Cuba, and the Platt amendment is intended to define this right and duty of intervention, which can not be used for the gain of the United States, but only for the protection of Cuba. The Monroe doctrine does not have international force, but by being recognized in the Cuban Constitution as applicable to Cuba obtains international force as regards Cuba, and gives the United States the legal right to intervene against any other power for the protection of Cuba, and will prevent the United States in case of such intervention from appearing aggressive to other nations. Coaling stations at Cape Maysi, Cape Antonio, and a point on the Gulf of Mexico will serve primarily in a political and a military sense to strengthen the position of the United States as protector of the independence of Cuba. There would be no interference with the local governments at these points. The obligations assumed by Cuba toward the United States could not reasonably deter other powers from recognizing the sovereignty of Cuba if it was recognized by the United States. As regards the Isle of Pines there was a doubt whether it belonged legally to the United States or to Cuba. Although the duty of the United States to fulfil the international obligations of Cuba was assumed in the treaty of Paris only for the period of military occupation, the United States has virtually made itself responsible before the world for the fulfilment of those obligations by the Cuban Government in devolving upon Cuba the duty of assuming them and carrying them out. The recognition by Cuba of the right of the United States to intervene will give the American Government a legal right against other nations.

When the commissioners returned to Havana the Cuban convention adopted the Platt amendment as explained by Secretary Root, their report being added as an appendix. Secretary Root caused the convention to be informed that his opinion could not be ingrafted on the Platt

amendment, which must be adopted in its exact terms. Maximo Gomez and other officers who were strongly opposed to the American demands in the beginning came to see in the end the need for the safety and stability of the Cuban Republic, and to regard them as reasonable from the American standpoint.

The Cuban Constitution is based on that of the United States, but the Government is centralized and laws are made by Congress. The federal system was discussed and finally rejected, a considerable degree of local self-government being guaranteed. The Constitution declares that the people of Cuba shall constitute a sovereign state under a republican form of government. The six former Spanish provinces were not constituted into states, but into departments having a large measure of self-government. The geographical limits are substantially the same as those of the provinces. Each department has a governor and an assembly elected by the people for three years. Municipal government is carried on by a mayor and a council elected by the people of the town, and towns are to have a reasonable amount of self-government. Provision is made for their raising taxes and borrowing money. Congress alone has power to regulate railroads and telegraphs. The judiciary shall be national, not departmental, and Congress shall frame or amend the civil and criminal laws. Universal suffrage was adopted after much discussion, some opposing the admission of Spaniards and foreigners to the franchise, others proposing an educational qualification calculated to shut out the ignorant colored element. Spaniards and foreigners residing in Cuba may become naturalized, and their children born in the island have the option of Cuban citizenship. Freedom of speech, of the press, and of religious worship is guaranteed. Prisoners can not be held longer than twenty-four hours without judicial authority. Congress consists of a Senate containing 6 members from each department, elected by municipalities for six years, one-third retiring every two years, and of a House of Representatives having 1 member to every 25,000 inhabitants, elected for four years by the people in each district. A member of Congress must be a Cuban by birth or naturalized eight years, and at least twenty-five years old. The President and Vice-President are elected for four years by popular suffrage through colleges of electors. Minority representation is provided for in a limited degree. In voting for President the voter is allowed to ballot for only two-thirds of the number of presidential electors allotted to his department. Justices of the Supreme Court are appointed for life by the President subject to the approval of the Senate. Civil law can be suspended only by Congress when it is in session, and when it is not in session by the President. The Senate is empowered to suspend the President temporarily when he is charged with crime or usurpation by the House of Representatives, and upon conviction to dismiss him from office. The Constitution can be amended by a two-thirds vote of both Houses of Congress, ratified by a constitutional assembly specially elected for the purpose. The convention debated for some time whether to declare Cuban citizens of alien birth eligible to the presidency or to restrict it to born Cubans. A personal rather than a broad constitutional question was involved, for those who took the latter view were enemies of Gen. Maximo Gomez, who, being a native of Santo Domingo, could not be a candidate under this restriction, which they failed to carry through.

A committee was appointed to draft an elect-

oral law. After three months of discussion the convention, on June 12, adopted the Platt amendment in the form in which it was presented, but by a majority of only 5 votes. The conditions thus made part of the Constitution of the Cuban republic are as follow: Cuba shall not make any foreign treaty which may tend toward placing the independence of the island or any portion thereof in jeopardy; no loans can be issued unless a surplus of revenue is available for the service of such obligations; the United States can intervene to preserve the independence of Cuba or to insure protection for life and property; the acts of the United States military administration in Cuba since 1898 are recognized as valid; proper hygienic precautions must be taken to protect public health on the island; the ownership of the Isle of Pines is left for future consideration; coal-mining stations shall be sold or leased to the United States in localities to be hereafter decided; and these conditions shall be embodied in the Cuban law of constitution.

A new tariff was framed placing higher duties on foodstuffs produced in the island. Other duties were made higher also, especially with a view to reciprocity arrangements with the United States.

Political parties were divided into two groups, one consisting of the Nationalist party, which wished to maintain a Cuban republic absolutely independent of the United States as well as of all other foreign powers, the other of those who were in favor of a closer union with and political dependence on the United States, including many who openly advocated annexation. Tomaso Estrada Palma, Gen. Maximo Gomez, and Bartolome Maso were proposed as presidential candidates. Estrada Palma was the candidate generally approved and the one favored by Gen. Gomez after an agreement on the future policy had been reached. Gen. Bartolome Maso, after hesitating a long time, came forward as a candidate, appealing especially to the old Autonomist party, the Spanish element, and the negroes. The electoral law first framed by the convention providing for separate elections at different dates was modified by advice of President Roosevelt so as to provide for only one election day in each year. The Maso ticket was withdrawn, official partiality being charged, and on Jan. 1, 1902, Estrada Palma and the Nationalist candidates for Congress were by a light vote elected. The transfer of sovereignty was expected to take place on May 1, 1902.

D

DELAWARE. (See under UNITED STATES.)

DENMARK, a kingdom in northern Europe. The legislative body, called the Rigsdag, consists of an upper house, the Landsting, of 66 members, 12 appointed for life by the King and 54 elected for eight years by indirect suffrage, and a popular assembly, the Folkething, containing 114 members, who are elected for three years by the direct vote of all male citizens thirty years of age excepting criminals, paupers, and servants living with their masters. The reigning King is Christian IX, born April 18, 1818. The heir apparent is Prince Frederick, born June 3, 1843. The Cabinet constituted on April 27, 1900, was composed as follows: President of the Council and Minister of Foreign Affairs, Hannibal Sehested; Minister of Justice and Minister for Iceland, Dr. A. H. F. C. Goos; Minister of Public Works, Baron C. F. A. Juul von Rysensteen; Minister of Agriculture, F. Friis; Minister of War, Major-Gen. F. Schnack; Minister of Finance, Dr. H. W. Schnarling; Minister of Marine, Capt. C. G. Midelboe; Minister of Ecclesiastical Affairs and Education, I. I. K. Bjerre; Minister of the Interior, L. Bramsen.

Area and Population.—Denmark has an area of 15,289 square miles. The population of the kingdom on Feb. 1, 1898, was estimated at 2,310,000, not including the dependencies. Copenhagen, the capital, had 333,835 inhabitants in 1895; or including suburbs, 408,330. The number of marriages in 1899 was 17,914; of births, 73,121; of deaths, 44,243; excess of births, 29,878. The emigration was 2,799. By the law of April, 1891, any Dane over sixty years of age unable to support himself or his family is entitled to a pension if he has not brought his poverty on himself by extravagance or by giving away his property, has never received relief from public charity, and has at no time been convicted of crime. The Government contributes half the pensions up to the limit of 2,500,000 kroner a year, and local authorities the remainder. The total expenditure in 1898 was 4,500,000 kroner. The number of persons receiving pensions was 56,656, comprising 12,971 male and 159 female heads of families, with 15,

897 dependents, 6,227 single men, and 21,402 single women.

Finances.—The revenue in 1900 was 72,561,487 kroner, and the expenditure 77,509,052 kroner. For the year ending March 31, 1901, the revenue was estimated at 72,820,278 kroner, and the expenditure at 71,464,566 kroner. The budget for 1902 makes the revenue 73,662,225 kroner, of which 863,056 are a balance from domain revenues, 3,677,907 kroner are interest on state assets, 10,816,700 are direct taxes, 51,117,400 kroner are indirect taxes, chiefly from customs and excise, 131,244 kroner are net receipts from posts and telegraphs, 1,090,000 kroner are the balance from lotteries, 622,534 kroner are separate revenues, and 5,343,384 kroner are revenue from employment of property and funding of debt. The budget estimate of expenditure for 1902 is 72,673,602 kroner, of which 1,203,200 kroner are the civil list and appanages, 332,232 kroner expenses of the Rigsdag and Council of State, 3,368,360 kroner pensions, 733,656 kroner appropriations for the Ministry of Foreign Affairs, 3,379,538 kroner for the Ministry of Agriculture, 7,189,448 kroner for the Ministry of the Interior, 5,023,865 kroner for the Ministry of Justice, 7,511,587 kroner for the Ministry of Public Worship and Instruction, 10,947,694 kroner for the Ministry of War, 7,867,305 kroner for the Ministry of Marine, 77,164 kroner for Iceland, 11,106,172 kroner extraordinary state expenditure, and 2,004,882 kroner for improvement of state property and reduction of debt.

The foreign debt on March 31, 1900, most of it paying 3 per cent., amounted to 138,512,250 kroner; the total debt, including internal loans, was 207,419,912 kroner. The reserve fund kept as a provision against a sudden emergency amounted on March 31, 1900, to 17,891,222 kroner. This and other invested funds make the sum of productive assets 76,325,868 kroner, apart from the railroads, valued at 237,025,353 kroner, and from the state domains. A loan of 45,000,000 kroner was authorized by the Folkething in 1901, 20,000,000 kroner for the conversion of old debt, and 25,000,000 kroner for railroads and for ad-

vances to rural laborers to enable them to purchase home lots. The loan in 3½-per-cent. non-redeemable stock was taken at 96 by French, German, and Danish bankers.

The Army.—Personal military service was made obligatory by the laws of July 25, 1880, and April 13, 1894. It begins at the age of twenty-two, and lasts eight years in the first and eight years in the second ban. Every regiment of infantry is reenforced annually by 480 recruits, who are instructed for one hundred and eighty days, at the end of which those who are made non-commissioned officers and 100 privates are retained for a further period of eight months. The term of active service for the cavalry is nineteen months; for the field artillery, twelve months; for the fortress artillery and the engineers, five months. The men not retained with the colors are called out for service twice for twenty-five days during the grand maneuvers. There are 5 brigades of 2 regiments of infantry, each regiment having 3 battalions with a war strength of 21 officers and 1,050 men; 5 regiments of 3 squadrons of cavalry, the squadron on a war footing numbering 5 officers and 150 men; 2 regiments of field-artillery, each containing 2 sections of 3 batteries, the battery of 4 officers and 200 men with 8 guns; 1 regiment of 3 battalions of fortress artillery; and 1 regiment of 9 companies of engineers. The infantry arm is the Krag-Jørgensen rifle of 8 millimeters bore, model of 1889. The peace strength of the army is 824 officers, 1,824 under-officers, and 7,121 annual recruits; the war effective, 1,448 officers and 60,134 men, with 128 guns.

The Navy.—The fleet in 1900 consisted of six armor-clads, the *Odin*, *Helgoland*, *Tordenskjold*, *Iver Hvitfeldt*, *Herluf Trolle*, and the unfinished *Olfert Fischer*; 3 monitors, the *Lindormen*, *Gorm*, and *Skjold*; 2 large cruisers, the *Fyen* and *Valkyrien*; 3 third-class cruisers; 8 gunboats; three school-ships; 2 torpedo vessels; and 13 first-class and 12 second-class torpedo-boats. The navy was manned by 277 officers, 81 sailors, 175 gunners, 218 mechanics, and 573 laborers. The largest vessels are the *Herluf Trolle* and the *Olfert Fischer*, sister ships of 4,476 tons, each carrying a pair of 26-ton guns in revolving turrets.

Commerce and Production.—About 40 per cent. of the total area of Denmark is pasture and meadow, 35 per cent. farm and garden, 5 per cent. forest, 3 per cent. peat bog, and 17 per cent. barren or occupied with roads and buildings. The production of wheat in 1899 was 1,285,000 hectoliters; of barley, 7,645,000 hectoliters; of oats, 13,060,000 hectoliters; of rye, 6,471,000 hectoliters; of mixed grain, 3,825,000 hectoliters; of potatoes, 6,399,000 hectoliters; of beets and turnips, 46,399,000 hectoliters. There were 449,264 horses, 1,743,440 cattle, 1,074,413 sheep, 31,803 goats, and 1,178,514 hogs in 1898. In that year 15,423 horses, 36,066 cattle, and 2,644 sheep were exported. The quantity of spirits distilled in 1899 was 7,911,234 gallons; of beer brewed, 22,388,870 gallons of excisable and 32,302,320 gallons of non-excisable; of beet-sugar manufactured, 39,204 tons; of oleomargarine manufactured, 16,210 tons. The value of the fish caught in 1898 was 6,120,448 kroner.

The value of imports in the general commerce of 1899 was 492,100,000 kroner, and of exports 364,500,000 kroner. In the special commerce the value of imports was 399,800,000 kroner, and of exports 270,100,000 kroner. The imports of food substances in the special commerce were 94,600,000 kroner in value, and exports 227,900,000 kroner; imports of articles of personal and domestic use were 76,300,000 kroner, and exports 4,600,000 kroner; imports of fuel were 34,200,000

kroner; imports of fodder, manures, and seeds were 68,200,000 kroner, and exports 2,300,000 kroner; imports of raw materials were 26,500,000 kroner, and exports 35,300,000 kroner. The general imports of groceries were 39,833,000 kroner, and exports 12,808,000 kroner, 917,000 kroner being domestic produce; imports of drugs were 7,446,000 kroner, and exports 3,722,000 kroner, 747,000 kroner being Danish produce; imports of textile goods were 55,221,000 kroner, and exports 7,255,000 kroner, of which 785,000 kroner were Danish manufactures; imports of metals and metal manufactures were 47,224,000 kroner, and exports 11,380,000 kroner, of which 3,405,000 kroner were of domestic manufacture; imports of wood and wood manufactures were 25,345,000 kroner, and exports 2,105,000 kroner, 561,000 kroner being of domestic production; imports of coal were 35,346,000 kroner, and exports 3,797,000 kroner, 5,000 kroner of Danish origin; imports of animals were 2,229,000 kroner, and exports 19,449,000 kroner, of which 19,445,000 kroner were Danish; imports of pork, butter, eggs, and lard were 38,342,000 kroner, and exports 212,632,000 kroner, of which 190,103,000 kroner were of Danish production; imports of cereals were 73,509,000 kroner, and exports 16,172,000 kroner, of which 9,148,000 kroner were domestic. The general commerce with different countries in 1899 is shown in the following table, giving values in kroner:

COUNTRIES.	Imports.	Exports.
Great Britain.....	100,519,000	216,415,000
Germany.....	144,253,000	66,673,000
Sweden and Norway.....	59,117,000	46,121,000
United States.....	78,146,000	6,852,000
Russia.....	36,780,000	16,209,000
France.....	11,147,000	1,403,000
Netherlands.....	10,696,000	472,000
Belgium.....	8,423,000	1,173,000
Danish colonies.....	3,459,000	3,713,000
Rest of America.....	5,697,000	2,000

Navigation.—During 1899 there were 31,627 vessels in foreign commerce, of 2,849,630 tons of cargo, entered and 32,147, of 815,738 tons of cargo, cleared at Danish ports. The number of coasting vessels entered was 35,660; cleared, 36,174.

The merchant navy, including colonial vessels, consisted on Jan. 1, 1900, of 3,305 sailing vessels, of 165,308 tons, and 539 steamers, of 258,241 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation in 1900 was 1,711 miles, of which 1,108 miles were owned by the Government, having been built at a cost of 237,025,353 kroner.

The postal traffic in 1899 was 90,382,094 letters and postal cards and 83,499,502 samples, newspapers, etc.

The length of telegraph-lines on Dec. 31, 1899, was 3,068 miles, with 9,367 miles of wire. The number of internal paid messages in 1899 was 595,433; of international messages, 1,461,180; of official messages, 158,959. The telephone-lines had a length of 647 miles, with 4,154 miles of wire.

Change of Government.—The constitutional conflict in Denmark was brought to an end in 1901. In the Folkething, which was dissolved in the spring, the Sehested Cabinet had only 11 thoroughgoing supporters, and in the Landsting its majority was only 2. The elections for a new Folkething were held on April 3. For the first time the voting was by ballot, but this did not affect the result. The growth of the Socialist party in the towns added materially to the strength of the Opposition. The chief legislative question was the reform of taxation, for which

the Government had a scheme that was not exactly the same as the one favored by the majority of the Landsting. The first project introduced by the Government caused the revolt of 9 Agrarian Conservatives in the Landsting. A plan elaborated by a committee of the Folkething was more favorable to agricultural interests, and this impelled the Government to turn about completely and offer a project nearer than this to the desires of the element on which it relied for political support, though still not satisfactory to the Agrarians, who were encouraged by the reversal of the Government policy to enlarge their demands. The result of the elections was an overwhelming defeat for the Conservatives, and especially for the ministers, who were defeated in their own districts and had not more than 5 adherents left. The Radicals were increased from 63 to 75, and the Socialists from 12 to 14, while the Moderate Liberals were reduced from 21 to 15 and the Right from 16 to 8, and the 2 Independents were re-elected. Although the passions aroused by the determination of the Conservatives to retain office and of the King to keep them at the helm when they had a hopeless and dwindling minority in the popular chamber abated when the Government ceased to spend large sums arbitrarily on fortifications, the Opposition still held firmly to the principles of parliamentary government as they are understood in most countries. The King and his Conservative advisers always based their refusal to confide the reins of government to the Radicals on the possession of a Conservative majority in the Landsting. The upper chamber is elected by the people as well as the Folkething. It represents especially the highest taxpayers, and it has always claimed equal constitutional rights with the popular chamber elected by broad popular suffrage. The succession of the Agrarians to the Radicals, of the most aristocratic section of the Conservatives, left the Sehested ministry with a majority of only a single vote in the Landsting. The Conservative party has been dissolving ever since the *modus vivendi* was brought about between the two chambers by Estrup in 1894 after a deadlock of nine years, during which the Government carried out, in spite of the protests of the Folkething, the fortifications around Copenhagen that cost 40,000,000 kroner. After the elections the Minister of the Interior offered his resignation, and then M. Sehested proposed a change of ministers to the King, who consulted Radical politicians and found suitable candidates for two or three of the posts, but no acceptable Prime Minister. The Conservative ministers were therefore persuaded to hold on longer. On July 16 they resigned in a body to enable a ministry to be formed in time to prepare bills to be laid before the Rigsdag when it assembled early in October. A Radical Cabinet was constituted on July 23, as follows: Prime Minister and Minister of Foreign Affairs, Prof. Deuntzer; Minister of Justice, M. Alberti; Minister of Public Instruction, Christensen Stadil; Minister of Finance, C. Hage; Minister of Public Works, M. Hörup; Minister of Agriculture, O. Hansen; Minister of Marine, Admiral Jöhnke; Minister of War, Col. Madsen; Minister of the Interior, M. Sörensen. Prof. Deuntzer was not an active politician. M. Stadil was the acknowledged leader of the Radical party, and M. Alberti and M. Hage were prominent in its councils. M. Hörup was the leader of the extreme wing of the Radicals, who formed the alliance with the Socialists, and on that question lost his seat in the Rigsdag to M. Alberti in 1892; who had been a persistent assailant of the King; and who put forward the claim, abandoned

by the Radicals when they compromised with Estrup in 1894, that the authority of the Folkething was absolute, that of the Landsting and that of the Crown never superior or even concurrent. The Cabinet thus united all the sections of the great Radical party. As Minister of Agriculture, whose chief duty it is to preserve the high standard of rural produce exported to Great Britain to the amount of 200,000,000 kroner a year, a practical farmer of known ability was chosen. The Radicals of all the districts of the country sent deputations on Sept. 1 to thank the King for the change of policy and of system. The Socialists, who saw no reason to thank the King because he had been beaten after thirty years of struggle, rejoiced in the Radical triumph as a step toward their own ultimate triumph. They remained true to their electoral alliance with the Radicals in by-elections for the Landsting, and put forward demands for lessened military expenditures, social reforms, and universal suffrage in communal elections. This last proposal, which once had been a part of the Radical program, they urged with insistence because in the present drift of opinion it promised to make them the masters in the country districts as they were in Copenhagen, and bring their day of triumph when the farmers who had snatched the power from the aristocrats must hand it over to the laborers, and the Left be succeeded by the Social Democracy. The Conservatives accepted the transfer of power to the Radicals as a political necessity. Answering the great Radical deputation, which met with no greeting from the socialistic suburbs or the Conservative center of Copenhagen, the King said that in calling the new ministers to office in compliance with the wishes of a great majority of the Danish people he had perfect confidence in the ability and patriotism of the ministers, and relied on the people to give them the same support in their difficult task as responsible leaders of the Government that they had given them as leaders of the Opposition; thus the change would bring about peace and unity for the good and prosperity of the country, and usher in a period of fruitful labor. The program of the new ministry included loans for public works, the tax-reform bill, a judicial reform bill, some changes in the tariff, the sale of the Danish Antilles to the United States for 16,000,000 kroner, and self-rule for Iceland. The administration of justice must be conducted with the participation and under the eyes of the people, in public oral proceedings free from troublesome forms, and cases of crime and political offenses must be tried by jury so as to guarantee an administration of justice in harmony with the popular conscience. Military expenditure could not be immediately reduced, because the pay of non-commissioned officers must be increased and field-guns purchased. The Cabinet hoped to carry out the demand for universal suffrage. The Rigsdag was opened on Oct. 5, for the first time since 1884 by the King in person. Law reform, army reform, a just distribution of the burdens of taxation, improvement of industrial conditions, ecclesiastical reform, and measures for the development of communal affairs were promised in the speech from the Throne, but there was no mention of the sale of the West Indian islands.

Iceland.—Since Aug. 1, 1874, Iceland has had home rule. The legislative power is vested under the King in the Althing, composed of two chambers, the lower one containing 24 members elected by the people, the upper one having 12 members, of whom 6 are appointed by the King and 6 are chosen by the other chamber. The King is repre-

sented by the Governor-General, M. Stephensen. The area of Iceland is 40,450 square miles, but only 16,240 square miles are habitable. There were 70,927 inhabitants in 1890, of whom 33,689 were males and 37,238 were females. In 1895 the population was estimated at 73,449. The value of imports in 1899 was 2,403,000 kroner, and of exports 2,660,000 kroner. A bed of excellent coal was discovered at Nordfjord in 1901. For many years the Icelanders have been at variance with the Danish Government and divided among themselves on the question of self-government. According to the existing Constitution the Minister for Iceland is the Danish Minister of Justice, residing in Copenhagen. The Government bills are laid before the Althing by the Governor. In 1882 the Althing approved a scheme of autonomous government, according to which the King should appoint a viceroy to reside at Reykjavik and nominate a separate Icelandic Cabinet of 3 ministers. Bills embodying these demands were twice carried through the Althing, but did not receive the royal assent. The Radicals of Iceland have since been insistent in their demand for the fullest measure of home rule, while the Conservatives are content with the present system. In 1897 Dr. Valthyr Gudmundsson suggested a compromise which was adopted as a platform by a middle party. He proposed that the King should appoint a special minister for Iceland who must be an Icelandic or familiar with the Icelandic language, and during the session of the Althing reside in Reykjavik, between sessions taking his place in the Ministerial Council in Copenhagen. This plan received the approval of the Danish Government. The Althing rejected it when it was first proposed, and on a second occasion the votes were evenly divided. The election held in October, 1900, hung upon this issue. In the result Dr. Gudmundsson's party gained a majority over both the others, electing 16 candidates. Several of the members appointed by the King favored his project, and several of the members elected by the opposing parties gave their adhesion to it in the end. Dr. Gudmundsson's constitutional reform bill was passed by the Althing on Aug. 17, 1901. The Minister for Iceland can hold no other portfolio, must be present to explain the Government policy in the Althing, and will be responsible to the Althing for all governmental acts.

Colonies.—The territory free from ice in Greenland has an extent of 34,000 square miles. The population in 1890 was 10,516, comprising 5,064 males and 5,452 females. The trade is carried on by the Danish Government, which sends ships with supplies that bring away the products of the fisheries and chase. The imports in 1898 were 703,000 kroner in value, and exports 401,000 kroner; imports in 1899 were 631,000 kroner, and exports 325,000 kroner.

For an account of the Danish Antilles see **WEST INDIES**.

DISCIPLES OF CHRIST. The meetings of the General Christian Convention, representing the several missionary and benevolent societies of the Disciples of Christ, were held in Minneapolis, Minn., beginning with that of the Christian Woman's Board of Missions, Oct. 11. The total receipts of the board for the year had been \$148,602, of which \$95,147 constituted the general fund. Deducting various loans, etc., the actual receipts proper had been \$135,441. The society included 1,796 auxiliaries, with 37,299 members. A report on Young People's work recommended the continuance of the special method of awarding prizes, etc.; fixed "\$25,000—25,000 members," as a special object to be aimed at; ad-

vised the building of a boys' orphanage at Bayamon, Porto Rico, and the commencement of a building in India; suggested the preparation and publication of a history of the Young People's department; and offered prizes for the best missionary story and the best plan of Young People's work.

The American Christian Missionary Society and Home Board of Missions met Oct. 12. The annual report represented that the total receipts had been \$91,716, a gain of \$28,089 over the receipts of the previous year. The board had aided 225 missionaries, or 30 more than in any previous year, and had assisted 342 places and organized or reorganized 93 churches; while 3,660 members had been received by confession and baptism (6,912 members in all), and 28 church buildings had been erected. State boards in 39 States reported 415 missionaries employed, 1,359 churches and places helped, a total of 17,623 members received, 184 churches organized and reorganized, and \$2,147,685 collected on fields for local work, and \$182,215 for State missions. The reports of the State and National Boards of Home Missions showed 640 missionaries employed, 27,535 additions (total) to churches by missionary effort, 227 churches organized and reorganized, and \$213,921 raised for State and general home missions. A total of \$13,700 had been received on the annuity plan. Two funds of \$5,000 each had been received as named memorial funds—from Dr. Henry Gerould, late of Cleveland, Ohio, and George Bates, of Nebraska, in consideration of which the board agreed to keep a missionary preaching during all the year. Special attention was called to the work among the German population, for whom two churches had been organized in Cleveland, Ohio. City evangelization was carried on in many cities, of which 16 were named. Three mission stations were maintained in Porto Rico. A plan of missionary protracted meetings was suggested, to be held by ministers at some weak point away from their own church. In adjusting appropriations to missions a policy was followed intended to encourage and develop self-support.

The meeting of the Foreign Christian Missionary Society was its twenty-sixth. The receipts for the year had been \$171,898—an amount which, deducting the special gifts of \$15,149 contributed in 1900 for famine relief, was \$7,031 in excess of that received last year. But fewer churches had contributed, and they had given less, while the contributions of the Sunday-schools and Christian Endeavor Societies, and the bequests (\$14,611) had increased by \$12,000. Seven gifts to the Annuity fund amounted to \$22,742, or \$7,683 less than in 1900. Of the Annuity fund, \$12,300 had been put into real estate. The Christian Endeavor Societies had undertaken to support most of the boys in the orphanage in India. Five churches had been added to the Living Link of churches, which had given enough to support a missionary each. The churches in Canada, England, and Australia were cooperating in the work of the society. The reports from the mission fields related to work in famine relief, and mentioned a larger number of additions to the churches than in any previous year; progress of recovery from the disasters in China, where the property of the mission had been protected by the Viceroy of Nankin; uninterrupted progress in Japan; preaching, medical work, and the opening of a school at Bolengi, on the Congo, Africa; the churches in Sweden, Norway, and Denmark, where the society in Copenhagen had celebrated its twenty-fifth anniversary; movements toward self-support and the support of missions in England; unsatisfac-

tory conditions in Turkey, whence withdrawal was advised; preaching in English and Spanish Sunday-schools in Cuba; work in the Sandwich Islands; and the beginning of missions in the Philippine Islands, whither two missionaries had been sent, while two others were under appointment. Several new buildings were in course of erection in India, China, and Japan.

The Church Extension Board reported that its new receipts—that is, moneys not derived from interest on investments—amounted to \$55,274, and that its fund amounted to \$305,342. The receipts from interest amounted to \$10,572.

The Board of Ministerial Relief had received \$11,809 and expended \$9,903, and had a permanent fund of \$18,799. The educational institutions of the disciples include 12 colleges and universities, 3 Bible schools and Bible chairs, and 2 colored schools, all returning together 293 instructors,

and 5,248 students, 715 of whom were preparing for the ministry, besides a few smaller schools which had made no report. The general statistical report for the year gave the number of churches as 10,689; of ministers, 6,385; of communicants, 1,179,541; of Bible or Sunday-schools, 8,002, with a total enrolment of 774,450, showing gains for the year of 161 churches, 42 ministers, 30,459 communicants, and 28,815 members of Sunday-schools. The number of Christian Endeavor Societies is given as 5,277, or 276 more than in 1900. An estimate of the total amount raised by the churches during the year, including contributions through all the societies and the State boards, gives: For missionary purposes, \$611,220; for education and other benevolences, \$220,652; for local church work, \$5,401,000; total, from all sources, \$6,332,872—representing a gain of \$576,850 over the contributions of the previous year.

E

EAST AFRICA. The strip of coast over which the Sultan of Zanzibar formerly exercised sovereign rights was leased by him to Germany, Great Britain, and Italy, and these three powers subsequently made agreements dividing among themselves the Hinterland, extending to the borders of the Congo State and the equatorial provinces of Egypt. The coast strip recognized as belonging to the Sultan of Zanzibar extends from Cape Delgado to Kipini on the Osi, and has a breadth of 10 miles. The German East Africa Company acquired in 1888 the right to administer the part lying between the Rovuma and the Umba rivers. Subsequently the British East Africa Company leased for fifty years the coast from the Umba northward to Kipini. The Anglo-German convention of July 1, 1890, conceded to Great Britain a protectorate over Zanzibar and Pemba and a sphere of influence north of the Umba as far as the Juba river, including the sultanate of Vitu. On June 15 a British protectorate was declared over the interior to the limits of Uganda, and on June 30 of that year the British Government took over the administration of the territories of the British East Africa Company and placed them under the control of the consul-general at Zanzibar. The company had on July 31, 1893, abandoned the territory situated between the Tana and the Juba, which reverted to the Sultan of Zanzibar, since October, 1891, a vassal of Great Britain. By the Anglo-Italian agreement of 1891 the Benadir coast, from the Juba river northward, was recognized as within the Italian sphere, and on Aug. 26, 1892, the Sultan of Zanzibar ceded to Italy the stations of Brava, Merka, Mogadoscio, and Warsheikh. Previous to the establishment of the German protectorate France and Great Britain exercised a joint control over Zanzibar for the suppression of the slave-trade by sea, patrolling the neighboring waters with their cruisers and taking the slave-dhows that they captured as prizes into the port of Zanzibar. The Sultan of Zanzibar with his Askaris kept the caravan routes open for travel and trade as far as the great lakes through stations now embraced in the German protectorate.

German East Africa.—The German sphere has an estimated area of 384,000 square miles, with a population of 6,000,000 to 8,000,000. German planters have coconut groves near the coast and raise coffee, vanilla, tobacco, rubber, and cacao. A railroad from Tanga to Karagwe and Nomba has been begun, and 55 miles were opened

on July 1, 1901. The Governor, residing at Dar-es-Salam, is Major-Gen. Liebert. The expenditure in 1899 was 9,708,000 marks, of which 3,008,000 marks were raised locally and 6,700,000 marks were contributed by the Imperial Government. The value of the imports in 1899 was 10,822,586 marks. Imports of cotton stuffs were 4,824,912 marks, and the next largest imports were hardware, groceries, rice, oil, kerosene, and liquors. The value of exports was 3,937,150 marks, the principal articles being rubber for 1,337,181 marks, ivory and horns for 1,097,359 marks, oil-nuts for 289,994 marks, copal and gum for 277,442 marks, and live animals for 137,885 marks. A syndicate of German bankers has agreed to raise 22,000,000 marks for the construction of a railroad from Dar-es-Salam to Mrogoro, 140 miles, the Government guaranteeing 3 per cent. interest, granting land and mining concessions for 62 miles on either side, and the privilege of extending the railroad to the lakes, and the company undertaking to complete the railroad in five years and to turn it over to the Government at the end of ninety-three years. Traffic by this route, amounting to 600 tons a year, is now carried on by porters, who bear loads of 50 kilograms. The Uganda Railroad will take away this business and the trade of the German ports unless the Germans themselves build a railroad. The number of Europeans in German East Africa at the beginning of 1901 was 1,078. There are 32 plantations of coffee, coconut-palms, and hemp in the interior and in the highlands of Usambara. Rubber, ramie, and various tropical products have been tried with success, and experiments are being made with teak, sugar-cane, agave, vanilla, and the breadfruit-tree. Tobacco has proved a failure. About 75 tons of Mocha coffee were exported in 1900. Liberian coffee does not pay for transportation. East Indians grow rice and cotton in the coast district. They have their passage paid and are provided with land and implements. There are 3,000 British Indians in the country. Of the Europeans 821 are Germans, 385 of them being officials, 227 missionaries, and 110 merchants. The natives reaped good crops in 1900, and have entirely recovered from the famine of 1898. On Kilimanjaro and in other districts are large herds of cattle, and where the herds are small the Government encourages the chiefs to breed more. There are excellent wagon roads to the lakes. Kilwakisiwani, once a famous and populous seaport known by the Portuguese name of Quiloa,

having a deep landlocked harbor, will be the maritime terminus of a railroad to Lake Nyasa. Dar-es-Salam, the capital of German East Africa, has a safe and spacious harbor, and is a clean and well-built town with a population of 300 Europeans and 21,000 natives. The boundary between the German possessions and the British sphere between Lake Nyasa and Lake Tanganyika has been fixed by a mixed commission under the agreement of July 1, 1890. Beginning on Lake Nyasa at the mouth of the Songwe, it follows this river up to its junction with the Kalandu, then runs across to the southeast source of the Samfue, follows this stream to its junction with the Kalambo river, which constitutes the boundary to its mouth in Lake Tanganyika. This delimitation was embodied in an agreement signed at Berlin on Feb. 23, 1901.

British East Africa.—The part of East Africa that was first brought under British dominion is the *British East Africa Protectorate*, containing the strip of 10 miles of coast land leased from the Sultan of Zanzibar by the British East Africa Company and the Hinterland as far as the Victoria Nyanza. The area is about 250,000 square miles, and the population is estimated at 2,500,000. There are about 450 Europeans and Eurasians and 25,000 East Indians. The East Africa Company handed over the administration to the Imperial Government on June 30, 1895. The Imperial Commissioner is Sir C. N. E. Eliot, the consul-general, residing at Zanzibar, under whom the British consul at Mombasa, Col. Trevor Ternan, has charge of the local administration. The revenue was £43,841 in 1898, increasing to £69,400 in 1899, and in 1900 it was estimated at £77,500. The imports in 1900 were 6,642,000 rupees in value; exports, 1,825,000 rupees. The tonnage entered in 1900 was 332,882. The chief exports are ivory, rubber, cattle, goats, grain, copal, and hides. Cotton cloth is imported from both England and India. Other imports are provisions, brass, and beads. The trade is carried on by Banyan merchants with connections in Bombay. Mombasa, the capital and chief port, had 27,000 inhabitants in 1900. The Uganda Railroad starts there from Kilindini harbor, and telegraphs connect the town with Uganda and Lamu, and a cable with Zanzibar. The rails of the Uganda Railroad were laid to within 65 miles of Lake Victoria by August, 1901, and before April 1, 1902, the whole line was expected to be completed. The total length is 583 miles, and 483 miles were finished on April 1, 1901. The cost is now estimated at £5,206,000. Towns have sprung up at the stations, but the natives do not use the railroad. Indian merchants, coolies, porters, troops, and officials are the passengers, and the freight, except a little ivory and country produce, consists of public stores for the Uganda Protectorate and articles for the consumption of the staff and laborers on the railroad. The people of the country have no wants to supply, and the hope of future traffic lies in the immigration of East Indians to cultivate the fertile soil, or of Europeans into the high regions on the last 300 miles of the railroad, where domestic animals seem to thrive. A little rubber and coffee may be exported by the numerous populations living on the borders of the lake. The receipts in the first year are expected to be 1,500,000 rupees, only half the expenses, and then to decline gradually to nearly nothing in 1910; after that a small revenue may be expected. The value of the railroad is military. Without it England could not hold the country around the head waters of the Nile, or deal with the slave-trade, which she is pledged to suppress in her

sphere of influence. As soon as the frontier between the British East Africa Protectorate and Abyssinia is determined and the relations between the Uganda Protectorate and the provinces of the upper Nile are adjusted there will be an amalgamation of the two protectorates into a single administration which the Colonial Office will control, instead of the Foreign Office, as at present. The estimate voted by Parliament for British East Africa in 1901 was £87,000. A supplementary vote of £140,000 was required to provide for the punitive expedition against the Somalis. Two little wars were going on simultaneously in the early part of 1901, one against the Ogaden Somalis in Somaliland (see ABYSSINIA), and one against the branch of that tribe on the Juba river. A district officer named Jenner was murdered in Jubaland in November, 1900, because he had fined the Ogaden Sultan, Ahmed Murgan, and imprisoned another chief. The Ogadens to the number of 6,000 fighting men rose in revolt. Col. Ternan organized at Kismayu a punitive expedition consisting of the Aden camel-corps, 2 mountain guns, 4 companies of Bombay infantry, 5 companies of East Africa rifles, and 2 companies of armed porters. Starting from Kismayu on Jan. 24, 1901, the column entered Afmadu on Feb. 5. The Sultan gave himself up on Feb. 7. His brother and other chiefs, who were the real culprits, fled to the north, and a flying column was sent after them on Feb. 12. Marching 57 miles in four days, the troops found the enemy, who attacked and broke through one corner of the square. Col. Maitland and 25 men were killed and 40 wounded, and the troops, weakened by heat and lack of water, retreated to Afmadu, warding off several attacks and inflicting losses on the tribesmen, from first to last estimated at 200. Other fortified posts were established to prevent the Ogadens from crossing the Juba into Italian territory and from bringing their herds to water. Some Ogaden Somalis broke into Tanaland, raiding villages and looting cattle until they were stopped by Capt. A. S. Rogers with a local levy assisted by a Soudanese company of the East Africa rifles. The garrisons in Jubaland, except those at Yonte and Kismayu, were withdrawn in May, and the Indian troops were sent back to India. All the officers were ill and many deaths from sunstroke occurred. A fine was imposed on the Ogaden Somalis, but it was not paid. The Sultan was carried off as a prisoner. An advance made up the Juba was checked by the Ogadens. The operations in Somaliland ceased in August, when the Abyssinian forces were recalled. A surveying expedition sent from Omdurman to Lake Rudolf mapped the country, part of it swamp and part desert, between Nasser and the northern extremity of the lake, and came out at Mombasa in the beginning of September, three-quarters of the Soudanese escort having perished.

The protectorate of *Uganda* includes the native kingdom of that name and all the other countries beyond the Victoria Nyanza and Lake Rudolf as far as the British sphere extends. The old equatorial province of Egypt as far as Lado, or Gondokoro, is included in the British sphere, which has an extent of about 140,000 square miles. Uganda proper and the neighboring countries now subject to British administration and military control have a population of about 4,000,000, a third of whom belong to the half-civilized Baganda nation. The Kabaka, or King of the Baganda, is Daudi Chua, a minor, whose authority is deputed to three regents assisted by a Lukiko, or native assembly. In the ten other prov-

inces the native chiefs rule over their own people, subject to European control. The number of Europeans in the protectorate in 1900 was 300. There are 4,000 troops under British officers, including a contingent of Indian soldiers enlisted for three years. The local revenue for 1901, derived mainly from a hut tax and a tax on arms, was estimated at £40,000. The British special commissioner and commander-in-chief in 1901 was Sir Harry H. Johnston, in whose absence the administration is managed by the deputy commissioner, F. J. Jackson. The soil is very fertile and the country is rich in iron, which is extracted and wrought by native processes. Copper is mined in the central part, and gold is found. The chief products for export are ivory, woods, rubber, and cattle. German and British merchants are being supplanted by East Indians. Sir Harry Johnston, whose connection with Uganda ceased in 1901, was sent out as special commissioner after the capture of Kabarega and Mwanga. He inaugurated reforms in the administration and devised plans for increasing the local revenue, which he expects before many years to be sufficient to provide for the government, protection, and development of the country. Since the establishment of the protectorate in 1894 the British Government has spent, besides nearly £5,000,000 on the railroad, £1,394,000 for military and administrative purposes in Uganda. Uganda was taken by the British for political reasons, chiefly to guard the sources of the Nile, which engineers could divert so as to deprive Egypt of the irrigating flood on which its fertility depends. East Africa is, moreover, an outlet for Indian commerce and emigration. The most promising part of Uganda is the salubrious eastern part, a region of about 12,000 square miles, to a great extent uninhabited by any native race, covered with forest, well watered and fertile, having an altitude of over 6,000 feet, perfectly adapted for European colonization. The valuable rubber-vine and rubber producing trees thrive here. In various parts of the protectorate coffee, indigo, cotton, sugar, and many fiber plants are grown, but cultivation brings little profit. Cattle and sheep may be reared at a profit. Iron, copper, and coal exist. Wild animals abound, from the elephant down. Experiments are being made in the domestication of zebras and wild asses, in ostrich-farming and in training young elephants that are brought in by the Baganda. The hut and gun tax imposed by Sir Harry Johnston produced in the first year £34,000, and is expected to produce before long an annual revenue of £165,000. The rest of the revenue necessary for the administration will be raised from Europeans in the form of customs duties, licenses, etc. The products of Government forests, salt-mines, royalties on minerals, and sale and rent of lands will yield a surplus from which the cost of the Uganda Railroad may be refunded to the British Government. The armed force of the protectorate will consist of a nucleus of 400 Indian troops and of native recruits raised in the Nile provinces and in Uganda. An expedition led by Lieut.-Col. J. Evatt, consisting of 105 Indian and 268 local troops, marched in the autumn of 1900 against the warlike Nandi tribe in the mountainous forest region east of the Victoria Nyanza. These people have always resented the entrance of strangers into their country, and when the railroad survey was first made the caravan route which avoided Nandi was followed. The Government decided on a shorter route direct to the shore of the lake. The Nandis attacked the surveying parties, and in 1897 Col. Ternan conducted a punitive expedition against them, but had to leave

the task unfinished when the Soudanese mutiny began. After that the Nandis harassed caravans, destroyed the telegraph, and grew so bold as to attack military posts and ambush detachments of the Uganda rifles. The punitive expedition of Lieut.-Col. Evatt was unable to accomplish anything in the difficult Nandi country after arriving there. Patrols were ambuscaded, and one detachment of 19 men was wiped out. The troops were practically shut up in the forts until 300 Masai spearmen came to their aid and quickly turned the fortunes of war. Columns of about 40 rifles and 100 Masais raided the country in all directions, capturing cattle and inflicting heavy losses on the Nandis. The fighting was done by the Masais. The main body meanwhile moved slowly through the country from west to east after the cave strongholds on the edge of the Nandi escarpment had been captured. The British were reinforced by 296 Uganda troops. After the zariha of their medicine-men was taken by Col. Evatt on Oct. 13, 1900, the Nandis made a final determined attack on the British camp which was almost successful, and was only repelled with a loss of 11 killed and 19 wounded, the Nandi tribes sued for peace, having lost most of their live-stock, which constitutes their property. Peace was not finally concluded until February, 1901, when Sir Harry Johnston held a palaver with the Nandi chiefs in their forest. The route of the railroad does not traverse the mountainous region which is the Nandi country proper. It passes by their mountains through a land that had been rendered uninhabitable by their incessant raids. The Nandis and other self-governing tribes outside of the limits of British administration do not pay the hut tax, which is collected from the semicivilized agricultural Bantu tribes who inhabit the country between the lakes, from the Baganda and the kindred races of the Unyoro, Toru, Ankole, and Busoga. These are still ruled by their own chiefs, and the British do not interfere except to protect the natives from oppression. An armed steamboat was launched on the Victoria Nyanza late in 1900. Sir Harry Johnston reduced military expenditures considerably, and at the same time increased the armed force by more than 1,000 men—not soldiers, but armed police. Mwanga and Kabarega, the captive deposed Kings of Uganda and Unyoro, were deported in October, 1901, to the Seychelles Islands.

The sultanate of Zanzibar, reduced to the islands of Zanzibar and Pemba, was made a British protectorate in 1891. The Sultan is Seyyid Hamud bin Mohammed bin Said, born in 1856, who was placed on the throne by the British after the death of Hamed bin Thwain, in 1896. The British agent and consul-general is Sir C. N. E. Eliot.

The area of the island of Zanzibar is 640 square miles, with about 150,000 inhabitants; that of Pemba is 380 square miles, with 50,000. The population includes 50 English, 50 Germans, some Greeks, Americans, French, Italians, and Roumanians, and about 7,000 East Indians, most of them traders, some of them constituting the firms that carry on the main commercial business of East Africa. The town of Zanzibar has 30,000 inhabitants. The military force, under Col. Raikes, consists of 900 soldiers and police. The revenue, derived from customs duties and taxes on cloves and other produce, is expended by the British officials, except the sum of 120,000 rupees assigned for the maintenance of the Sultan and his household. The value of imports in 1899 was £1,596,606, and of exports £1,513,407, including the trade of the port of Zanzibar with the rest of the

Sultan's dominions. The imports of cloves were £186,483 in value, and exports £197,232; imports of rice £193,497, and exports £141,631; imports of textile fabrics £367,850, and exports £345,910; imports of ivory £113,204, and exports £127,312; imports of coal £53,147; imports of copra £30,596, and exports £69,736; imports of groceries £59,562; imports of rubber £40,517, and exports £41,298. The trade was distributed as shown in the following table:

COUNTRIES.	Imports.	Exports.
British India.....	£491,548	£129,896
German East Africa.....	173,172	457,238
Zanzibar and Pemba.....	240,658	144,845
Great Britain.....	146,143	116,964
British East Africa.....	86,098	190,641
United States.....	101,014	84,464
Germany.....	95,893	65,766
France.....	24,178	80,591
Belgium.....	56,380	2,724

The tonnage entered at the port of Zanzibar during 1899 was 324,961 tons.

Any slave can get his liberty on application. The great majority of the slaves are unwilling to avail themselves of their legal right. Some who are energetic and enterprising and have learned trades seek emancipation, and a few who have quarreled with their masters or whose masters have died. The freedmen have to use all their wits and energies to obtain the requirements of life, and often they are in debt. They are shunned by their fellows, who consider it a disgraceful thing to change their estate. The slave has the use of as much of his owner's land as he desires, and the product is his own. The master frequently supplies the material for building the slave's house, and in want or in sickness the slave goes to him for food and medicine. Slaves share the feasts and pleasures of the master's household. All they give in return for the life of comparative ease and comfort and complete freedom from care and responsibility is the nominal three days of work weekly, which in practise amounts to not more than fifteen hours of honest work. The freed slave becomes an outcast as far as his past associations are concerned. His former owner and his late companions will not recognize him. He has no home, no friends or companions, and may die of sickness or starvation with none to lend a helping hand. Although the emancipated slaves are ostracized and the process of emancipation goes on very slowly, the right to obtain freedom is gradually elevating the character and improving the lot of the slaves themselves, who are less abject and cringing. The freed slaves show much greater energy and self-reliance than those still in bondage. Of the 100,000 slaves in Zanzibar and Pemba in 1897, when the emancipation law went into force, only 53,000 remained in 1901, an epidemic of smallpox having carried off 20,000, and 15,000 having disappeared or died from ordinary causes, while 12,000 have obtained emancipation. In 1899 the number of slaves who applied for and obtained freedom was 3,757 in both islands, and in 1900 there were 1,126 freed in Zanzibar and 559 in Pemba. The average amount of compensation paid was 40 rupees. Very few slaves are smuggled out. The Sultan cooperates with the English in suppressing traffic in slaves. He even had his own cousin imprisoned for slave-dealing. Many owners have, in spite of the vigilance of the cruisers, deported slaves from Pemba to Muscat. Sir Lloyd Mathews, the Prime Minister of Zanzibar, proposed to procure native labor for Zanzibar and Pemba from British East Africa and

Uganda on contracts for three years or longer, making the merchants who imported and supplied gangs responsible for their wages and support. This scheme was disallowed by the British Government.

British Somaliland comprises the coast district from Lahadu to Bander Ziyada. It became a British protectorate in 1894, having formerly belonged to Egypt. The area is about 68,000 square miles. There are British officers at Berbera, with 30,000 inhabitants; at Zeyla, with 15,000; and at Bulhar, with 12,000. The revenue in 1900 was 385,884 rupees; expenditure, 340,092 rupees. The imports were 3,315,651 rupees at Berbera and Bulhar, and 3,471,904 rupees at Zeyla; exports, 2,871,962 rupees at Berbera and Bulhar, and 3,012,712 rupees at Zeyla. Rice, cotton goods, and dates are imported, and hides and skins, ostrich-feathers, gum, cattle, and sheep are exported. The consul-general, Lieut.-Col. J. Hayes Sadler, is at the head of the British administration.

Italian Somaliland.—The sultanate of Obbia was declared an Italian protectorate in 1889 by an arrangement with its ruler, and the Mijertain Sultan also accepted Italian protection for a part of his dominions and agreed not to conclude any treaty with another power regarding the rest. In 1892 the Sultan of Zanzibar ceded to Italy the Somali coast to a distance of 180 miles inland, including the ports of Brava, Merka, Mogadoseio, and Warsheik. The boundary between British East Africa and the Italian sphere by the agreements of March 24, 1891, and May 5, 1894, is the Juba river from its mouth up to six degrees of north latitude, that parallel eastward to thirty-five degrees of east longitude, and that meridian northward to the Blue Nile. The area of the Italian sphere is about 100,000 square miles, with a population estimated at 400,000. The Sultan of the Mijertain Somalis having assumed a hostile attitude and engaged in the contraband trade in arms, a naval expedition under the direction of the Italian consul-general at Zanzibar bombarded and captured his residence and took a large quantity of arms and ammunition in April, 1901. His son was taken prisoner. He himself fled into the interior with a small number of followers, where he was kept with short supplies until he made his submission in July, signing a convention which acknowledges the Italian protectorate and granting various concessions. An agreement was made with France for the delimitation of French and Italian territories on the Somali coast by a mixed commission which met at Raheita in February, 1901.

French Somaliland.—The French Somali Coast Protectorate, with the colony of Obok, extending from Cape Dumeira to Cape Gumarle, has an area of 45,000 square miles and about 200,000 inhabitants. Jiboutil, the capital, has 15,000 inhabitants, including 2,500 Europeans. The local revenue in 1900 was 581,000 francs; the expenditure of France, 337,500 francs. The exports are coffee, wax, and ivory. A railroad is building from Jiboutil to Harar. The Bay of Adulis was ceded to France by the King of Tigre about the same time that Obok was acquired under the second empire, but it has never been occupied. Obok was first occupied in 1881, and a protectorate was extended over Sagallo, Tajura, and Ambado in the following years. The port of Jiboutil was founded in 1888. The natives are Danakils and Gallas. By agreement with Great Britain the town and district of Harar, where formerly an Egyptian garrison was maintained, can not be annexed by either France or Great Britain, the territory having been conceded to Abyssinia

by the latter after the Egyptians were driven out. The railroad, which will be the outlet of the trade of southern Abyssinia, was completed in the beginning of 1901 for 60 miles. The total length is 186 miles.

ECUADOR, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 32 members, 2 from each province, elected for four years, and a House of Representatives, 41 in number, elected for two years by adult male citizens who can read and write. The President is elected for four years by direct popular suffrage, and the Vice-President, who is called upon to take the place of the President in certain contingencies, is elected for the same term at the succeeding biennial election. The President elected for the term ending Aug. 31, 1901, was Gen. Eloy Alfaro; the Vice-President is Freile Zaldumbide. The Cabinet at the beginning of 1901 was composed as follows: Minister of the Interior, Police, Public Works, Agriculture, and Public Charity, A. Moncayo; Minister of Foreign Affairs and Justice, José Peralta; Minister of War and Marine, Gen. Nicolo Arellano; Minister of Finance, T. Gagliardo. Gen. Plaza was elected to the presidency, and Gen. Alfaro peacefully handed over the Government at the close of his term.

Area and Population.—The area of the republic is about 120,000 square miles, including the Galapagos Islands, which have an area of 2,950 square miles. The population is estimated at 1,271,861, of whom about 100,000 are whites, 300,000 of mixed blood, and the rest Indians. Quito, the capital, has about 80,000 inhabitants; Guayaquil, the seaport, has 50,000.

Finances.—The revenue for 1900 was estimated at 8,268,100 sucres, of which 6,476,100 sucres came from customs and 610,000 sucres from salt, rum, tobacco, and powder. The estimate of expenditure was 8,967,783 sucres, of which 2,129,705 sucres were for financial administration, 2,045,949 sucres for public works, 1,729,412 sucres for the army and navy, and 1,071,713 sucres for public instruction. The military force numbers 3,341 men of all ranks. The naval force consists of a torpedo-launch and a transport-vessel.

The foreign debt, amounting to £693,160, has been assumed by the Guayaquil and Quito Railroad Company. The internal debt in 1897 was 4,580,000 sucres.

Commerce and Production.—The chief product is cacao, grown in the coast provinces. The production in 1899 was 26,413,571 kilograms. Sugar, ivory-nuts, and coffee are exported in considerable quantities. Minor products are cinchona, cotton, orchilla, and sarsaparilla. The rubber forests have been so exhausted that they are being replaced by planting. Gold is found in many places, and American companies are getting the value of 50 cents a cubic yard from gravel and 1 ounce of gold per ton from quartz. Silver, iron, copper, and lead ores are found in abundance, and large deposits of coal and petroleum. The exports from the port of Guayaquil in 1898 were 16,781,700 sucres in value, consisting of cacao for 13,202,370 sucres, rubber for 933,400 sucres, coffee for 422,350 sucres, sugar for 276,500 sucres, hides for 270,600 sucres, ivory-nuts for 230,800 sucres, cotton prints for 160,000 sucres, raw cotton for 114,000 sucres, Panama hats for 89,000 sucres, other articles for 782,680 sucres, and specie for 300,000 sucres. The quantity of cacao exported from Ecuador in 1899 was 27,703,545 kilograms, of which France took the most, Germany coming next, and then Spain, Great Britain, and the United States.

Navigation.—The port of Guayaquil was visited in 1899 by 207 vessels, of 305,800 tons, nearly half the tonnage being British and the rest mostly Chilean and German.

Railroads and Telegraphs.—The railroad to connect Quito with Guayaquil was begun by the Government, which built the section from Duran, opposite the seaport, to Chimbo, 58 miles, and then stopped. The railroad company that has undertaken to complete the work will rebuild this section and construct the remaining 292 miles, the route passing through a rich agricultural country producing coffee, cacao, and sugar. Laborers brought from Jamaica to work on the railroad struck in the beginning of 1901, but were compelled to go back to work by soldiers, against which proceeding the Jamaican Government raised a protest. The telegraphs have a total length of 1,242 miles.

EGYPT, a principality in northern Africa, tributary to Turkey, and under the military occupation and political and financial control of Great Britain. The Government is theoretically an absolute monarchy of the Mohammedan type, but the throne passes by the European law of primogeniture, and the Khedive, or Viceroy, is advised by a Council of Ministers. The reigning Khedive is Abbas Hilmi, born July 14, 1874, who succeeded his father, Mehemet Tewfik, on Jan. 7, 1892. The heir apparent is Prince Mohamed, born Feb. 20, 1899. The British occupation has lasted since the suppression of the military revolt led by Arabi Pasha in 1882, and since Jan. 18, 1883, an English financial adviser has possessed the power of veto over financial measures, and has generally exercised a decisive voice in all important measures, imposing such as he and his Government consider expedient and desirable, and preventing the enactment of others that they disapprove. A conference of representatives of the powers, assembled at Constantinople to consider the situation caused by the bankruptcy of the Egyptian treasury, dissolved when England, after the signature of a self-denying protocol, intervened single-handed in Egypt. France having refused to join in the intervention, the dual control which France and Great Britain had previously exercised over Egyptian finances was abolished, leaving Great Britain alone in control of the Egyptian Government. The assurance was given at that time, and reiterated afterward by successive British ministers, that Great Britain would evacuate Egypt as soon as Egypt should be able to maintain a firm and orderly government.

The Cabinet of the Khedive consisted at the beginning of 1901 of the following members: President of the Council and Minister of the Interior, Mustapha Fehmi Pasha; Minister of War and Marine, Mohammed Abani Pasha; Minister of Public Works and of Education, Hussein Fakhry Pasha; Minister of Foreign Affairs, Butros Ghali Pasha; Minister of Finance, Ahmet Mazlum Pasha; Minister of Justice, Ibrahim Fuad Pasha. The British diplomatic agent was Viscount Cromer; financial adviser, J. L. Gorst; commander-in-chief of the army of occupation, Lieut.-Gen. R. A. J. Talbot.

Area and Population.—The area of Egypt proper is about 400,000 square miles, but only 12,976 square miles are fertile and inhabited by a settled population. The population at the census of June 1, 1897, was 9,811,544, comprising 4,985,021 males and 4,826,523 females. The census was not taken beyond Wadi Halfa, which then marked the military frontier. The population of Cairo, the capital, was 570,062; of Alexandria, 319,766; of Tunta, 57,289; of Port Said,

42,095; of Assiout, 42,012. Of the total Egyptian population over ten years of age, 63 per cent. were employed in agriculture, but less than 1 per cent. of the foreigners, who formed 48 per cent. of the professional class, and nearly half of whom, but only a sixth of the native Egyptians were employed in industries and trades.

Finances.—The revenue in 1900 amounted to £ E. 11,447,000 and expenditure to £ E. 9,895,000, the budget estimate having been £ E. 10,380,000 for revenue and the same for expenditure. The budget for 1901 made the revenue £ E. 10,700,000, of which £ E. 4,698,000 were derived from the land tax, £ E. 137,000 from other direct taxes, £ E. 900,000 from customs duties, £ E. 1,000,000 from tobacco, £ E. 500,000 from other indirect taxes, £ E. 615,000 from other taxes, £ E. 207,000 from miscellaneous sources, £ E. 2,000,000 from the railroads, £ E. 56,000 from telegraphs, £ E. 120,000 from the post-office, and £ E. 229,000 from other services, making the total ordinary revenue £ E. 10,484,000, to which was added a contribution of £ E. 215,600 from the general reserve fund. The budget estimate of expenditure for 1901 was £ E. 10,636,000, of which £ E. 255,361 was for the civil list, £ E. 2,322,105 for expenses of the administration, £ E. 957,200 for operating the railroads, £ E. 44,000 for the telegraphs, £ E. 114,973 for the post-office, £ E. 69,590 for other services, £ E. 439,870 for the Egyptian army, £ E. 84,825 for the British army of occupation, £ E. 437,000 for pensions, £ E. 665,041 for tribute to Turkey, £ E. 37,300 for expenses of the Caisse de la Dette, £ E. 3,489,202 for the consolidated debt, £ E. 207,082 for unfunded debt, £ E. 250,000 for suppression of the corvée, £ E. 250,000 for the Soudan deficit, and £ E. 32,000 for a reserve for unforeseen expenses, making the total ordinary expenditure £ E. 9,822,728, to which are added £ E. 265,037 for conversion economies, £ E. 63,385 for the sinking-fund of the guaranteed loan, and £ E. 484,850 for the share of the surplus to be paid into the general reserve fund. The net surplus in 1900 was £ E. 559,000. The ordinary revenue exceeded that of 1899 by £ E. 247,000 notwithstanding remissions of the land tax made necessary by the low Nile of 1899. There was a deficit of £ E. 2,606,000 in the first four years of British control ending with 1886, and since then a surplus has been realized of the aggregate amount of £ E. 9,986,000, an average of £700,000 sterling per annum, in spite of large reductions of taxation, heavy expenditure on public works, and latterly the Soudan charges, which in 1900 amounted to more than £400,000.

The Egyptian debt on Jan. 1, 1900, amounted to £103,049,000 sterling, the 3-per-cent. guaranteed loan amounting to £8,410,800, the privileged 3½-per-cent. debt to £29,393,580, the unified 4-per-cent. debt to £55,971,960, the Daira Sanieh 4-per-cent. loan to £6,162,800, and the 4½-per-cent. domains loan to £3,109,900. The annual debt charge, including the sinking-fund, was £ E. 3,862,302. The charges on debts of all descriptions, including tribute, was £ E. 4,727,047 in the estimates for 1901. The reserve funds established in 1887 amounted on Jan. 1, 1900, to £ E. 5,206,154, of which £ E. 3,565,468 are the economies from conversion, £ E. 1,341,177 the general reserve fund, and £ E. 299,509 the special reserve fund.

The Army.—The military law requires every Egyptian, excepting priests, students, and some other classes, to serve six years in the army unless he pays £ E. 20 for exemption. The army has been trained by British officers, who hold the higher commands. The commander-in-chief, who

has the title of sirdar, is Sir Reginald Wingate, colonel in the British army. The total peace strength of the army in 1900 was 102 officers and 175 employees in the general staff and administration, 57 officers and 1,340 men in the cavalry, 545 officers and 15,646 men in the infantry, 102 officers and 601 men in the camel-corps, 50 officers and 1,341 men in the artillery, 58 officers and 284 men in the medical corps, 7 officers and 30 men in the veterinary department, 41 officers and 68 men in the engineers, 5 officers and 18 men in the military school, and 2,300 railroad troops; total, 915 officers and 22,787 men, besides 623 civil employees; the coast service employed 144 officers and 1,839 men. The strength of the British army of occupation in 1900 was 4,466 men.

Commerce and Production.—The production of cotton in 1900 was 6,510,000 kantars, about 645,000,000 pounds. There were 1,262,000 acres under wheat, 1,592,000 acres under corn, 906,000 acres under cotton, and 67,120 acres under sugarcane. The sugar exports in 1899 were 64,390,550 kilograms, valued at £ E. 664,427. The exports of cotton were 6,001,222 kantars, valued at £ E. 11,598,222. The total value of merchandise imports in 1900 was £ E. 14,112,369, and of exports £ E. 16,766,609. The imports of specie were £ E. 4,114,612, and exports £ E. 2,602,790. Imports of animals and animal food products were valued at £ E. 652,357, and exports at £ E. 129,733; imports of hides, skins, leather, and leather manufactures at £ E. 206,860, and exports at £ E. 84,855; imports of other animal products at £ E. 84,373, and exports at £ E. 41,611; imports of cereals, vegetables, etc., at £ E. 1,532,341, and exports at £ E. 2,615,433; imports of provisions and drugs at £ E. 404,735, and exports at £ E. 676,226; imports of spirits, oils, etc., at £ E. 815,888, and exports at £ E. 16,318; imports of rags, paper, and books at £ E. 177,103, and exports at £ E. 15,690; imports of wood, coal, cane-work, etc., at £ E. 2,093,061, and exports at £ E. 16,350; imports of stone, lime, glass, etc., at £ E. 399,008, and exports at £ E. 1,528; imports of dyes, etc., at £ E. 282,875, and exports at £ E. 21,112; imports of chemical products at £ E. 276,509, and exports at £ E. 15,547; imports of textile materials and manufactures at £ E. 4,011,498, and exports at £ E. 13,104,860; imports of metals and metal manufactures at £ E. 1,817,971, and exports at £ E. 5,691; imports of miscellaneous merchandise at £ E. 439,609, and exports at £ E. 12,689; imports of tobacco at £ E. 577,203.

Navigation.—The number of vessels entered at the port of Alexandria during 1899 was 2,805, of 2,414,674 tons; cleared, 2,758, of 2,389,058 tons.

Railroads, Posts, and Telegraphs.—The Government railroads had a length of 1,393 miles on Jan. 1, 1900, besides which there were 670 miles of narrow-gauge railroads belonging to companies. The number of passengers carried on the state railroads in 1899 was 11,284,284; tons of freight, 3,055,897; gross earnings, £ E. 2,112,065; working expenses, £ E. 950,429; net receipts, £ E. 1,161,636.

The post-office in 1899 forwarded 12,920,000 internal and 2,659,000 foreign letters and postal cards, 7,650,000 internal and 1,181,000 foreign newspapers, 188,000 internal and 63,700 foreign parcels, and 598,500 post-office orders and remittances, amounting to £ E. 17,437,000.

The telegraphs of the Government system on Jan. 1, 1901, had a length of 2,106 miles, with 9,440 miles of wire. The number of despatches in 1900 was 3,288,662, against 2,958,258 in 1899.

Suez Canal.—The number of vessels that passed through the Suez Canal in 1899 was 3,603,

of 9,895,630 tons, of which 2,310, of 6,586,311 tons, were British; 387, of 1,070,767 tons, German; 226, of 598,819 tons, French; 206, of 418,867 tons, Dutch; 101, of 266,360 tons, Austrian; 65, of 224,636 tons, Japanese; 55, of 171,589 tons, Russian; 69, of 132,765 tons, Italian; 59, of 123,757 tons, Norwegian; 38, of 114,149 tons, Spanish; 26, of 67,690 tons, American; 21, of 58,062 tons, Danish; 26, of 36,670 tons, Turkish; 5, of 12,411 tons, Belgian; 4, of 8,438 tons, Greek; 2, of 1,921 tons, Egyptian; 3, of 1,288 tons, Portuguese; 2, of 592 tons, Swedish; and 1, of 538 tons, Siamese. The receipts in 1899 were 94,317,505 francs, of which 88,698,555 francs came from tolls. The expenses were 24,863,166 francs, leaving a gross profit of 69,454,339 francs. The number of passengers who passed through the canal was 221,347. The share and loan capital on Jan. 1, 1900, amounted to 464,100,827 francs, increased by 151,174,307 francs of revenue applied to improvement of the canal and 17,764,598 francs of redemption and insurance funds, making the total capital 633,039,732 francs. The net profit for 1899 was 54,153,660 francs. The amount distributed in dividends was 51,538,028 francs.

In 1900 the number of vessels that passed through the canal was 3,441, of 9,738,152 tons, comprising 2,407 merchant vessels, 773 mail-steamer, and 261 war-vessels. The number of passengers was 282,194. The traffic receipts were 90,623,608 francs. The civilian passengers numbered 102,000; pilgrims, convicts, and emigrants, 25,000; military, 155,000. Owing to events in China, Russia sent out 37,000, France 34,000, and Germany 24,000 troops, while British outward-bound troops fell from 19,000 in 1898 and 15,000 in 1899 to 5,600. The United States troops homeward bound from the Philippines numbered 22,000, and outward bound 13,000. The British mercantile tonnage declined from 77.2 per cent. in 1899 to 71 per cent., and that of Germany increased from 9.3 to 11.1 per cent. of the total. Of the total number of vessels 1,935 were British, 462 German, 285 French, 232 Dutch, 126 Austrian, 100 Russian, 82 Italian, 63 Japanese, 34 Spanish, 30 Norwegian, 28 Turkish, 27 Danish, 22 American, 7 Belgian, 3 Portuguese, 2 Swedish, 2 Greek, and 1 Argentine. The mean net tonnage per vessel has increased from 1,951 tons in 1889 to 2,743 tons in 1899 and 2,830 tons in 1900. A loan of 100,000,000 francs authorized in 1885 for improvements was finally exhausted in 1901, and a new loan of 25,000,000 francs was sanctioned. The adoption of the electric light for night traffic and the increase of business culminating in 1899 enabled the company to carry out a great part of the work of improvement with surplus earnings. Further improvements to be made are a new series of stations for large vessels and the deepening of the canal to 9½ meters.

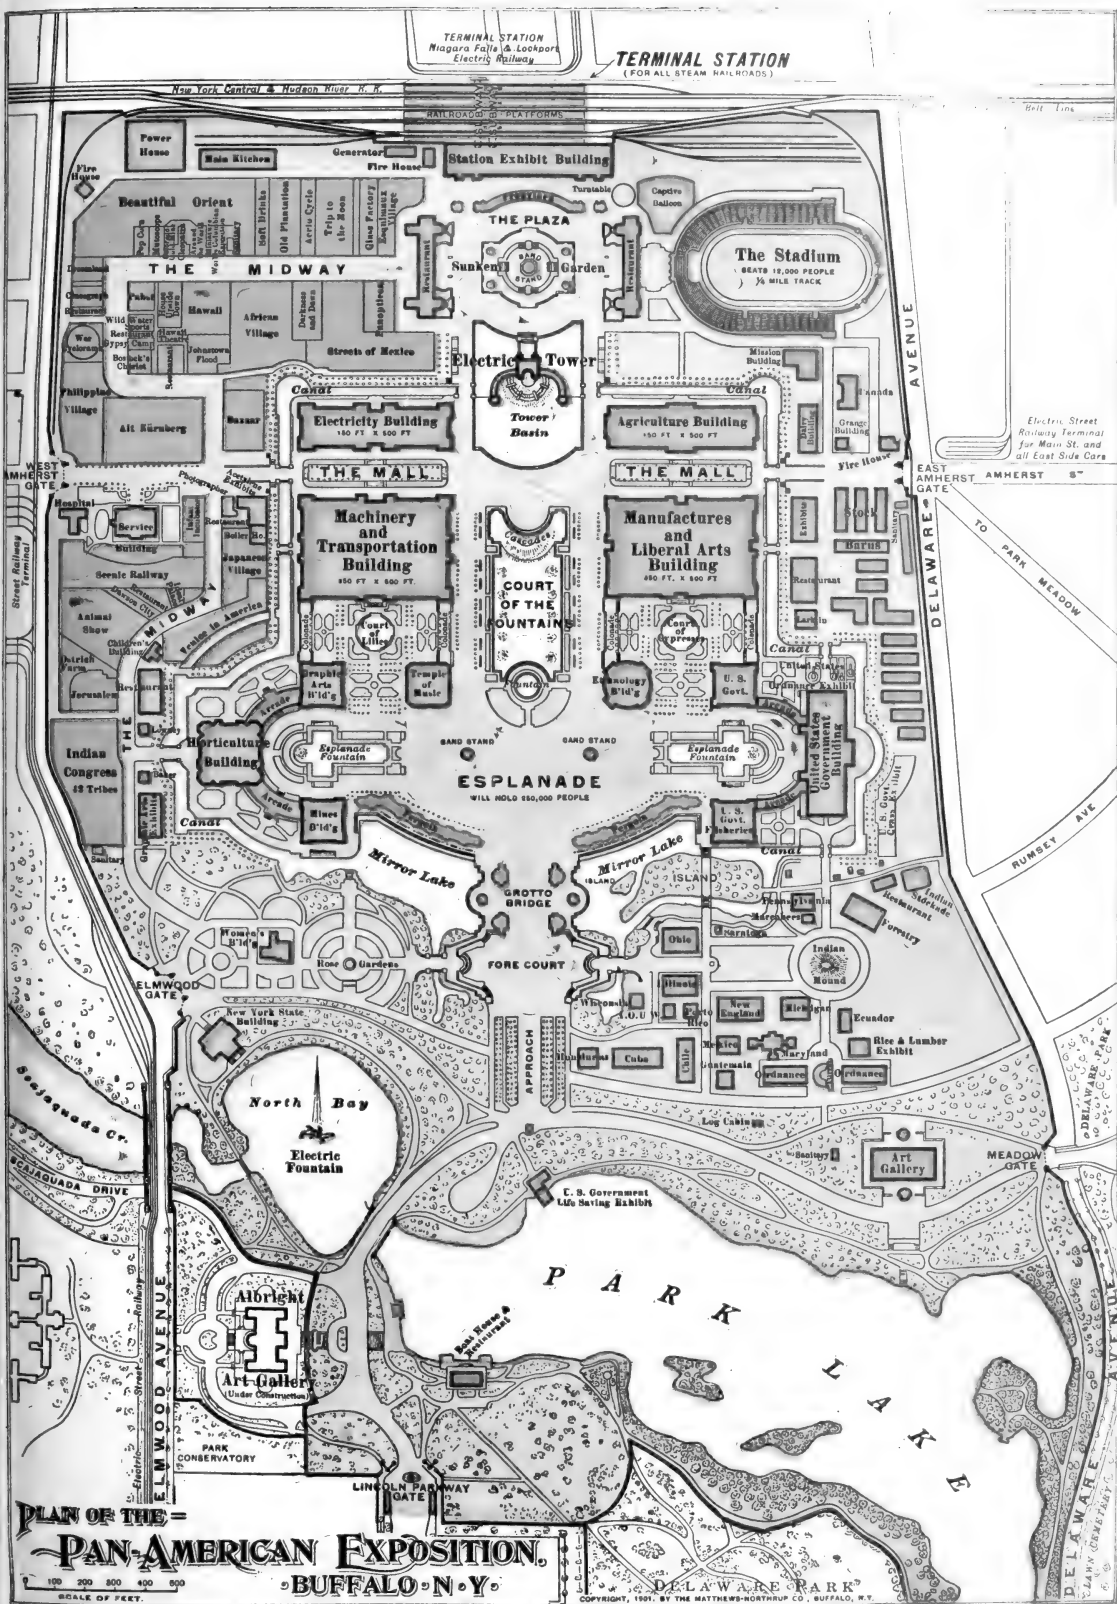

Economical Development.—The British administration, which has rehabilitated the finances of Egypt, has wrought improvement in the public life of the country as well as in its economical situation, which has been immensely bettered by the irrigation works begun by French and carried to completion twenty years later by English engineers. The cultivated ground subject to taxation has increased from 4,175,000 feddans in 1880 to about 6,000,000 feddans in 1900, and the improvement in the water-supply has increased production 50 per cent. Numerous railroads have been constructed, including electric lines by which cotton is transported and travel facilitated in the country districts. The land tax, the principal source of revenue of the Egyptian Government, has been gradually diminished in annual instal-

ments by the sum of £ E. 563,000, yet owing to the extension of the cultivated area the proceeds remain about the same as in 1880. Post and telegraph offices have multiplied, and even the telephone has been introduced.

One of the social improvements that the British have endeavored to introduce is to free the fellahen from their indebtedness to the money-lenders, who constitute a large unproductive class. Although their average gains are not great, the aggregate burden bears enormously on the producers, who pay 40 and 50 per cent. interest. The banks were induced to lend small sums for fixed terms at 10 per cent. through local agents, who receive a commission of 1 per cent., which gives them a sufficient motive to present the advantages of the new system to the fellahen and persuade them to borrow at the lower rate in order to pay off their loans obtained at exorbitant rates from the usurers. English inspectors supervise the agents, and see that contracts are honestly drawn up. The Government collects the instalments along with the ordinary taxes and pays them over to the banks, which have no expense in placing or collecting the loans, for which they receive 6 per cent. net interest, aside from the risk of bad debts, which is very slight, £ E. 28,122 having been collected in 1900 from 5,035 borrowers without any default.

Lord Cromer regards the fellahen as naturally more thrifty than the English peasantry. The desire of the Egyptians to learn European languages is not encouraged by the Government, which is anxious to improve the instruction in the vernacular schools. Of those who do study European languages 85 per cent. choose English, which is now a passport, rather than French, to Government employ. There are far too many small official posts, depending on abuses which the British intend to reform, and for these there is a great excess of applicants. Of native artisans there is a great lack, most of the mechanical work being done by imported foreigners. There are over 2,000 girls in the Government schools, showing that the Egyptian prejudice against the education of women, 99.7 per cent. of whom were unable to read and write in 1897, is being gradually overcome.

The completion of the Nile barrage at a cost of less than £500,000 has doubled the cotton crop of Lower Egypt, adding £ E. 5,000,000 a year to the national production. The projects for the benefit of Egyptian agriculture were estimated in 1885 at a total cost of £ E. 7,000,000. In 1902 the last and greatest of these will be completed—the great dams at Assouan and Assouit—which will enable wide tracts of land to bear two crops a year instead of one, bring waste districts into tillage, and greatly increase the area of sugar cultivation. The Assouan reservoir will supply 1,000,000,000 cubic meters of water annually. The dam at Assouan is 1½ mile long, pierced by 180 openings, 23 feet high and 7 feet wide, which have steel sluice gates. The regulating dam at Assouit is a barrage of masonry on steel piling, with 119 sluices 16 feet wide. Sir William Garstin, who has studied a plan to provide 3,000,000,000 or 4,000,000,000 cubic meters more to Egypt's summer supply of water, rejects the project of Mr. Willcocks, the designer of the Assouan reservoir, of a dam at the outlet of the Victoria Nyanza, because such a dam would flood populous and fertile regions on the borders of the lake, half the territory affected being German. He considers it impracticable to impound the waters of the Albert Nyanza for the purpose, because the earthquakes that occur there would be dangerous to the

dam, and the region of swamps through which the river flows down is not adapted for canalization. The most likely source for an additional supply he finds in Lake Tsana, at the head of the Blue Nile, but this is in Abyssinia, and can not be utilized without the consent of the Emperor Menelek. The navigation of the Blue Nile would at the same time be improved. The water-supply could be supplemented by utilizing also the water of the upper Nile that is wasted in swamps, either by embanking the Bahr el Gebel or by using the Bahr el Zeraf as an additional channel for the summer supply. If such a work is ever carried out a large part of the Soudan can be irrigated. Meanwhile the Egyptian Government intends to employ its financial resources in the construction of a railroad between the Nile valley and the Red Sea as an outlet for the commercial products of the Soudan. The *sudd* obstructing the channels of the Nile affluents, consisting of masses of decayed vegetation, has been removed from the Bahr el Gebel, giving a free navigable channel from Rajaf to Omdurman, a distance of 1,200 miles. Half of the water issuing from the equatorial lakes which might reach Egypt is absorbed by the marshes that extend for a distance of 400 miles from Bor to Lake No. The cutting of the *sudd* had no effect in increasing the flow. In 1900, as well as in 1899, there was a failure of rains in the upper Nile valley, causing distress, which was aggravated by the ravages of locusts. The main supply of the White Nile in 1900 was furnished by the Sobat and to a less extent by the Bahr el Ghazal.

The development of the Soudan is the task now taken in hand by the Egyptian Government, but this does not preclude some further gradual relief of the fiscal burdens placed on the Egyptian taxpayers.

The opening of the Soudan to commerce has revived the gum trade of Kordofan. Cattle and sheep have become plentiful in that province. The country on the Blue Nile about Elifun is well cultivated and populous. Gedarif, in the vicinity of which large quantities of gum are gathered, has 30,000 inhabitants. The black soil suitable for cotton is not cultivated here nor at Gallabat, where population and animals are scarce, but the town is recovering and carries on trade in coffee, wax, honey, and rhinoceros hides. Everywhere in the Soudan whole districts are depopulated as the result of dervish rule, and consequently the soil lacks laborers, and the situation is rendered worse by the confusion in the ownership of land. The administration of the Soudan is likely to entail a heavy financial burden on Egypt for many years, as the process of recovery is necessarily slow. The difficulty of providing irrigation is a serious obstacle to the development of agriculture. The Government is making energetic efforts to improve the condition of the inhabitants. Great consideration is shown in the collection of taxes, from which land that is not irrigated is quite exempt. The Government has begun tentatively to buy the crops raised by the fellaheen with the object of encouraging agriculture. Commissions have been appointed to regulate and establish titles to real estate in town and country. Continuous possession for five years is held to be sufficient evidence of ownership. The prohibition against raising tobacco has been annulled. Disbanded Soudanese battalions have been colonized as an experiment on the Blue and White Niles. Tranquillity prevailed throughout the Soudan in 1901, there was a considerable decline in the price of foodstuffs, and other improvements in the condition of the country were noticeable.

Sir Reginald Wingate, the sirdar, inspected all the provinces of the Soudan in the first half of 1901. When Anglo-Egyptian post offices established in the Bahr el Ghazal the Congo State, which by the convention of 1894 obtained a lease of that province, but did not proceed to occupy it in consideration of French susceptibilities, reclaimed its rights under the lease. The Congo State leased to Great Britain in exchange the strip of territory between Lake Albert Edward and Lake Tanganyika, which was required for the exclusive British route from Cape Town to Cairo, but the British Government, in view of German and French objections to the alienation of Congo territory, refrained from taking possession. Anglo-Egyptian troops were not only posted in the parts of the Bahr el Ghazal which the Belgians had not occupied, but at Lado, where a Belgian garrison was in possession, the Egyptian Government taking the ground that Egypt after the fall of the dervish Government at Omdurman resumed all her former rights in the Soudan. The Belgian troops were not withdrawn, and the question was discussed diplomatically between the British and the Congo governments.

The anti-British sentiment still rife in Egypt was manifested in serious riots that occurred in Alexandria early in August. Arabi Pasha, the leader of the military revolt that led to the British occupation of Egypt in 1882, was pardoned by the Khedive in May, and returned from his long exile in Ceylon to pass the remainder of his life in his native land.

EXPOSITION, THE PAN-AMERICAN.

This was held in Buffalo, N. Y., from May 1 to Nov. 2, 1901. (For the previous interstate expositions, see the list in the *Annual Cyclopædia* for 1898, page 249.)

Organization.—Soon after the Cotton States Exposition, held in Atlanta in 1895, the plan of organizing a Pan-American exposition on the Niagara frontier was conceived, to illustrate the progress of civilization in the Western Hemisphere during the nineteenth century. In 1897 the Pan-American Exposition Company was incorporated, and a site was selected on Cayuga island, near the village of La Salle, where a memorial stake was driven by President McKinley, in July, 1897. The war with Spain followed, and the enterprise was postponed; but on Dec. 5, 1898, a reorganization of the project, on a larger basis, with a new charter, was urged upon the community by Conrad Diehl, then mayor of Buffalo. A new charter was approved in January, 1899, and bills were introduced both in the national and the State Legislature, authorizing exhibits on the part of the nation and the State, which were approved, and in March, 1899, the Exposition Company was perfected.

Management.—The incorporators of the exposition elected a Board of Directors, who in turn elected officers of the company. These were as follow: President, John G. Milburn; Secretary, Edwin Fleming; Treasurer, George L. Williams. The executive officers were: Director-General, William I. Buchanan; Commissioner-General and Auditor, John B. Weber; Director of Concessions, Frederic W. Taylor; Commander of Police, John Byrne; Medical Director, Roswell Park; Director of Works, Newcomb Carlton; Superintendent of Landscape, Rudolf Ulrich; Superintendent of Electrical Exhibits, George F. Sever; Director of Fine Arts, William A. Coffin; Superintendent of Graphic Arts, Machinery, Transportation Exhibits, and Agricultural Implements, Thomas M. Moore; Superintendent of Liberal Arts, Selim H. Peabody; Super-

intendent of Ethnology and Archeology, A. L. Benedict; Superintendent of Live Stock and of Dairy-Products and Agricultural Products, Frank A. Converse; Superintendent of Horticultural and Food-Products, Frederic W. Taylor; Superintendent of Mines and Metallurgy, David T. Day; Superintendent of Manufactures, Algar M. Wheeler; Superintendent of Press Department, Mark Bennett; Superintendent of Passenger Department, James V. Mahoney.

Finances.—The Pan-American Exposition Company was organized with a capital stock of \$2,500,000, with authority to issue bonds for a similar amount. The bill introduced into the New York Legislature, which was signed on March 1, 1899, appropriated \$300,000 for a State building and exhibit, and Congress, on March 3, 1899, appropriated \$300,000 for a Government building and exhibit. Citizens of Buffalo subscribed and paid for stock and bonds to the amount of \$4,467,905.

Location.—The original site on Cayuga island having been abandoned, the Board of Directors chose grounds in the northern part of Buffalo, within three miles of the business center of the city. The plot contained 350 acres, and its dimensions from north to south were about one mile, and from east to west about half a mile. Of this tract, 133 acres were improved park property, including a watercourse and an irregular and beautiful lake, half a mile in length, which was described as "the most beautiful interior lake in the country," and became one of the principal water features of the exposition. This site was considered the most accessible of any that could have been chosen, and it was reached over the electric street-railway system by means of transfers, so that it was within a twenty minutes' ride from the central portions of the city. A line of double-track steam railway, known as the New York Central Belt Line, encircled the city, and touched the northern boundary of the exposition grounds. By means of this line, access was had to all the steam railways entering Buffalo.

Buildings.—The principal buildings were arranged around a broad court, having the form of an inverted letter T. The transverse section of this court, called the Esplanade, ran east and west, and there was a space of more than 1,700 feet between the extremes. The Court of Fountains, which was north of the transverse court, was 500 feet wide and 200 feet from north to south. The Aquatic Basin in this court was 225 feet wide by 565 feet long, and covered more than two acres. It contained numerous fountains, and was one of the most picturesque features. On the right was a subordinate court, known as the Court of Cypressess, while to the left, in similar design, was the Court of Lilies. Beyond the Court of Fountains was the famous Electric Tower, while to the right were the buildings devoted to agriculture and manufactures and the liberal arts, and to the left were the buildings devoted to electricity and machinery and transportation, these four being the largest of the exhibition buildings. At the lower end of the Esplanade were the pylons of the Triumphal Bridge, forming an entrance to the Esplanade when approached from the south. The ground was broken for the exposition on Sept. 26, 1899, and the first building to be erected was the administrative headquarters for the officers of the exposition, whose presence was required upon the grounds, to which the name of Service Building was given. Simultaneously with the erection of the great buildings was the excavating of a wide canal, more than a mile in length, and the crea-

tion of small lagoons, while at the same time thousands of trees and shrubs were planted, in order to make the grounds attractive. The preparation of plans for the exposition was entrusted to a board of architects, composed of John M. Carrère, Chairman, of Carrère & Hastings, New York; John G. Howard, of Howard, Caldwell & Morgan, New York; Walter Cook, of Babb, Cook & Willard, New York; Robert S. Peabody, of Peabody & Stearns, Boston; George F. Shepley, of Shepley, Rutan & Coolidge, Boston; George Cary, Buffalo; August C. Esenwein, of Esenwein & Johnson, Buffalo; Edward B. Green, of Green & Wicks, Buffalo. The electrical effects were planned by Luther Stieringer, with Henry Rustin as engineer, while the landscape plan and all formal landscape work, including bridges and approaches, were under the direct supervision of John M. Carrère, chairman of the board. Rudolf Ulrich was the landscape gardener.

The style of architecture followed was a free adaptation of the Spanish Renaissance, chosen in graceful compliment to those Latin-American countries whose valued assistance had been sought and gained. No such aggregation of colonnades and pavilions, arcades and balconies, loggias, domes, lanterns, towers, minarets, flag standards, and finials was ever before seen under a northern sky. The color treatment was devised by C. Y. Turner, and gained for the exposition the name of "The Rainbow City," or "The Tinted City." It had for its purpose the harmonizing of the buildings, not only with one another, but with their surroundings, such as the sky, the grass, and the water. The colors symbolized the progression from the less civilized stage to the highest, and so the crudest colors were nearest the entrance, and as you proceeded farther into the grounds they became softer and more refined, until finally, at the Electric Tower, at the head of the Court of Fountains, the highest note of all was reached in the ivory-white and gold and delicate blue. The entire color scheme, as described by Mr. Turner at the time, is as follows:

"The horticultural group has orange as a basis for the color of the body of the building. On the Government Building a warm yellow is used for the plain surfaces. For the Music Hall I have used red, quite pure, as the foundation color. On the Ethnology Building, golden orange. On the Machinery and Transportation Building green was the basis. Opposite it, across the court, the Liberal Arts Building is a warm-gray color. The Electricity and Agricultural Buildings are different shades of light yellow, while the restaurant and entrances to the Stadium have a French gray as the basis, with a lighter shade of the same tint on the Propylæa. For the Electric Tower I reserved a light ivory. In the horticultural group I have used blue and white largely in the ornamental portions of the panels, pilasters, spandrels, etc., relieved now and again by brighter shades of rose and deep yellow. The Government Buildings have a mild gray for the structural portions to relieve the yellow, and in those buildings, where it is possible, the green note is introduced in the sashes and doors, blue on the dome, and gold on the smaller domes. Blue-green is on the dome of the Temple of Music, and is repeated again on the Ethnology Building. On the Machinery and Transportation Building red, yellow, and green are introduced in the great doorways and corner pavilions, and also are distributed through the towers, while blue and gold play a large part in the detail work of the Liberal Arts Building, especially on the ceilings of the colonnades and east and west entrances, and in the

UNITED STATES GOVERNMENT BUILDING.
PAN-AMERICAN EXPOSITION.

great pediments of the north and south entrances. The yellow of the Electricity Building is relieved by gray trimmings and green doorways, which are elaborately enriched in their ornamentation by delicate shades of the prevailing tones used throughout the exposition. The Agricultural Building is warmer, and there are blue, yellow,

THE COURT OF FOUNTAINS.

and ivory, and stronger notes of red and green in the entrances. The restaurants are ivory and French gray. The sashes and doors are painted green, and the minarets and pinnacles are tipped with gold. The Propylæa, which curves across the north end of the grounds, has a wide-open arcade, the panels of which are enriched with brilliant red, where white statues are placed, while the panels above are a bright yellow. The ceilings are blue, and the trellis above is made a strong violet hue. Violet occurs again at the entrances from the railway station through the great arch. The Railway Transportation Building is in a French gray, with green roof and ivory and gold trimmings, while the Stadium, one of the most imposing buildings of the exposition, will be a light ivory-gray, with pale blue-green sashes and doors. The tower is a very light ivory, and is enriched in the capitals, brackets, finials, stars, pinnacles, etc., with gold, and is crowned with a gilded figure of the Goddess of Light. The panels have the brightest fresh blue-green we could make, and are intended to suggest the water as it curves over the crest at Niagara."

Considering the buildings more in detail, and beginning at the north entrance, we reach, first, the—

Electric Tower, which was designed by John G. Howard, and was 375 feet high. The main body of the tower was 80 feet square and 200 feet high. The crown was in three parts, of diminishing proportions, the first of these being an arched loggia having wall surfaces brilliantly colored and richly ornamented in all details. Pavilionettes adorned each of the four corners and terminated in light, fantastic cupolas. Above the loggia was a high circular colonnade, entirely open, so as to allow the effect of the sky to be seen between the columns. A spiral stairway in the center led up to a domed cupola, on which was poised a figure, 16 feet high, designed by Herbert Adams and known as the Goddess of Light, which overlooked the entire exposition. At the base of the tower, and on the sides, were two colonnades, 75 feet high, which swept southward, forming a large semicircular space, opening toward the Court of Fountains. In the niches of these wings, running from west to east, were groups of statuary, representing Lake Michigan, by Louis A. Gudebrod; Lake Superior, by Philip Matiny; Lake Ontario, by Ralph Goddard; Lake St. Clair, by Henry Baerer; Lake Huron, by Philip Matiny; and Lake Erie, by Carl E. Tefft. The spandrels of the niche in the south face of the

tower and the smaller ones above the arch of entrance on the north side were modeled by Adolph A. Weinman, under the direction of Karl Bitter. They represented the four rivers—Niagara, Buffalo, St. Lawrence, and St. Clair. The loggion of these arches were modeled by the same sculptor. The groups ornamenting the pinnacles of the south side adjoining the water niche were modeled by George Gray Barnard, and typified The Great Waters in the Time of the Indian and The Great Waters in the Time of the White Man. The frieze, with children, garlands of fruit, and eagles, beneath the loggia at the top of the shaft, was executed by Karl Bitter, director of sculpture.

Agriculture Building.—This structure, east of the Electric Tower, was designed by George F. Shepley, and was 150 feet in length, facing the Court of Fountains, while the principal front, 500 feet in length, was on the Mall. The chief entrance was on this side, facing the Manufactures and Liberal Arts Building. Around this entrance was the greatest amount of enrichment, it being decorated with designs of fruits, vegetables, and flowers, expressing the character of the building, while large corbels were in the form of heads of animals of the field. A similar idea was shown in the decorations of the cornice. On the south side of the building, overlooking the Mall, was a loggia, formed of arches resting on single columns, with a ceiling of groined vaulting. The general treatment of the exterior was in the Spanish Renaissance.

Manufactures and Liberal Arts Building.—This building, designed by George F. Shepley, was southeast of the Court of Fountains, and separated from the Agriculture Building by the Mall. It occupied a space 350 by 500 feet, with a courtyard in the center, which was 132 by 170 feet, and was surrounded by a portico about 15 feet wide, with openings through semicircular arches, supported by square pillars. On the front of the building, between the arches, were the seals of the governments of the various South American republics, while over the entrance was a group of statuary typifying the arts and manufactures, designed by Bela Pratt. The building was entered from the middle of all four sides, and also from the pavilions on the corners. The south or upper front of the building faced the Court of Cypressess, and in the center of the front was the principal feature of the building, a great dome rising to a height of 130 feet, surrounded by four towers.

Electricity Building.—On the other side of the Electric Tower, opposite the Agriculture Building, was the Electricity Building, designed by Green & Wicks. It was 500 feet long from east to west, and 150 feet wide, covering 75,000 square feet. This building followed the Spanish-mission style of architecture, with Renaissance features. The entrances in the northern and southern façades consisted of arches between tall towers, while the towers carried ornamental cupolas. Surmounting the four corner towers were domed pavilions, and the spaces between the towers were embellished with colonnades and grilled windows. The roofs had broad, overhanging eaves, and the total height of the building was 160 feet.

Machinery and Transportation.—This building was directly south of the Electricity Building, and was on the west side of the Court of Fountains. It was designed by Green & Wicks, who followed the Spanish-American Renaissance style of architecture. Its dimensions were 500 feet from east to west, and 300 feet from north to south. The main entrances on the north and south façade were flanked on either side by tall towers having open lanterns and an intricate detail of plastic

ornamentation. The entrances were all rich in decorative work, and the walls were broken with arched windows, finished with ornamental grilled screens. Each façade was thus enriched with important architectural features, and at the four corners were open pavilions with red-tiled roofs that had broad overhanging eaves.

Temple of Music.—This structure, designed by Esenwein & Johnson, was at the northeast juncture of the Esplanade and the Court of Fountains, and south of the Machinery and Transportation Building, from which it was separated by the Court of Lilies. It was octagonal, and occupied a site 150 feet square. It was surmounted by a dome 180 feet high, suggestive in proportions of the dome of the Pantheon at Rome. In treatment the building was highly ornate, and it was profusely decorated with pilasters sculptured in relief, and over each of the four pediments was a sculptured group by Konti. The auditorium of the building had seating accommodations for 2,200 persons, and contained one of the largest organs ever made in the United States, built by Emmons Howard & Son. This was presented to the city of Buffalo at the close of the exposition by James N. Adam.

Horticulture Building.—At the extreme west end of the Esplanade was the Horticulture Building, designed by Robert S. Peabody. It was 220 feet square, with a dome and lantern rising to a height of 240 feet. The building was formed on the plan of a Greek cross, with four large arches on the principal axes, and small octagonal pavilions filling in the corners. The entrance from the Esplanade was framed under an ample pediment ornamented with rich decorations in relief, and picked out in color like the majolica work of Italy. Its style of architecture was more suggestive of the buildings of northern Italy than of Spanish-America.

Graphic Arts and Mines Buildings.—These two pavilions, which formed part of the horticultural group, were also designed by Robert S. Peabody, and were connected with the Horticulture Building by means of covered conservatories, filled with blossoming hothouse plants. The Graphic Arts Building was to the north, and was to the west of the Temple of Music. At the southwestern end of the Esplanade, and connected similarly with the Horticulture Building by an arcade used as a conservatory, was the Mines Building. These two pavilions were square, with four towers in the corners, and a loggia of three arches forming the entrances to the building, and had a floor space each of 30,000 square feet. The Fountain of Nature, by George F. Brewster, was directly in front of the east entrance of the Horticulture Building.

Government Buildings.—This group, which was on the east side of the Esplanade, was designed by J. Knox Taylor, supervising architect of the Treasury Department. The group, similar to the horticulture group, consisted of three structures connected by curved arcades. The style of architecture was Spanish-American, and suggested the great cathedral of the city of Mexico. The large central structure was made picturesque by numerous small towers and gilded domes and the use of Mexican gables at the north and south ends, and was crowned by a dome on which was an imposing figure of Victory. The height of the building was 250 feet, or 270 feet to the top of the statue. The pavilion to the south was occupied by the fishery exhibits, while the pavilion to the north contained the collections from the Philippines.

Ethnology Building.—This building, which was designed by George Cary, was west of the Gov-

ernment group of buildings, and south of the Court of Cypressess, which separated it from the Manufactures and Liberal Arts Building. Its general design was classical, with Renaissance decorative treatment. The building was circular in plan, with the main entrances on the diagonal axes. Between and connecting these was a continuous colonnade with a decorative frieze over the windows. Above the colonnade was a promenade with balustrade, and figures representing the five different races. Over each of the four entrances was a pediment, with the Pan-American seal forming a decorative motive of the triangular space above the gable. The building was covered by a dome resembling that of the Pantheon at Rome, 150 feet high.

The Stadium.—This amphitheater for athletic sports was designed by Walter Cook, and was in the northeastern part of the grounds. It was modeled after the Pan-Athenaic Stadium, which was cut in the side of Mount Pentelicus, near Athens, more than two thousand years ago, and was 680 feet long and 450 feet wide. The exterior consisted of a series of columns, with arches between, while the interior had seats for 12,000 persons, backed up against the arcade, and terminated by a sort of attic forming a promenade around the entire building. On the west side was the main entrance, above which was a tribune, with seats covered by a roof. The arena was laid out to obtain a quarter-mile running track, and its extreme dimensions were 569 feet in length and 260 feet in width.

The Propylæa.—This structure was also designed by Walter Cook, and consisted of a colonnade surmounted by a sort of pergola with green vines, flanked by two large archways, giving access from the railroad station. It formed the extreme north side of the Plaza, serving, as far as possible, to shut out the noise and smoke of the railway-trains. It was 500 feet long, and the gateways were broad arches 54 feet high and 36 feet wide. Two high, open towers surmounted the arches on either side, and statues were placed between the columns against a background of color.

Art Building.—This building was designed by Green & Wicks, and was at the extreme southeast end of the grounds, on a knoll 35 feet above, and west of, the Park Lake. It was in the Ionic style of architecture, resembling the Erechtheum in Athens. It was 250 feet by 150 feet wide, and was of fire-proof construction, being built of white marble and bricks. This building is to be a memorial of the exposition, and was given by J. J. Albright, of Buffalo, to his fellow citizens. It is to be the permanent home of the collection of the Buffalo Fine Arts Academy, which has been made the custodian of the property. Its cost was upward of \$350,000.

New York State Building.—This structure, designed by George Cary, is in the classical order of architecture, and follows the lines of the Parthenon in Athens. Like the Art Gallery, it is to be a permanent structure, and it was in the southwest end of the grounds, facing the north bay of the lake. In form it was a rectangle about 130 feet long by 80 feet wide, with a height of 50 feet. At the close of the exposition it became the home of the Buffalo Historical Society, and the large collections and library of that organization are to be preserved within its walls. The northern façade is faced with three-quarter columns, and the entrance is through a vestibule, the bronze doors of which were the gift of Andrew Langdon, President of the Buffalo Historical Society. The southern entrance was through a portico, embel-

Copyright, 1901, by C. D. Arnold.

THE ELECTRIC TOWER.
PAN-AMERICAN EXPOSITION.

lished by ten Doric columns, and commanding a view of the Park Lake.

Minor Buildings.—These included a series of modest structures, among which were the Acetylene Building, devoted to exhibits of the acetylene industry; the Bazaar Building, which served for the sale of souvenirs of the exposition; the Dairy Building, imitating a Swiss chalet; the Forestry Building, constructed of logs, resembling the

and shall lead and enlighten our children's children. Electricity Building: Panel I—To those painters, sculptors, and architects, tellers of tales, poets, and creators of new worlds; to those actors and musicians who, in the New World, have cherished and increased the love of beauty; Panel II—To the statesmen, philosophers, teachers, and preachers, and to all those who, in the New World, have upheld the ideals of liberty and

GROUP OF STATE BUILDINGS.

cabins of the early settlers; the Ordnance Building, which formed a sort of annex to the Government Building, and was in the Spanish style of architecture; and the Woman's Building, which was a frame structure, formerly the home of the Country Club. The State buildings included those erected by the commonwealths of Dakota, Illinois, Michigan, Minnesota, New Jersey, Ohio, Pennsylvania, Wisconsin, and one by the New England States. The foreign governments that had buildings were Canada, Chile, Cuba, Ecuador, Guatemala, Honduras, Mexico, Porto Rico, and Santo Domingo. In addition to these may be mentioned the buildings of the United Workmen and the Knights of Maccabees, and the Mission Building.

Inscriptions.—Dedicatory inscriptions, written by Richard Watson Gilder, appeared on the various buildings. They were as follow: Agriculture Building: Panel I—To the ancient races of America, for whom the New World was the Old, that their love of freedom and of nature, their hardy courage, their monuments, arts, legends, and strange songs may not perish from the earth; Panel II—To the scholars and laborious investigators who, in the Old World and the New, guard the lamp of knowledge and, century by century, increase the safety of life, enlighten the mind, and enlarge the spirit of man. Machinery and Transportation Building: Panel I—To the great inventors and far-seeing projectors, to the engineers, manufacturers, agriculturists, and merchants who have developed the resources of the New World and multiplied the homes of freemen; Panel II—To those who in the deadly mine, on stormy seas, in the fierce breath of the furnace, and in all perilous places working ceaselessly, bring to their fellow men comfort, sustenance and the grace of life. Manufactures and Liberal Arts Building: Panel I—To the explorers and pioneers who blazed the westward path of civilization, to the soldiers and sailors who fought for freedom and for peace, and to the civic heroes who saved a priceless heritage; Panel II—To the prophets and heroes, to the mighty poets and divine artists, and to all the light-bearers of the ancient world who inspired our forefathers

justice, and have been faithful to the things that are eternal. The great pylons of the Triumphal Causeway (on the pylons are statues of Courage, Liberty, Tolerance, Truth, Benevolence, Patriotism, Hospitality, and Justice): Panel I—The spirit of adventure is the maker of commonwealths; Panel II—Freedom is but the first lesson in self-government; Panel III—Religious tolerance a safeguard of civil liberty; Panel IV—A free state exists only in the virtue of the citizen; Panel V—Who gives wisely builds manhood and the state, who gives himself gives best; Panel VI—To love one's country above all others is not to despise all others; Panel VII—The brotherhood of man, the federation of nations, the peace of the world; Panel VIII—Between nation and nation, as between man and man, lives the one law of right. The Stadium: Panel I—Not ignoble are the days of peace, not without courage and laureled victories; Panel II—He who fails bravely has not truly failed, but is himself also a conqueror; Panel III—Who shuns the dust and sweat of the contest on his brow feels not the cool shade of the olive. The Propylæa: Panel I—Here by the great waters of the North are brought together the peoples of the two Americas, in exposition of their resources, industries, products, inventions, arts, and ideas; Panel II—That the century now begun may unite in the bonds of peace, knowledge, good-will, friendship, and noble emulation all the dwellers on the continents and islands of the New World. Ethnology Building: I—"Knowledge begins in wonder" (Plato, Aristotle, Langley); II—"Speak to the earth, and it shall teach thee" (Job xii, 8); III—"Nothing that is human is alien to me" (Terence); IV—"And hath made of one blood all nations of men" (Acts xvii, 26); V—"What a piece of work is a man!" (Shakespeare, Hamlet, ii, 2); VI—"All are needed by each one" (Emerson, Each and All); VII—"The weakest among us has a gift" (Ruskin); VIII—"No se gano Zamora en una hora" (Cervantes, Part II, chap. lxxi); IX—"O rich and various man! thou palace of sight and sound, carrying in thy senses the morning and the night and the unfathomable galaxy; in thy brain the geometry

of the City of God; in thy heart, the bower of love and the realms of right and wrong" (Emerson, *The Method of Nature*).

Sculpture Plan.—A general symbolical idea extended through the decoration of the grounds by means of sculpture. More than 125 original groups, by celebrated American sculptors, were scattered about the grounds and buildings. No exposition was ever so adorned before. Beginning with the east wing of the Esplanade, the subject of Nature was chosen, and the large fountain at the head was called the Fountain of Nature, and its execution entrusted to George T. Brewster. The two subordinate fountains were by Edwin F. Elwell, and were known respectively as Ceres and Kronos. Six groups of statuary in the immediate vicinity, consisting of three series of two each, represented Mineral Wealth, by Charles H. Niehaus; Floral Wealth, by Bela L. Pratt; and Animal Wealth, by E. C. Potter. On the opposite side of the Esplanade, Man was the dominating subject, and corresponding to the Fountain of Nature was the Fountain of Man, by Charles Grady, while the subordinate fountains were dedicated to Hercules and Prometheus, and were by Hinton R. Perry. The groups representing the Savage Age, the Age of Despotism, and the Age of Enlightenment, were by John J. Boyle, Isidore Konti, and Herbert Adams. The large fountain on the north side of the Esplanade was the Fountain of Abundance, by Philip Martiny, while surrounding the Court of Fountains were numerous statues of fauns, nymphs, and bacchantes. The Triumphal Causeway, which formed the entrance to the Esplanade from the south, consisted of four pylons, crowned by mounted standard-bearers, by Karl Bitter, expressing Peace and Power. Large semicircular bays extended on either side of the bridge into the canal, and these bays supported colossal flag-poles, the bases of which were richly ornamented with figures and sea-horses, one having as its subject the Atlantic and the other the Pacific, both by Philip Martiny. In front of the Causeway were two guard-houses, surmounted by two colossal Fighting Eagles, by Maximilian Schwarzott. The equestrian statue of Washington, by Daniel C. French, was at the entrance of the main approach to the Triumphal Causeway, and one of Gen. Sherman, by St. Gaudens, was in front of the Art Building.

The Amusement Features.—These were arranged in the northwest portion of the grounds, under the name of the Picturesque Midway, or Lane of Laughter. The director of concessions, Frederic W. Taylor, grouped them under two headings—those that were devoted to distinctly amusement features, and those that were largely educational. A further classification, also presented by him, includes the following: Ethnological—African Village, Alt Nürnberg, Beautiful Orient, Chiquita, Eskimo Village, Gypsy Camp, Hawaiian Village, Indian Village, Infant Incubator, Japanese Village, Mexican Village, Old Plantation, Philippine Village, and Venice in America. Zoological—Bostock's Animal Arena, Diving Elks, Educated Horse Bonner, and Ostrich Farm. Pictorial—Cineograph, Cleopatra, Dawson City, Fall of Babylon (painting), Johnstown Flood, Kilauea, Living Pictures, Missionary Ridge, Microscopes, and Panopticon. Human Labor—Colorado Gold-Mine, and Glass Factory. Theatrical—Darkness and Dawn, Dreamland, House Upside Down, and Trip to the Moon. Sensational—Aero Cycle, Captive Balloon, Merry-go-round, Miniature Railway, and Scenic Railway. There were also booths or bazaars, where souvenirs could be purchased, as well as several restaurants.

Music, Special Days, and Conventions.—During the life of the exposition, various bands gave daily concerts from the band-stands about the Plaza and the Esplanade, and among these were the famous First Artillery Band, of Mexico, Sousa's Band, of New York, the Carlisle Indian Band, of Carlisle, Pa., Innes's Band, of New York, and the Ladies' Military Band, of Boston; also organ recitals were given daily in the Temple of Music by some seventy-five organists, representing nearly every portion of this country and Canada, each of whom presided at the organ for not more than two days. As has been the practise at expositions, each day during the life of the fair was devoted to the interests of some special community, organization, or nationality, the communities being represented by the various States, the organizations by fraternal societies, and the nationalities by various countries. Likewise, very many conventions were held in Buffalo, advantage being taken of the exposition to bring out a large gathering. These included college fraternities and organizations, ranging in variety from the Associated Bill-Posters of the United States and Canada to the American Institute of Architects.

Stamps and Medals.—The Post-Office Department issued a series of commemorative stamps in recognition of the exposition, similar to those used during the Trans-Mississippi Exposition. They were of uniform dimensions, 0.76 by 1.06 of an inch, the longer side being horizontal. The borders took the colors of the regular series on the same denominations of the current date. The words "Commemorative series, 1901," and "United States of America" next below appeared above the vignette; the legend in a line next below the central opening, with the denomination in a line at the bottom, was given in the same order on all stamps of the series. The lettering was in white Roman capitals, and the numerals were all white-faced Arabic in the roman type except the 10-cent, where the block-letter type of figure condensed to secure space for the two figures was used. The borders were well-separated from the central pictures, and the words of denomination at the bottom were preceded on the same line by the word "Postage." All the central illustrations were from photographs as the objects represented appear to-day, and were printed in black. The series was as follows:

One-cent, with the legend "Fast lake navigation," shown by a lake steamer, propelled by side-wheels, with one funnel, and the pilot-house well forward. Color, green.

Two-cent, with the legend "Fast Express," shown by a train of four cars, drawn by a four-driver locomotive, and four parallel tracks in the vignette. Color, red.

Four-cent, with the legend "Automobile," shown by a closed-coach automobile, with two men on the box, and a part of the United States Capitol at Washington as a background. Color, red brown.

Five-cent, with the legend "Bridge at Niagara Falls," shown by a view of the largest single-span steel bridge in the world, having two trolley-cars upon it, and a view of Niagara Falls appearing under, beyond, and up the river, with a graceful springing arch as a frame. Color, blue.

Eight-cent, with the legend "Canal locks at Sault de Ste. Marie," shown by the great ship-canal locks at Sault de Ste. Marie, Michigan, including immediate surroundings, given in a view from a higher point. Color, lilac.

Ten-cent, with the legend "Fast ocean navigation," shown by an American Line steamship,

GENERAL VIEW OF THE ESPLANADE.
PAN-AMERICAN EXPOSITION.

with two smokestacks and masts, presenting its starboard bow lapped by rising waves. Color, light brown.

The commemorative medal issued by the exposition authorities was one of unusual beauty, and was struck under the direction of the United States Treasury Department. The obverse showed a finely modeled figure of a man standing with his foot on the head of an eagle and his right hand uplifted, as if to indicate that even the animal world had become subservient to him. The reverse contained the outline map of the two Americas, and the legend, "Pan-American Exposition, Buffalo, New York, U. S., A., May 1, Nov. 1, M. D. C. D. I.," and a monogram of the letters "P. A. E."

The Pan-American Exposition flag was one of the new features introduced at this exposition. It was designed by Miss Adelaide J. Thorpe, was quadrangular, and divided into three sections. The triangle nearest the staff was blue, with the north star upon it in white. The triangle at the opposite corner was red, on which the four stars of the Southern Cross were set in white. The parallelogram between the triangles was white, on which a gold eagle was depicted, having over its head a rising sun, which is found on the flags of the Argentine Republic, Bolivia, Costa Rica, Peru, Uruguay, and the Greater Republic of Central America. The intertwined palm branch and pine, on which the feet of the eagle rested, expressed the union of North and South. A ribbon bearing the motto "P A X 1901" was interwoven between the palm branch and the pine. The purpose of the flag was to give expression of the policy of a great group of powerful and enlightened nations.

Opening Exercises.—The opening of the exposition was set for May 1, but the disagreeable weather that had prevailed during the spring, as well as the incomplete condition of the exposition at that time, led to the postponing of the formal opening until May 20. On May 1, however, direct telegraphic communication was established with President McKinley, who was in Memphis, Tenn., and at two o'clock, Buffalo time, he touched the electric button that started the machinery of the exposition, also transmitting his "congratulations to the citizens of Buffalo upon the auspicious opening of the Pan-American Exposition, so rich in blossom and ripe in expectations. May the hopes and ambitions of its promoters be realized to the fullest measure." Forty-five aerial bombs were fired, one in honor of each State of the Union, and the flags on all the buildings were unfolded to the breeze. Later in the afternoon of May 1 the Government Building was formally opened, and was declared to be the most complete of any exhibit ever presented to the people of the United States. The formal opening, which took place on May 20, began with a parade, under the command of Gen. S. M. Welch, which included several thousand troops, with four bands, after which were a hundred carriages with officials and guests, and then followed the picturesque representatives of the Midway, who marched from the City Hall to the Esplanade in front of the Temple of Music. The dedicatory exercises, which were held inside the hall, included an opening prayer by the Right Rev. C. H. Fowler, bishop of the Methodist Episcopal Church; an address by Conrad Diehl, mayor of Buffalo; a poem written for the occasion by Robert C. Rogers; an address by Theodore Roosevelt, Vice-President of the United States—in the course of which he said: "More and more we are learning that to love one's country above all others is in no way incompatible with respecting and wishing well to all others, and

that, as between man and man, so between nation and nation, there should live the great law of right. These are the goals toward which we strive, and let us at least earnestly endeavor to realize them here on this continent." In an address by Henry Cabot Lodge, United States senator from Massachusetts, who, after referring to the value of modern expositions as bringing about a better understanding between peoples widely removed, added, while discussing the relations of the United States with the other American republics: "We desire that you should regard the United States as your best friend. We seek no extension to the southward. We desire nothing that is yours. We ask only for your friendship, for your commerce, and for your good-will. We also earnestly hope that you will unite with us in the support of what we believe to be the true policy for America, both North and South. That policy is expressed in the Monroe doctrine, and carries with it the purpose of drawing close the bonds between the continents and extending the belief in the solidarity of American interests"; a poem written for the occasion by Frederic Almy; an address by Timothy Woodruff, Lieutenant-Governor of New York; and a benediction by the Right Rev. William D. Walker, Bishop of Western New York.

Mr. Milburn, who presided over the exercises, read telegrams of congratulation from the President of Argentina, the Governor-General of Canada, the President of Colombia, the President of the Dominican Republic, the President of Ecuador, the President of Haiti, the Governor of Jamaica, the Governor of Martinique, the President of Nicaragua, the President of Paraguay, the President of Peru, and the President of Uruguay. Mr. McKinley said: "I send you greetings from the shores of the Pacific, with fervent prayers for the benediction of heaven upon this beneficent enterprise, with sincere congratulations to all those whose energy and devotion have brought it to pass, and with heartfelt welcome to our guests from our sister republics, to whom we wish continued and abundant prosperity. May there be no cloud upon this grand festival of peace and commerce, no thought of rivalry except that generous competition in useful arts and industries which benefits all."

At the conclusion of the exercises in the Temple of Music there was a grand display of day fireworks on the Esplanade and about the Court of Fountains. There was first a salute of 125 aerial guns fired from steel mortars. At the same time 27 12-foot gas balloons, each lettered with the name of one of the Pan-American countries and carrying below the flag of its country, were released. Forty-five aerial rockets were fired, one for each State in the Union. There was also a magnificent display of Japanese daylight fireworks, Oriental kite displays, daylight bomb cloud-shells setting free American and Pan-American flags with souvenirs of dedication day, and finally a grand salute of 500 large gun cotton rockets. In the evening a display of fireworks from the shore of Park Lake and an illumination of the buildings and the tower terminated the festivities.

Juries and Awards.—In July and August a series of juries convened in Buffalo and examined the exhibits. Before the close of the exposition announcement was made that 3,193 awards were made, distributed as follows: Gold medals, 887; silver, 1,159; bronze, 1,147; and honorable mentions, 1,384. Distributed according to nationalities, the United States came first, having received 601 gold medals, 663 silver, 562 bronze, and

470 honorable mentions. Mexico followed with 78 gold medals, 151 silver, and 139 bronze; Chile, 51 gold medals, 98 silver, and 110 bronze; Cuba, 38 gold medals, 55 silver, and 57 bronze; Argentina, 19 gold medals, 21 silver, and 25 bronze; Ecuador, 22 gold medals, 39 silver, and 55 bronze; Canada, 13 gold medals, 23 silver, and 17 bronze; Honduras, 11 gold medals, 9 silver, and 11 bronze; and Porto Rico, 11 gold medals, 14 silver, and 45 bronze.

Closing Exercises.—The formal closing exercises began in the Temple of Music on Nov. 2, at 11 o'clock p.m. At the close of the concert by the Herbert Orchestra, the organ played Auld Lang Syne, followed by the familiar strains of America, at the beginning of which the audience rose in a body and sang the well-known words. President Milburn then made a brief address, in which he said: "There will be, but a few hours hence, only a memory of this exposition. We started out to cement together all the countries of America and to end the nineteenth century and begin the twentieth century by a binding of the relations of the free peoples of North, Central, and South America, and I feel that this exposition goes down in history as the greatest social and political triumph by having brought those people closer together and having made them better known to each other." When he had finished speaking the visitors gathered in the Court of Fountains, and the arrival of the exposition officials was announced by a trumpet, which sounded far down the court. "Attention" was blown by eight strong-lunged trumpeters, stationed on the top of the Electric Tower, at 11:59. Exactly at midnight, "taps" were sounded to the waiting throng. As the last note died away, the lights gleamed with their accustomed brilliance, and then gradually they melted into faint tiny points of fire. For the last time the spark outlines of the buildings wavered for a moment, and then went out. The big search-light was turned down on the scene for an instant, and then it passed into darkness. The switch by means of which the electric lights were operated was turned off, the cable that supplied the power to the lighting

system from Niagara Falls was cut, and the Pan-American Exposition came to an end.

Attendance.—The total attendance at the exposition was 8,120,048, which included passes. The unfavorable weather immediately prior to the beginning of the exposition naturally resulted in a diminution of attendance, and, together with its uncompleted condition, prevented the anticipated influx of visitors. And again, subsequent to the assassination of President McKinley the attendance dwindled sadly.

Auditor's Report.—The total receipts from admissions were \$2,467,066.88, and the receipts from concessions were \$3,011,522.76. The auditor's report on the financial transactions of the exposition to, and the condition at the close of business, Nov. 2, 1901, shows that the payments made for construction—buildings, grounds, streets, sewers, piping, wiring, fountains, etc.—real estate, and office furniture and fixtures, amounted to \$5,215,259; and that the payments made for operating expenses amounted to \$2,171,836; total payments, \$7,387,095. There were outstanding unpaid construction expenses amounting to \$389,311, unpaid operating expenses amounting to \$113,685, and unpaid miscellaneous expenses amounting to \$49,525. The first-mortgage bonds unpaid were \$174,979, and unpaid second-mortgage bonds \$500,000. The contractors who put up the buildings will lose a large amount, as the company has no assets with which to pay their claims.

Literature.—This exposition, more than any of its predecessors, advertised its existence by means of a series of exceedingly beautiful pamphlets. The railroads likewise issued folders filled with attractive illustrations that described the routes to Buffalo, as well as the most interesting features of the grounds. An official catalogue and guide, and a Pan-American Art Handbook, could be purchased on the grounds. The monthly magazines devoted much space to the history of the exposition, and the World's Work for August and the Cosmopolitan for September devoted their entire issues to the various phases of the exposition, with descriptions by specialists.

F

FARMERS' NATIONAL CONGRESS. The twenty-first annual meeting of the Farmers' National Congress opened in the Auditorium, Sioux Falls, S. Dak., Oct. 1, 1901. Addresses of welcome were made by Lieut.-Gov. Snow in behalf of South Dakota, and H. H. Keith in behalf of Sioux Falls, and responses were made by Hon. J. Sterling Morton, of Nebraska, the Hon. William D. Hoard, of Wisconsin, and Col. Benjamin F. Clayton, of Iowa. In his address Mr. Morton said: "On the farm nothing can ever arise to threaten American institutions. It is in the cities, where many men are homeless, that riots and anarchy are found. On the farms the people love their homes, and there can never be a riot where the people love the home, which is a part of the nation. Loving the part, they love all."

In the opening session the band played a medley of airs, and when it began the national air the audience arose to its feet, cheering. This manifestation foretold the patriotic spirit and high motives that characterized the meeting throughout.

At the conclusion of the responses to the addresses of welcome, the president of the congress, Mr. R. G. F. Candage, of Massachusetts, read his annual address. He sketched the development of

agriculture, and called attention to the fact that "this vast area of our country, with its nearly 80,000,000 of stirring and active people, produces more than enough for the needs of that mighty host from its cultivated acres, and had a surplus of the products of the farm, factory, forest, shop, and mine, in 1900, valued at nearly \$1,500,000,000." The congress later took the action suggested by the need of foreign markets for our products.

A committee on resolutions was appointed.

Prof. John Hamilton, of the Board of Agriculture of Pennsylvania, read a paper on The State Department of Agriculture: Its Mission and Organization. He recommended the general plan followed by the national Department of Agriculture as one that offers the most advantages. The work should be divided into sections, and he recommended these divisions: Farmers' institutes, live stock, horticulture, forestry, pure food, dairying and dairy-products, entomology, public roads, market and flower gardening, fertilizers and cattle-foods inspection, chemistry, meteorology, publications, statistics, and markets.

At the evening session Francis B. Thurber, of New York, read a paper on What shall we do with Our Surplus Products? This contained a

THE ETHNOLOGY BUILDING, AND A PORTION OF THE ESPLANADE.
PAN-AMERICAN EXPOSITION.

strong plea for ship subsidies, to which the congress did not make a favorable response, however. Mr. Thurber said: "It is an anomaly that we should be willing to spend \$40,000,000 a year on a navy, and balk at spending \$10,000,000 a year in building up a merchant marine that will make our navy effective. The nation demands an isthmian canal, but what is the use of building a canal unless we have a merchant marine to use it?" He also approved the suggestion of the Hon. O. P. Austin that a floating exposition should be organized, using some of the army transports, the services of which will not be longer required, and with the cooperation of our manufacturers show samples of our wares in the principal ports of the world.

In the discussion of this paper, Hon. William D. Hoard, of Wisconsin, said he believed the danger from trusts had been exaggerated by the public, and that, while trusts should probably be regulated, the people had less to fear from the trusts than the owners of trust stocks had to fear from depreciation of those stocks. He pointed out the effect that enhanced price has in lessening consumption.

On the second day a very interesting paper on *The Rice Industry: Its Relation to Other Industries*, prepared by Mr. J. B. Foley, of Louisiana, one of the largest rice-planters of that State, was read by Col. Edward W. Wickey, of Mississippi, who made valuable and interesting comments. Mr. Foley pointed out that the rice district of southwest Louisiana is a beautiful level prairie, marked by winding rivers and bayous. The rice area has been circumscribed only by the ability to irrigate. The rice industry of that section has been developed largely by Northern people and capital. No other equal agricultural area in the United States compares with the rice district as a consumer of the products of other sections of the country. It is a one-crop region. The rice belt buys very nearly all its food for man and beast. It spends every year many thousands of dollars for machinery, which comes from the North. The rice industry of southwest Louisiana is one of the "infant industries," and while the home product at present supplies only about three-fifths of the home demand, the rice-growers of the United States will soon need all our home market. The high price of rice to the consumer is due to the cost of retailing it. For a rice that the mills get for four cents a pound, the consumer pays eight to ten cents a pound. If grocers would sell rice on the margin on which they sell sugar, it would be a cheap food. Some rice-growers make large profits, and some none at all.

This was followed by an able paper on *The Nicaragua Canal: Its Importance to Farmers*, by the Hon. Harvie Jordan, of Georgia. He quoted Prof. Emory R. Johnson to the effect that the result of the building of the canal on railway rates would be offset by the expansion of the whole traffic handled. He said: "The time is not far distant when the rapid development of our industries, the expansion of trade both at home and abroad, will require not alone the services of our present railways and the canal, but we shall need more railways and ships to meet the requirements of our country. The building of this canal is a great national necessity. Its construction would change the geographical position of our commerce on the high seas. We should be brought into direct trade relations with the Asiatic nations, whose 500,000,000 people stand ready and willing to buy our cotton, grain, meat, and other commodities. Millions of tons of freight from the West and the South would soon

find new markets at a minimum cost of water rates for freight, which would leave to the producer and manufacturer a better margin of profit on all commodities intended for export.

The afternoon session was devoted to a discussion of oleomargarine and other butter substitutes and proposed legislation affecting them. The discussion was opened by an exhaustive and carefully prepared paper by Charles Y. Knight, of Illinois, secretary of the National Dairy Union. He asserted that oleomargarine is a fraud wherever sold, and that its fraud is admitted by its makers; that only 50 cents' worth of fat is used in the manufacture of oleomargarine from each head of cattle killed, and that only 1 per cent. of the cottonseed-oil product is used in the manufacture of oleomargarine; that the people themselves do not demand oleomargarine, do not want it, and that it can be sold to them in any considerable quantity only through deception; that not all the oils used in its manufacture are made from clean fats; that it is not the equal of butter in digestibility or nutritiousness, and is positively unwholesome; and that as coloring it in imitation of butter is done only to sell it as butter, such fraudulent coloring should be subjected to a prohibitive penalty.

Opposing views were advanced by the Hon. J. Sterling Morton, of Nebraska, ex-Secretary of Agriculture, in a very skilful argument. He interestingly told of the development of the manufacture of paper from a part of the corn-stalk. He exhibited samples of paper in various forms, from newspaper to paper board, made from a part of the corn-stalk previously wasted. He then asked if the manufacturers of paper from the materials formerly used should be allowed to compel by law the manufacturers of paper from corn-stalk fiber to color it in such manner that it could not compete with paper made from wood-pulp, etc., though the paper made from corn-stalk was just as good, and sold for a less price. He contended that compelling the manufacturers of paper from corn-stalk fiber to color their paper in such a way as to prevent its competition with other paper was a parallel to the legislation asked for by the dairymen, to compel the manufacturers of oleomargarine to color their product pink, or else subject it to a prohibitive tax. He also contended that the National Government had the constitutional right to tax only to raise revenue, etc., and not in order to prohibit the manufacture of a product.

His argument was vigorously combated by the Hon. William D. Hoard, of Wisconsin, president of the National Dairy Union. He contended that the basis of the traffic in oleomargarine is deception, that it is selling one product for another. The manufacturers of oleomargarine bought the merchants to violate the laws. "It is a question that strikes into the integrity of society," he said, "when men will go before Congress with the claims the oleomargarine men present." He pointed out the difference between coloring butter and oleomargarine—butter is colored to conform to the taste of the consumer, oleomargarine is colored to deceive the consumer.

At the evening session Prof. E. Benjamin Andrews, Chancellor of the University of Nebraska, spoke on *The Farmstead Beautiful*. "Scientific farming has now put it within the reach of nearly all to have good reading-matter, and to indulge in travel; and the telephone and the trolley-car have done much to add interest to life on the farm." Trees and hedges temper the climate and add to the beauty of the farm. "Have your home lot square, with lawn all around it. The beauty of a

lawn is when the whole expanse of green may be seen at a single glance, not cut up by flower-beds or trees. In the house have no carpets. No room is too good in your house for your own use. Don't live in the kitchen. That is vulgarizing. Have a few good pictures."

At the morning session of the third day Dr. J. W. Heston, president of South Dakota Agricultural College, read a paper on The Farmer's Opportunity, which was a plea for irrigating the arable lands of the semiarid region by the National Government. "Individual enterprise has done all it can. Of the \$6,000,000 spent on irrigation, \$5,000,000 were private funds. The States can not do it. Irrigation is not new; it is a demonstrated success. The irrigated land would have a value much in excess of the cost."

The discussion that followed this paper made it certain that a large majority of the congress was opposed to any irrigation enterprise by the National Government.

Other papers read were on Ancient American Forests, by John P. Brown, of Indiana; one by Prof. H. W. Campbell, of Kansas, in which he advocated, for the semiarid West, the shallow cultivation and fine-earth mulch that he has done so much to popularize among farmers, and that has proved to be valuable to conserve moisture in regions outside the semiarid belt; and a paper on Aspects of our Sheep Industry, prepared by Hon. J. R. Dodge, of Washington. He said: "The assertion that the pastoral resources and feeding capacity of the country are in danger of exhaustion is simply absurd. Our agriculture is still in a primitive condition. Even in some of our seaboard States there is more wild land than farm area, and much uncultivated land in farms. The competition of cotton with wool is legitimate, but the skilful mixture of cotton with wool for the fraudulent purpose of facilitating sales of the hybrid fabric as pure wool, is obviously reprehensible. The Dingley law was the salvation of both branches of the wool interests in one of the critical periods that threatened the destruction of both industries—the production and the manufacture of wool. That the present tariff is no bar to importation of clothing and combing wools is shown by the average imports for three years past of 33,777,894 pounds per annum. Our varied climates, soils, grasses and forage plants, and pastoral experience can produce almost any class of wool that the caprice of fashion or the competition of textile manufacture may require."

At the evening session Mrs. Bertha Dahl Laws, of Minnesota, gave an interesting lecture on The American Girl in the Home. Her main thought was that home-making is and should be the highest ambition of the American girl. The American girl of to-day is the home-maker of the future. All mothers should see that their daughters are taught the duties of wifehood and motherhood. "Domestic economy should be taught in the public schools. Housekeeping and home-making is a most delightful occupation if one will only make it so. It is drudgery only to those that make it drudgery. We should make full use of light, water, air, and rest. We do not rest enough."

She was followed by Mr. M. F. Greeley, editor of the Dakota Farmer, in a strong plea to young men to endeavor to own land, though only a little. Land ownership gave an independence and feeling of responsibility that nothing else did. Land was becoming scarce, and would be a good investment from the money standpoint. Land ownership made good citizenship. The farm home was self-sustaining. The city home required a constant ex-

penditure. Too often the farm was not credited with the supplies it furnished the family. The girl that could prepare a good meal and could preside at the table with grace, and was a good housekeeper, was not lacking in education, might be better educated than the graduate of a college.

Officers were elected to serve for two years, as follows: President, Hon. George L. Flanders, of Albany, N. Y.; first vice-president, Hon. Harvie Jordan, of Monticello, Ga.; second vice-president, Col. B. Cameron, of Stagville, N. C.; secretary, John M. Stahl, of Chicago, Ill.; first assistant secretary, E. A. Callahan, of Albany, N. Y.; second assistant secretary,

Hon. George M. Whitaker, of Boston, Mass.; third assistant secretary, Joel M. Roberts, of Waco, Neb.; treasurer, Hon. J. H. Reynolds, of Adrian, Mich.; executive committee, the president and secretary ex-officio, and Col. Benjamin F. Clayton, of Indianola, Ia.; Col. E. W. Wickey, of Ocean Springs, Miss.; and Mr. W. L. Ames, of Oregon, Wis.

The State vice-presidents are: Alabama, George I. Motz; Arkansas, R. R. Dinwiddie; California, D. L. Cantlin; Colorado, Farwell Bemis; Connecticut, J. H. Hale; Delaware, J. A. Whitaker; Florida, T. J. Appleyard; Georgia, Dudley M. Hughes; Idaho, W. H. Buchanan; Illinois, R. H. Kirby; Indiana, J. B. Brown; Iowa, Samuel Jones; Kansas, Thomas M. Potter; Kentucky, J. H. Alderson; Louisiana, John Dymond; Maine, Obadiah Gardner; Maryland, William M. Amos; Massachusetts, N. Sagendorph; Michigan, Bronson Turner; Minnesota, John Cooper; Mississippi, A. L. Hutchinson; Montana, R. N. Sutherland; Missouri, Charles K. Greene; Nebraska, L. L. Young; Nevada, S. P. Davis; New Hampshire, Joseph D. Roberts; New Jersey, Franklin Dye; New Mexico, Arthur Goetz; New York, H. S. Ambler; North Carolina, John S. Cuninghame; North Dakota, S. M. Edwards; Ohio, D. L. Pope; Oklahoma, H. A. Todd; Oregon, Richard Baird; Pennsylvania, George G. Hutchinson; Rhode Island, Henry L. Greene; South Dakota, John S. Armstrong; Tennessee, J. K. P. Wallace; Texas, W. A. Rhea; Vermont, D. H. Morse; Virginia, Henry E. Alvord; West Virginia, D. Buchanan; Wisconsin, E. M. Anderson; Wyoming, E. L. Ramsey.

The following resolutions were adopted:

"Whereas, The rapid expansion of agricultural production, manufacturing industries, and commercial trade generally in the United States is growing beyond the demands of present markets, both at home and abroad; and

"Whereas, It is deemed of vital importance to cultivate better trade relations with the Central and South American republics and the Asiatic nations; and

"Whereas, The Government of the United States is committed to the enforcement, and will

PAN-AMERICAN EXPOSITION.

enforce and protect the integrity of the Monroe doctrine; therefore be it

"Resolved, by the Farmers' National Congress, that the early construction of the Nicaragua Canal is deemed highly essential for meeting the objects and purposes above set forth; and we hereby earnestly petition the Congress of the United States to take immediate steps toward the opening of the said isthmian canal, that the same may be opened to the commerce of the world, on the high seas; and that it may and shall be built and controlled by the Federal Government of the United States without the aid of any foreign nation, and without any international complications.

"Resolved, That the Farmers' National Congress in session assembled at Sioux Falls, S. Dak., hereby respectfully urges the Congress of the United States to enact, at the earliest possible moment, a law providing, first, that whenever any dairy or other food products are taken from any State or Territory into another State or Territory, the said products shall become subject to the laws of such State or Territory to the same extent and in the same manner as though they had been produced or manufactured therein, and shall not be exempt therefrom by the fact that they are in the original importer's package; second, that all oleomargarine, butterine, suine, and kindred products manufactured or produced in imitation or semblance of butter, the product of the dairy, shall be taxed ten cents per pound; third, that on all such products manufactured or produced not in imitation or semblance of butter, the product of the dairy, the present tax of two cents per pound shall be reduced to one quarter of a cent per pound.

"Resolved, That the Farmers' National Congress in session assembled at Sioux Falls, S. Dak., respectfully represents to the Congress of the United States that a great wrong is being committed against the consuming public and against a great producing interest whereby the former are liable to be injured in their health and the latter in their reputation for integrity, and to the great financial injury of both, in the fact that large quantities of inferior and adulterated products are being produced in some of the States of the Union and are branded or labeled as goods of a superior quality and as produced or manufactured in other States, usually counterfeiting or appropriating brands of known standing and reputation; and these goods are largely used in interstate commerce. And therefore this congress respectfully urges the Congress of the United States to pass an act, and provide for its enforcement, to the end that no dairy or other food products used in interstate commerce be falsely branded or labeled as to the State or Territory in which they are manufactured or produced.

"Resolved, That this Farmers' National Congress regards with especial satisfaction the efforts that are being put forth by the States of Wisconsin and New York, and other States, to introduce the teaching of the elements of agriculture in the common schools; believing, as we do, that this system of education is greatly needed in the formation of the true spirit and purpose of agriculture.

"Resolved, That we earnestly urge upon every State in this Union the adoption of like methods, and we further recommend that the work of teaching the elements of agriculture be made a part of the regular educational system of the State.

"Whereas, The farmer is necessarily removed from large centers of population and trade, and therefore the mail-service affords his best means

of communication with the outside world for both commercial and intellectual purposes; and

"Whereas, Any increase of the postal facilities of the country adds to his convenience and comforts; therefore,

"Resolved, That the United States Congress be requested to extend rural free mail delivery as fast as practicable, to provide a simple and practical postal currency for the safe transfer of national currency, and to establish a parcels post.

"Whereas, The Post-Office Department has recently made a ruling designed to remedy the abuses in the carriage of second-class mail-matter, which will save many millions of dollars per year, which will be available for the extension of rural free delivery and other improvements in the mail-service which have been retarded by the absorption of the department's revenues in such abuses;

"Resolved, That the Farmers' National Congress hereby indorses the action of the Post-Office Department, and commends the Postmaster-General for his efforts to defend alike the public interest and all legitimate publications within the meaning of the postal law.

"Resolved, That the Farmers' National Congress heartily indorses the views of the late President McKinley favoring reciprocal trade agreement with foreign nations.

"Resolved, That true reciprocity involves making concessions on our part as well as receiving concessions from foreign nations.

"Resolved, That the Farmers' National Congress, in annual meeting assembled, expresses its horror at the recent assassination of President McKinley, and its sympathy with his family.

"Resolved, That we further desire to put on record our detestation of the doctrines which lead up to such deeds, and of all those who preach or in any manner encourage them.

"Resolved, That the Legislatures of the various States should enact laws which will tend to prevent such occurrences in the future.

"Whereas, Appropriations by the National Government for improvement of the navigation of our coasts, harbors, and rivers are recognized as a public benefit and a wise expenditure of the public money; and

"Whereas, The Congress of the United States has passed no general river and harbor bill for the past three years; therefore be it

"Resolved, That the Farmers' National Congress urges the Congress of the United States to make liberal appropriations for all meritorious, important, and needed improvements of rivers and harbors already begun, in the interests of more extended commerce and as safeguards of life and property.

"Resolved, That the Farmers' National Congress respectfully calls the attention of the Congress of the United States to the unsatisfactory condition that exists concerning the public domain, now at the mercy of ranchmen, and which it is claimed is being denuded and rendered infertile by the system of pasturage now pursued.

"Resolved, That the Farmers' National Congress respectfully requests the Congress of the United States speedily to make investigations into the facts, and if these lands are being injured and the rights of actual settlers invaded, to adopt such measures as may in its judgment seem wise, to the end that these lands may be preserved for the final use and ownership of actual settlers.

"Resolved, That the members of the Farmers' National Congress deeply regret that the Massachusetts State authorities have discontinued their war upon that most dangerous insect, the gipsy-

moth, against which there is no protection except absolute extermination.

Resolved, That we regard the prevalence of this insect in Massachusetts as a menace to the entire country, and feel that we may properly urge the authorities of that State to destroy it utterly, on the same principle that justifies the public in expecting every householder to extinguish a conflagration on his own premises."

An amendment to the constitution, providing for an increase in the number of delegates that constitute the congress, was submitted by W. L. Ames, of Wisconsin. Under the constitution the proposed amendment lies on the table until the next annual meeting, when it will be acted on. At present the number of regular delegates appointed by the governors of the various States, which constitutes very nearly all the voting membership of the congress, is limited to one from each congressional district and two from each State at large. The proposed amendment will make it possible for the governors to appoint as many as ten delegates from each congressional district.

The attendance at this meeting was not so large as it has been at some previous meetings. Every delegate present was a farmer, and the proceedings were characterized throughout by unusual earnestness, carefulness, and patriotic feeling. The sentiment of the congress was that the next meeting-place, which is to be selected by the executive committee, should be Richmond, Va., or some point in North Carolina.

FEDERATION OF CHURCHES. A conference of persons interested in federated action among churches and Christian workers met in Philadelphia, Pa., Feb. 5 and 6, under the call of the National Committee, and was attended by representatives of about ten denominations from New England and the Middle States, including Ohio. Accounts were given of an interdenominational commission in Maine representing the five leading denominations of the State; of the promotion of cooperation by the Evangelical Alliance in Boston, Philadelphia, Pittsburg, Erie, Pa., and other places; of the federations established in Hartford and New Haven, Conn., New York, Jersey City, N. J., Cleveland, Ohio, and Syracuse, N. Y.; of the organization of a new federation in Chicago; and of the work of the State federation in New York. A National Federation of Christian Churches and Workers was formed, of which Mr. J. Cleveland Cady, of New York, was chosen president, and for which an executive board of 15 clergymen and 15 laymen was constituted.

The federation in New York city performs a part of the work of a home missionary society, for the purpose of which the city is systematically divided into districts corresponding with the Assembly districts, each of which is represented by an auxiliary cooperating with the federation in making a canvass of its territory in order to ascertain the religious relations and social, economical, and civic conditions of the people. The plan in operation calls for an annual canvass of one-fifth of the enlarged city. A review of the work accomplished by the federation since its formation in 1896 was published in the periodical Federation for January, 1901, by the executive secretary, the Rev. Walter Laidlaw. One of the results of it was the establishment of several denominational enterprises through interdenominational induction and suggestion. Among the enterprises enumerated as thus started were 3 Protestant Episcopal, 2 Lutheran, and 1 Baptist. In a sociological canvass much attention had been given to facts of importance on the problem of

tenement-houses, and one of the addresses made at the annual meeting, Jan. 29, was on Federation from the Tenement-House Improvement Standpoint, by Dr. E. R. L. Gould. The expenses of the work of the federation were, in 1896, \$2,502; in 1897, \$4,421; in 1898, \$4,820; in 1899, \$6,874; in all, including odd cents, \$18,618. The receipts during the same time were \$18,418. The literature of the organization had been requested in 26 States of the American Union, in places in Canada, in Glasgow, Scotland, and in London. It was represented at this meeting that 110 places in the United States had become interested in the plan; that State federations had been organized in Maine, Connecticut, Vermont, Pennsylvania, and New York, and the formation of several city federations and the national federation was mentioned.

In 1901 the canvasses of Greater New York had resulted in turning over to church care more than 20,000 unchurched families, enlisting the cooperation of more than 20 religious societies, and promoting several benevolences and material improvements.

A State board of federation has been formed in Massachusetts.

The second annual Conference of the Federation of Churches and Christian Workers of the State of New York was held in Rochester, Nov. 12 and 13, and was attended by representatives of the Methodist, Baptist, Presbyterian, Protestant Episcopal, Congregational, Lutheran, Reformed, Unitarian, and Universalist Churches, and a Jewish rabbi. Reports were made of what had been accomplished in the different towns and cities; work that took the various shapes of repression of civic unrighteousness, restraint of the saloon, of Sabbath desecration, and of the degradation of the young; and evangelistic labors. Thorough cooperation had been effected, and all the enterprises engaged in had been carried on in harmony and with practical efficiency. Several addresses were made, bearing upon the purposes of the federation and the fields of work open to it.

At a meeting of the Executive Committee of the proposed Federation of Evangelical Churches and Christian Workers in Ohio, held at Columbus, June 3, Dr. E. B. Sanford reported that in his tour of the State as representative of the committee he had found great interest manifested in the movement, and that federations were formed or being formed in Cleveland, Cincinnati, Springfield, Columbus, Xenia, Chillicothe, Toledo, Findlay, Lima, Mansfield, Oberlin, Marietta, and Steubenville. A convention for perfecting the full State organization was appointed, to be held at Columbus, Dec. 3, each local federation to be represented by two delegates.

National Council (English) of Evangelical Free Churches.—The Free Church Year-Book for 1901 gives statistics showing that the Evangelical Free Churches in England making returns report 1,910,302 communicants, 384,632 teachers and 3,283,600 pupils in Sunday-schools, 9,114 ministers at work, 50,919 local preachers, and 8,100,652 sittings. Tables in the same book represent that the Anglican Church provides 6,979,150 sittings and has 1,941,760 communicants and 207,539 teachers and 2,865,291 pupils in Sunday-schools; while the Official Year-Book of the Church of England gives the number of sittings provided by Anglican churches as 7,000,375.

The eighth annual meeting of the (English) National Council of the Evangelical Free Churches was held at Cardiff, Wales, March 12 and 13. The Rev. C. H. Kelly, retiring president, spoke, in the opening sermon, on the reality and value of

personal experience in the Christian life. The president for the present meeting, the Rev. J. G. Greenhough, in his address on the Unifying Forces of the Times, defined the patriotism of the Federation of Free Churches, and said that it would watch with the utmost vigilance every attempt that might be made to tamper with the Protestant succession to the Crown. While some of them might be willing to have the language of a certain oath modified, they would resist with united force every proposal to abrogate or change the substance. The report of the council showed that 87 new councils had been organized during the year as against 44 in the previous year, and that there were now about 700 councils. Three new distinct federations had been formed, and another was expected to be formed shortly. Some of the federations had displayed notable originality and vigor in starting new work. The Metropolitan Federation included 60 councils. Federation was represented as making great progress abroad—in America, Australia, New Zealand, and South Africa. The formation of a Free Church Council in Berlin, Prussia, was mentioned. The idea of federation was being discussed in Scotland. Half of the volume of the report was devoted to records of the simultaneous mission which had been held in London, the larger cities, and in other towns and parts of the kingdom. A resolution of "most hearty congratulations" upon the union of the United Presbyterian and Free Churches in Scotland was adopted. A resolution respecting the South African War, which was unanimously carried, declared that while grave differences of opinion existed among Christian citizens as to the origin and conduct of the war, this disagreement afforded no reason why the council "should not express with one voice its distress that Christian nations could find no way of settling differences except the cruel arbitrament of the sword"; expressed pain at the continuance of the war and all the horrors attending it; and avowed a passionate longing for a peace which, being wise and righteous, shall be enduring. The resolution further called upon all the local councils and all the Free Churches to pray to Almighty God to lead events and the dispositions of men to that issue from present difficulties and perplexities "which shall be for the good of all races in South Africa" and of the British Empire. A resolution was passed desiring local councils to educate public opinion with a view to the early enactment of the recommendations of Lord Peel's report on the licensing laws. The council sermon was preached by the Rev. Dr. Joseph Parker, on the subject of A Learned Ministry. Papers were read and addresses made on different aspects of Sunday-school work (The Old Testament in the Sunday-School, Are Sunday-Schools Declining? etc.); The Relation of the Free Church Council to Public Institutions; Is Our Preaching as Effective as it Ought to Be?; The Rest Day; Christian Liberty; and Attractiveness in Church Services. Five former French priests were welcomed to the meeting as representatives of a body of their order who had withdrawn from the Roman Catholic Church.

Local councils were urged to carry out during the year the Free Church Girls' Guild Scheme, which had been adopted by the National Council, and it was suggested that each council should form a special committee acting in association with the Central Bureau to be opened in London.

The special committee of the National Council appointed to deal with the Free Church Girls' Guild organized April 26, and decided to make the formation of guilds throughout the country a chief work of the council for the year.

The Simultaneous Mission. The holding of a simultaneous mission in all parts of London was suggested to the National Council of the Evangelical Free Churches several years ago, and the council of 1900 decided to hold a series of services, occupying as many churches, temples, and halls throughout the metropolis as the audiences attracted should require, from January to Feb. 4; and to follow this movement after a short interval, with similar series of services in the provincial cities and towns; and finally to hold missions in the English and Welsh villages, March 2 to 6. The missionaries who were expected to engage in all these meetings included the most prominent preachers in all the denominations represented in the council. The program of the meetings included a systematic house-to-house visitation, from which no house was excluded, to be made first primarily to non-churchgoers, the rule being that "the visitation must never be used for proselyting purposes," and to induce such to attend the meetings. Great care was taken in the organization of the meetings and in the selection of those who led and assisted at them, so as to secure the most acceptable and efficient service. The meetings included, besides the principal service in the evening of each day, Bible readings or addresses, afternoon meetings for Christians, dinner-hour meetings for business men and in factories, special services for shop assistants on their early-closing day, early morning meetings for men and women on their way to work, and meetings late at night for cabmen, omnibus and tramway men, railway men, and other special classes. The meetings were attended by daily increasing and crowded audiences of hearers of all social classes, even till the day of closing them, while the interest was still rising. The second series of meetings, in the larger towns and cities, were conducted on a similar plan with those in the metropolis, were engaged in to a considerable extent by those who had led in the Metropolitan meetings aiding the local ministers, and were marked by similar features and like results. Among the missions of which special reports were published were those at Manchester, Liverpool, Leeds, Bradford, Cardiff—where the publicans closed their houses for two hours to allow their clerks and hands to attend the meetings—Plymouth and Devonport, Brighton, Bristol, Newcastle-on-Tyne, Halifax, Portsmouth, Swindon, Blackburn, Crewe, Cambridge, Sheffield, York, etc. The most marked results of the missions were found to consist in the religious awakening produced through them in the churches that participated in them. The projectors of them were disappointed in that they failed to reach the non-churchgoing classes to the extent which they had hoped and anticipated. These people would not come to the churches, but there was less difficulty in drawing them to the meetings held in theaters and halls; but the most satisfactory results were obtained among them when the meetings went to such places. Thus the dinner-hour services held at the great works in certain cities were very successful. Large audiences of men, while their nooning was not interrupted, listened attentively to the addresses and joined heartily in the hymns; and in some cases the missionaries were pressed to come again. The results of the house-to-house visitations were likewise encouraging, and the meetings held for business men were regarded as one of the most promising features of the mission. In all cases the time allotted to the prosecution of the missions was found to be too short, and the hour of closing the mission at the end of the appointed ten days found the public interest still rising, and

prospect of producing wider and more enduring effects still growing brighter. An announcement was made at the annual meeting of the Free Church Council in March, on the authority of the committee, that a great simultaneous mission would be carried out in the early weeks of 1903 in the theaters and music-halls, to reach those who could not be induced to attend meetings in regular places of worship.

The Presbyterian General Assembly of New South Wales in May adopted a motion of the Rev. Dr. Clouston, to be sent for consideration by the General Assembly of Australia, calling for the appointment of "an influential committee to devise a scheme for the federation of as many as possible of the Protestant churches of Australia, with power to confer with the representatives of other churches, so as to promote closer fellowship and organized cooperation, with a view to the ultimate formation of one grand church of Australia."

An Evangelical Union has been formed by federation of the several missionary organizations working in the Philippine Islands, for the purpose of securing comity and effectiveness in their operations.

FINANCIAL REVIEW OF 1901. There was almost an entire absence of political tension in Europe during the year. The only incident of a disturbing character was the despatch, early in November, of a French fleet to Turkish waters for the purpose of the enforcement by France of demands upon Turkey for the settlement of claims of French citizens, and for the exaction of guarantees of future protection. The fleet occupied the island of Mitylene Nov. 5, and though Turkey protested to the other powers against the aggressive movement, there was no active interference by these powers. Turkey thereupon promptly complied with the demands of France, the French fleet withdrew, and the incident was closed. The South African War developed into a guerrilla contest which required the maintenance of a large British force for the protection of lines of communication, and the entire pacification of the territory seemed likely at the end of the year to be somewhat remote. The British Government issued in April a loan for £60,000,000 consols for war purposes, making the total of such appropriations £152,069,000 since the war began in October, 1899, and it was regarded at the end of the current year as probable that another loan of about £100,000,000 would be required. There was more or less severe industrial depression in Germany, Belgium, and Russia during the year which at intervals indirectly resulted in bank failures, the effect of which, however, was localized. In consequence of such disturbances in Germany, French bankers withdrew large amounts of money which had been invested in that country, temporarily placing it in England, and it was estimated in October that not far from \$400,000,000 of French investments, which began to be made in 1899, were in the above-named month held by French bankers in the form of consols, exchange and bank bills. Toward the end of October some considerable amounts of these investments were withdrawn, causing a movement of gold from London to Paris and an advance in the Bank of England discount rate. The situation was relieved in November through exports of gold hence to Paris.

The conferences between the representatives of the powers and the Chinese Government resulted in the termination of the situation created by the disorders in the summer of 1900, and the final protocol was signed at Peking, Sept. 7, by the

plenipotentiaries on the part of the powers and by those representing the Chinese Government. By an imperial edict of June 9, Prince Chun was appointed ambassador of the Emperor to convey to the Emperor of Germany the expression of the regrets of the Chinese Emperor and of the Chinese Government for the assassination of Baron von Ketteler, German minister. Imperial edicts inflicted punishments on the principal authors of the outrages and crimes committed against the foreign governments and their nationals. In order to make reparation for the assassination of Mr. Sujiyama, chancellor of the Japanese legation, Na-Tung, vice-president of the Board of Finances, was directed to convey to the Emperor of Japan the expression of the regrets of the Emperor of China and of his Government. By imperial edict of May 29 the indemnity to the powers for the outrages in the previous year was fixed at 450,000,000 haikwan taels (\$333,900,000), which sum represents the total amount of the indemnities for states, companies, or societies, private individuals, and Chinese converts. These 450,000,000 taels constitute a gold debt calculated at the rate of the haikwan tael to the gold currency of each country as follow: The tael equals 3.055 marks; 3.595 Austro-Hungarian crowns; 0.742 United States dollar; 3.750 francs; 3 shillings British sterling; 1.407 Japanese yen; 1.796 Netherlands florin; and 1.412 Russian gold ruble (17.424 dolias fine). The above-noted sum in gold, it is decreed, shall bear interest at the rate of 4 per cent. per annum, and the capital shall be reimbursed by China in thirty-nine years. Capital and interest shall be payable in gold, or at the rates of exchange corresponding to the dates at which the different payments fall due. The amortization shall begin Jan. 1, 1902, and shall end at the close of 1940. The amortizations are payable annually, the first payment being made Jan. 1, 1903. Interest shall run from July 1, 1901, but the Chinese Government shall have the right to pay off, within a term of three years, beginning January, 1902, the arrears of the first six months ending Dec. 31, 1901, on condition, however, that it pays compound interest at the rate of 4 per cent. per annum on the sums the payments of which shall have been thus deferred. Interest shall be payable semiannually, the first payment to be made July 1, 1902. Service of the debt shall take place at Shanghai. Each power shall be represented by a delegate to a commission of bankers, authorized to receive the amount of interest and amortization which shall be paid to it by the Chinese authorities designated for that purpose, to divide such sums among the interested parties, and to give a receipt for the same. The Chinese Government shall deliver to the *doren* of the diplomatic corps at Peking a bond for the lump sum, which shall subsequently be converted into fractional bonds bearing the signatures of the delegates of the Chinese Government designated for that purpose. The proceeds of the revenues assigned to the payment of the bonds shall be paid monthly to the commission.

Among the other provisions of the protocol are those relating to the quarter in Peking occupied by the legations; the razing of the Taku forts; concessions for the occupation by the powers of twelve new ports; amendments to treaties of commerce and navigation; the improvement of the navigability of the Peiho and the Whangpoo, and the reformation of the Office of Foreign Affairs, Tsung-li-Yamen, into a ministry of Foreign Affairs, which will take precedence over the six other ministries of state. The international troops, with the exception of the legation guards,

completely evacuated Pekin Sept. 17, and withdrew from the province of Chihli Sept. 22, 1901.

The statistics of the foreign commerce of the United States indicated gradually decreasing exports of domestic merchandise and manufactures, especially after the first five months, when imports also fell off, though there was a recovery in the volume of both exports and imports in October. At the end of May the excess of exports over imports of merchandise was \$254,041,912, against \$224,964,501 at the corresponding date in the previous year. In June this excess was \$34,369,606, the smallest for any month since May, 1899, and the excess did not approach the maximum of the year, which was \$67,013,521, in January, until October, when it was \$64,228,601. Then, however, the exports were \$145,640,458, the largest since December, 1900, while the imports were \$81,411,857, the greatest on record. The total excess of exports over imports of merchandise for eleven months ending Nov. 30 was \$528,068,764, against \$571,603,735 to the corresponding date in 1900.

The following is a tabular survey of the economic conditions and results of eleven months of 1901 contrasted with those of the preceding year:

ECONOMIC CONDITIONS AND RESULTS.	1900.	1901.
Coin and currency in the United States, Nov. 30	\$2,429,210,235	\$2,539,351,896
Bankclearings in the United States (eleven months).....	\$76,720,199,255	\$108,245,078,115
Business failures (eleven months).....	\$109,913,257	\$118,358,793
Imports of merchandise (eleven months).....	\$760,452,507	\$800,424,607
Exports of merchandise (eleven months).....	\$1,332,056,242	\$1,328,493,371
Gross earnings 105 railroads (ten months).....	\$566,366,401	\$624,640,241
Wheat raised, bushels	640,797,779	708,250,849
Corn raised, bushels	2,105,102,516	1,359,970,000
Cotton raised, bales.....	9,930,270	9,674,000

Money.—The striking feature of the monetary situation this year was the almost continuous absorption by the Treasury of money from the banks through the fiscal operations of the Government, and this, too, notwithstanding the important reduction in internal-revenue taxes which became effective at the beginning of the fiscal year. The efforts of the Secretary of the Treasury to distribute the accumulating surplus revenues through purchases of unmatured bonds and the increase of deposits of public money in the depository banks were only partially effective. At the end of June the surplus revenues for six months of the year amounted to \$56,983,575, while the disbursements for bonds purchased under orders issued March 30 were only \$12,840,924. Even after the above-noted internal-revenue-tax reduction became effective, the surplus continued to increase, because of smaller expenditures, chiefly for the War Department, and the liberal distribution of money for unmatured bonds in September, amounting to \$18,894,385, only partially relieved the monetary tension. Hence it was deemed advisable in November to resume bond purchases after they had been suspended in the previous month. The evidence thus presented of the derangement to the monetary situation resulting from the Government's fiscal operations, and the inefficiency of such measures of relief as could be lawfully resorted to by the Treasury Department, caused a general popular demand for the further reduction in internal-revenue taxes, and recommendations to that end were submitted by the Secretary of the Treasury in his annual report to Congress. Almost concurrently with

the above-noted drain of money into the Treasury there was a movement of gold hence to Europe, which was partly for the payment of securities which had been returned hither in large volume. These exports of gold amounted at the end of November to \$47,907,629, which sum was partially offset by the receipt of \$11,842,362 from Australia. The movement of gold bullion from the Yukon fields was intermittent during the season, and the receipts at New York of assay-office checks representing the metal deposited at Pacific coast points contributed only moderately to the supplies in the banks at this center. The gross stock of gold in the United States Treasury was on Nov. 14 \$544,824,726, the largest on record.

The cash holdings of the New York associated banks were \$232,083,600 at the beginning of the year, reaching the maximum, \$269,011,100, Feb. 9. By July 6, influenced largely by absorptions by the Treasury and by gold exports, these holdings were reduced to \$246,532,800. There was a recovery to \$262,298,200 by Aug. 10, but by Sept. 14 they had fallen to \$239,968,800. Thereafter they increased, reflecting the large purchases of unmatured bonds in that and in the following month, and on Oct. 26 the cash was \$253,337,200. At the end of November the amount held was \$248,581,700. The loans of the banks at the beginning of the year were at the minimum \$803,989,600. Influenced largely by borrowings by combinations of capitalists who were negotiating important deals in railroads and industrial properties, there was an expansion in bank loans by March 9 to \$918,789,600, which was the highest on record. Gradual liquidation of some of these loans, caused in part by a reduction of bank reserves, resulted in a decrease to \$882,067,300 by April 20. There was a recovery to \$897,716,900 by May 11, followed by a sharp fall of \$38,844,300 in the next fortnight, reflecting the unsettling influences of the panic which resulted from the Northern Pacific corner. The loans fluctuated between \$902,755,300, June 22, and \$856,198,500, July 20, thereafter advancing to \$895,186,600, Aug. 31, declining to \$865,949,200, Sept. 14, and at the close of November they were \$876,169,200. The deposits of the banks were \$870,950,100, the minimum at the beginning of the year. The unprecedented maximum of \$1,012,514,000 was recorded March 2. There was an irregular fall to \$939,145,300 by July 20, followed by a recovery to \$968,149,600, Aug. 24, a decline to \$930,361,900, Sept. 21, and at the end of November the deposits were \$940,668,500. The surplus reserve of the banks Jan. 5 was \$14,346,075. There was a rapid rise to \$30,799,450, the maximum of the year, by Jan. 26, a fall to \$5,817,975 by April 6, a recovery to \$21,288,975, May 25, chiefly caused by the reduction in deposits, a decline to \$5,211,525, July 6. In the three succeeding weeks, or by July 27, there was an increase to \$23,128,575, due to a gain in cash and a decrease in deposits. This was followed by a decline to \$6,915,875, Sept. 7, an advance to \$17,483,175 by Oct. 12, reflecting the gain in cash resulting from bond purchases. An increase in deposits and a decrease in cash, however, caused a fall to \$8,689,925, Nov. 9, and at the close of November the surplus reserve was \$13,414,575.

The condition of the New York Clearing-House banks, the rates of interest, exchange, and silver, and the prices of United States bonds on Nov. 30, 1901, compared with the same items for the preceding two years, are given in the table on the next page.

The extremes for money on call at the New York Stock Exchange during the year were 75 per cent., which was recorded at the time of the

May panic, and 1 per cent., to which the rate momentarily fell in July. At the beginning of January loans were made at 6 per cent., but, influenced by the distribution of interest and dividends, by liberal disbursements by the Treasury, and by a return movement of money from the interior, the rate fell to 1½ per cent. in the last week. In February easy monetary conditions prevailed, and loans were made at 2½ and at 1½ per cent. In March money was more active in consequence of Stock-Exchange requirements, and after loaning at 2 per cent. early in the month there was a rise to 7 per cent., due to the low bank reserves. In April an improvement in bank conditions caused a fall in the rate from 7 per cent. at the beginning to 2½ per cent. by the end of the month. In May, after the panicky rise to 75 per cent. on the 9th, due to the development of the Northern Pacific corner, there was a gradual fall to 2 per cent. In June bank reserves were again low; there was consequently a calling in of loans by these institutions, and after opening at 2½ per cent. the rate advanced to 5 per cent. by the 17th. The suspension of the Seventh National Bank on the 27th caused a temporary rise in the rate to 15 per cent. At the beginning of July unfavorable bank conditions, disquieting crop reports, threatened railroad complications, growing out of the Northern Pacific controversy, and industrial troubles had a disturbing effect upon the situation. The Stock Exchange had been ordered closed from the 3d until the following Monday, and some of the large lenders were unwilling to make call contracts extending over that period. Consequently rates rose to 25 per cent. on the 3d, and on the 8th loans were made at 8 per cent. The market was then relieved, however, through liberal offerings of money by private bankers, and, influenced by a liquidation in loans and large supplies of money from the interior and also from the Treasury, the situation improved, rates on call fell by July 16 to 1 per cent., and the average for the remainder of the month was 2½ per cent. In August bank reserves were weakened by absorptions of money by the Treasury through fiscal operations, and the market was active with loans at 4 per cent. and at 2 per cent. In September the tone was comparatively easy with transactions at 4½ per cent. and at 3 per cent., until the week immediately succeeding the shooting of President McKinley. The effect upon the money market of that event was, however, greatly minimized through the prompt and effective action which was taken by the Clearing-House Committee. The Stock Exchange was, early on the day following the tragedy, ordered

closed, and business on the London Stock Exchange was immediately suspended. Thus was the possibly disturbing factor of stock transactions eliminated from the situation. Those of the Clearing-House Committee who were in the city assembled at an early hour, and, after a brief conference with the presidents of the larger banks and with J. Pierpont Morgan, it was decided to unite all the resources of the banks, even to the extent of issuing clearing-house certificates, should such a course be necessary, for the purpose of sustaining the market through liberal loans of money, thereby averting a crisis. So entirely effective was this course that on the following Monday, when the Stock Exchange opened, no further action, beyond the formal securing of pledges from the banks of \$30,000,000 for use in the loan market, was necessary, and confidence was restored without the use of any of the money so pledged. At the request of the Clearing-House Committee the Secretary of the Treasury contributed to the relief of the money market by offering to buy any part of \$20,000,000 unmaturing bonds, including the 4s of 1925, which had hitherto not been included in such purchases, and he also directed that the deposits of public money in the depository banks be increased to an amount equal to the par value of the bonds held as security for such deposits. The above-noted measures, which were taken by the Clearing-House Committee for meeting any emergency that might arise, continued in effect, and no additional measures were made necessary on the news of the death of the President. The highest recorded rate for money during the week was 10 per cent. Influenced by liberal offerings of bonds to the Treasury, money declined in the following week to 1½ per cent., and the average for the remainder of the month was 3½ per cent. Normal monetary conditions prevailed in October, and loans were at 4½ and at 2½ per cent., the average falling from 3½ per cent. in the first week to 3¼ per cent. by the close. In November, though the tone was firmer, rates for money on call did not rise above 5 per cent., and the average was about 4½ per cent.

Time contracts were in good demand during the first four months of the year at from 3 per cent. for sixty days to 3½ and 4½ per cent. for four to six months. In May there was some urgency in the inquiry, which resulted in an advance to 4 to 6 per cent. for short time, while four to six months' contracts were obtainable at 4 to 5 per cent. In June rates were 3 to 3½ per cent. for thirty to ninety days, and from 4 to 4½ per cent. for four to six months. For the remainder of the year the demand was moderate, and rates were 4½

to 5 per cent. for all periods from sixty days to six months. Many of the larger borrowers of money on time, it may be noted, obtained foreign-exchange loans with which their requirements were satisfied without negotiating loans in the domestic market. Commercial paper was $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. for indorsements, and 4 to $4\frac{1}{2}$ per cent. for four to six months' single names until June, when $3\frac{3}{4}$ per cent. was the lowest rate, and thereafter quotations were from $4\frac{1}{2}$ to 5 per cent. for indorsements, and 5 to $5\frac{1}{2}$ per cent. for four to six months' single names. Banks at the West were among the largest buyers of paper in this market until September.

The clearings of the New York associated banks during the clearing-house year ending Sept. 30 were the largest on record, amounting to \$77,020,672,493.65. For eleven months ending Nov. 30 the clearings were \$73,112,212,005, against \$46,687,067,789 for the same time in 1900. Clearings of all banks in the United States for eleven months this year were \$108,245,078,115, against \$76,720,199,255 for the same time in 1900.

The following is a statement of the average loans, specie, circulation, deposits, and legal tenders of the New York associated banks at the beginning of each quarter and at the end of November, 1901:

DATE.	Loans.	Specie.	Circulation.	Deposits.	Legal tenders.
January 5	\$803,989,600	\$165,023,800	\$30,982,500	\$870,950,100	\$67,059,800
April 6	904,440,600	182,860,500	31,781,700	985,781,300	69,402,800
July 6	889,466,900	169,864,100	30,578,800	965,285,100	76,668,700
October 5	873,558,200	180,354,600	30,618,100	943,553,100	71,093,700
November 30	876,169,200	176,186,500	31,975,000	940,668,500	72,395,200

Stocks.—The stock market was buoyant at the beginning of the year, influenced largely by rumors of impending combinations of important industrial and railroad interests, with the object of harmonizing existing differences and of securing uniformity of tariffs. The purchase in December of the previous year by J. P. Morgan & Co. of the Pennsylvania Coal Company, through which purchase the threatened construction by independent coal operators of a new line of railroads to tide-water was prevented, seemed to foreshadow a movement having for its object the practical control of the anthracite coal-mining and transportation companies. On Jan. 5 it was announced that the above-named firm had secured control, through purchase of a majority of the stock, of the Central Railroad of New Jersey, which control had been tendered to and accepted by the Reading Railroad Company, thus uniting these two important systems. This announcement stimulated an exceedingly active speculation in the stocks of all the coal-producing and carrying roads. Rumors were current of intended combinations of the Great Northern, the Northern Pacific, and the Chicago, Milwaukee and St. Paul systems, which rumors were readily believed, causing rapid advances in the market value of the stocks of these roads, and also in railroad properties generally. The volume of business on the Stock Exchange was enormous and altogether unprecedented during the greater part of the first half of the month. Then followed a recession in prices due to realizing sales, which were encouraged by the absence of confirmation of reports of contemplated deals, and also by the development of weakness in the iron and steel properties. This weakness was caused by the announcement that the Carnegie Company intended to erect a steel plant at Conneaut, on Lake Erie, for the manufacture of merchant pipe, in opposition to the National Tube Company. Subsequently there

was a recovery in the steel properties, and toward the end of the month the market grew strong again, influenced by large purchases of stocks of the Gould system of roads and of other South-western lines. On Feb. 1 it was announced that the Southern Railway Company had offered to exchange its securities for the stock and bonds of the Mobile and Ohio Railroad Company. It was simultaneously announced that Union Pacific interests had secured control of the Southern Pacific, through purchases of the Huntington-Speyer holdings, and that the negotiation would be financed by the issue of \$40,000,000 Union Pacific first-lien 4-per-cent. convertible bonds. Thus were harmonious relations established between the Union Pacific and the Southern Pacific systems, and also the Central Pacific. Another event, early in February, was the purchase by E. H. Harriman of a controlling interest in the stock of the Chicago Terminal Transfer Railroad. Rumors were later current of an intended consolidation of the principal steel manufacturing plants, which rumors were confirmed on Feb. 26 by the announcement by J. P. Morgan & Co. of the organization of the United States Steel Corporation, with a capital of \$1,100,000,000. This corporation was projected to take over and control the Carnegie Company and seven other steel companies,

including the Federal, the Steel and Wire, the National Tube, the National Steel, the American Tin-Plate, the Steel Hoop, and the Sheet Steel plants. The announcement was accompanied by a statement of the terms for the exchange of stocks of the constituent companies for the shares of the steel corporation, which statement caused a decline in the market value of the stocks of the seven companies above named, the terms being regarded as unsatisfactory. The tone of the market at the close of the month was irregular, with the steel stocks heavy and the railroad list and the anthracite-coal properties strong. At the beginning of March there was quite confident buying of investment stocks, and also of Union Pacific, Chicago, Burlington and Quincy, Baltimore and Ohio, and Atchison. The proposal by the Pennsylvania Railroad directors to increase the capital stock to \$100,000,000, the increase of dividends on Chicago, Milwaukee and St. Paul common stock, and evidence of improvement in the anthracite-coal situation, had a stimulating effect upon these properties. The stock of the United States Steel Corporation was traded in on the "curb" at rising prices, and March 20 it was announced that the organization had been successfully completed by the deposit of 98 per cent. of the stocks of the constituent companies; also that the Lake Superior iron-mines would be absorbed by the steel corporation. Rumors, which, however, were not at that time confirmed, were current that the Chicago, Burlington and Quincy would be absorbed by the Great Northern, and some color was given these rumors by the proposed increase of the capital of the last-named company. Toward the end of the month the market grew irregular, though it closed generally strong, with the coal shares higher on the failure of an attempt to cause a strike of miners. There was some selling of stocks based upon an advance in foreign exchange to the gold-export point, and

there were some apprehensions of dearer money. These fears were, however, partly allayed by the issue of an order by the Secretary of the Treasury directing the purchase of bonds for the sinking-fund. In April the market was generally buoyant, and the volume of business for the month was unprecedented, amounting to 41,719,086 shares of stock and \$115,802,800 par value of bonds, making since the beginning of the year 120,967,931 shares of stock and \$448,341,000 bonds. During the first week of the month the tendency of the market was irregularly downward, influenced by active money, by rumors of a strike on the Central New Jersey, and by speculative selling. Subsequently, however, there was a rally, and with the exception of the steel stocks, which were heavy on realizing sales, the buying appeared very confident. Amalgamated copper rose on news of arrangements for consolidation with the Boston and Montana and the Butte and Boston Companies; Chicago, Burlington and Quincy advanced on reports of its intended absorption by the Great Northern and the Northern Pacific; the stocks of the Southwestern roads improved on rumors that these properties would be consolidated with the Gould system, and Atchison rose on reports that the Pennsylvania was seeking control. All the high-priced stocks were in demand, and at the end of the month the market was very strong. In May occurred one of the most noteworthy crises in the history of Wall Street, and though the market closed strong, at almost an entire recovery, the effects of the panic were observable for many months in less confident buying and in occasional sharp declines in prices. The panic was caused by the sudden development of a close corner in Northern Pacific common stock. In order to accumulate the stock for the purpose of carrying out the above-noted plan of absorption of the Chicago, Burlington and Quincy by the Great Northern and Northern Pacific interests, which were represented by J. P. Morgan and James J. Hill, president of the Great Northern, a majority of Northern Pacific common had been bought by this combination. The Union Pacific interests, represented by E. H. Harriman, Kuhn Loeb & Co., and their associates, who held a majority of Northern Pacific preferred stock, feeling apprehensive that their interests in the Southwest would be placed in jeopardy by the absorption of the Chicago, Burlington and Quincy, bought largely of Northern Pacific common stock in the hope that thereby they would secure, with their holdings of the preferred stock, sufficient representation in the company to defeat the plans of their opponents. These purchases of the common stock, which were made in the local market and also in Europe, caused a sharp advance in the price. On May 6 the execution of an order for 200,000 shares of the stock resulted in a rise from 114 to 133, owing to the scarcity of the share certificates in this market, and by May 8 the price was 180. Then the corner rapidly developed, and on May 9 \$1,000 cash per share was paid, while sales for delivery on the following day were \$700 per share, indicating that 300 per cent. was demanded for the use of the stock for one day. The panic which ensued was directly caused by an advance in the rate for money to 75 per cent. per annum, which advance was accompanied by demoralization on the stock market, during which declines were general, and some stocks fell almost as sharply as they did in the panic of 1873. Atchison dropped from 78½ to 43, St. Paul common from 165 to 134, and Rock Island from 158 to 125. Among the other prominent stocks Delaware and Hudson fell 60 points,

Louisville and Nashville 27½, Manhattan 37, Missouri Pacific 31, Union Pacific common 37, and Southern Pacific 20. Early in the day arrangements were made, through Frederick D. Tappen, president of the Gallatin National Bank and chairman of the Clearing-House Committee, to loan \$19,500,000, which sum was contributed for that purpose by fourteen banks, and the prompt loaning of this money, together with \$6,000,000 by J. P. Morgan & Co., caused a fall in the rate for money to 6 per cent. Confidence was almost immediately restored, and the acute stage of the crisis speedily ended. Concurrently J. P. Morgan & Co. and Kuhn Loeb & Co. announced that they had agreed not to enforce immediate deliveries of Northern Pacific stock, naming \$150 per share as the basis of settlement. Prices of stocks thereupon almost as rapidly recovered as they had declined. Though feverish, owing to enforced liquidation of speculative accounts, which were insufficiently margined, the market was generally strong to the close of the month. The volume of business, however, was greatly reduced. One feature in the last week was an advance in Delaware, Lackawanna and Western to 244, a rise of 50 points since March. It was reported at the end of the month that an agreement had been reached by which control of the Northern Pacific would remain with the Morgan-Hill combination. The sales of stocks at the Exchange during May were 35,292,203 shares, making 156,260,134 since Jan. 1. In the following month stock transactions fell off to 19,795,612 shares, clearly indicating the effects of the panic upon the volume of business. The market was, however, generally strong until toward the end of June. Among the features was a rise in Chicago, Milwaukee and St. Paul, due to reports that the road was to be acquired in the interest of the Union Pacific. Other important advances were in Iowa Central, Minneapolis and St. Louis, Illinois Central, Chicago and Great Western, St. Louis and San Francisco common, and New York Central. Rumors that the United States Steel Corporation intended to absorb the Colorado Fuel and Iron and the Tennessee Coal and Iron Companies caused buying of those stocks. In the last week of the month the failure, June 27, of the Seventh National Bank of New York, the unsettled financial situation in Germany, and low reserves of the New York Clearing-House banks had a depressing effect upon the market, though there was an irregular recovery by the close of the month.

The intense heat early in July tended to restrict business on the Stock Exchange. The prevalence, during almost the entire month, of dry and hot weather in the West, which caused disastrous damage to corn and seriously affected other agricultural products, unfavorably influenced the speculation in the stocks of the grain-carrying roads. On July 1 a strike of the Amalgamated Association of Iron and Steel Workers was inaugurated for the purpose of compelling the recognition of the association by the managers of the United States Steel Corporation. A strike of the machinists of the United States for a nine-hour day, which strike began in May, was then in progress, but this industrial trouble came to an end early in the month, as also did a strike of stationary firemen at the anthracite-coal mines, which was intended to assist the steel strike. At the close of the month a settlement of the Amalgamated Iron and Steel Workers' differences seemed probable, but assent to the terms of adjustment was withheld by the president of that association. On the opening of the market after

the Fourth of July holiday there was a sharp fall in prices, due to the above-noted disturbing conditions, and also to the unfavorable bank statement of the previous week, to active money, to reports of renewed friction between the Harriman-Kuhn Loeb and the Morgan-Hill interests, and to a proposed cut in rates by the Atchison, Topeka and Santa Fé Railroad Company. The market was more or less unsettled until July 17, when the new board of directors of the Northern Pacific Railroad Company was announced by J. P. Morgan. This was regarded as indicating that the differences between the Morgan and the Harriman interests had been adjusted, and the market gradually, though irregularly, improved, and at the end of the month there was a substantial recovery. The steel strike continued throughout August, but there were indications at the close of the month of its speedy collapse. The Bureau of Agriculture on Aug. 10 reported the condition of the corn crop much worse than had been expected; later advices were, however, more encouraging. The effect upon the market, Sept. 7, of the murderous assault on President McKinley was to some extent minimized through the prompt and effective action which was taken by the Clearing-House Committee of the New York associated banks to avert a crisis and to restore confidence in the situation. The immediate response by the Secretary of the Treasury to the appeal of the above-noted committee for relief to the money market and the issue by the Secretary of an order directing purchases of bonds to the amount of \$20,000,000 also had an assuring effect. The Stock Exchange was promptly closed on the receipt of news of the attack on the President, and by the Monday following the excitement had subsided, and the tone of the market was thereafter generally strong, there being no renewal of apprehension on the announcement of the death of the President. The steel strike collapsed on Sept. 14, and this contributed to an improvement in the market. On the 20th the directors of the Amalgamated Copper Company declared only the regular quarterly, omitting the extra, dividend on the stock, and this action caused a sharp fall in that property. This had a disturbing effect upon other industrials, and also upon the copper speculation at the European centers. Later, however, there was a partial recovery in the local market, influenced by a rise in the Vanderbilt specialties which was due to a report that the organization of a securities company to take over the stocks and bonds of certain roads in the Vanderbilt system was contemplated. The generally unfavorable reports of the condition of industrial companies, which were made public at the beginning of October, had an unsettling effect upon the market value of the shares of these concerns. Stocks of railroad companies were, however, generally strong during the month. Among the notable gains were in Atchison, influenced by an increase in dividends on the common stock; in the Northern Pacific and Union Pacific, due to rumors of a settlement of the differences between the Morgan and the Hill interests; and in St. Paul common, New York Central, Lake Shore, and Michigan Central. At the close of the month the market was irregular and lower, in consequence of liberal sales for European account due to the development of unsettled conditions on the foreign bourses. Early in November the market gradually improved under the lead of Union Pacific and the properties in the Northern Pacific-Great Northern group; these were affected by conferences having for their object the adjustment of the matters in dispute between the interests repre-

senting these roads. As the result of these conferences a corporation was organized under the laws of New Jersey to be known as the Northern Securities Company, with a capital of \$100,000,000, to hold the stocks of the Northern Pacific, the Great Northern, and the Chicago, Burlington and Quincy Railroad Companies, the Harriman-Kuhn Loeb and the Morgan-Hill interests being represented in the directorate of the Securities Company. The stock market grew active and stronger after the announcement of the above-noted organization, and there was an exceptionally good demand for Union Pacific, the shares of the grain-carrying roads, the Vanderbilt specialties, and local traction stocks. Though there was some realizing in the shares of the Northern Pacific-Great Northern group of roads, caused by the opposition of the governors of the Northwestern States to the plan for the control of these properties, the declines were not important, and the market was generally strong to the close of the month, with the Vanderbilts leading; amalgamated copper was, however, quite weak.

Total sales of stocks at the New York Stock Exchange for eleven months ending Nov. 30 were 249,193,674 shares, against 114,968,555 shares for the corresponding period in 1900.

The following shows the highest prices of a few of the leading speculative stocks in 1900, and the highest and lowest prices to Nov. 30, 1901:

STOCKS.	1900.	1901.	
	Highest.	Highest.	Lowest.
American Sugar Refining Co.	149	153	112½
American Tobacco, preferred.	140	150	137
Brooklyn Rapid Transit.	88½	88½	55½
Central New Jersey.	150½	185	145½
Chicago, Burlington and Quincy.	144	199½	138½
Consolidated Gas.	201	238	187
General Electric.	200	251½	183½
Louisville and Nashville.	89½	111½	76
Manhattan Elevated.	116½	138½	83
Missouri Pacific.	72½	124½	69
Omaha.	126	146½	125
Pacific Mail.	57	49½	30½
Reading.	26	52	24½
Rock Island.	122½	175½	116½
St. Paul.	148½	188	134
Southern, preferred.	73½	94½	67½
Tennessee Coal and Iron.	104	76½	49½
Union Pacific.	81½	133	76
Western Union.	88½	100½	81

The Crops.—Crop conditions early in the year were quite favorable. The acreage planted to grain and cotton was large, and the weather was generally such as to encourage expectations of an abundant yield. While there was some impairment as the result of drought in the condition of fall-sown wheat, indicated by the early June report of the Department of Agriculture, the average was much higher than that at the same time in the previous year, being 87.8 per cent., against 82.7 per cent. in June, 1900. The outlook for spring-sown wheat was far superior to that of the year before, when the crop, in some sections, was almost an entire failure. The harvest of fall-sown wheat began in June, and the results were very satisfactory. Early in July, after this crop had been gathered, extremely high temperatures prevailed throughout the entire grain area, accompanied by severe drought, which caused great damage to spring-sown wheat, while corn was in some sections almost destroyed. Toward the end of the month the drought was broken by showers, but these were insufficient in many of the States west of the Mississippi to afford the needed relief, and the corn situation was critical. Spring-sown wheat, however, suffered small loss. The drought was entirely broken

to the close of July and in August, and there were then some hopes entertained that corn conditions would improve. These expectations, however, were only partially realized, and in Missouri and in other States in that section the crop was almost a complete failure. In Kansas, however, the wheat crop was the largest on record. The yield of hay and potatoes was reduced much below the average, and the destruction of pasturage on the ranges by the drought caused heavy losses of beef-cattle. The report of the Bureau of Agriculture for Aug. 1 showed an average of 54 per cent. for corn, a decline of 27.3 per cent. in the previous month. The average in Kansas was 19, for Missouri 29, for Nebraska 36, for Illinois 51, and for Iowa and Indiana 57 per cent., each indicating very considerable damage in the Central corn belt. The yield of corn, based upon conditions in October, was estimated at not more than 1,359,970,000 bushels, against 2,105,102,516 bushels in the previous year. The wheat yield, however, was then calculated at 644,835,000 bushels. The October report of the Department of Agriculture showed an average condition of corn 52.1 per cent., the lowest ever recorded. The indicated yield of oats, on an average condition of 83.7 per cent., against 89.2 per cent. last year, was 660,756,000 bushels, against 809,125,989 bushels in 1900. The estimated crop of barley was 70,631,000 bushels, against 58,925,833 bushels last year. Owing to the failure of the corn crop high prices prevailed, and these tended to check exports. The demand for wheat for shipment to Europe, where the crop was generally deficient, caused high prices for this cereal, and early in the fall some of the farmers in the Northwest withheld their wheat from the market in expectation of an advance. The yield of cotton was above the average, and it was estimated at 10,560,417 bales. Though ocean freights were low, because of the competition of vessels released from the South African transport service, the export movement of cotton was small until October, planters holding the staple for higher prices. These low ocean freights failed to stimulate shipments of grain from the Northern ports, and during a portion of the active export season many of the regular steamers were compelled to sail in ballast owing to inability to obtain grain cargoes.

Foreign Exchange.—The exports of domestic and foreign merchandise for the eleven months ending Nov. 30, 1901, were \$3,562,871 below those to the same date in 1900, and the imports of merchandise were \$39,972,100 greater. The excess of merchandise exports over imports for the eleven months was \$528,068,764, against \$571,603,735 for the corresponding period in 1900. The excess of exports over imports of merchandise and gold and silver coin and bullion for eleven months was \$553,407,425, against \$583,846,191 for the same time in 1900. Gold exports were \$2,790,195 in excess of imports for eleven months in 1901, against \$9,638,383 imports over exports for the corresponding period in 1900.

The foreign exchange market was strong in January, influenced by easy monetary conditions at this center and by higher discounts in London, which encouraged the remittance of bankers' balances for employment at the British capital. The market was also affected by the return to this country from Europe of large amounts of American securities, which had been held abroad by investors and been bought by speculators who were induced to sell by the high prices ruling for these properties in our market. This movement stimulated a demand for sterling exchange for remittance, and after opening at \$4.81½ to \$4.82 for

sixty-day and at \$4.85½ to \$4.86 for sight bills, there was a gradual advance to \$4.84½ to \$4.84½ for the former and to \$4.88 to \$4.88½ for the latter by the end of the month. These high rates for exchange made profitable shipments of gold, and \$8,083,869 of the metal was exported to Paris, the requirements for gold being greatest at that center. The market was irregular in February, tending downward for sight exchange, partly in consequence of a reduction in the Bank of England rate from 5 per cent. to 4 per cent. After opening at \$4.84½ to \$4.84½, sixty-day bills advanced to \$4.84½ to \$4.85 by the 4th, declined to \$4.83½ to \$4.84 on the 20th, and the closing quotation was the same as the opening. Sight bills opened at \$4.88 to \$4.88½, rose to \$4.88½ to \$4.88½ on the 4th, fell to \$4.87 to \$4.87½ on the 18th, and they closed at \$4.87½ to \$4.87½. The requirements for remittance were met without making necessary shipments of gold. In March the market recovered, and it was generally strong. Sixty-day bills opened at \$4.84 to \$4.84½, rose to \$4.85 to \$4.85½ by the 28th, and they closed at \$4.84½ to \$4.85. Sight bills opened at \$4.87½ to \$4.87½, advanced to \$4.88½ to \$4.88½ by the 28th, and they were \$4.88 to \$4.88½ at the end of the month. Gold to the amount of \$245,318 was shipped to Paris on the 30th. In April the tone was strong for the greater part of the month, closing easier. The rate for sixty-day bills at the opening was \$4.85 to \$4.85½. There was an irregular advance to \$4.85 to \$4.85½ by the 22d, followed by a decline to \$4.84½ to \$4.84½ by the close. Sight sterling opened at \$4.88½ to \$4.88½, and it thereafter fluctuated between this rate and \$4.87½ to \$4.88, closing at that quotation. The shipments of gold to Europe were \$4,819,435. In May the market was strong, chiefly influenced by a demand to remit for securities. It is noteworthy, however, that it was not directly affected by the crisis resulting from the Northern Pacific corner, though after the panic the increased movement hither from Europe of American securities, which was due to the above-mentioned corner, greatly contributed to the strength of the market. Owing to the urgent demand for remittance, \$10,073,007 gold was exported, principally to Paris and Berlin. The quotation for sixty-day bills at the opening was \$4.84½ to \$4.84½, and there was an advance to \$4.85 to \$4.85½ by the close of the month. Sight bills were \$4.87½ to \$4.88 at the opening, and they closed at \$4.88½ to \$4.88½. In June money was relatively higher in New York than in London, the Bank of England rate having been reduced to 3½ per cent. on the 6th and to 3 per cent. on the 13th, and comparatively low reserves of the New York associated banks tended to make our money market firm. With the object of taking advantage of the low rate for discounts in London, those of our bankers who were largely interested in railroad and other combinations negotiated exchange loans upon stock collateral to such an extent as to create more or less of an urgent demand for exchange. At the same time there was a large inquiry for remittance for securities sold in the stock market for European account, and the supplies of exchange being insufficient to meet these requirements, the tone was strong. After opening at \$4.85 to \$4.85½, sixty-day bills advanced by the 13th to \$4.85½ to \$4.86, later declining to and closing at \$4.85½ to \$4.85½. Sight bills opened at \$4.88½ to \$4.88½, but after the 18th they fell to \$4.87½ to \$4.87½, recovering by the close of the month to \$4.87½ to \$4.88. The gold exports during the month amounted to \$4,910,307, and they were wholly to Germany, where there was more or less financial

derangement, due to the unsettled industrial situation and to somewhat important failures of banks. In July the market was affected early in the month by high rates for money in New York, and later by an insufficiency of commercial bills resulting from a light movement of commodities. There was a good demand to cover, or rebuy, exchange which had been previously sold for delivery in this month, and there was also a steady inquiry for sight sterling with which to pay maturing exchange loans which had been negotiated in May. Sixty-day bills opened at \$4.85½ to \$4.85½, falling to \$4.84½ to \$4.84½ by the 12th, and reacting to \$4.85 to \$4.85½ at the end of the month. Sight bills opened at \$4.87½ to \$4.87½, and after declining to \$4.87 to \$4.87½ on the 12th they advanced to and closed at the opening rates. Gold exports were \$1,353,241, entirely to Germany. The market was strong during the first half of August, influenced to some extent by easier money in New York, but after the 14th the tone grew weak in consequence of a better supply of commercial bills, the shortage in the corn crop stimulating an export demand for grain, and at the same time there was a lighter demand for remittance. Sixty-day bills opened at \$4.85½ to \$4.85½, and after rising to \$4.85½ to \$4.85½ by the 14th they fell to and closed at \$4.84 to \$4.84½. Sight sterling opened at \$4.87½ to \$4.88, advanced to \$4.88 to \$4.88½ on the 7th, and then gradually declined, closing at \$4.86 to \$4.86½. In September the lowest rates of the year were recorded. After opening at \$4.83½ to \$4.84 for sixty-day bills, there was a decline, influenced by dearer money, a better supply of commercial drafts, and a light inquiry, to \$4.82½ to \$4.82½ by the 18th, after which there came a recovery to \$4.82½ to \$4.83 at the close. Sight exchange opened at \$4.85½ to \$4.86, and it fell by the 16th to \$4.84½ to \$4.85 by the 20th, when \$1,250,000 gold was bought in Europe for shipment hither. There was a reaction to \$4.85½ to \$4.85½ by the end of the month, due to a demand to pay maturing exchange loans and for remittance. In October the market was affected by a dearth of commercial bills against cotton, planters withholding the staple for higher prices, and by the light export movement of corn, due to the limited supply, and though wheat moved freely the resulting bills were small. Bankers' drafts were absorbed by an inquiry for remittance, and also to cover contracts, and there was a special demand toward the end of the month for the November instalment, payable by American subscribers to the British consol loan, which was issued in April. Sixty-day bills opened at \$4.83 to \$4.83½, and they advanced by the 22d to \$4.84½ to \$4.84½, closing, however, at \$4.83½ to \$4.83½. Sight exchange opened at \$4.85½ to \$4.85½, and it steadily advanced to and closed at \$4.86½ to \$4.87. An important influence was exerted upon the market at the end of the month by monetary derangements at Paris and at London. Owing to large sales of Paris exchange on London, caused by an unsettling fall in copper stocks at the French capital, the rates for such exchange had fallen so low as to draw gold from London to Paris, and, concurrently, there was a movement of the metal from London to Berlin. Discount rates rose, and the Bank of England minimum was advanced on the 31st to 4 per cent. While New York exchange on London would not permit shipments of gold to that center, sight bills being below the gold export point, there was a profit in exporting gold to Paris. Accordingly, \$2,851,586 gold was forwarded to Paris on the 31st. The bills for the reimbursement of the shippers were drawn on London, and the money with which to

meet these bills, when they should be presented, was obtained by the sale, by the Bank of France, of the gold, of Paris exchange on London. The exchange market was generally strong in November in consequence of a demand for bills for the settlement of maturing loans. There was an insufficient supply of bankers' drafts, and though commercial bills were offered in fairly liberal amounts, they were in such urgent request that the offerings were promptly absorbed. On the 19th there was some evidence of a corner in sight bills, and, owing to the inability of bankers to procure exchange for remittance, the largest single export of gold ever made to Europe, amounting to \$7,329,583, went forward. In the following week the market grew easier, partly because the urgent demand had been satisfied by the exports of gold, but chiefly because of the renewal by borrowers of their maturing exchange loans. By the end of the month, however, the market again became strong. The gold exports in November were \$15,420,804, making \$47,907,629 since the beginning of the year. Rates for exchange were \$4.83½ to \$4.84 for sixty days at the opening of the month, and the highest rates were \$4.84½ to \$4.85 on the 18th; the closing quotations were \$4.84½ to \$4.84½. Sight exchange opened at \$4.87 to \$4.87½, and after sales at \$4.86½ to \$4.87 rates rose to \$4.88 to \$4.88½ by the 18th. They fell to \$4.87 to \$4.87½ on the 25th and recovered to \$4.87½ to \$4.88 by the close of the month.

Railroads.—The acquisition, elsewhere referred to, by J. P. Morgan of a controlling interest in the Central Railroad of New Jersey, and its transfer to the Reading, was one of the most important events early in the year. The object of the movement, the harmonizing of conflicting interests among the coal-carrying roads, was not only attained, but the earnings of these roads showed marked improvement during the greater part of the year. This event was followed by the absorption of the Mobile and Ohio by the Southern Railway Company, and the purchase by the Union Pacific of control of the Southern Pacific, and also by the further development of the community of interest policy through the purchase by E. H. Harriman and associates of control of the Chicago Terminal Transfer Company, and of a large block of the stock of the Illinois Central. The announcement was made in April of arrangements for the absorption by the Great Northern and the Northern Pacific of the Chicago, Burlington and Quincy. The resulting crisis in the stock market, due to efforts by the Harriman-Kuhn Loeb syndicate to protect their interests through the purchase of larger amounts of the Northern Pacific stock than they then held, seemed to cause a suspension of movements having for their object further acquisitions of railroad properties by combinations of capitalists. In November the announcement was made of the organization of the Northern Securities Company, with a capital of \$400,000,000, to hold the stocks of the Great Northern, the Northern Pacific, and the Chicago, Burlington and Quincy companies. This arrangement was designed to provide for the joint ownership by the Harriman and the Morgan-Hill syndicates of these properties. The Harriman syndicate was given three representatives on the board of directors of the Northern Securities Company, and the Northern Pacific Railroad Company was represented by six directors. James J. Hill, president of the Great Northern, was made president of the Securities Company, and his interests and those of J. P. Morgan were represented by six directors. It was mutually agreed that the Northern Pacific preferred stock should be retired

Jan. 1, 1902. Immediately after the announcement of the details of the organization of the Northern Securities Company the Governor of Minnesota expressed the opinion that the agreement provided for the consolidation of the Great Northern and the Northern Pacific, and that these being competing roads, such consolidation would be in violation of the State law. He also called the attention of the Governors of North Dakota, Washington, and Idaho, in which States these roads were also operated, to this matter in order that they too might take action. The officers of the Northern Securities Company, however, claimed that consolidation of the roads was not intended, the company being formed solely for the purpose of holding the stocks of the roads. Deposits of these stocks began soon after the completion of the organization of the Securities Company, and by the end of November nearly all of such shares had been turned over to the new corporation.

Gross earnings of 206 railroads during the first six months of the year showed an increase of \$68,181,730 compared with the corresponding period in the previous year. In July the gain by 113 roads was \$12,019,349; in August 121 roads reported gains of \$12,098,685; in September 102 roads gained \$6,536,704; and in October the gains by 105 roads were \$8,232,194. For ten months ending Oct. 31 100 roads reported earnings of \$624,640,241, an increase compared with the corresponding period last year of \$58,273,840. None of the roads, excepting the Mexican, showed important decreases.

Manufacturing Industries.—Among the most important consolidations of capital in manufacturing enterprises was that in the steel industry in February, when, as elsewhere noted, the United States Steel Corporation was organized with a capital of \$1,100,000,000 to take over the principal iron and steel producing plants of the country. The chief object of this consolidation, the regulation of the output and the maintenance of prices for the manufactured articles, appeared to be attained, though the foreign demand for these products was smaller than in the previous year. The strike of steel workers, which began in July and ended in September, seemed to have little influence in checking production, and in October there was a marked increase in the demand for iron and steel which caused a sharp advance in the prices in the following month. It was then estimated that the output of steel rails for the year would be about 2,700,000 tons, and of pig-iron 16,650,000 tons. The yield of pig-iron was partially restricted in November, owing to a deficiency in the supply of coke. Another important consolidation early in the year was that of the Amalgamated Copper Company. This was followed by litigation with a view to prevent the absorption of Montana mines and, concurrently, the statistical position of copper had a depressing effect upon the domestic industry. Imports of copper from Mexico, Australia, and Chili were large in November, thus decreasing the foreign visible supply and greatly augmenting stocks in manufacturers' hands. Hence the unsettled markets toward the end of the year. There was an expansion in the tobacco-manufacturing industry, and an absorption by the American Company of large plants in England and also in the United States. In November there was active competition between the Consolidated and the Universal companies for the control of the McAlpin plant, which resulted in its acquisition by the former. A corporation with a capital of \$50,000,000 was projected in November to control the zinc-smelt-

ing companies, with a view to regulate production and increase profits. There was no special feature in the cotton-manufacturing industry until August, when the Fall River Selling Committee was dissolved. This committee, it may be noted, had been in existence since October, 1898, and it was organized to regulate production and prices of print-cloths. A movement developed after its dissolution for a reduction in rates of wages, manufacturing being somewhat unprofitable at the then prevailing rates because of high prices for the staple, but the proposed reduction was abandoned. Then M. C. D. Borden came to the relief of the market, as he had done on previous occasions, and offered to take the whole supply of print-cloths at an advance of one-sixteenth of a cent per yard. This caused a temporary improvement in the market. Early in October the situation became unsettled, owing to the refusal of manufacturers to advance wages. Toward the end of November there seemed to be some prospect of an adjustment of wage differences through a convention of textile operatives at which Southern mills would be represented. The woolen and the silk manufacturing industries were active during the greater part of the year, and trade conditions were fairly prosperous.

Incorporations of new industrial companies during eleven months ending Nov. 30, 1901, indicated a total capitalization of \$2,805,605,000, against \$2,255,075,000 for the corresponding period in 1900.

Imports of unmanufactured material showed only slightly increased values until October, when there was a gain, partly due to the above-noted importations of copper. The decreased exports of manufactures of this metal, however, caused more or less of a reduction in the total of the export movement of manufactured goods, and at the end of November these exports for the eleven months were \$362,392,181 against \$408,529,105 for the corresponding period last year.

Commercial failures for eleven months ending Nov. 30 were 9,594, involving \$118,358,793 of liabilities, against 8,833, involving \$109,913,257 for the same time in 1900.

FINE ARTS IN 1901. Under this title are treated the principal art events of the year ending with December, 1901, including especially the great exhibitions in Europe and the United States, sales and acquisitions of works of art, and erection of public statues and monuments.

Paris.—The two Salons are now permanently housed in the Grand Palais des Champs Élysées, constructed to serve the same purposes as the old Palais de l'Industrie, which occupied very nearly the same site, and in which the annual Salons had been held since 1855. The new Palais, which is the property of the state and is under the administration of the Beaux Arts, was occupied last year by the Centennial Exhibition of Art. The two Salons are lodged on the same floor, separated from each other by only a thin partition, the Artistes Français on the Avenue Nicolas II, the Société Nationale on the Avenue d'Antin.

Paris: Salon of the Artistes Français.—The officers of the Société des Artistes Français for the year are: Honorary Presidents, Léon Bonnat, Edouard Detaille, Jean Paul Laurens; President, William Bouguereau; Vice-Presidents, A. Bartholdi, Louis Henri Georges Seillier de Gisors; Secretaries, J. G. Vibert, G. Lemaire, J. L. Pascal, A. Mongin; Corresponding Secretary, Albert Maigman; Secretary-Treasurer, E. A. Boisseau.

The annual exhibition (May 1 to June 30) comprised 4,812 numbers, classified as follows: Paintings, 2,092; cartoons, water-colors, pastels,

miniatures, enamels, porcelain pictures, etc., 851; sculptures, 668; engraving on medals and precious stones, 84; decorative art, 298; architecture, 309; engraving and lithography, 510.

The honorary awards for 1901 are as follow: Section of Painting: No medal of honor awarded. First-class medal: Adolphe Décheud, for *Portrait of Mon Père*, which was bought by the state. Second-class medals: Émile Louis Thivier (for *Jephte*), Henri Thiérot, Karl Cartier, Raoul de Pibrac, Georges Laverne, Georges Haquette, Laurent Jacquot-Defrance, Léon Richet, Mme. Debillmont - Chardon, Henri Courcelles - Dumont, Henri Zo, Henri Dabadie, Herman Hartwich (New York), Paul Hippolyte Flandrin. Third-class medals: Frank Spenlove-Spenlove, Paul Michel Dupuy, Edmond Richter, Étienne Mondineu, Gustave Henri Mosler (New York), Mme. Delorme, Georges Boisselier, Tancrède Synave, André Humbert, Patrick Downie, Henry Caro-Delvaile, Walter Thor, Susan Watkins (California), Valentine Pépe, François Maurice Lard, Pierre Vignal, Léon Bellemont, Maurice Moisset, Gustave Adolphe Grau, Gaston de Burgraff, Othon de Faber du Faur, Seymour Thomas (United States), Jules Scalbert, Ernest Azéma, Mlle. Louise Lavrut.

Section of Sculpture: No medal of honor awarded. First-class medals: Eugène Jean Boverie, for statue of Baudin and figure for a tomb; Georges Recipon, for a plaster relief and a marble bust. Second-class medals: Paul Auban, John Goscombe, Anatole Guillot, Paul Ducuing, Albert Ernest Miserey, Sylvain Salières. Third-class medals: Fernand David, Maurice Roger Marx, Hans Schuler (Baltimore), Paul Ludovic Theunissen, Julien Lorieux, Jean Baptiste Larrive, Édouard Paul Mérite, Edmond de Lahendrie, Gabriel Zimmermann, Jules Louis Rispal, Alix Marquet, Xavier Barthe, Albert Schirrer.

Section of Architecture: Medal of honor, Joseph Albert Tournaire, *État actuel et restauration des fouilles de Delphes*, bought by the state. First-class medals: Jacques Hermant, Louis Albert Louvet. Second-class medals: Henri Le Grand, Ernest André Thibeau, Louis Grandin. Third-class medals: Charles Henri Lemaesquier, Marcel Aubertin, Georges Alexandre Closson, Louis François Tavernier, Georges Dussart, Richard Bouwens van der Boyen, fils, Jean Frédéric Taillens.

Section of Engraving and Lithography: Medal of honor, Augustin Mongin, etching, *Le Baptême*, after Dendy Sadler. First-class medals: Engraving, Émile Jean Buland, André Charles Coppiet; etching, Victor Louis Focillon, Albert Ardail; wood, Marguerite Jeanne Jacob-Bazin. Second-class medals: Engraving, Julien Deturck, Jean Vybond; etching, Henry Fabien Alasonière; lithography, Marguerite Vernant. Third-class medals: Etching, Mlle. Léonide Bourges; wood, Adolphe Dauvergne, Marie Marguerite Gaillard; lithography, Émile Pierre Bertrand, Louis Huvey, Eugène Mathurin Mage.

Among the noteworthy exhibits was the portrait of Queen Alexandra, by Benjamin Constant, whose large state portrait of Queen Victoria, exhibited last year in the Paris Exposition, is seen this year in the Royal Academy. The Alexandra is in direct contrast to the dramatic portrait of Victoria, and is intended to be a family likeness—a *portrait intime*—from which all idea of state is absent. It is a bust portrait, showing the hands, and is in the ordinary costume of the day.

Léon Bonnat exhibited a portrait of M. Loubet, President of the republic. He is represented, three-quarters length, seated in a chair, with arms folded, looking front.

Georges Rochegrosse's *Marvellous Legend of the Queen of Saba and King Solomon* is an immense triptych, the middle panel of which represents the reception of the Queen by Solomon on the throne, and the left and right other episodes of the legend.

Marbot at Jena, by Émile Boutigny, represents a scene described by Marbot in his *Memoirs*, in which he rescues from drunken soldiers of Hesse-Darmstadt two beautiful young girls who, scantily clad, are crouching at the foot of a bed.

Paul Gervais contributed *Fête in Honor of Bacchus and Ariadne*. Bacchus, crowned with vine leaves, stands beside Ariadne, who is seminude, in front of an altar erected beside a Terminus, while all around bacchantes and satyrs are grouped, some playing instruments and some dancing. In the background are the shore of the sea and mountains.

Louis Beroud's *Paradise Lost* represents Adam and Eve driven from Eden by the Angel, whose hand is seen reaching out from a cloud of light behind. At the right, upon a craggy rock, is a tiger showing his teeth, and at the left a hovering bird of prey.

Ulpiano Checa's *Vinicius riding toward Burning Rome* is evidently a scene from *Quo Vadis*, and Henri Charles Daudin's *Aphrodite* a scene from the *Aphrodite* of Pierre Louys. The latter represents the quay at sunset, with galleys in the background and in the foreground dancing girls, and many other figures grouped around them.

The *Abduction of Cupid by the Sirens*, by Adolph Lalire, is an immense canvas representing sirens and sea-horses in an apparently inextricable maze, with Cupid in the midst and flying *amoretti* above. It is said to be for the dining-room of the Château des Sirenes.

Paris: Salon of the Société Nationale.—The twelfth annual exhibition of the Société Nationale des Beaux Arts comprised 1,960 numbers, of which 932 were paintings, 486 designs, drawings, etc., 129 engravings, 141 sculptures, 219 art objects, and 53 architecture.

The post of honor was reserved for seven works of Cazin, lately deceased, who was one of the most active founders of the Société Nationale. Among them was his *Souvenir de Fête à Paris*, exhibited first in the Salon of 1881, which was received by the critics with many satirical remarks, and a later and better example, entitled *La Charette*.

Of the five exhibits of Carolus-Duran, *The Ensign of the Fencing Master* represents a full-length figure in fencing costume leaning on his foil.

J. Béraud exhibited his usual monstrosity, a sacred subject in modern costume. He entitles this one *Christ Bound to the Column*. It represents the Saviour, whose head radiates light, in the midst of a crowd of French workmen and gamins, who are binding him with cords.

Hagborg's *Elves* represents many nude figures with diaphanous flying draperies floating in air over an expanse of water with a wooded landscape for a background. His *Old Fisherman*, a more characteristic subject, shows an old man standing in shallow water, with a basket on his back, and holding a good-sized hand net in both hands.

Aublet's *Young Girl frightened by a Swan* is a suggestion of the story of Leda. The girl, who is entirely nude, is sitting on a grassy bank throwing up her arms in terror at the swan, which does not look in the least aggressive. It is simply an excuse for painting a nude, of which the exhibition was full, under the usual titles of *A Study*, *Nude Study*, *Spring*, *Summer*, *Lady at her Toilet*, etc.

The *Upper Chamber*, by Eugène Girardet, repre-

sets a shadowy Christ sitting in a glow of light behind a table, on which are a chalice, a plate, a vase, and an antique lamp, and at each end of the table a figure in Eastern costume, listening to his words. Save the light in their front the two men are in strong shadow.

J. J. Rousseau exhibited several characteristic cattle pieces, and Firmin-Girard *The Pavement of the Central Paris Market*.

Paris: Miscellaneous.—At the sale of the Georges Feytaud collection, in February, the aggregate receipts were 513,000 francs. Some of the prices obtained were: Boudin, *Le Port de Camaret*, 11,250 francs; *Le Port d'Anvers*, 2,560; *Trouville Market*, 5,400; *Brest Harbor*, 8,100; *Rotterdam*, 8,200; *L'Éclaircie*, 10,000; *View of Antwerp*, 6,850; *Environs of Trouville*, 7,600; *Douarnenez Harbor*, 4,200; *Outer Dock at Trouville*, 4,650; *Corot, Twilight*, 10,000; *The Tower*, 17,200; *Carolus-Duran, La Fille de l'Emir*, 6,000; *Dau-mer, The Bath*, 3,000; *The Amateurs*, 15,200; *Diaz, The Thicket*, 7,500; *Isabey, The Port*, 10,500; *Jacque, Horse and Sheep*, 3,300; *Jongkind, Dutch Canal*, 8,310; *Environs of Nevers*, 7,100; *La Rue de l'Abbé de l'Épée*, 9,150; *Monet, Rocks at Étretat in the Morning*, 7,200; *do. in the Evening*, 6,900; *Hoarfrost*, 11,000; *Meadow*, 6,700; *Rocks at Belle Isle*, 5,500; *Poppy Field*, 9,100; *Pissaro, Rouen Fog Effect*, 10,000; *Renoir, Garden at Fontenay*, 7,000; *Peonies*, 3,800; *Ricard, Girl's Head*, 9,550; *Ribot, Kitchen Scene*, 9,050; *De Sisley, Banks of the Loing*, 5,600; *Garden at Louveciennes*, 11,100; *The Tow-Path*, 7,350; *Moret Bridge*, 28,000; *Argenteuil Bridge*, 10,000; *Birches and Acacias*, 5,300; *Stevens, Girl Reading*, 5,000; *Ziem, Venice*, 8,900; *St. Sophia at Constantinople*, 5,100; *Grand Canal at Sunset*, 19,000.

M. Charles de Bériot's collection, sold at the *Hôtel Drouot in March*, realized a total of 388,950 francs. Among the best prices obtained were: *Jongkind, Honfleur*, 7,900 francs; *Notre Dame*, 7,000; *Patineurs à Oversalie (Holland)*, 9,000; *Canal at Dordrecht*, 16,600; *Rotterdam—la Nuit*, 12,700; *Vue de Maassluis*, 31,000; *Clair de Lune*, 9,000; *Patineurs*, 19,100; *Marseille*, 10,000; *Harpignies, Saules à l'Arrière-Saison*, 13,050; *La Rivière*, 8,250; *Maison Reflétée*, 10,950; *Laveuses*, 9,700; *Chênes de Château-Renard*, 14,800. *Monet's Jardins de l'Infante* brought 10,300 and *Boudin's Anvers* 12,950 francs.

The collection of the Abbé Gauguin, sold in May, realized 127,400 francs. *Claude Monet's Printemps à Giverny* brought 8,300 and *De Sisley's Gelée Blanche* 9,200 francs. Another collection, sold in the same month, produced a total of 348,000 francs. Among the best prices obtained were: *Courbet, Le Réveil*, 13,000 francs; *Charles Jacquet, Le Retour du Troupeau*, 37,500; *Ziem, La Flotte sortant du Port d'Anvers*, 35,000; *Le Canal—Venise*, 34,000; *Le Soir sur la Grand Canal*, 23,000 francs.

London: Royal Academy.—The thirty-second annual winter exhibition was devoted to the works of British artists deceased since 1850, about 200 pictures by 61 artists. It included examples of *Turner, Frederick Walker, George Mason, Millais, Landseer, Rossetti, Madox Brown, Alfred Stevens, Calderon*, and others. Among the examples by *Turner* were *Conway Castle* and *The Wreck of the Minotaur*; by *Rossetti, Fiametta*; and by *Madox Brown, Chaucer at the Court of Edward III*.

The one hundred and thirty-third summer exhibition, with more than 1,800 entries, was about equal in artistic importance to the one of last year. As in that exhibition, the pictures of *John S. Sargent*, the American painter, dominated all

the rest. The *London Athenæum* says: "It must be admitted that, if all the other pictures in this exhibition pass into oblivion, Mr. Sargent's are likely to survive." Among his exhibits were portraits of *Mrs. Schreiber, Mrs. Russell, Sir Charles Sitwell and Family, Mrs. Cazalet and Children, and Daughters of A. Wertheimer, Esq.* The last is a masterpiece.

Sir Edward J. Poynter, president of the academy, contributed but one picture to the exhibition, a version in oil of a water-color of 1899, entitled *Helena and Hermia*. It represents two classic maidens, on a marble seat covered with an orange cushion, under a laurel hedge beside a great pine trunk, working on a sampler. The studies for the background, which disclose an expanse of water and mountains, were made at the *Lake of Orta*.

Sir Laurence Alma-Tadema's usual classical and archeological composition, entitled *Under the Roof of Blue Ionian Weather*, is concerned with lightly draped, garlanded figures, grouped about a semicircular lounge of white marble. His portrait of *Prof. George Aitchison* is for the *Royal Institute of British Architects*, of which he was president in 1896-'99.

Edwin A. Abbey, another American academician, sent a large canvas entitled *Crusaders Sighting Jerusalem*, one of the most successful pictures of the year. Three Knights Templars, in chain mail and tabards showing a great cross, have gained a height in advance of their fellows, seen in the distance below, and are eagerly looking for the city. One stands erect, holding aloft the great banner; a second, kneeling, directs his eyes heavenward; and the third, kneeling lower at right, holds up before his face his cross-hilted sword.

Seymour Lucas's *Clouds that gather Round the Setting Sun* depicts an incident in the later days of *Cardinal Wolsey*. The yet powerful minister, in the robes of a cardinal, is walking amid the yew hedges of *Hampton Court*, with the red-roofed palace, mellowed by evening light, in the background. Absorbed in meditation, he appears to take no heed of several sumptuously dressed persons who look after him as he passes.

Benjamin Constant sent his *Queen Victoria*, which was first exhibited at the *Paris Exposition* of last year. The Queen is represented in regal attire throned in an alcove of the House of Lords, through whose windows filters golden light. The crowned head is veiled in gossamer lace, which falls over the shoulders and arms, and the bust is crossed by the broad blue ribbon. By command of the King, the west wall of the central gallery was devoted exclusively to this picture.

Hubert Herkomer's *A Zither Evening with my Students* in my Studio illustrates an incident in the history of the *Bushey Art School*, founded by himself, which is sufficiently explained by the title.

Other noteworthy pictures were *Luke Fildes's* portrait of *The Hon. Mrs. Marshall Brooks, E. Blair Leighton's The Accolade, B. W. Leader's The Weald of Surrey, J. W. Waterhouse's The Mermaid, and Sheridan Knowles's Home Again*, the last representing a soldier returned from the wars.

London: New Gallery.—The winter exhibition was devoted to the works of *Sir W. B. Richmond*, of which 495 were shown. It represented all the phases of his painting under the several influences of *Millais, Burne-Jones, Watts, and Leighton*. One of the most interesting pictures was *The Sisters*, painted in 1864, representing the three daughters of the late *Dean Liddell*, for the youngest of whom *Alice in Wonderland* was written.

The fifteenth summer exhibition comprised nearly 500 works, including noteworthy figure-pieces and portraits and good landscapes and marines. Mr. Sargent contributed two portraits, Mrs. Garrett Anderson and the Duke of Portland. Mr. Watts sent four pictures, one of which is entitled *Greed and Labor*, allegorical figures grandly and broadly treated. A second, *The Slumber of the Ages*, represents a weary woman with her head thrown back asleep, holding in her arms a wondering child. *Trifles Light as Air*, a third canvas, represents a swarm of *amorini*, naked baby shapes, swaying and drifting in air against a sky of delicate blue and gold, like a cloud of insects.

Sir George Reid, the antithesis of Mr. Sargent, contributed a full-length portrait of the Earl of Stair, standing, cane in hand, by an ivy-covered wall.

J. J. Shannon's *Lady Carbery and her Children* is a happy effort in decorative portraiture, and the Hon. John Collier's *Rudyard Kipling* is a conscientious attempt to represent the writer as he sees him. Mrs. Evelyn de Morgan sent several pictures suggestive of Burne-Jones, and G. H. Boughton a *Diana of the Goose Pastures*, with jet-black hair seen against the fresh green of willows.

London: Guildhall.—An exhibition of some 200 works by Spanish artists was collected at the Guildhall by the director of the City Art Gallery, including 39 pictures attributed to Velasquez. Among the latter were the *Water-Carrier of Seville*, the *Marquis of Bristol's* portrait of Don Balthazar Carlos when seven years old, the *King's* portrait of Don Carlos, the *Duke of Wellington's* half-length of Pope Innocent X, the *Duke of Devonshire's* *Lady with a Mantilla*, and *Captain Holford's* full-length portrait of Olivares. Among famous *Fortunys* shown was the well-known *Selection of a Model*. *Pradilla's* *Boabdil Surrendering the Keys of Granada*, *Alvarez's* *Seat of Philip II*, lent by the Emperor of Germany, and examples of *Madrazo* and other noted modern artists were also shown.

London: Miscellaneous.—The picture sales of 1901 were remarkable for the sale of Hoppner's portrait of *Lady Louisa Manners*, afterward *Countess of Dysart*, for the large sum of £14,752 10s., the highest price ever paid for a single picture at a public auction in England, though *Raphael's* *Madonna dei Candelabri* was bought in at the *Novar* sale in 1878 for £20,475. *Lady Manners* is represented in this beautiful work in peasant costume, with a straw bonnet tied under the chin, standing against a pleasing landscape background. Hoppner's full-length portrait of Mrs. Farthing also was sold at the same sale for £8,400. A remarkable portrait of *Louisa, Duchess of St. Albans*, by Sir Thomas Lawrence, fetched £1,680.

At the sale of the pictures of the late Mr. Alfred Buckley, an original sketch by Rubens for the famous altar-piece in *Antwerp Cathedral*, was sold for £3,360. It is a triptych, the center of which shows the cross of Christ raised by seven men, with a group of Roman soldiers and the two thieves, one on the cross, in the background. On the left wing are soldiers on horseback and the two thieves being led to crucifixion, while on the right are *St. Mary* and *St. Joseph* with five other figures.

At the sale of the collection of Mr. Arthur Kay, an *Annunciation* by *Andrea da Solario*, signed and dated 1506, was sold for £2,100. A *Philip IV* in armor, with lace collar, by Velasquez, brought £997 10s.

At a sale of pictures from various collections, some reached remarkable prices. A *Van derhout* *Hobbema's* *A View of a Woody Country*, interspersed with houses, which brought £2,000. Another *Hobbema*, a typical village scene with a church and a country inn, brought £2,000 10s. Other good prices were: *Murillo's* *Portrait of the Artist*, £2,730; *Gainsborough's* *Mrs. Bacon*, £1,869; *Isaac Henrique Sequeira, M. D.*, £2,200; *Joshua Reynolds's* *Mrs. Willett*, £1,701; *Squire Musters*, £1,680. *J. de Mabuse's* *Jacqueline de Bourgogne when a Child*, £2,520; *G. Romney's* *Mrs. Dorothy Champion Crespigny*, £5,880.

A portrait by *Gainsborough* of *Mrs. Palmer, nee Gascoigne*, was sold in July for £2,047 10s.

At the *Cunliffe Brooks* sale, a fine *Raeburn*, representing a boy in a loose white shirt holding a basket of cherries, was sold for £2,100.

New York: National Academy of Design.—The council consists of the following: President, *Frederick Dielman*; Vice-President, *J. G. Brown*; Corresponding Secretary, *H. W. Watrous*; Recording Secretary, *George H. Smillie*; Treasurer, *Lockwood De Forest*; Francis C. Jones, *J. Carroll Beckwith*, *J. C. Nicoll*, *B. West Cline*, *Edmund C. Y. Turner*, *H. Siddons Mowbray*. The academy numbers 92 academicians and 62 associates.

The seventy-sixth annual exhibition (Jan. 5 to Feb. 2), held in the galleries of the *Fine Arts Society*, contained 285 numbers, of which 272 were paintings. The annual prizes were awarded as follow: The *Thomas B. Clarke* prize of \$300, for the best American figure composition, to *William Fair Kline*, for his *The Flight into Egypt*; the first *Julius Hallgarten* prize (\$300) to *W. Elmer Schofield*, for his *Winter Evening*; the second *Hallgarten* prize (\$200) to *Clara T. McChesney*, for her *A Good Story*; the third *Hallgarten* prize (\$100) to *Matilda Browne*, for her *Repose*; the *Norman W. Dodge* prize of \$300, for the best picture painted in the United States by a woman, to *Mary Theresa Hart* for her *Portrait of James M. Hart*; and the *Inness Gold Medal*, for the best landscape in the exhibition, to *Bruce Crane* for his *The Golden Grain*.

The seventy-sixth exhibition, though smaller than some preceding ones, showed a distinct advance in merit. Among the noteworthy pictures were *Horatio Walker's* *Plowing*—the *First Glean*, *Alden Weir's* *New England Village*, *James D. Smillie's* *A Normandy Barn-Yard*, *J. C. Nicoll's* *Corbière Light*, *Thomas Moran's* *Shoshone Falls of Snake River, Idaho*, *Bruce Crane's* *The Year's Wane*, *W. Whittredge's* *Primitive Forest Brook*, *Carroll Beckwith's* *The Hamadryad*, and *George H. Bogert's* *Passing Shower*—*Holland*. Among the best portraits were *F. P. Vinton's* *John Harsen Rhoades*, *R. W. Vonnoh's* *Mrs. M. E. Porter*, *Daniel Huntington's* *A. Cleveland Coxe*, *Alfred Q. Collins's* *John M. Bowers*, and *Mary Theresa Hart's* *J. M. Hart*. *Daniel C. French* exhibited two full-length plaster figures, entitled *Architecture and Painting* and *Sculpture*, intended for the terminals of the *Hunt Memorial* on Fifth Avenue opposite the *Lenox Library*. They have since been cast in bronze and are now in place.

New York: Society of American Artists.—The twenty-third annual exhibition was held in the *Fine Arts Society Building* from March 20 to May 5. The Board of Control for the year consists of: President, *John La Farge*; Vice-President, *Kenyon Cox*; Secretary, *Bruce Crane*; Treasurer, *Samuel Isham*; Advisory Board, *Herbert Adams*, *William Bailey Faxon*, *R. Swain Gifford*, *William H. Hyde*. The society has 103 members.

The annual prize of \$300, instituted in 1887 by

J. W. Seward Webb, of New York, for the best landscape by an American artist under forty years of age, was awarded to Ben Foster for his *Mists of the Morning*.

The Shaw fund of \$1,500, instituted in 1892 by Samuel T. Shaw, of New York, to be devoted to the purchase of a figure composition in oil by an American artist, was withdrawn by Mr. Shaw, who founded in its place the Shaw prize of \$300, to be awarded annually for the best figure composition in the exhibition painted in oil by an American citizen, portraits to be excluded. This prize was awarded to Sergeant Kendall for his *Fairy Tale*.

An annual prize of \$500, instituted by Andrew Carnegie for the most meritorious oil-painting in the exhibition by an American artist, portraits excepted, was first awarded to John W. Alexander for his *Autumn*. The exhibition comprised 355 numbers.

New York: Miscellaneous.—The collection of the late George L. Crosby, of Chicago, sold at the Waldorf-Astoria in March, brought in the aggregate \$68,990 for 72 pictures. Anton Mauve's *Cattle at the Well* brought the highest price, \$4,500. Other sales were: Felix Ziem, *Grand Canal—Venice*, \$3,000; François Daubigny, *Corbigny on the Nièvre*, \$2,800; Julien Dupré, *Le Regain*, \$2,525; Adolph Schreyer, *Arabs in the Desert*, \$3,150; Auguste Bonheur, *Cattle in the Forest of Fontainebleau*, \$2,400; Corot, *Evening*, \$1,200; Jongkind, *On the Corniche Road*, \$2,025; Charles Jacque, *Sheep in the Moonlight*, \$2,300; Henri Harpignies, *Aux Bords du Loing*, \$2,250; Marie Dieterle, *Cattle Drinking*, \$1,025; Edouard Detaille, *During the Maneuvers*, \$1,400; Clay, *In the Channel*, \$1,275; Schenck, *Sheep in a Storm*, \$1,250; Cazin, *The Chateau Farm*, \$1,700; De Neuville, *Chasseur d'Afrique*, \$1,050; George Inness, *Marine*, \$1,000; Jules Dupré, *The Farmyard*, \$1,800; Crome, *Norwich River*, \$850.

The Metropolitan Museum has acquired, through the liberality of a public-spirited citizen, a portrait of Columbus usually called the *Talleyrand* portrait, because it has been for a hundred years or more in the possession of that family. It bears a Latin inscription ending with the words "*Sebastianus Venetus fecit*," indicating that it is the work of Sebastian Luciani, commonly called Sebastiano del Piombo, who was born at Venice (?) in 1485. As Columbus died in Spain in 1506, and there seems to be no proof that he visited Venice before Sebastian left that city for Rome, it could not have been painted from life. Of the more than 70 alleged portraits of Columbus, not one is certainly traceable to a life sitting.

The full-length portrait of William de Villiers, Viscount Grandison, by Van Dyck, which figured at the Antwerp exhibition of the works of the master in 1899, has been purchased by William C. Whitney, of New York, for \$125,000, the highest price paid in America for a picture, excepting Millet's *Angelus*. It was originally in the possession of the Buckingham family, from whom it passed to Lady Grey and to Jacob Herzog, of Vienna, who exhibited it in 1899.

Another noteworthy purchase is that of Turner's *Rockets and Blue Lights*, by Charles T. Yerkes, who is reported to have paid for it £15,750. If true, this is the record price for a Turner in this country, the largest sum paid heretofore having been 7,600 guineas, for *The Wreckers*, which came to New York from the Pender sale. The Metropolitan Museum has three Turners: *The Grand Canal—Venice*, *The Whale-Ship*, and *Saltsash*. The Lenox Library owns *Scene on French Coast* and *Staffa*, and the Vanderbilts

have *Norham Castle* and the *Fountain of Indolence*. The *Slave-Ship*, one of Turner's most important works, is now in the Boston Museum of Fine Arts.

Buffalo: Pan-American Exposition.—The exhibition of fine arts (May 1 to Nov. 1) was held in the Albright Art Gallery, a permanent marble, fire-proof building in the exposition grounds, to be occupied after the close of the exhibition by the Buffalo Fine Arts Academy. It was one of the most complete and representative exhibitions of American art during the twenty-five years from 1876 to 1901. It comprised four groups. Group 1: Paintings in oil, water-color, pastel, and other recognized mediums, miniatures, and cartoons. Group 2: Sculpture, including medals and cameos. Group 3: Drawings, etchings, engravings, black and white or monotint in oil or water-color. Group 4: Architecture. The exhibition included in all about 1,800 numbers.

The awards made by the Fine Arts Jury were as follow:

GROUP 1.—Gold Medals: Edwin A. Abbey; John W. Alexander; Cecilia Beaux; Robert F. Blum; G. De F. Brush; William M. Chase; William T. Dannat; T. W. Dewing; Thomas Eakins; John McL. Hamilton; Childe Hassam; Winslow Homer, water-colors; Eastman Johnson; John La Farge; Gari Melchers; Frank D. Millet; H. S. Mowbray; John S. Sargent; J. J. Shannon; Edward Simmons; Abbott H. Thayer; D. W. Tryon; Elihu Vedder; Frederick P. Vinton; Horatio Walker; J. Alden Weir; James McNeill Whistler; Irving R. Wiles; Albert Lynch, Peru; William Brymner, Canada; R. Harris, Canada; Homer Watson, Canada; W. B. Bruce, Canada. *Silver Medals:* George R. Barse, Jr.; Edward A. Bell; Frank W. Benson; George H. Bogert; Robert B. Brandegee; F. A. Bridgman; J. G. Brown; W. Gedney Bruce; Bryson Burroughs; Howard R. Butler; Mary Cassatt; F. S. Church; Walter Clark; B. West Clinedinst; Bruce Crane; C. C. Coleman; Louise Cox; Charles C. Curran; Elliott Daingerfield; Arthur B. Davies; Charles H. Davis; Henry G. Dearth; Robert C. Minor; Thomas Moran; J. Francis Murphy; Leonard Ochtman; Benjamin C. Porter; Charles S. Pearce; Charles A. Platt; Henry W. Ranger; Robert Reid; Albert P. Ryder; W. Elmer Schofield; R. V. V. Sewell; Walter Shirlaw; Julian Story; Henry O. Tanner; C. Y. Turner; John H. Twachtman; R. W. Van Boskerck; Robert W. Vonnoh; Douglas Volk; Henry O. Walker; Edwin Lord Weeks; Louis P. Dessar; Charles M. Dewey; F. V. Du Mond; Frank Duveneck; John J. Ennening; Ben Foster; Walter Gay; B. Swain Gifford; Robert Henri; Albert Herter; William H. Howe; George Inness, Jr.; John H. Johnston; Francis C. Jones; William S. Kendall; William F. Kline; Wilton Lockwood; Louis Loeb; Will H. Low; Dana Marsh; George W. Maynard; W. L. Metcalf; W. Whittredge; Walter L. Palmer, water-colors; H. B. Snell, water-colors; A. Sterner, water-colors; R. S. Turner, water-colors; L. F. Fuller, miniatures; L. C. Hills, miniatures; E. Dyonnet, Canada; E. Wyly Grier, Canada; J. Hammond, Canada; Laura Mentz, Canada; J. W. Morrice, Canada; M. R. Correa, Chile; Pedro Lira, Chile; J. E. Harris, Chile; M. Pedro A. Reszka, Chile; L. Romanack, Cuba. *Bronze Medals:* Thomas Allen; W. V. Birney; H. S. Bisbing; Max Bohm; Joseph H. Boston; H. H. Breckenridge; John B. Bristol; Carlton T. Chapman; Lockwood De Forest; Maria O. Dewing; J. H. Dolph; Arthur W. Dow; Edward Dufner; C. Harry Eaton; George W. Edwards; J. W. Finn; Frank Fowler; Kenneth Frazier; Frederick W. Freer; Henry B. Fuller; Gilbert

Gaul; Edward Gay; Edward W. Redfield; F. K. M. Rehn; William M. J. Rice; Julius Rolshoven; Edward F. Rook; Guy Rose; William Sartain; C. Schreyvogel; W. E. Schumacher; Amanda B. Sewell; R. M. Shurtleff; William T. Smedley; Charles J. Theriat; S. Seymour Thomas; William Thorne; Jules Turcas; H. M. Walcott; Edgar M. Ward; Harry W. Watrous; William Wendt; Sarah W. Whitman; Carleton Wiggins; Seymour J. Guy; Birge Harrison; E. L. Henry; Charles Hopkinson; William H. Hyde; William Keith; Augustus Koopman; F. W. Kost; Francis Lathrop; W. L. Lathrop; Albert P. Lucas; Clara T. MacChesney; Mary F. MacMonnies; C. M. McIlhenney; Alfred H. Maurer; Richard E. Miller; Hermann D. Murphy; Rhoda H. Nicholls; J. C. Nicoll; Charles R. Peters; Henry R. Poore; Edith M. Prellwitz; Henry Prellwitz; F. B. Williams; Charles H. Woodbury; M. B. Prendergast, water-colors; Sarah C. Sears, water-colors; Rosina E. Sherwood, water-colors; F. H. Smith, water-colors; W. J. Baer, miniatures; Theodora W. Thayer, miniatures; M. Cullen, Canada; W. Cruikshank, Canada; E. Morris, Canada; A. D. Patterson, Canada; J. St. Charles, Canada; A. V. Puelma, Chile; A. O. Luce, Chile; Onofro Jarpa, Chile; A. Menocal, Cuba. Besides these, 74 artists in this group received honorable mention.

GROUP 2.—Special award of a diploma and medal of honor to Augustus Saint-Gaudens. *Gold Medals:* Paul W. Bartlett; Frederick MacMonnies; Charles Grafty; George G. Barnard; H. A. MacNeil; Karl Bitter; C. H. Niehaus; Richard E. Brooks; Virginio Arias, Chile. *Silver Medals:* Lorado Taft; Louis Saint-Gaudens; Cyrus E. Dallin; Frank E. Elwell; Solon H. Borglum; J. H. Roubush; John Flanagan; Bela L. Pratt; W. S. Alward, Canada; Simon Gazales, Chile. *Bronze Medals:* John J. Boyle; Andrew O'Connor; Victor D. Brenner; William Couper; Charles R. Harley; J. Scott Hartley; Eli Harvey; Edward Berge; Attilio Piccirilli; Señorita Rebecca Matte, Chile; Nicanor Plaza. Besides these, there were 11 honorable mentions awarded.

GROUP 3.—*Gold Medals:* J. McNeill Whistler, etchings; T. Cole, wood-engravings; H. Pyle, drawings; W. J. Glackens, drawings. *Silver Medals:* W. B. Clason, wood-engravings; F. S. King, wood- and copper-engravings; F. Duveneck, etchings; J. Pennell, etchings and drawings; D. S. MacLaughlan, etchings; Gustav Kruell, wood-engravings; F. French, wood-engravings; T. Johnson, wood-engravings; C. D. Gibson, drawings; W. A. Clark, drawings; M. Parrish, drawings; F. V. Du Mond, drawings; W. T. Smedley, drawings; L. Loeb, drawings; A. B. Wenzel, drawings. *Bronze Medals:* S. G. Putnam, wood-engravings; W. M. Aikman, wood-engravings; J. Tinkey, wood-engravings; F. H. Wellington, wood-engravings; Caroline A. Powell, wood-engravings; H. Davidson, wood-engravings; J. P. Davis, wood-engravings; V. Bernstrom, wood-engravings; H. W. Peckwell, wood-engravings; P. Aitken, wood-engravings; R. A. Muller, wood-engravings; E. C. Schladitz, wood-engravings; William Miller, wood-engravings; A. B. Comstock, wood-engravings; C. W. Chadwick, wood-engravings; E. Heinemann, wood-engravings; S. P. Davis, wood-engravings; C. State, wood-engravings; J. W. Evans, wood-engravings; R. C. Collins, wood-engravings; H. C. Merrill, wood-engravings; C. Y. Turner, drawings; Rosina E. Sherwood, drawings; Maude A. Cowles, drawings; W. S. Kendall, drawings; A. I. Keller, drawings; A. Sterner, drawings; S. S. Stilwell, drawings. There were also 13 honorable mentions in this group.

Munich: International Art Exhibition.—The catalogue of the eighth annual exhibition contains 2,689 numbers. Three rooms were devoted to the works of three lately deceased painters, a Böcklin room with 50 exhibitions, a G. G. room with 105, and a Leibl room with 10. Von Lenbach also had a room to himself, devoted to his portraits.

Philadelphia: Pennsylvania Academy of Fine Arts.—The seventieth annual exhibition, which opened on Jan. 12, was in respect to both quantity and quality one of the best of late years. More than 900 numbers were exhibited, of which nearly 600 were oil-paintings, and the remainder mostly water-colors and pastels. The place of honor was given to John S. Sargent's standing portrait of Gen. Ian Hamilton of the British army in South Africa, which was exhibited in London last year.

Miss Cecilia Beaux was represented by a portrait of a seated lady, with bare arms and neck, holding a straw hat in her lap. J. W. Alexander exhibited 11 figure-pieces, and Henry W. Ranger 6 landscapes. The portrait of the French sculptor Rodin and the group entitled *The Mother* won for Mr. Alexander a gold medal at the Paris Exposition. Anders Zorn, the Scandinavian painter, contributed a seated portrait of Halsey C. Ives, of the Cincinnati Museum. James McNeill Whistler was represented by a work entitled *Battersea*, a misty scene on the Thames with a big yellow moon on the horizon and the lights of vessels on the river. Alexander Harrison exhibited several marines and a *Misty Morning*—a French peasant girl walking through a grove of birch-trees. Humphreys Johnston showed his *Mystery of the Night*, a partially nude female figure standing against the sea, which took a silver medal, and Henry van der Weyden his *The Hillside*, which won a bronze medal at the Paris Exposition.

Pittsburg: Carnegie Institute.—The sixth annual celebration of Founder's Day was held in Carnegie Music Hall, Nov. 7. The annual address was made by ex-President Cleveland, his theme being *The Obligations of National Copartnership*. Other addresses were made by Joseph Jefferson, John W. Alexander, of New York, and Robert W. Allan, of London.

The awards of the International Art Jury of the prizes for pictures in the art exhibition were as follow: Alfred H. Maurer, New York, medal of the first class (gold), with an award of \$1,500, for his picture entitled *An Arrangement*; Ellen Wetherald Ahrens, Philadelphia, medal of the second class (silver), with an award of \$1,000, for picture entitled *Sewing—A Portrait*; Edmund C. Tarbell, Boston, medal of the third class (bronze), with an award of \$500, for picture entitled *The Venetian Blind*. Two others received honorable mention—Mary L. Macomber, of Waverley, Mass., for a picture entitled *The Hour-Glass*, and Henri Le Sidaner, of Paris, for a village street scene entitled *Light*.

The exhibition, which contains 247 numbers selected from 600 contributions, is one of the strongest shown at the institute. Thirty-five New York artists are represented in it. Among noteworthy pictures, besides the prize-winners, are a portrait of Rodin, the sculptor, by J. W. Alexander; *The Sculptor*, by George De Forest Brush; *The Japanese Print*, by William M. Chase; *The Close of Day*, by Benjamin Foster; and *The Breeze*, by Louis Loeb.

Venice: International Art Exhibition.—The works of 160 artists were represented, out of a total of 550 who sent in 2,200 pictures and sculptures. The large central gallery was interna-

mal, and among the other rooms special galleries were assigned to special artists. One of these contained 20 examples by Rodin, of which his plaster group *Les Bourgeois de Calais* was bought for the Venice New Gallery. In the International Gallery was hung J. Lavery's portrait of Mrs. Brown Potter on horseback, and excellent portraits by J. S. Sargent. Lenbach's wonderful portrait of Bismarck was exhibited on an easel.

Miscellaneous.—An interesting art note is that the famous wall-painting *The Last Supper*, by Leonardo da Vinci, in the old refectory of the Convent of Santa Maria delle Grazie, Milan, is once more in the hands of restorers. This noted picture, finished in 1498, which is 14 feet 10 inches high by 28 feet 3 inches long, has suffered many vicissitudes. Its colors, mixed with a defective oil medium, caused it to fade rapidly, until it became little more than a shadow of its original self. In 1726 it was repainted by Bellotti, and in 1770 by Mazza. In 1796, when the refectory was made into a stable against Napoleon's orders, the picture was greatly damaged by dragoons, and in 1800, when the room was flooded for fifteen days, it received further injury. In 1883 it was again repainted by Barozzi. The picture is best known by Raphael Morghen's engraving, but this was not made from the original picture, as generally supposed. Morghen engraved it in Florence from a drawing by Teodoro Matteini, who undoubtedly took many details from a copy of the original by Marco d'Oggionno, now in the Royal Academy, London, in which the heads are not closely copied. The present restoration is said to be in the hands of three eminent experts, one a bacteriologist, who are to do all that modern science can suggest to insure the preservation of this celebrated work.

The long-lost portrait of the Duchess of Devonshire, by Gainsborough, whose disappearance for a quarter of a century has aroused the curiosity of art lovers, has at last come to light, and found its way back to its owners, the Messrs. Agnew, of London. This famous picture, a full-length well known through engravings, was exhibited at the Royal Academy in 1783. It passed to a Mrs. Maginnis, who sold it for £50 to Mr. Bently, who sold it in turn to Wynn-Ellis for £63. At the Wynn-Ellis sale in 1876 it was purchased by the Messrs. Agnew for 10,100 guineas. When on exhibition at the gallery of the New British Institution, Bond Street, London, it was cut from its stretcher and stolen, during the night of May 26-27, 1876, by persons unknown. Rumors of its recovery have been frequent, but none have been verified until now. It is said to have been found in Chicago through the efforts of an agent of the thieves, who are reported to have received \$25,000 for its return. It is also reported that its owners, the Messrs. Agnew, sold it, soon after its recovery, to Mr. J. Pierpont Morgan for \$125,000.

Another theft of a valuable picture is reported from Rome, where the masterpiece of Sassoferrato, the *Madonna del Rosario*, has disappeared from the Church of Santa Sabina, on the Aventine. It is an upright picture rounded at top, measuring 4 by 2½ feet, and represents the Madonna and Child enthroned. The Child, seated on the Virgin's knee, hands a rosary to St. Catharine of Siena, who kneels on the right, while the Virgin gives a similar one to St. Dominic, represented as a young man with flaxen hair and beard, who kneels on the left. Above are flying cherubs, and below, at the foot of the throne, are white lilies and a wreath of roses.

An extremely interesting art and archeological

discovery is the finding by sponge-divers near the island of Ceregotto, the ancient Anticythera, off Cape Malea, the southernmost point of the Peloponnesus, of what are apparently the remains of an art-laden vessel, perhaps a Roman galley bearing the spoils of Greece to enrich the Imperial City. Among the articles recovered are bronze and marble statues and fragments of statues of the best period of Greek art, the fourth century B.C., many corroded by long immersion in sea water, but some in good preservation, especially those that had been buried in the sand. The most important bronze recovered is a life-size *Hermes*, of which the head, bust, and arms are in excellent preservation, while enough of the body and legs have been found to insure a complete restoration. It is an admirable work of the period of Praxiteles and Lysippus, the cast of the features resembling that of the *Hermes* of Praxiteles found at Olympia, but more noble and dignified. Another bronze statue, of a youth, is a remarkable work of the last half of the fifth century B.C., and a third, a little later, represents the muscular style of the Argive and Sicyonian schools. Other finds are a marble statue of a youth, life-size, numerous fragments of bronze and marble statues, and a beautiful bronze statuette of *Apollo*, without a head, standing on a base of red marble.

A discovery of importance to the history of early Italian painting is the finding behind the stalls of the choir on a wall facing the apse of Santa Cecilia in Trastevere, Rome, of frescoes representing the *Last Judgment*. They prove to be works of the thirteenth century, by Pietro Cavallini, a Roman painter, pupil of Giotto, according to Vasari, who died in 1344 at the age of eighty-five. The only older series of *Last Judgments* preserved in Italy are those in Sant Angelo in Formis, near Capua, and those on the island of Torcello, near Venice.

Botticelli's *Madonna of the Thorns*, announced last year as purchased by P. A. B. Widener, of Philadelphia, is now said to belong to Mrs. John L. Gardner, of Boston. The picture, discovered in 1899 in the old Colonna Palace, was sold by Prince Chigi to an unknown purchaser for \$65,000. As the Italian laws forbid the exportation of a national art object until the Government experts have examined it and granted the right, Prince Chigi was sued for the sum obtained for the picture, but on appeal the penalty was reduced to \$400. The state appealed from this decision, and the case is still before the court at Perugia. The picture was lately exhibited in London by Messrs. Colnaghi, "by kind permission of Mrs. John L. Gardner."

A new Rembrandt, lately discovered in the palace at Compiègne, has been added to the national collection in the Louvre. The picture, which represents the disciples going to Emmaus, was discovered by a Dutch expert who detected its Rembrandtish qualities under layers of dust and varnish. When the canvas was cleaned Rembrandt's signature was found upon it, and mention of it has since been found in an old catalogue of pictures belonging to the Crown.

The Art Museum of Princeton University has lately acquired a replica or a copy of Titian's *Magdalen of the Hermitage Gallery*, St. Petersburg. The original, a canvas 3 feet 9 inches by 3 feet 3 inches, was painted in 1561 and is signed. It represents the figure of the saint to the hip, scantily clad in a white garment striped with red and black, the well-developed bosom and throat covered by long wavy hair. At the right are a skull and open book, at the left a small vase. Replicas of this picture, with variations, are in

the Naples Museum and the Durazzo Palace at Genoa, and another was lately in the Ashburton Collection, London. There are also numerous late copies. The Princeton picture is said to have been bought in Rome several years ago by a Mr. Tilton, and to have previously belonged to a Venetian landscape gardener, who exhibited it in London and Paris. The critics pronounce it a valuable work of the Venetian school of the time of Titian if not by the master himself.

The Boston Museum of Fine Arts has acquired Frans Hals's Portrait of a Woman, formerly one of the treasures of the collection of the Duke of Buckingham. It passed thence to Mrs. Whatman, of Maidstone, from whom it was purchased by Lawrie & Co., of London, who sold it to T. J. Blakeslee, of the Blakeslee Galleries, New York. The price paid for it by the museum is said to have been \$30,000. The picture, which measures 40" by 50 inches, is undoubtedly one of the finest of the few genuine examples of the master in this country. It represents a woman in a white cap and broad ruff, and with white cuffs turned back at wrists, seated, holding a book in the right hand, and with the left on the arm of the chair. It will hang in the main gallery of the museum.

The Boston Museum of Fine Arts has also acquired, for about \$80,000, an important painting by Velasquez, The Prince Balthazar Carlos and his Dwarf, from the collection of the Earl of Carlisle, at Castle Howard, York. The work was painted soon after Velasquez's return to Madrid from his first visit to Italy, when Prince Balthazar was about three years old. The quaint baby figure, clad in a dark green skirt and coat, embroidered with gold, with a white collar and a steel gorget over his chest, stands in the middle of the canvas. The dwarf, in the lower left-hand corner, holds in his right hand a large silver rattle, and in the left a red apple. The work belongs to Velasquez's second or intermediate period.

FLORIDA. (See under UNITED STATES.)

FRANCE, a republic in western Europe, proclaimed Sept. 4, 1870, after the surrender of Napoleon III at Sedan. The legislative power is vested in the Senate and the Chamber of Deputies, and the executive power in the President of the Republic and the Council of Ministers. The Chamber and the Senate when they meet in joint session form the National Assembly, which elects the President of the republic for seven years and has power to revise the Constitution. The Senate has 300 members, elected for nine years by electoral bodies in the departments composed of the members of the departmental councils and delegates from the communal councils, with the Senators and Deputies of the department. The Chamber of Deputies has 584 members, elected by arrondissements, which are divided into two electoral districts when their population exceeds 100,000. Every Frenchman twenty-one years of age has the right to vote excepting soldiers in active service, and every one who has fulfilled his military duty is eligible excepting functionaries of the state. The ministers are responsible to the Chamber, and when defeated on a vote of confidence they usually resign, in which case the President of the republic selects a new Prime Minister who is able to command a majority, and the latter in consultation with the President selects his colleagues.

The President of the republic for the term ending Feb. 18, 1906, is Emile Loubet, born Dec. 31, 1838. The ministry, constituted on June 22, 1899, was composed at the beginning of 1901 as follows: President of the Council and Minister of

the Interior and of Public Worship, M. Waldeck-Rousseau; Minister of Finance, M. Caillaux; Minister of Justice, M. Monis; Minister of Foreign Affairs, M. Delcassé; Minister of War, Gen. André; Minister of Marine, M. de Lanusse; Minister of Public Instruction, Georges Leygues; Minister of Public Works, P. Baudin; Minister of Agriculture, Jean Dupuy; Minister of Commerce, Industry, Posts, and Telegraphs, M. Millerand; Minister of the Colonies, M. Decrais.

Area and Population.—The area of France is 204,092 square miles. The legal population at the census of March 29, 1896, was 38,517,975. The resident population was 38,269,011, of whom 37,014,389 were French by birth, 202,715 were naturalized Frenchmen, and 1,051,907 were foreigners. The number of marriages in 1899 was 295,752; of births, 847,627; of deaths, 816,233; excess of births, 31,394. The population of Paris was 2,536,834; of Lyons, 466,028; of Marseilles, 442,239; of Bordeaux, 256,906; of Lille, 216,276; of Toulouse, 149,963; of St. Étienne, 136,030; of Roubaix, 124,661; of Nantes, 123,902; of Havre, 119,470; of Rouen, 113,219; of Reims, 107,963. The number of divorces in 1899 was 7,179, making a total of 87,269 since the divorce law was enacted in 1884. The quinquennial census taken on March 23, 1901, shows the population of France to be 38,641,333, an increase of 412,364, compared with 133,819 between 1891 and 1896. Paris shows an increase of 148,000; Marseilles increased by 47,000; Havre by 11,000.

Finances.—The budget estimate of revenue for 1900 was 3,547,932,981 francs, of which 3,492,014,270 francs were receipts in France and 55,918,711 francs revenue collected in Algeria. Of the receipts in France 185,842,339 francs were from the land tax, 96,821,864 francs from the personal and property tax, 62,005,143 francs from the tax on doors and windows, 132,206,471 francs from licenses, and 1,068,350 francs from the first advertisement, making the total from direct contributions 477,944,167 francs; 7,106,700 francs came from taxes on property in mainmort, 2,730,070 francs from mining royalties, 5,240,000 francs from verification of weights and measures, 336,000 francs from inspection of pharmacies, etc., 12,929,480 francs from the tax on horses and carriages, and 9,434,899 francs from the taxes on societies, billiard-tables, velocipedes, etc., and the military tax, making the total from taxes assimilated to direct contributions 37,777,149 francs; 52,523,300 francs were the income from domains and forests, 21,647,300 francs coming from domains and 30,876,000 francs from forests; 533,085,001 francs came from registration, 184,536,201 francs from stamps, 5,104,501 francs from the tax on bourse operations, 70,647,500 francs from the tax on income from securities, 445,148,850 francs from customs, 401,584,000 francs being import duties, 7,209,000 francs charges for statistics, 7,899,000 francs navigation dues, 6,013,850 francs divers other dues, and 22,443,000 francs the tax on imported salt; 659,867,000 francs came from indirect taxation, 508,128,000 francs being the tax on drinks, 11,219,000 francs the salt tax, 5,905,000 francs charges on shipments of dutiable articles, 1,784,300 francs the duty on oil, 8,281,000 francs the duty on candles, 2,856,000 francs the vinegar duty, 63,741,000 francs the tax on traveling by express-trains, and 52,525,700 francs various other taxes; and 182,982,500 francs came from the excise and customs duties on sugar, making the sum of the tariff and internal revenues 2,081,371,553 francs; 713,825,363 francs were the profits from monopolies and Government industrial establishments, 448,851,000 francs coming from

shes, tobacco, and gunpowder, 195,483,470 francs from the post-office, 54,848,640 francs from telegraphs and telephones, and 17,642,250 francs from various enterprises; 56,801,180 francs came from miscellaneous sources, 5,100,000 francs being savings-bank profits, 253,500 francs the money received from sales of Government publications, 4,494,030 francs receipts from railroads, 765,680 francs revenues from the colonies, 1,200,000 francs fees received by diplomatic and consular representatives, 3,722,030 francs fees for patent rights on inventions, 4,213,000 francs the produce of prison labor, 2,555,000 francs savings in the expenses of the departments, 30,498,220 francs various repayments, and 3,999,720 francs miscellaneous and accidental receipts; and 68,771,564 francs were *recettes d'ordre*, balanced by disbursements. The total expenditures authorized in the law of April 30, 1900, were 3,547,863,008 francs, of which 3,476,809,184 francs were for France and 71,053,824 francs for Algeria. Of the expenditure in France 1,242,653,162 francs went for the service of the public debt, of which 692,157,850 francs were for interest on the consolidated debt, 319,100,110 francs for terminable debts, and 241,395,202 francs for floating debt; 14,075,560 francs were the expenses of the public powers, 1,700,000 francs going to pay the salary and household expenses of the President and 12,375,560 francs the expenses of the Senate and Chamber; and 1,705,077,545 francs were voted for the general services of the Government. The sum allowed for the Ministry of Finance was 20,117,610 francs, of which 9,521,470 francs were for the central administration; the appropriation for the Ministry of Justice was 35,608,933 francs; the Ministry of Foreign Affairs required 16,283,100 francs; the vote for the Ministry of the Interior was 112,966,454 francs, of which 19,522,197 francs were devoted to administration, 18,322,744 francs to public safety, 16,460,417 francs to prisons, 12,349,000 francs to subventions, 10,566,118 francs to charities, and 1,759,000 francs to various expenses; the sum devoted to Public Worship was 42,986,978 francs; the amount granted to the Ministry of War was 659,237,500 francs, and to the Ministry of Marine 312,776,332 francs; the Ministry of Public Instruction and the Fine Arts received 227,607,178 francs, of which 208,154,163 francs were for the schools and 19,453,015 francs for art; the appropriation for the Ministry of Commerce and Industry was 38,842,553 francs, including 35,521,358 francs for commerce and industry and 3,321,195 francs for the service of the posts and telegraphs; the Ministry of the Colonies obtained 106,493,358 francs, and the Ministry of Agriculture 31,607,678 francs; the expenses of the Ministry of Public Works were estimated at 81,039,470 francs for ordinary and 113,497,379 francs for extraordinary purposes, making a total of 194,536,849 francs, the ordinary expenses being made up of 28,490,970 francs for administration, 31,291,200 francs for roads and bridges, 12,350,000 francs for inland navigation, and 8,907,300 francs for harbors and lighthouses, the extraordinary of 3,975,000 francs for roads and bridges, 12,050,000 francs for inland navigation, 13,226,500 francs for railroads, 12,064,000 francs for harbors and lighthouses, 71,718,579 francs for annuities due to railroad companies, and 463,300 francs for other works; the cost of *régie* and the collection of revenue was 404,508,755 francs, of which 28,961,590 francs were allocated to direct contributions, 18,721,540 francs to registration, domains, and stamps, 32,521,590 francs to customs, 40,923,520 francs to excise, 84,604,933 francs to Government manufactures, 60,000 francs to foreign affairs, 184,733,999 francs to posts and

telegraphs, and 13,981,583 francs to forests; the repayments amounted to 40,494,162 francs. The special services included in the budget as *recettes d'ordre* are represented by the total of 135,960,691 francs, of which 4,839,700 francs pertain to the mint, 6,622,050 francs to the national printing-house, 16,252,429 francs to the Legion of Honor, 17,352,512 francs to the naval invalid fund, 751,500 francs to the Central School of Arts and Manufactures, 48,622,000 francs to state railroads, 11,728,500 francs to the railroad and port of Réunion, and 29,792,000 francs to the national savings-bank. The actual ordinary revenue in 1898 was 3,619,946,888 francs, and the expenditure was 3,527,535,605 francs.

The capital of the public debt on Jan. 1, 1900, was 30,055,398,099 francs, of which 22,001,914,539 francs represent the consolidated debt, 3,836,833,000 francs amortizable 3-per-cent. *rentes*, 189,633,930 francs the Morgan loan, 1,313,655,624 francs annuities guaranteed to railroad companies, 531,154,244 francs obligations incurred for local railroads and school buildings, 88,743,000 francs expenses incurred in Madagascar and Siam, 87,206,702 francs annuities of the savings-bank, 26,710,861 francs schoolhouse debts, 30,723,357 francs debts incurred for the improvement of rivers, canals, and harbors, 730,191,891 francs railroad annuities, 6,038,770 francs various annuities, 1,054,106,181 francs the floating debt, 37,276,000 francs short-timed treasury loans, and 121,210,000 francs a special war account under the law of Feb. 17, 1898.

The Army.—Every Frenchman at the age of twenty is liable to conscription. Active service is for three years except in the case of students, who serve one year only on the condition that they complete their studies. Soldiers who can read and write if they attain military proficiency at the end of the first year may have indefinite leave of absence. There are 145 regiments of infantry of the line, each composed of 62 officers and 1,591 men; 18 regional regiments, each composed of 51 officers and 1,560 men; 30 battalions of chasseurs, having 4 or 6 companies of 19 officers and 552 men; 4 regiments of zouaves, each composed of 73 officers and 2,551 men; 4 regiments of Algerian tirailleurs, each composed of 103 officers and 2,632 men; 2 regiments of the Algerian foreign legion, each of 5 battalions of 4 companies; and 5 battalions of African light infantry. The cavalry consists of 13 regiments of cuirassiers, 31 of dragoons, 21 of chasseurs, 14 of hussars, 6 of African chasseurs, each regiment composed of 37 officers and 792 men, with 722 horses; and besides these regiments there are 8 remount companies of 299 men, 3 regiments of spahis in Algeria, and 1 regiment of Tunisian spahis. The field-artillery consists of 40 regiments, comprising 428 mounted, 52 horse, and 16 mountain batteries, and there are 4 mounted and 8 mountain batteries in Algeria and Tunis. The foot-artillery consists of 16 battalions of 6 batteries, and in Africa there are 4 batteries. The engineers consist of 6 regiments of sappers and miners of 3 battalions and 1 company of sapper conductors, except 1 regiment which has 4 battalions; and there is 1 regiment of railroad sappers. The train has 12 squadrons of 4 companies and 8 of 3 companies, 12 companies being in Algeria. The peace strength of the army as provided in the military budget for 1901 is 522,013 men, including 27,044 officers, in France; 57,292 men, including 2,255 officers, in Algeria; and 19,460 men, including 691 officers, in Tunis; making a total of 598,765 men, of whom 29,990 are officers, with 143,667 horses. There are 4,418, including 3,717 officers, on the general staff in

France, 386, including 290 officers, in Algeria, and 98, including 74 officers, in Tunis; 3,673, including 426 officers, in the military schools; 2,836, including 2,366 officers, unclassified among the troops; and in the army corps 377,835 infantry, including 13,557 officers, 14,423 administration troops, 70,739 cavalry, including 3,940 officers, 75,064 artillery, including 3,965 officers, 12,849 engineers, including 501 officers, and 10,465 train, including 412 officers, making 561,375 men, including 22,375 officers, in the army corps, of whom 487,373, including 20,492 officers, are in France, 54,905, including 1,387 officers, in Algeria, and 19,097, including 496 officers, in Tunis. The active army comprises 497,419 men, including 26,337 officers, in France; 56,050 men, including 2,224 officers, in Algeria; and 19,317 men, including 687 officers, in Tunis; total, 572,786 troops, including 29,284 officers. In the gendarmerie are 21,601 men, including 624 officers, in France; 1,242 men, including 31 officers, in Algeria; and 143 men, including 4 officers, in Tunis; total, 22,986, including 659 officers. The Garde Républicaine numbers 2,993 men, of whom 83 are officers. The effective strength of the active army was reported to be 534,149 men, and of the gendarmerie and Garde Républicaine 25,715 men. The total strength of the active army and its reserve is about 2,350,000 men; of the territorial army, 900,000 men; of the territorial army reserve, 1,100,000 men. Of this total war strength of 4,350,000 men not more than 2,500,000 are trained and able-bodied.

The Navy.—The effective navy in 1900 comprised 20 battle-ships—the Amiral Baudin, Amiral Duperré, Bouvet, Brennus, Carnot, Charles Martel, Courbet, Charlemagne, Dévastation, Formidable, Gaulois, Hoche, Jauréguiberry, Iéna, Magenta, Marceau, Neptune, Masséna, Redoutable, and St. Louis; 4 cruising battle-ships—the Duguesclin, Turenne, Vauban, and Victorieux; 19 coast-defense vessels—the Amiral Tréhouart, Bouvines, Caïman, Colbert, Friedland, Fulminant, Furieux, Jemappes, Indomptable, Onondaga, Requin, Richelieu, Tempête, Terrible, Tonnant, Tonnerre, Trident, Valmy, and Vengeur; 6 armored cruisers—the Amiral Charner, Bruix, Chanzy, Dupuy-de-Lôme, Latouche-Tréville, and Pothuan; 1 torpedo-cruiser—the Foudre; 7 first-class cruisers—the Châteaurenault, Cécille, Duquesne, D'Entrecasteaux, Guichen, Tage, and Tourville; 14 second-class cruisers—the Alger, D'Assas, Bugeaud, Casart, Catinat, Chasseloup-Laubat, Descartes, Du Chayla, Friant, Isly, Jean Bart, Pascal, Protet, and Sfax; 18 third-class cruisers—the Coetlogon, Cosmao, Davout, D'Estaing, D'Estrées, Éclaireur, Forbin, Galilée, Infarnet, Iphigénie, Laland, Lavoisier, Linois, Nielly, Primauguet, Suchet, Surcouf, and Troude. There were besides 14 destroyers, 8 armor-clad gunboats, 9 unarmored gunboats, 4 first-class and 11 other avisos, 23 transports, 9 sloop gunboats, 10 torpedo despatch-boats, 5 torpedo vedettes, 9 submarine torpedo-boats, 32 squadron torpedo-boats, and 103 first-class, 76 second-class, and 17 third-class torpedo-boats. The vessels building or being fitted out in 1900 were 2 squadron battle-ships—the Henri IV and Suffren; 12 armored cruisers—the Amiral Hubert, Condé, Desaix, Dupetit-Thouars, Duplex, Gloire, Gueydon, Jeanne d'Arc, Kléber, Marseillaise, Montcalm, and Sully; 1 first-class protected cruiser—the Jurien de la Gravière; 9 destroyers—the Épée, Escopette, Espingole, Fauconneau, Flamberge, Pertuisane, Pique, Rapière, and Yatagan. The Framée was wrecked. The battle-ships Charlemagne, St. Louis, and Gaulois, of 11,275 tons, launched in 1895 and 1896, have 16-inch armor, engines of 14,000 horse-power to give a

speed of 18 knots, and an armament of 4 12-inch guns, with 10 5.5-inch, 8 3.9-inch, and 20 smaller quick-firers. The Iéna and Suffren, launched in 1898 and 1899, of 12,052 tons, have armor for protection and a more formidable quick armament, consisting of 8 6.4-inch, 8 3.9-inch, and 34 smaller pieces, and they are fitted with Belleville boilers and engines of 15,500 horse-power to steam 18 knots. The Henri IV, of 6,889 tons, very broad in the beam, carries 2 10.8-inch guns and 7 5.5-inch and 10 small quick-firers. These and all the battle-ships and coast-defense vessels built since 1892, including the Bouvines, Valmy, Jemappes, Charles Martel, Jauréguiberry, Tréhouart, Carnot, Masséna, and Bouvet, have their barbette turrets and protective shields. Two battle-ships of 15,000 tons were begun in 1900, improved and enlarged Suffrens, designed to make 18½ knots, having 4 12-inch guns, mounted in barbette turrets fore and aft, and 18 6.4-inch quick-firers, 12 of them mounted in pairs in turrets and the rest in a redoubt, with a great many smaller ones. Four other vessels of this class are to be built. The armored cruiser Jeanne d'Arc, launched in 1899, of 11,270 tons, has engines of 28,000 horse-power for a speed of 23 knots, and carries 2 7.6-inch, 12 5.5-inch, and 26 small quick-firers. The Montcalm, Dupetit - Thouars, and Gueydon, launched later, of 9,517 tons, carry 2 7.6-inch, 8 6.4-inch, 4 4-inch, and 24 small quick-firers. The Gloire and Condé, of 10,000 tons, have the same armament, and all these vessels are intended to make 21 knots with engines of 20,000 horse-power. The Niclausse water-tube boilers are used in most of the latest cruisers. The Marseillaise and Amiral Aube are made a little larger to carry 2 additional 4-inch guns, but the Sully has the same armament and the same dimensions as the others. The Desaix, Kléber, and Duplex, having a displacement of 7,700 tons and carrying 10 6.4-inch and 16 small quick-firers, follow the type of the larger cruisers. The Jules Ferry, an improved Jeanne d'Arc, her sister, the Léon Gambetta, and 4 others that are to be built, will have a displacement of 12,416 tons and engines of 24,000 horse-power to get the same speed, and the armament will be 4 6.7-inch quick-firers and 16 6.4-inch quick-firers. The Jurien de la Gravière, launched in 1900, is the latest type of deck-protected cruiser, having a displacement of 5,500 tons, a speed of 23 knots with engines of 17,000 horse-power, and an armament consisting of 8 6.4-inch and 12 1.8-inch quick-firers. An armor-clad cruiser of 12,500 tons, the Victor Hugo, was begun at Toulon in the spring of 1901.

Among the new destroyers of the French navy are some of the fastest in the world. The Forban in a sustained trial showed a speed of over 31 knots an hour. The attention of French naval designers has been given much to submarine torpedo-craft, both those that remain under water and those of the submersible kind that have a greater radius of action. Fourteen were building in the beginning of 1901. They are provided with the periscope, by means of which the water around for 1,000 yards is visible to the navigator 20 feet below the surface. Two new destroyers of 303 tons were ordered in March, 1901, also 8 of Francisque type and 11 first-class torpedo-boats. At the same time 3 submarine boats of a new experimental type and 20 of the existing type were ordered. The submarine boats Gustave Zédé, Morse, and Narval proved in trials their ability to maneuver under water at various depths and also their ability to launch torpedoes with a reasonably perfect aim at a distance of 300 meters from the objective hull.

Commerce and Production.—The yield of wheat in 1899 was 128,418,920 hectoliters; of barley, 15,965,790 hectoliters; of oats, 95,301,320 hectoliters; of rye, 23,577,000 hectoliters; of buckwheat, 8,106,430 hectoliters; of corn, 9,002,990 hectoliters; of mixed grain, 3,951,500 hectoliters; of potatoes, 123,476,410 quintals; of sugar-beets, 72,266,270 quintals; of other beets and turnips, 105,126,730 quintals; of colza, 620,163 quintals; of flax, 87,698 quintals of seed and 126,257 quintals of fiber; of hemp, 85,028 quintals of seed and 213,919 quintals of fiber; of tobacco, 227,574 quintals; of clover, 40,549,560 quintals; of hay, 192,700,160 quintals; of wine, 46,810,390 hectoliters; of cider, 20,835,000 hectoliters. The imports of wine were 8,465,000 hectoliters, and exports, 1,713,000 hectoliters. The production of wine in the first ten months of 1900 was 67,353,000 hectoliters, the largest vintage since the appearance of the phylloxera. The value of the crop of chestnuts, walnuts, olives, cider-apples, prunes, and mulberry leaves in 1899 was estimated at 214,921,140 francs; of the orange and lemon crop, 1,372,570 francs. The production of cocoons was 6,993,339 kilograms. The export of cocoons was 70,907 kilograms, value 829,612 francs; export of raw silk, 5,437,359 kilograms, value 145,952,285 francs. The number of horses in France on Dec. 31, 1899, was 2,917,160; of mules, 204,750; of asses, 357,820; of cattle, 13,550,880; of sheep, 21,357,660; of pigs, 6,305,200; of goats, 1,504,390. The production of refined sugar in 1900 was 869,201,000 kilograms, against 737,902,000 kilograms in 1899. The production of alcohol in 1899 was 2,599,558 hectoliters.

The production of coal and lignite in 1899 was 32,933,788 tons; of pig iron, 2,567,388 tons; of finished iron, 842,755 tons; of steel, 1,529,182 tons; of steel rails, 1,253,701 tons. The output of silver and lead ore in 1898 was 20,800 tons; of zinc ore, 82,100 tons; of manganese ore, 31,900 tons; of antimony ore, 4,400 tons; of salt, 999,000 tons.

There were 27,137 boats, of 172,066 tons and 162,626 men, engaged in the French fisheries in 1896, and in the cod fisheries there were 474 boats, of 44,100 tons and 9,741 men. The value of the codfish catch in 1897 was 15,022,960 francs; of the catch in the home fisheries, 113,037,883 francs. The herring fleet in 1899 numbered 542 vessels, of 22,370 tons, employing 6,812 men, and the catch was 369,716 quintals. The codfish fleet was 619 vessels, with 12,372 men, and the quantity of fish and oil brought home was 564,260 quintals; export of dried codfish, 198,044 quintals. The premiums given by the Government for the equipment of vessels and imports and exports of fish amounted to 3,965,339 francs.

The total value of the general commerce in 1899 was 5,848,000,000 francs for imports and 5,533,500 francs for exports. The value of the special commerce was 4,518,300,000 francs for imports and 4,152,600,000 for exports. The special imports in 1900 were 4,408,500,000 francs in value, and the special exports 4,078,000,000 francs. The imports of food products in 1900 were 951,000,000 francs, against 1,506,000,000 francs in 1899, and the exports were 777,000,000 francs, against 676,000,000 francs. The imports of raw materials were 2,738,000,000 francs, against 2,348,000,000 francs, and the exports were 1,090,000,000 francs, against 1,210,000,000 francs; and the imports of manufactured articles were 2,185,000,000 francs, against 1,916,000,000 francs. The special imports of wool in 1899 were 467,400,000 francs in value; raw silk, 370,600,000 francs; wine, 267,400,000 francs; coal and coke, 258,200,000 francs; raw cotton, 177,600,000 francs; oil-seeds, 166,100,000

francs; timber and wood, 157,000,000 francs; cereals, 143,900,000 francs; hides and furs, 139,600,000 francs; coffee, 89,600,000 francs; ores, 87,900,000 francs; silk manufactures, 65,400,000 francs; flax, 56,100,000 francs; cotton manufactures, 43,800,000 francs; woolen manufactures, 40,700,000 francs; sugar, 32,300,000 francs; cattle, 32,100,000 francs. The exports of silk manufactures had a value of 278,300,000 francs in 1899; woolen yarn and raw wool, 271,700,000 francs; woolen fabrics, 264,000,000 francs; wine, 210,200,000 francs; fancy goods, 183,700,000 francs; silk yarn and raw silk, 179,900,000 francs; cotton fabrics, 174,300,000 francs; linen cloth and garments, 142,100,000 francs; leather, 130,400,000 francs; skins and furs, 122,100,000 francs; metal wares and tools, 91,500,000 francs; chemical products, 83,700,000 francs; cheese and butter, 76,200,000 francs; leather goods, 75,900,000 francs; spirits, 47,600,000 francs; refined sugar, 46,200,000 francs. The imports for domestic consumption from the principal countries had in 1899 and 1900 the following values in francs:

COUNTRIES.	1899.	1900.
Great Britain.....	591,000,000	669,000,000
United States.....	427,000,000	460,000,000
Germany.....	360,000,000	412,000,000
Belgium.....	332,000,000	389,000,000
Argentine Republic.....	292,000,000	242,000,000
Spain.....	239,000,000	214,000,000
Russia.....	179,000,000	204,000,000
Italy.....	159,000,000	147,000,000

The exports of articles of French produce and manufacture to the principal foreign countries in the same years had in francs the following values:

COUNTRIES.	1899.	1900.
Great Britain.....	1,239,000,000	1,239,000,000
Belgium.....	606,000,000	593,000,000
Germany.....	457,000,000	460,000,000
United States.....	255,000,000	254,000,000
Switzerland.....	216,000,000	212,000,000
Italy.....	192,000,000	167,000,000
Spain.....	148,000,000	141,000,000
Argentine Republic.....	53,000,000	47,000,000
Brazil.....	67,000,000	38,000,000

Of the total value of general imports in 1899 the value that came by land was 1,748,000,000 francs, and by sea 4,100,000,000 francs, of which 1,767,000,000 francs in value were carried in French and 2,333,000,000 francs in foreign ships. Of the total value of exports 1,915,000,000 francs went in land vehicles and 3,619,000,000 francs in vessels, 1,894,000,000 francs of this sum in French and 1,725,000,000 francs in foreign vessels.

The special imports of gold coin and bullion in 1899 were 318,504,683 francs, and exports 161,646,282 francs; imports of silver coin and bullion were 187,212,189 francs, and exports 219,651,177 francs; imports of bronze coin were 79,080 francs, and exports 602,390 francs; total imports of specie, 505,795,952 francs; total exports, 381,899,859 francs.

The transit trade in 1899 amounted to 961,000,000 francs.

Navigation.—The total number of vessels entered at French ports during 1899 was 101,370, of 24,911,506 tons, of which 80,315, of 12,167,655 tons, were French and 21,055, of 12,743,851 tons, were foreign, and of the French vessels 8,661, of 4,967,828 tons, were engaged in the foreign and colonial trade or in maritime fishing, and 71,654, of 7,199,827 tons, in the coasting trade. The total number of vessels cleared was 101,864, of 25,180,960 tons, of which 80,556, of 12,369,276 tons, were French and 21,308, of 12,811,684 tons, were foreign, and of

the French vessels 8,902, of 5,169,449 tons, were engaged in foreign commerce or in the colonial trade or ocean fisheries and 71,654, of 7,199,827 tons, were coasting vessels.

The French merchant navy on Jan. 1, 1900, comprised 14,262 sailing vessels, of 450,636 tons, with 68,031 sailors, and 1,227 steamers, of 507,120 tons, with 13,701 men in their crews. Of the sailing vessels 150, of 14,507 tons, sailed European waters and 264, of 213,078 tons, navigated the oceans, and of the steamers 237, of 197,067 tons, were engaged in European seas and 173, of 274,861 tons, in the ocean trade. The other vessels were employed in the coasting-trade, port service, or fishing, 13,579 of the total number being under 50 tons. The Government gives bonuses for construction, equipment, and navigation amounting annually to 20,000,000 francs.

Railroads, Posts, and Telegraphs.—The French railroads had a total length at the close of 1899 of 23,576 miles, and the receipts for that year were 1,406,600,000 francs. There had been 252 miles added in twelve months. The cost of construction up to Dec. 31, 1898, was 16,099,000,000 francs. The number of passengers carried in 1898 was 355,873,000; tons of freight, 114,437,000; receipts, 1,377,025,000 francs; working expenses, 707,400,000 francs. The street-railroads on Dec. 31, 1899, had a total length of 2,319 miles.

The postal traffic of France and Algeria in 1898 was 821,603,000 internal and 161,762,000 foreign letters, 45,856,000 internal and 2,621,000 foreign registered letters, 52,909,000 internal and 6,598,000 foreign postal cards, and 1,233,261,000 internal and 137,685,000 foreign newspapers, samples, circulars, etc. The receipts of the post-office were 245,716,510 francs in France and 4,725,810 francs in Algeria. The expenses of posts and telegraphs were 181,394,532 francs in France and 3,326,933 francs in Algeria.

The length of the telegraph lines on Jan. 1, 1899, was 79,396 miles, with 400,341 miles of wire. The number of messages in 1898 was 43,963,811, of which 35,682,829 were internal, 5,759,646 foreign, 1,047,573 in transit, and 1,473,763 official. There were 767 telephone exchanges, with 9,994 miles of line and 117,795 miles of wire. The number of conversations in 1898 was 138,128,082. The long-distance circuits numbered 1,288, with 13,358 miles of line and 37,244 miles of wire; number of conversations, 3,098,801.

Legislation.—The multifarious enemies of the parliamentary republic and the political adventurers with whom they intrigued and conspired—the Royalists, Bonapartists, Conservatives, Clericals, Nationalists, Anti-Semites, Plebiscitary Republicans, and Revolutionary Socialists—who used the Dreyfus scandal as an ambush for a combined attack on the established Government, compelled the ministry that rallied the forces of the republic to resist the insidious machinations of its foes to take some signal measure to emphasize the triumph of the republic and discourage its inveterate opponents. Liberals in France have always looked upon clericalism as the enemy, and under monarchical government as well as in republican times have passed laws to curb clerical influence. The aversion to the republic manifested by officers of the army during its recent time of trial seemed to be the greatest danger, and the disloyalty of the army was attributed by the Radicals to antirepublican bias of the education given by congregational schools in which French aristocrats receive their early training. The militant orders of the regular clergy, such as the Assumptionists and the Jesuits, were believed, moreover, to have given large sums of money in aid of

the recent conspiracies against the republic. A measure against the religious orders was demanded by the Radicals and Socialists, and by Republicans in general. Before the bill was presented to the Chamber the Pope protested against the expulsion of the congregations from France in a letter to the bishops, in which he hinted that France might lose thereby her position as protector of the Christians in the Orient, for if French missionaries did not go to the near and far East, missionaries of other nations would take their place and their own governments would protect them. M. Waldeck-Rousseau framed his associations bill in the form of a general measure, applicable to any association of two or more persons whereby they place in common their knowledge or activity with a purpose other than that of sharing profits. Such association would be governed as to validity by the general principles of law applicable to contracts and obligations. Any association founded for an illicit end or on a cause contrary to the laws, to public order, to good morals, to the national unity, or to the republican form of government, was declared to be null and void. The founders of any association are bound to report at the prefecture the covenants of the association, its title and objects, the place of meeting, and the names, professions, and domiciles of its members and of those who are in any way connected with its administration. Any member of an association which has not been formed for a determined time may withdraw at any time after payment of all dues for the current year in spite of any clause to the contrary in the covenants of the association. The founders, directors, or administrators of an association maintained or reconstituted illegally are guilty of a crime punishable with fine and imprisonment. Associations existing at the time of the promulgation of the law and not previously authorized or recognized were required to conform to the provisions of the law within six months; otherwise they would be considered as dissolved. Societies already authorized must seek fresh authorization. Property contributed by members on entering associations or that had accrued to them and been placed in the common fund since was to be returned to them on dissolution, and property contributed by others to be refunded to the donors or to their heirs or assigns. All the rest of the property of dissolved associations, at least half of their accumulated wealth, was to be turned over, according to an amendment carried in the Chamber, to the projected superannuation fund for working men. When the attention of the legislators was called to the injustice of making no restitution to those members of these communities who, by their exertions and earnings, had increased the wealth of the corporations and the impolicy of turning out into the world without any means of livelihood recluses who were unfitted to compete with ordinary citizens, the bill was changed so as to reimburse members of congregations who could prove that they had contributed to the common property by their labor or activity and to provide a fund for those who would otherwise be destitute. If unauthorized orders do not wind up their affairs and divide their assets among the donors and their heirs and members entitled thereto within six months, then the state steps in and disposes of the property, holding the proceeds in trust for claimants. Moneys not claimed within twelve months are to be employed in the relief or maintenance of children, the aged sick, or incurables for whose benefit no special institution exists. Persons lending their premises for the use of a dissolved associa-

tion are guilty of a punishable offense. Members of religious orders bound by vows of obedience, poverty, and celibacy are debarred from being electors, and members of dissolved orders from teaching unless they prove that their membership has been terminated. The prohibition of congregational schools and of all professional instruction by members of non-authorized orders was considered by many a blow dealt at secondary schools that would have deplorable results, and was, moreover, an infraction of the principle of the liberty of education, which was made a part of the French law in 1830 as regards elementary schools, in 1850 for intermediate education, and in 1875 for higher education, and limited only by the law of 1880 subjecting the qualifications of teachers and school standards to state supervision. A proposal supported by M. Ribot and the Republican Opposition to sever this clause from the bill and enact a separate bill on schools was opposed by M. Waldeck-Rousseau as equivalent to wrecking the bill and overturning the Cabinet, and was rejected by 297 votes to 248. The bill does not apply to the colonies, in some of which the religious orders perform the work of parish priests, while in others foreign orders are established under international treaties, so that the dissolution of French orders would leave to these a monopoly. The colonies will therefore continue to be regulated by decrees. Gifts and bequests for sheltering and reconstituting dissolved orders were declared to be null and void, the burden of proof, according to an amendment emanating from the Clerical side, being placed upon the state. Associations are obliged to furnish an annual balance-sheet on demand of the prefect of police. Associations between Frenchmen and foreigners must have the authorization of the Council of State, and those having a foreign domicile or foreign directors can not be formed without special authorization by Parliament, nor can associations the members of which live in common. All deeds of property to associations whose members live in community were declared null and void. On the motion of a Socialist an amendment was adopted providing for the dissolution of associations whose acts are such as to falsify the normal conditions of buying or selling and of such as menace the integrity of the national territory and the republican government.

The general application of the bill to all associations except commercial ones was dreaded by many, and especially by the Socialists, who feared that it would be applied by some future ministry to objects for which it was not intended, as such measures often have before. M. Groussier proposed a clause giving the right to form associations without authorization or previous declaration, but depriving them of the right to sue unless they do conform to the clause requiring them to register their name, objects, statutes, and membership. By an amendment of M. Fournière this permission is confined to non-religious associations. Every authorized body has the right of legal personality to the extent that it can hold property necessary to the fulfilment of its objects and be represented before the tribunals by its officers. No property not needed for or devoted to the purposes set forth in the registered declaration can be legally held by any association, nor can its funds be invested in the names of other persons. The civil courts are empowered to dissolve unlawful and refractory associations on the motion of an interested person or of the public authorities. In considering applications for authorization, weight is given to any objec-

tions made by the local authorities. Religious associations before receiving authorizations must promise obedience to the bishop of the diocese, and can not obtain it unless the bishop accepts jurisdiction. All schools must keep a register of the birthplace, nationality, antecedents, and diplomas of its teachers. The bill was passed in the Chamber on March 31, by 303 votes to 224. The amendment providing for the payment of a capital sum or an annual income out of the unclaimed assets of dissolved associations to members who have no sure means of existence or who can prove that they have contributed to the acquisition of the common riches of the order was made by the Senate, which passed the bill on June 23, by 173 votes to 99. The bill became law on July 1. The associations bill was in no way directed against the parish clergy, who are state officials, receiving stipends from the Government by virtue of the concordat. The persons aimed at are the members of the religious corporations, auxiliary associations of the Church, having their own special statutes, rivals and competitors often of the parish priests, only partially subordinated to the episcopate, sometimes rebellious against the slight episcopal control to which they are subjected, and responsible only to the Pope and to their superiors, who in the great orders are foreigners. Headed by the Jesuits, the Dominicans, and the Passionists, these societies, with their enormous membership, formed a most prevailing and potent element in the economical as well as the social life of France, and the greatest of them had for their objects nothing connected with French national aims and interests, but the international ends and cosmopolitan policy pursued by the Catholic Church. The Pope instructed the religious orders to apply for authorization if they desired, furnishing the state authorities with a synopsis only of their statutes, not submitting their ancient rules and constitutions. They were allowed to promise submission to the bishops, but only such submission as is conformable to the character of each institution. While episcopal rights over the external or parochial operations of the religious orders are respected, the direct dependence of the latter on the Holy See can not be impaired. There were 152 male and 1,511 female communities in France, of which 5 male and 905 female communities had been authorized prior to the new law, which, however, obliged them to make fresh applications. The 147 male non-authorized communities possessed 2,010 and the 606 female ones possessed 2,282 establishments, besides which the authorized orders had 1,276 male and 272 female establishments that had not been authorized. There were in all 4,292 establishments requiring authorization by Parliament and 12,176 requiring authorization by the Council of State. The time for making applications expired on Oct. 2. Only 1,740 male and 1,227 female establishments sent in applications for sanction by Parliament and 39 male and 2,135 female establishments applied to the Council of State, making 5,141 out of 16,468 establishments, containing over 400,000 inmates, which leaves 11,327 establishments which made no application. The sisters of St. Vincent de Paul, having 1,045 establishments, applied for authorization, and so did 1,352 other female establishments devoted to nursing and other charitable work. The Assumptionists, the Jesuits, the Passionists, and some of the minor orders placed their property outside of French jurisdiction before the term for application expired. The Carmelite, Oblate, and Benedictine nuns took refuge in England, Switzerland, Spain, and Italy. The Jesuits sent their novices to Hol-

land, and members of the order, after protesting against the law as an infringement of their rights as freemen and citizens and as Catholics and ecclesiastics, emigrated to Jersey, Syria, Egypt, and other countries. Belgium received a great number of refugees, but the bishops of that country would not let them open chapels or schools or make collections.

Labor legislation was expected and demanded from the Cabinet that included M. Millerand and M. Baudin and was headed by M. Waldeck-Rousseau. On the other hand, the farming class called for relief. A critical time had arrived for both industry and agriculture in France. The protective duty of 7 francs a quintal on imported wheat had more than the desired effect of stimulating production until France supplied the needs of the population. The production already exceeded consumption, and the growers could no longer obtain the price that made bread dearer in France than in any other country. A bill was passed by the Chamber, but not by the Senate, which would give a bounty of 7 francs a quintal to the farmer who exports wheat. The wine-growers asked for legislation to stimulate the consumption of wine. The bounties which make French sugar cheap abroad and dear at home facilitated a corner in sugar which enriched the manipulators and ruined contractors, leading to the bringing of charges against Deputy Jaluzot, one of the syndicate, and the framing of a bill on time bargains.

Labor strikes in France have always a political bearing, especially strikes in the coal-mines, which have not benefited the miners, and have usually led to increased imports of foreign coal. Optional arbitration was introduced by the law of Dec. 27, 1892, but of nearly 5,000 strikes that have occurred since then only 6½ per cent. were settled according to this law. Early in 1901 a large section of the miners of Montceau-les-Mines went on strike, induced by Socialists of the faction opposed to M. Millerand. The miners belonging to trade-unions, about two-fifths of the miners of France, threatened a general strike in November unless Parliament passed the pending and the promised labor bills, including an eight-hour law, a law insuring a minimum wage, a superannuation law, and others. M. Millerand, in August, 1899, issued decrees defining as conditions of work a weekly rest, the normal duration of labor obtaining in the locality, the normal scale of wages, and limitation of the employment of foreign workmen, for which conditions the Government was bound to stipulate in its contracts and departmental and communal authorities might in theirs. In September, 1899, M. Millerand modified the composition of the Superior Council of Labor, whose duty it is, when requested by the Government, to examine questions relating to labor organization. He made two-thirds of these councils elective, half of these elective members being chosen by masters and half by workmen. In March, 1900, a law was promulgated for the regulation of work in factories, protecting not only children and women, but adult men, and limiting the day's work to eleven hours in mixed workshops where men, women, and children are employed. In September, 1900, M. Millerand, adopting a Belgian law, established councils of work in industrial centers, elected partly by the unions of masters and partly by the unions of workmen, and having for their mission to bring about compromises in labor disputes. Bills to enable labor-unions to own property and to trade and to establish obligatory arbitration in labor disputes were introduced early in the session of 1901. Optional conciliation by jus-

tices of the peace had proved ineffective. The bill on compulsory arbitration provided that in establishments employing more than 50 workers permanent delegates should be elected, 2 for every 50 workmen, to present and explain any demands of the workmen to the employer, who must reply within forty-eight hours; otherwise the men have the right to strike. If he rejects their demands he is bound to appoint arbitrators and the workmen to select their referees, all of them from the district labor council. If the arbitrators can not agree on a settlement within six days, the men can legally cease work by the decision of a majority vote by secret ballot, the majority to consist of at least one-third of the workmen interested. The striking miners of Montceau obtained from M. Waldeck-Rousseau a promise to advance legislation for limiting hours of labor and for pensioning aged workmen from a fund to which both masters and men contribute. An eight-hour day in mines was approved by the Prime Minister. The Minister of Public Works notified all persons having concessions of mines in France, Corsica, or Algeria which were not being worked that their concessions would be annulled if they did not resume operations within three months. In May the miners went back to work at Montceau. Marseilles became the scene of strikes attended with turbulent manifestations. The strike of the dockers drove the commerce of the seaport to Genoa and put a stop to manufacturing while it lasted. The strikers were willing to arbitrate; not so the contractors, in whose favor the strike terminated. Strikes occurred in many of the smaller trades. In the autumn the miners held plebiscites with reference to the labor measures before the Chambers, and decided not to strike. A law to compel storekeepers to furnish seats to saleswomen went into force. A commission drew up sanitary regulations for factories in which lead oxid and other poisonous materials are used or produced based on the British and German regulations. Foreign workmen were excluded from the labor pensions, although in Germany there is no discrimination against foreign workmen. It was proposed to make employers pay a tax for each foreign workman, but the Government rejected the proposal. The labor pensions bill was not completed when the Chambers were prorogued.

The budget embodied a new kind of taxation that excited much controversy—progressive succession duties such as had been introduced in England, but on a scale of progression so sweeping that the measure was called the antimillionaire bill, and was by many expected to drive capital out of France. Gifts in lifetime are taxed at the same rate as inheritances or bequests. A legacy or inheritance in the direct line not exceeding 2,000 francs pays only 1 per cent., rising to 2½ per cent. for 250,000 francs or over; legacies or inheritances from husband to wife pay 3½ to 7 per cent.; from brother or sister, 8½ to 12 per cent.; from uncle or aunt, 10 to 13½ per cent.; legacies from a stranger in blood, 15 to 18½ per cent. For greater sums the tax is made much heavier.

When the net share devolving on the beneficiary exceeds 1,000,000 francs, the succession duty is increased by one-twelfth; for 2,000,000 francs and over, by one-tenth; for 3,000,000 francs, by one-eighth; for 5,000,000 francs, by one-fourth; for 10,000,000 francs, by a half; for 20,000,000 francs it is double; for 50,000,000 francs it is two and a half times as great; for 100,000,000 francs and over it is tripled. Moderate Republicans, Rallied Republicans, Reactionaries, and Nationalists, as well as the supporters of the Govern-

ment, voted in the Chamber for this bill, which received 375 votes.

Gen. André, who retired or disciplined all officers who gave vent to reactionary sentiments and was the first Minister of War to take the stand that the army must be republican, not monarchistic and republican nor neutral, was willing to adopt a measure for the reduction of the term of active service to two years coupled with a scheme for the reenlistment of 50,000 trained soldiers by means of bounties and high pay, an equal number of conscripts having families to support being released on furlough, and for a better supply of commissioned and non-commissioned officers. His agreement with the popular demand for short service was the basis for incessant attacks of the Reactionaries, who represented that he endangered the Russian alliance thereby. The Army Committee of the Chamber discussed the more radical plan of M. de Montebello for the gradual reduction of the term of service in barracks to one year, the cavalry and strong cadres in the other arms being recruited entirely by enlistment for five years. M. Waldeck-Rousseau would not consent to a reduction of the term of service to two years, necessitating the conscription of 5,000 young men destined for liberal professions and 61,000 who provide for families, until the question is canvassed in an electoral campaign. Gen. André proposed to assign seminarist conscripts to hospital duty, but the army committee pronounced against the proposal. The departmental elections in July showed a further decline in the strength of the reactionary parties.

For the purpose of delaying the passage of the associations bill by the Senate, Count de Lur-Saluze, who had fled from France and been condemned in his absence, returned to stand trial. The Senate disposed of the bill before the trial began, the trial was quickly ended without creating popular excitement, and the Royalist leader sentenced to five years of exile. Laurent Tailhade, an anarchist who printed an article inciting to the murder of the Czar while he was in France, was tried in October and condemned to imprisonment despite the protests of some of the foremost authors of France, who extolled the poetry and the profundity of the article and deemed that literature was being persecuted in the person of its author.

Algeria.—The Governor-General administers the civil government of Algeria under instructions from the ministers of the French Cabinet, except in the departments of finance and customs, worship, justice, and public instruction, in which he is advised by ministers of his own. The departments of Algiers, Oran, and Constantine each send a Senator and two Deputies to the National Assembly, and the laws for Algeria are made by the French Chamber, administrative and political questions not covered by legislation being settled by the President and Council of Ministers. The budget is submitted to a superior council composed of delegates of the general councils of the three departments. The Governor-General in the beginning of 1901 was M. Jonnart. Owing to ill-health he resigned, and on May 22 Paul Revoil was appointed to the governorship.

The area of Algeria is 184,474 square miles, not including the Algerian Sahara, which is about 125,000 square miles in extent. The population of Algiers in 1896 was 1,526,667; of Constantine, 1,874,506; of Oran, 1,028,248; total, 4,429,421, including 556,143 in the military territory. The population of the Algerian Sahara was estimated at 50,000. The population of the city of Algiers was 92,120; of Oran, 80,941; of Constantine, 47,-

771. In March, 1901, the population of Algeria was 4,774,000.

The revenue for 1901 was estimated at 55,314,144 francs, of which 12,088,014 francs were derived from direct taxes, 8,747,800 francs from registration fees, stamps, etc., 14,583,900 francs from customs, 4,903,200 francs from monopolies, 4,004,200 francs from domains and forests, 8,286,610 from other sources, and 2,600,420 francs were *recettes d'ordre*. The expenditure for 1901 was estimated at 55,237,675 francs, of which 7,099,234 francs were for administration, 7,569,305 francs for finance, 2,731,300 francs for justice, 8,362,629 francs for education and worship, 11,196,326 francs for public works, 4,326,434 francs for agriculture and forests, 6,418,519 francs for commerce and the post-office, and 7,533,928 francs for colonization, charitable institutions, etc. The military expenses and service of the debt are not included in the budget. The Nineteenth French Army Corps constitutes the military force of Algeria, consisting of 3 regiments of zouaves, 3 of tirailleurs, 2 foreign legions, 3 battalions of light infantry, 3 disciplined companies, 5 regiments of chasseurs d'Afrique, 3 of spahis, 3 remount companies, 12 batteries, 3 companies of engineers, and 9 companies of train. The troops organized for the defense of the southern frontiers and the extension of French authority in the direction of Lake Chad and the Niger are called Saharan tirailleurs and spahis, and are not a part of the Nineteenth Corps. The Algerian force according to the estimates for 1901 consists of 2,255 officers and 55,037 men, with 13,434 horses. There are 207,310 European colonists who have acquired possession of most of the Government lands, but the main part of the arable soil, of which there are about 20,000,000 hectares, belongs to Arab tribes, and is held in common. The native agriculturists number 3,437,304. The crop of soft wheat in 1899 was 1,042,908 quintals; of hard wheat, 5,021,165 quintals; of barley, 7,203,965 quintals; of oats, 658,067 quintals; of corn, 88,756 quintals; of millet, 144,769 quintals; of beans, 141,816 quintals; of potatoes, 300,276 quintals; of wine, 4,502,028 hectoliters; of tobacco, 49,207 quintals. The production of cocoons was 11,650,000 kilograms; of cork from the Government forests, 42,000 quintals. Alfa, olives, dates, flax, ramie fiber, and colza and other oil-seeds are grown. The Government owns 1,759,495 hectares of forest, and communes own 76,919 hectares, while 468,395 hectares belong to private owners. The live stock in 1899 consisted of 204,761 horses, 145,666 mules, 263,208 asses, 200,886 camels, 1,045,102 cattle, 7,523,763 sheep, 3,751,534 goats, and 88,085 hogs. Only 7 per cent. of the animals belong to Europeans. The production of iron ore in 1898 was 474,569 tons; of zinc ore, 29,774 tons; of salt, 21,302 tons. The quantity of phosphate of lime dug was 269,500 tons, valued at 5,390,000 francs. The general commerce in 1899 was 319,846,493 francs for imports, of which 260,421,593 francs came from France, and 346,415,000 francs for exports, of which 279,675,000 francs went to France. The value of special imports was 309,947,382 francs, of which 49,525,789 francs came from foreign countries and French colonies, and of special exports 325,407,699 francs, of which 53,940,079 francs went to foreign countries and French colonies. The chief exports are wine, cereals, sheep, and horses to France, and alfa, tobacco, iron ore, cork, and hides to foreign countries. The number of vessels in the foreign trade entered in 1899 was 1,798, of 1,198,247 tons; cleared, 1,840, of 1,263,217 tons; entered and cleared in the coasting-trade, 9,635, of 1,782,531 tons. The merchant navy consisted on Jan. 1,

1899, of 657 sailing vessels, of 7,420 tons, and 64 steamers, of 10,958 tons. There were 2,156 miles of railroads on Jan. 1, 1900, including 325 miles in Tunis. The telegraphs had a length of 7,260 miles, with 18,496 miles of wire at the end of 1898, in which year 1,892,633 internal, 57,358 foreign, and 83,748 official messages were sent.

The French troops under Gen. Servièrre in the early months of 1901 gradually occupied the oases of Tuat without encountering resistance. The population of Sahela, Metarfa, Gurara, Brinkan, and Isabit accepted French sovereignty, the new Governor-General, M. Jonnart, promising to respect native manners and customs and the rights of the Bedouin chiefs. In February the French marched on Adrar and Timmi. The Berbers on Feb. 18 attacked the post at Timmimum. In the beginning of March the Moorish tribes near El Aricha revolted.

An insurrection of Arabs who had been under French rule since the conquest of Algeria justified the efforts that M. Jonnart was making to reform thoroughly the administration of native affairs. On April 26 the tribe of Beni Menasser sacked the village of Marguerite, and killed several French, Spanish, and Italian colonists and a detachment of gendarmes. A company of Algerian tirailleurs drove the Arabs into the mountains. The tribe, which is the oldest and purest of the ancient Berber stock, is poor and dwindling, and it was driven to revolt by the economic misery caused by an unenlightened administration which had deprived the tribe of its best lands but continued to impose grinding taxes. The Governor-General took the opportunity to admonish the Algerian prefects to pay attention to the material and moral welfare of the natives, as well as to the development of colonization. When he arrived in Algeria in 1900 M. Jonnart announced a series of administrative reforms. In each prefecture he established a bureau of native affairs to study the needs of the natives and the means of improving their agriculture and reviving their ancient arts and industries. The unsympathetic and tyrannical treatment of the natives by the French administrators was the evil that Gov.-Gen. Jonnart chiefly sought to uproot, and the same policy was followed by his successor, who arrived in June and took the control of the troops and the appointment and dismissal of judicial and administrative officials into his own hands, while bestowing a larger initiative upon the local authorities. He determined to overhaul the methods of governing the natives. Algerian Deputies attributed the unrest among the natives in part to intriguing English Protestant missionaries, who inculcated hatred and contempt of the French, and were even said to be supplying the natives with arms. Gov.-Gen. Jonnart considered that violent recriminations and strife between Frenchmen, assaults committed on officials, and riots in Algiers and the other towns resulting from the anti-Semitic agitation, was a more potent cause for excitement among the natives. Max Régis, the anti-Semitic mayor of Algiers, continued his active crusade against the Jews, and his partisans posted inflammatory placards and assailed the character and motives of ministerial officials. He had a personal encounter in public with the editor of a newspaper, and other street disturbances occurred. Gov.-Gen. Jonnart on May 2 prohibited all gatherings in the public thoroughfares and all public meetings having for their object the incitement of citizens against one another. The anti-Semite committees were dissolved by order of M. Lutaud, prefect of Algiers.

Max Régis resigned the mayoralty in order to

attack the prefect of Algiers and the Jews without official restraint. In the remote Sahara the occupation of Tuat was continued. The inhabitants of Khaurin offered resistance, but were brought into submission by Gen. Servièrre. The posts in the Algerian Sudan were revictuated by way of the Niger. The authority of the native chiefs was not disturbed by the French, and these chiefs welcomed French garrisons which guarded their districts against the raids of the Tuaregs and the Moorish Berbers.

Tunis.—The regency of Tunis, nominally under the suzerainty of the Sublime Porte, has been a French protectorate since 1882, and is governed practically by the French Minister Resident General under instructions from the French Ministry of Foreign Affairs. The Bey of Tunis, whose authority is now confined to religious affairs, is Sidi Ali, born Oct. 5, 1817. The heir apparent is his son Mohamed, born June 24, 1855. The Resident General in the beginning of 1901 was R. P. Millet.

The area of Tunis is about 51,000 square miles, with a population of 1,906,000. The Kabyles and Bedouins number about 1,750,000; Jews, 60,000. The French in 1896 numbered 26,678, including 10,144 soldiers. The number of foreigners in 1899 was 79,497, of whom 63,866 were Italians and 12,732 were Maltese. The city of Tunis has about 170,000 inhabitants, of whom 50,000 are Europeans. The revenue for 1901 was estimated at 39,237,154 francs, of which 7,812,200 francs were derived from direct taxes, 9,108,700 francs from customs, 7,476,700 francs from monopolies, 1,198,900 francs from domains, 1,003,200 francs from various sources, 2,023,500 francs from arrears not collected in 1900, and 10,613,954 francs from exceptional sources. The expenditure for 1901 was estimated at 39,122,435 francs, of which 1,680,000 francs were for the civil list, 11,829,710 francs for debt and financial administration, 1,424,700 francs for posts and telegraphs, 3,715,704 for the general administration, 1,056,050 francs for agriculture and forests, 1,042,711 francs for public instruction, 4,743,500 francs for public works, 992,605 francs for the army, etc., 2,023,500 francs to pay arrears from 1899, and 10,613,954 francs for exceptional expenditure. The debt amounted to 142,550,000 francs. The value of imports in 1899 was 55,778,241 francs, and of exports 49,433,460 francs; imports from France were 36,114,691 francs, and exports to France 30,959,504 francs. The principal exports were olive-oil, of the value of 13,787,000 francs; cereals, 11,307,000 francs; zinc, 3,580,000 francs; skins, 1,870,000 francs; wine, 1,795,000 francs; animals, 1,755,000 francs; fish, 1,686,000 francs; phosphates, 1,593,000 francs; alfa, 1,415,000 francs; fruit, 1,225,000 francs; tan, 973,000 francs; silk and woolen cloth, 942,000 francs. The imports from France were 34,263,933 francs in value, exports to France 26,714,110 francs; imports from Algeria were 1,850,758 francs; imports from Great Britain were 5,756,835 francs, exports to Great Britain 3,095,939 francs; imports from Italy were 4,505,064 francs, and exports to Italy 9,386,418 francs; imports from Belgium were 1,365,795 francs; imports from Russia were 2,530,356 francs, and exports to Russia 40,965 francs. The total number of vessels entered during 1899 was 11,489, of 2,433,841 tons, of which 2,754, of 2,287,438 tons, were steamers; French vessels, 1,676, of 1,254,943 tons. The shipping of the regency consists of 403 vessels, of from 10 to 150 tons.

Colonies and Dependencies.—The colonies and protectorates of France, apart from Algeria, which is regarded as a part of France, and the protectorate of Tunis, which is nominally a vassal of Turkey, have an aggregate area estimated at

over 5,000,000 square miles and over 50,000,000 inhabitants. Including the sphere in northern and western Africa conceded to France in recent conventions with England, the colonial empire in that continent alone will be 5,000,000 square miles in extent (see WEST AFRICA). The French part of East Africa is the Somali coast in the neighborhood of Obok, with the adjacent districts of Gallaland (see EAST AFRICA). Some of the islands of the Indian Ocean near the coast of Africa have long been French. The conquest of Madagascar was an event in the modern era of colonial expansion (see MADAGASCAR). Of the smaller islands the most important is *Réunion*, which has been settled with French creoles since 1764. It has an elective Council-General, and is represented in the French Chambers by a Senator and 2 Deputies. The area is 965 square miles, and the population in 1897 was 173,192, including 15,219 East Indians, 4,496 natives of Madagascar, 9,848 Africans, and 836 Chinese. The towns are French municipalities. St. Denis has 32,850 inhabitants; St. Pierre, 27,900; St. Paul, 20,000; St. Louis, 13,300. The military force consists of 500 French soldiers. There were 148 schools, with 14,034 scholars, in 1897. The railroad, 83 miles long, running from the port of Pointe-des-Galets to St. Pierre, became the property of the Government in 1887. Rice and cereals are imported for food. The production of sugar in 1899 was 29,465 tons. The total value of imports was 20,966,343 francs in 1899, that of exports 15,337,475 francs. The value of sugar exported was 8,681,343 francs; of vanilla, 3,358,148 francs. Other exports are coffee, cacao, and spices. France and the colonies took 15,036,683 francs of the exports, and provided 15,824,535 francs of the imports. The number of vessels entered in 1899 was 122, of 157,864 tons. The local revenue in 1900 was 5,425,300 francs, and the expenditure of France was 4,460,203 francs. In 1901 the contribution of France was 4,256,184 francs. The small islands of St. Paul, Amsterdam island, and Kerguelen are dependencies of Réunion. *Mayotte*, with an area of 140 square miles and 11,640 inhabitants, produces sugar and rum. Coffee has been planted on a large scale, and the export of vanilla has become considerable. The local revenue for 1900 was 293,807 francs. The subvention of France in 1901 was 33,000 francs. The Glorieuse Islands have been attached to Mayotte. The *Comoros* have an area of 620 square miles and about 47,000 inhabitants, mostly Mohammedans. Sugar and vanilla are the chief products, and coffee and cloves have been planted. The budgets of the different islands amount to the sum of 259,000 francs. *Nossi Bé*, near Madagascar, having an area of 130 square miles and a population of 9,500, produces sugar, rum, coffee, rice, vanilla, and tobacco. *Sainte Marie*, north of Madagascar, has an area of 64 square miles and 9,500 inhabitants.

The French possessions in India were reduced after the defeat of Napoleon to the towns of Pondichery, Karikal, Shandernagar, Mahé, and Yanaon, having an aggregate area of 196 square miles and a population in 1899 of 280,462, of whom less than 1,000 are Europeans. There were 271 schools with 16,163 scholars in 1897. The local revenue in 1900 was 1,135,678 francs. The expenditure of France in 1901 was 494,083 francs. The leading export is oil-seeds. The imports at Pondichery and Karikal in 1899 amounted to 4,661,938 francs, and exports to 9,253,144 francs; the number of vessels entered at the two ports was 405, of 509,422 tons; cleared, 404, of 509,012 tons.

French Indo-China is a modern empire acquired in Asia by successive conquests and annexations, beginning with the establishment of French rule in Cochinchina and Cambodia under Napoleon III. Annam, Tonquin, and Laos were annexed between 1884 and 1893. The latest acquisition is the territory of Kwang-Chi-Wan, on the coast of the Lien-Chau peninsula, opposite the island of Hainan, leased for ninety-nine years from the Chinese Government in April, 1898, with the islands commanding the entrance to the bay, which were transferred in November, 1899. The area of Indo-China is about 263,000 square miles, and the population is estimated at 22,400,000. The Governor-General, residing at Saigon, is Paul Doumier. He is assisted by the Superior Council of Indo-China, composed of the chief military and naval commanders, the Lieutenant-Governor of Cochinchina, the residents in Tonquin, Cambodia, and Annam, a representative of the administration of Laos, the directors of financial control, the judicial service, customs, and the Department of Commerce and Agriculture, the president of the colonial council of Cochinchina, the presidents of the chambers of commerce in Saigon, Hanoi, and Haiphong, of the chambers of agriculture of Cochinchina and Tonquin, and of the mixed chambers of commerce and agriculture of Annam and Tonquin, and two native notables. The general budget for 1900 made the revenue \$20,803,000 in silver, of which \$5,800,000 were derived from customs, \$2,500,000 from the alcohol régime, \$6,000,000 from the opium régime, \$2,200,000 from the salt régime, \$1,800,000 from the rice export duty, and \$2,503,000 from various sources. The expenditures were estimated at \$20,796,000, of which \$4,050,000 were for military expenses, \$3,386,000 for public works, \$2,615,739 for the public debt, and \$10,744,261 for miscellaneous expenses. The separate budgets were 4,439,500 for Cochinchina, \$2,315,587 for Cambodia, \$4,072,200 for Tonquin, \$2,120,016 for Annam, and \$739,000 for Laos, making the total local revenue \$34,489,303, and expenditure \$34,482,303. The expenditure of France in 1901 was 19,436,800 francs, not including special appropriations of 1,084,913 francs for Annam and Tonquin together, 320,012 francs for Cochinchina, and 485,000 francs for Tonquin. The military forces in Indo-China consisted in 1900 of 11,537 French soldiers and 17,023 natives.

Cochinchina has an area of 23,160 square miles, with 2,323,499 inhabitants, as estimated in 1899, comprising 2,054,831 Annamites, 183,659 Cambodians, 6,374 Mois, 2,656 Chams, 65,801 Chinese, 4,130 Malays, 1,477 Indians, 46 Tagals, 4,451 Europeans, and 74 others. There were 376 schools in 1897, with 18,760 scholars. There were 1,688,270 Buddhists. The Catholic converts numbered 73,234. About one-sixth of the area is cultivated. The crop of rice in 1899 was 678,248 tons. The exports of rice in 1900, going to China, the Philippine Islands, and Europe, were 608,998 tons. The imports of merchandise in 1899 amounted to 66,234,008 francs, of which 29,424,961 francs came from France. The exports were 109,178,828 francs, of which 20,365,051 francs went to France. The exports of fish in 1899 were 5,540,500 francs; of hides, 3,547,500 francs; of pepper, 4,903,000 francs; of cardamom seed, 1,717,250 francs; of copra, 1,055,250 francs; of silk, 746,750 francs; of isinglass, 554,500 francs. The cultivation of coffee has been introduced by Europeans, the yield in 1899 having been 240 tons. The number of vessels that visited Saigon in 1899 was 631, of 789,330 tons. There are 51 miles of railroad, and 2 other lines have been contracted for. The telegraphs have a length of 2,276 miles, with 3,840 miles of

wire. Cambodia has an area of 40,530 square miles, with a population estimated at 1,500,000, including 250,000 Chinese and Annamites and 40,000 Malays. Pnom-Penh, the capital, has 50,000 inhabitants. King Norodom is the nominal ruler, but French administrators carry on the Government. The allowance for the King and princes is \$520,510. Rice, betel, tobacco, indigo, the sugar-tree, the silk-tree, pepper, corn, coffee, and cinnamon are some of the products, and cotton is exported, as well as salt fish, tobacco, and rice.

Annam is administered by native officials under French superiors. Thanh-Thai was made King by the French in 1889. The area is 88,780 square miles, and the population is estimated at 6,000,000, consisting of Annamites in the populous lowlands and Mois in the hills. There are 420,000 Christians. The country produces rice, corn, and other grains, areca-nuts, silk, cinnamon, tobacco, sugar, betel, manioc, bamboo, timber, caoutchouc, dyes, and medicinal plants. Iron, copper, gold, and zinc are mined and worked by the natives, who also make crape-cloth and pottery. Sugar and cinnamon are the largest exports. Coal is mined at Tourane, and a railroad is to be built to that point from Hue, the capital.

Tonquin has an area of 119,600 square miles and a population estimated at 12,000,000. There are 400,000 Christians. Hanoi, the capital, has 50,000 inhabitants. The chief product is rice, which is exported to Hong-Kong and thence to China. Sugar, cotton, silk, pepper, oils, fruit, and tobacco are produced also, and coffee has been extensively planted. The value of the imports in 1899 was 45,016,918 francs, of which 24,951,948 francs came from France and French colonies, and the exports were valued at 19,335,971 francs, of which 1,234,648 francs were taken by France and French colonies. The transit trade to Yunnan is about 5,000,000 francs a year, and the products brought down from there are valued at 3,200,000 francs. There are 64 miles of railroad, and contracts have been made for five other lines. Copper and iron are mined, and 244,800 tons of coal were taken from the mines at Hongay and Kebao in 1898.

The Laos territory has an area of about 91,000 square miles and 1,500,000 inhabitants. The capital is Luang-Prabang, which has 40,000 inhabitants. Rice, cotton, indigo, tobacco, and fruits are raised. There are teak forests, and gold, tin, lead, and precious stones exist, and French companies have been formed to work the mines. Owing to difficulties of transport the trade is small. Steamboats have been placed on the upper Mekong above the rapids.

Amy and the Russian port of Vladivostok will be connected by a cable, enabling messages to be exchanged with France independently of English and German lines. The French Cable Company has undertaken to lay cables connecting the French colonies with each other and with France by purely French lines. The French Chambers passed with little discussion a bill sanctioning the arrangements made by M. Doumier with a French syndicate for the construction of the railroad into the Chinese province of Yunnan, first projected in 1889. A concession was obtained from the Chinese Government in the spring of 1898, and in the same year the Chambers approved the project. Gov.-Gen. Doumier went to France in 1901 for the purpose of organizing a company to undertake the construction of the railroad in Chinese territory. The Indo-China Government had already built a good part of the section from Haifong to Vietri, and was building the continuation to Laokai, the total distance between Hai-

fong and the frontier being 237 miles. The length of the Chinese section from Laokai to Yunnan-Sen is 285 miles. The company, which has an authorized capital of 101,000,000 francs, 25,000,000 francs of share capital and 76,000,000 francs of bonds, will have the operation of the whole line, taking over the section to Vietri on April 1, 1903, and the section between that point and Laokai two years later. Half the stock is taken by the Government of Indo-China, and a guarantee is given of 3 per cent. interest for seventy-five years on the bonds, which the colony undertakes to redeem should the company fail. The company will divide the profits with the Government. The exports of Yunnan are at present tin and opium, and the principal article of import is cotton yarn of Indian manufacture. The undeveloped mineral resources of this part of China are believed to be great. Yunnan has copper and excellent coal as well as tin. An extension of the line into the Yangtse basin will tap the richest part of China and divert the trade of Szechuan to Haifong, but the rough mountainous country that the route crosses presents engineering difficulties that will make construction costly. In Yunnan France can not pretend to exclusive commercial or political privileges, having agreed with England on Jan. 15, 1896, that all advantages conceded in that province to either power shall be shared by both. The railroad connecting Phulang-Thuong with Langson has been extended to Hanoi across the northeast part of the Tonquin delta in a direction parallel to the seacoast, while the main line that will penetrate Yunnan crosses the delta in a southeasterly direction from Haifong. A line will connect Hanoi with Vietri. The line from Hanoi to Haifong crosses the delta and conveys the products of the interior of Tonquin to the coast. A railroad is to be built across the delta from Hanoi to Vinh in Annam, and eventually extended to Hue and Saigon, connecting the three colonies of Indo-China with each other. Hanoi, with four railroad lines, is growing rapidly. Insurrectionary disturbances on the frontiers passed off without untoward consequences, but in 1901 several incursions of Chinese pirates occurred, and in an attack on the post of Lungling the Chinese killed 5 Tonquin sharpshooters before they were driven back over the frontier. The Indo-Chinese army contributed 6 battalions to the international forces in China. A revolt of the southern Khas tribes of Laos had to be dealt with in the autumn. The insurgents repulsed the militia and, holding the Mekong river, intercepted communications between Laos and Cochin-China.

New Caledonia is the most important of the French possessions in the Pacific. The Governor is P. Feillet. There is an elective Council-General. The area of the island and its dependencies is 7,700 square miles, with a population in 1898 of 52,756, comprising 19,053 Europeans, 31,874 natives, and 1,829 Asiatics. Of the Europeans 1,762 were officials, 1,714 soldiers, 5,585 colonists, 2,515 liberated convicts, and 7,477 convicts in the penal establishment. Noumea, the capital, had 4,010 free inhabitants. The local revenue in 1900 was 3,407,876 francs. The expenditure of France in 1901 was 6,341,838 francs. Coffee, corn, tobacco, sugar, wine, manioc, and pineapples are produced. The minerals produced in 1898 were 53,200 tons of nickel ore, valued at 2,394,000 francs; 21,000 tons of cobalt ore, valued at 2,100,000 francs; and 14,300 tons of chrome iron, valued at 715,000 francs. The imports in 1899 were 10,958,198 francs in value, of which 6,275,796 francs came from France, and 369,403 francs from French colonies. The exports were valued at 8,913,197 francs, of which

1,480,392 francs went to France and 748 francs to French colonies. The exports of minerals were 7,981,093 francs, and the next largest export was canned meat for the French army of the value of 801,579 francs. Noumea was visited by 127 vessels, of 177,657 tons, in 1899. Progress in both mining and agriculture has increased the prosperity of New Caledonia. Increased exports of ore and coffee have led to a corresponding increase in imports. The climate is favorable to settlers, and the population is steadily increasing. The French colonists raise large families. The employment of convicts in the mines has ceased, and they now are employed only on public works. Labor for the mines was imported from Asia, but found to be costly. Immigration from Dalmatia has furnished some laborers who are preferred to Asiatics. It is proposed to bring Malays from Java to work on the plantations. The demand for nickel and cobalt was greater than the supply in 1901. Hitherto only mines near the sea have been worked with profit; now mines of remarkable richness have been opened in the interior.

The *Isle of Pines*, close to Noumea, having an area of 58 square miles and a population of 600, is now used as a penal colony, where recidivists are detained. The *Wallis Islands*, with an area of 40 square miles and 4,500 inhabitants, are attached to New Caledonia; also the *Loyalty Islands*, with an area of 800 square miles and 14,800 inhabitants, who raise bananas and cut sandalwood for export. The *Huon Islands* and the small islands of *Futuna* and *Alafi*, which have about 1,500 inhabitants, have been annexed in recent times. The New Hebrides by agreement with England are neutral territory, and a mixed commission of naval officers decides what action must be taken when European lives or property are attacked by the natives or when natives are kidnapped by labor vessels.

The French establishments in Oceania have a total area of 1,520 square miles and about 29,000 inhabitants. They consist of several scattered groups of islands in the western Pacific which are united for administrative purposes under the authority of a single Governor, G. P. T. Gallet, residing in Tahiti. The island of Tahiti has an area of 401 square miles and 10,750 inhabitants. Papeete, the chief town, has a population of 4,282, of whom 2,490 are French. The local revenue in 1900 was 1,237,456 francs. The contribution from the French Government in 1901 was 818,137 francs. Coconuts, oranges, sugar-cane, vanilla, cotton, coffee, and tobacco are grown on the fertile coast lands of the island of Tahiti. The value of imports in 1899 was 2,893,433 francs; of exports, 3,528,432 francs. The export of copra was 1,468,144 francs, of mother-of-pearl, 777,547 francs; of vanilla, 850,957 francs. Food substances and cotton goods are the chief imports. The value of 1,323,327 francs came from the United States, 525,116 francs from New Zealand, and only 329,081 francs from France and the colonies. Of the exports 1,484,402 francs in value went to the United States, 623,761 francs to Great Britain, 432,229 francs to France and French colonies, and 243,501 francs to New Zealand. The number of vessels entered at Papeete during 1899 was 49, of 22,105 tons; cleared, 48, of 23,019 tons. *Moorea*, the next largest of the Society group, has an area of 50 square miles and 1,596 inhabitants. The islands of *Raiatea*, *Tahaa*, *Huakine*, and *Bora Bora* constitute the Windward Islands, which have a population of 4,400. The *Tubuai* and *Raiarava* islands contain about 100 square miles and 1,700 inhabitants. *Rapa* has an area of 15

square miles with 15 inhabitants. The population of the *Tuamotu Islands* is about 5,000; of the *Gambier Islands*, with an area of only 6 square miles, 580; of the *Marquesas Islands*, with an area of 480 square miles, 4,280.

In America France possesses the islands of Martinique and Guadeloupe (see WEST INDIES), the small islands of St. Pierre and Miquelon near the south shore of Newfoundland, and French Guiana on the northern coast of South America. *St. Pierre* and *Miquelon* are groups of small islands, the former having an area of 10 square miles and 5,700 inhabitants, the latter an area of 83 square miles and 550 inhabitants. The people are engaged in the cod fishery. In 1899 there were 184 boats, which caught 448 quintals of fish, valued at 7,404,127 francs. The local revenue in 1900 was 475,708 francs. The contribution from the French treasury for 1901 was 259,178 francs.

French Guiana has an area of about 50,000 square miles and a population estimated at 30,300, including 4,360 convicts undergoing sentence, 80 liberated convicts, and 2,650 on parole. The native Indians number about 1,500. Cayenne, the capital, has a population of 12,300. The military force consists of 371 French soldiers. Not over 8,800 acres are cultivated, although rice, corn, manioc, cacao, coffee, sugar, indigo, and tobacco are grown. Gold-mining has become the most important industry. There are silver, iron, and phosphate mines also. The exports, besides minerals, are rum, coffee, cacao, and cabinet woods. The total value of imports in 1899 was 10,099,731 francs, and of exports 6,844,076 francs. The revenue collected in the colony in 1900 was estimated at 2,498,439 francs. The expenditure of France in 1901 was 6,857,057 francs, including 5,585,700 francs for the penal establishment. The Governor is L. Mouttet. There is an elective Council-General of 16 members. The colony sends a Deputy to the French Chamber. A large region on the southern frontier was claimed by both France and Brazil after the discovery of gold had been made. The dispute was settled by Swiss arbitrators, who gave their decision on Dec. 1, 1900. The boundary is the Oyapoc river up to its source, and from there westward the watershed of the Tumuc Humac mountains. By this award only a small part of the disputed territory falls to France.

FREE-WILL BAPTIST CHURCH. The statistics of this Church, given in the Free-Will Baptist Register for 1901, furnish the following summary: Number of quarterly meetings, 191; of churches, 1,486; of ordained ministers, 1,407; of licensed ministers, 212; of members, 85,109; value of church property, \$3,034,945; amount of contributions for the year, \$30,060. Five local bodies or associations not connected with the General Conference are enumerated, which have together 2,559 members. The educational institutions comprised 3 colleges, 6 schools of academic grade, and Storer Institute for the Colored People, at Harpers Ferry, Va.

The mission in India returned 13 churches, 819 members, a native Christian community numbering 1,708, 55 added by baptism during the year, 13 Sunday-schools, 241 teachers, and 3,171 pupils, 1,984 of whom were non-Christian. A gain of 22 church-members and 386 pupils in Sunday-schools was shown. The missionary force consisted of 27 missionaries, of whom 19 were on the field, and 67 native helpers, of whom 6 were ordained ministers, 8 licentiates, and 12 lay preachers; 99 Christian and 66 non-Christian teachers; and 261 members of Christian Endeavor Societies.

The General Baptists, with whom the Free-Will Baptists seek closer relationships, had in 1900 484 ministers, 423 churches, and 24,775 communicants.

The thirty-first General Conference met at Harpers Ferry, Va., Sept. 3. The Rev. R. D. Lord, D.D., was chosen president. The Conference Board reported concerning its transactions and work for the past three years, and the field-secretary gave an account of his labors, which had been practically those of a home missionary. Since the last General Conference, he had traveled 51,600 miles, given 470 addresses, and collected \$15,200. He reported that the Rev. J. Taylor had given 300 acres of land in New Jersey, subject to the disposal of the conference; concerning the nature and object of the proposed Twentieth Century Loan fund, to be applied to needy churches, which he suggested should be raised gradually; and concerning the slow increase of church-membership, the importance of the Southern field, the need of encouraging the Young People's movement, the Manning Bible School, and a proposed school at Midway, Tenn. Among a number of proposed amendments to the constitution acted upon, two, relating to the office of corresponding secretary, were adopted. Committee reports were presented, emphasizing the importance of maintaining the doctrines of the Church and favoring closer union with the Free Baptists of Nova Scotia and New Brunswick and with the General Baptists. Fraternal messengers were commissioned to visit the conferences of these bodies, as well as the general eldership of the Church of God and the National Congregational Council. The Union Association of Tennessee and the Piedmont Association of West Virginia were admitted as members of the conference. A report on temperance was adopted, in which the liquor traffic, the army canteen, the use of tobacco and other narcotics, and the omission of the temperance lesson from the series of Sunday-school lessons were condemned, and Congress was asked to investigate the effects of the liquor traffic on morals, education, health, material prosperity, etc. A report on Our Country commended the establishment of civil government in Cuba and the Philippine Islands, deplored the existence of the mob spirit and the lynching and burning of criminals, and mentioned such institutions as Storer College of this Church at Harpers Ferry and the Tuskegee Institute as instrumentalities calculated to solve the race problem. The report on the Bible cause referred with satisfaction to archeological discoveries that throw light on the Word of God. The question of establishing a mission in Africa was regarded as the most important one that came before the conference. The Rev. L. P. Clinton had been in Africa about two years preparing the way for the foundation of a mission on the borders of Liberia, and had applied to the conference for assistance and the adoption of his work. The conference voted unanimously to regard the opening in Africa as providential, and advised the Conference Board to advise and assist Mr. Clinton. Appropriations of such amounts as might be received for the specific purpose were authorized to be made for the new mission. The Church has already a prosperous mission in India. The conference recommended that church letters, as a rule, should be sent directly to the church which the applicant intends to join, rather than given immediately to him. While holding that members ought not to be received unless baptized by immersion, the conference decided that if unimmersed persons had been received, they could not be excluded for a refusal to be rebaptized. The expression of the

conference was given in favor of uniform laws of divorce. Pastors were advised to solemnize no marriages of parties who were divorced for other than scriptural reasons. A resolution was passed discountenancing distinctions in the employment of labor on account of color.

Free-Will Baptists in Nova Scotia.—The number of Free-Will Baptists in Nova Scotia is given in the Register as 2,559.

Free-Will Baptists in New Brunswick.—The Free-Will Baptist Church was organized in the province of New Brunswick with 2 ordained elders and 6 churches. The last annual report shows that the Conference has now 43 ordained ministers, 156 churches, and 12,352 members. The General Conference met at Marysville in the first week in October.

Two denominations have been organized and incorporated by members who have withdrawn from the Free-Will Baptist Church. The Primitive Baptist Church was formed by persons who disapproved of the movements of the Free-Will Baptists in the direction of ministerial education, foreign missions, and Sunday-schools, although they have since adopted Sunday-schools. The Reformed Baptist denomination originated in divisions in a number of Free-Will Baptist churches on account of differences of views regarding the doctrine of Christian perfection.

FRIENDS. At the New York Yearly Meeting of Friends the Board of Home and Foreign Missions made statements concerning work in Mexico, among the Indians, and at the High Point Normal and Industrial School for Colored People. The board unites with the Woman's Foreign Missionary Society and the Young People's Society of Christian Endeavor in the support of a mission in China and with the American Friends' Board in work in Cuba. The Woman's Foreign Missionary Society has work in Japan, Africa, and India. In addition to their cooperation with the board and the Woman's Society, the young people are supporting a missionary of their own. A proposition for holding a conference of yearly meetings on temperance was received with approval.

The thirty-eighth annual report of the Friends' Freedmen's Association relates to the condition of the school and farm at Christiansburg, Va.

The Friends in the United States reported to the late Christian Endeavor Convention concerning the work of 402 societies enrolling 11,966 members and raising for home and foreign missions and other purposes \$8,223.

The Friends' Africa Industrial Mission Board is seeking to establish an industrial mission in the Kavairondo country, in East Central Africa, near the Victoria Nyanza. This country is as yet untouched by Christian missions. The people are described as being low in civilization, but friendly and intelligent. The mission will be begun when \$10,000 have been contributed for it; toward this sum the board have \$7,500 in cash and pledges.

The Publishing Association of Friends at Plainfield, Ind., has been in business eighteen years, most of the time in Chicago, Ill., and has built up a considerable trade in books, tracts, and Sunday-school supplies. It publishes six periodicals, all Sunday-school helps, which have reached a combined circulation of nearly 200,000 copies every three months, giving a total of more than 11,000,000 pages of religious matter a year for the young people. It also does a considerable work in the distribution of Bibles and tracts at reduced prices, and in some cases without price.

London Yearly Meeting.—The statistical report of English Friends presented to the London

Yearly Meeting in May accounted for 373 congregations and 17,346 members, an excess of 193 on the membership of the previous year; and 7,797 habitual attendants on meetings not in membership. Three hundred and seventy persons had entered and 109 had left the society. Of recorded ministers, 218 men and 148 women were returned; of elders, 284 men and 287 women; and of overseers, 606 men and 633 women. The number of members in Australia and Tasmania was reported as 504, besides 281 members of English monthly meetings residing in those colonies.

In the Meeting on Ministry and Oversight preceding the London Yearly Meeting, a proposition was offered for continuing the morning meeting in a modified form, but the "sense of the meeting" was ultimately expressed to be in favor of discontinuing the meeting in question, and transferring its functions to the meeting for sufferings. A conversation on the relative positions of the individual and the Church was brought on by an expression in the report from Yorkshire to the effect that in some cases the judgment of the Church as to a person's duty is to be preferred to the judgment of the individual. In this conversation the dangers of extreme individualism were pointed out on the one hand, and on the other the paramount duty of personal loyalty to the spirit, at whatever cost. In a discussion upon the importance of systematic instruction in religious truth, in church history, and the biography of leading Christians, the view was expressed, on the one side, that one of the duties of the meetings on ministry and oversight should be to see that such teaching was given in each congregation where there were children; and on the other side that the direct responsibility should be thrown more upon the parents. In the London Yearly Meeting, the Central Education Board, responding to a request of the previous Yearly Meeting to obtain figures

concerning the number of children who had not membership by birthright because only one of their parents was a member, reported showing that at least 39 per cent. of the children of Friends were of that class, and that great deficiency was revealed in the provisions for their religious training. A committee was appointed to propose to a future meeting a definite scheme for reconstituting the Education Board. Visiting American Friends explained the nature and bearings of the new features in American Quakerism—of the Five-Year Meetings and the Uniform Discipline. It was thought, they said, that the Uniform Discipline would have the result of compacting the Society of Friends in America, of extending its influence, and of checking some excrescences which had caused uneasiness. A committee appointed to prepare a protest against the war spirit brought in a paper entitled *A Plea for a Peaceable Spirit*, disclaiming any consideration of the political aspect of the subject, but insisting on the opposition of Christianity and war, and setting forth that in condoning militarism the Christian Church "destroys with one hand the edifice of love which she seeks to build with the other"; and appealing to the churches to wake to their high rank of "maintaining a faith which shall make no compromise with evil, but penetrate life with the Master's spirit of peace."

Friends' Foreign Missionary Association.

—At the annual meeting of the Friends' Foreign Missionary Association, held in London, May 27, the treasurer reported a general income of £18,870, in addition to which £27,280 had been received for the Indian Famine fund. The expenditures, including £6,769 for India, £5,209 for Madagascar, £3,439 for Syria, and £2,368 for China, had amounted to £20,628. A deficiency of £4,456 had been incurred. The association had decided to make no claim for damages suffered in China.

G

GEOGRAPHICAL PROGRESS. Arctic

Regions.—While explorers have been busy in all parts of the world, the operations in the polar regions and the preparations for explorations there have, for the past two years, drawn most attention and aroused the greatest interest. In 1901 several expeditions were started, some for the arctic and some for the antarctic, most of them aided by their respective governments. Of those already in arctic waters are the Peary and Baldwin-Ziegler expeditions from the United States; Capt. J. Elzear Bernier's from Canada; from Russia, those of Baron Toll and Vice-Admiral Makaroff; and from Germany, Capt. Bauendahl's, with a vessel of only 44 tons register.

Dr. Nansen and the Duke of the Abruzzi have joined forces to seek the pole in the *Stella Polare*; Prof. Anschuetz-Kaempke, of Austria, proposes to find his way thither in a submarine boat; and there are besides a German expedition and expeditions to Franz-Josef Land and Stein-Ellesmere Land.

For the south pole three expeditions—British, German, and Swedish—go out under Government auspices, and propose to take each a different portion of antarctic territory to explore on their way to the pole. Something more concerning each of these enterprises is given below.

The farthest point north known to have been reached was made by the exploring party led by the Duke of the Abruzzi, who has received one of the medals awarded each year by the Royal Geo-

graphical Society of England for the most valuable work in geographical discovery. They left Christiania in June, 1899, wintered in Franz-Josef Land, and early the next year proceeded northward by sledge. A part of the expedition, led by Capt. Cagni, who also received an award from the society, went as far north as 86° 33' 49", about 23 miles beyond Dr. Nansen's highest point. The duke was not able to accompany them, having frozen three fingers, which were afterward amputated, on an expedition by sledge which he had undertaken to accustom his dogs to the service. Capt. Cagni's party started from the exploring ship March 11. The cold was bitter and the mercury sometimes fell to 58° below zero. The traveling was difficult, for the ice was very rough wherever it was not covered with heavy snow. In ten days Capt. Cagni and his men had made only 43½ miles to the north of the ship. It was then evident that the party must be reduced in size if a long journey was made, for the provisions would not suffice for long absence; and three men—Lieut. Querini, the guide Felice Ollier, and Alfred Stoekken, machinist—were instructed to return to the ship. Ten days later Capt. Cagni decided to reduce his party still further, and Dr. Cavalli, the guide Savoye, and the midshipman Cardenti were sent back to the *Stella Polare*. They reached it in twenty days, and were surprised to learn that nothing had been heard at headquarters of the missing men. Meanwhile Capt. Cagni, with two alpine guides and one sea-

man, pushed his way to the north. He had food for two months, which 60 dogs dragged on 6 sledges. When the supplies for man and beast began to give out the dogs died or had to be killed. The party struggled on, however, and at last reached Nansen's farthest north, $86^{\circ} 14'$. Then they went on till April 26, when they touched $86^{\circ} 33'$ at about 56° east longitude. The lives of the party would be imperiled if they went farther, and so they determined to turn back. They reached camp on June 23 with 2 sledges and 7 dogs.

Searching parties had been sent out from the ship for the lost men, but no trace was found. Two depots of supplies were left for them at places which it was thought they might reach if they were alive. After the return of the expedition to Italy there was an official inquiry as to the disappearance of the men. All the members of the expedition except the Duke of the Abruzzi thought they could not possibly have survived. Dr. Cavalli testified that when the men turned back the ice was weak in many places and covered with new snow. They could not lose their course, he said, for they knew perfectly the route to steer back to the ship. He believed they had fallen through the ice. The Duke of the Abruzzi said, however, he thought it possible that the men had reached one of the supply stations or at least had found a refuge on some island where they might be able to live, as Nansen did in the same region, upon the game they killed. It was a forlorn hope, but he proposed to act upon the chance that they were alive. In March, 1901, therefore, a search expedition was sent from Norway in the whaling vessel *Capella*, under command of Capt. Stoecken, father of the lost young machinist. The search was unsuccessful. The Baldwin party found at Cape Flora a granite shaft which Capt. Stoecken had set up there a month earlier as a memorial to the lost men.

An account written about the time of the departure of the duke gives details of the equipment: "The total expenses of the expedition are expected to reach \$500,000, of which the King of Italy has contributed a fourth. Some details of the duke's equipment are quite unique. He distributed his baggage among 1,500 boxes, each weighing about 55 pounds, and easily portable, if necessary, upon a man's back. He divided the boxes into four classes: provisions, clothing and equipment, tools and scientific instruments, and, lastly, articles that are useful, but not indispensable. Each class has its special color, and each box is numbered according to the class and nature of its contents. The provisions, consisting of rice, sea-biscuit, preserved meats, etc., have been so divided that each box contains five different kinds of food, in order that the fare may in no case be reduced to one article of food."

The results of the expedition are summed up in Petermann's *Mitteilungen*: "In many respects the experiences of the Italian expedition are of decided importance for future researches that may be carried on from Franz-Josef Land. It is demonstrated that the British Channel is navigable even for large craft, as the *Stella Polare* found very little difficulty from ice. It is probable that when no unusually unfavorable conditions of wind and ice are present, this arm of the sea may be free from ice for a long time each year, and so afford easy access as far as 82° north. For sledge journeys Cagni's experience was almost ideal, though polar explorers will not always be so richly provided with the necessary facilities. As the main object was to penetrate as far as possible northward, of course little could be done in the way

of exploring Franz-Josef Land, especially as the ship was subjected to severe ice pressure soon after the landing, and much labor was required to save the equipment. What was done in the way of exploration there was limited to a journey around Crown-Prince-Rudolf Land by the Duke of the Abruzzi in the early days of September. It was proved that neither to the north nor northwest of this island is there more land, so that Franz-Josef Land has its northern termination at 82° and Petermann Land and King-Oscar Land are non-existent, but owe their presence on the maps of the past twenty-five years to an optical illusion on the part of Payer, probably caused by a bank of fog."

According to Prof. Nathorst, Payer was mistaken in the height of the summit which he named Mount Petermann, supposed to be the highest in Greenland. He gave its height as 3,480 meters; Nathorst makes it 2,500 to 2,800 meters.

All hope of the return of Andrée from his bold attempt to solve the arctic mystery in a balloon has been abandoned. The buoys that have been found were apparently all cast out soon after the start. It is the general opinion of arctic men that the balloon came down within ten days after his ascent in July, 1897, and that he landed in the sea east of Spitzbergen and all hands were lost.

A letter from Tromsø July 11, 1901, says: "The scaffolding built for Andrée's balloon and the cabins he used for his workshops still stand on the edge of the fiord awaiting the disposition of their absent owner—a melancholy reminder, appealing to the sentiment of the Norwegians, who will allow them always to stand as a monument to Andrée, Fraenkel, and Strindberg."

Prof. Nathorst had offered prizes for the recovery of buoys, of which he believes others are still to be found, carried, he thinks probable, by the east Greenland polar current to western Greenland.

The following despatch of Sept. 13, 1901, from North Sydney, Cape Breton, gives particulars of the movements of Lieut. Robert E. Peary, to whose relief the Peary Club sent the steamship *Erik* from that point in July, 1901. The *Windward* was sent in 1900: "The Peary arctic steamer *Erik*, from Cape Sabine, Ellesmere Land, Aug. 20, arrived here to-day. All well. Peary left Fort Conger (latitude $81^{\circ} 44' N.$), where he was last reported March 31, 1900. On April 15 of that year, accompanied by Henson and 5 Eskimos, crossed Robeson channel to the west of Greenland coast, and followed it along on foot and over sea ice to the northward. At Blackhorn Cliffs on April 26 2 natives were sent back, and from Cape Britannia ($83^{\circ} 24' N.$), Beaumont's farthest seen, 2 more were sent back in May. Lockwood's farthest north cairn ($83^{\circ} 24.5' N.$), of May 13, 1882, was opened at 11.40 P. M., May 8. Its records were taken, and at Cape Washington, the headland seen by him 15 miles northeast in 1882, another cairn was erected and a copy of the 'farthest' record and additional memoranda were deposited. Peary, with Henson and the other Eskimo, Ahngmalokto, pushed on, and, at $83^{\circ} 39'$ north, rounded the northern extremity of Greenland, finding the coast at this point to trend rapidly eastward. Here, on the most northerly known land in the world, Peary built a cairn, in which he deposited, in addition to the records of his journey to that point, portions of the flags of his country, of his club, and of his private signal, together with a few other articles interesting as souvenirs. Changing his course directly northward, Peary then struck out over the sea ice for

the pole, but was able to advance only to 83° 50' north, when he was effectively stopped by the broken pack and much open water, absolutely impassable either for sledges or boats. Retracing his steps to the shore, he pushed on along the Greenland coast, all the time eastward, about 160 miles beyond Lockwood's farthest, to latitude 83° north, longitude 25° west, or approximately but little more than a degree from Independence Bay, discovered and named by him, July 4, 1892, the high mountain, then visible to the north, being plainly recognized from his new position to the south. The reconnaissance ended with a definite demonstration of the western and northern coast lines of Greenland, and with one or two small breaks along the eastern coast an exact and accurate chart of the entire archipelago."

Peary's own estimate of his work is clearly set forth in the letter to the secretary of the club, Herbert L. Bridgman, from which the following extracts are taken:

"First, the rounding of the northern limit of the Greenland archipelago, the most northerly known land in the world, probably the most northerly land. Second, the highest latitude yet attained in the Western Hemisphere (83° 50' north). Third, the determination of the origin of the so-called poleocratic ice (floe-berg), etc. Considering that I am an old man, have one broken leg and only three toes, and that my starting-point was Etah, I feel that this was doing tolerably well. It is almost a thousand years since 'Erik the Red' first sighted the southern extremity of the archipelago, and from that time Norwegians, Dutch, Danes, Swedes, Englishmen, Scotchmen, and Americans have crept gradually northward up its shores, until, at last, through the instrumentality and liberality of the club, its northern cape has been lifted out of the arctic mists and obscurity. If I do not capture the pole itself in this spring campaign, I shall try it again next spring."

A pronounced change in the character of the coast was found beyond Cape Washington, the bold precipitous headlands and deeply cut fiords being succeeded by a low, rolling foreland, suggesting possible glaciation at some earlier period, and all along the northern coast much open water was met. Bear, musk-oxen, hare, and lemming were killed in the newly discovered country, affording an ample supply of fresh meat.

Having practically connected his work of eight years before with that of 1900 and completed the determination of the northern boundary of Greenland, Peary, on May 22, turned back, following the line of his outward march, and on June 10 arrived at Fort Conger, having been three months in the field without accident, illness, or serious mishap of any kind to himself or any of his party. Peary sends to the club a complete and detailed chart of his newly discovered coast and other work.

Having eliminated the Greenland archipelago as a desirable route to the pole and no farther advance northward being possible until the opening of the season of 1901, Peary decided that his next attempt would be from Cape Hecla, the northern point of Grinnell Land, and from Fort Conger as a base. Accompanied as in the previous year by Henson and 5 Eskimos, he left Conger April 5, 1901, for the north, by way of Cape Hecla. But after ten days' march along the ice, both men and dogs proved to be out of condition and unfit for the more arduous work certainly ahead of them. Peary therefore returned in good order and without loss to Fort Conger. Late in April, with his entire force, he retreated southward.

The Windward, fast in her winter quarters at

Payer harbor, near Cape Sabine, with Mrs. Peary and Miss Peary on board, prisoners in the ice for nearly eight months, was reached May 6, and here Peary established his headquarters until the auxiliary ship of 1901 should arrive.

Open water came early at Cape Sabine, and on July 2 the Windward extricated herself from the ice and, crossing to the east side of Smith Sound, devoted July to a successful hunt for walrus in Inglefield Gulf. One hundred and twenty-five were captured and landed at Cape Sabine, the Windward recrossing the sound to Etah, Peary's headquarters for 1899-1900, where she awaited the Erik, which arrived on Aug. 4.

Some trouble having arisen with the physician of Peary's expedition, Dr. T. S. Diedrich, he was left behind on the shore of Smith Sound at the Eskimo settlement of Etah, where he insisted upon landing and remaining.

Lieut. Peary intends to make another effort to reach the pole in the spring of 1902.

In the region about Baffin Bay it was thought some intelligence might be obtained of the Fram, Capt. Sverdrup's vessel; but it seems to have been last seen by the natives at Etah about Aug. 17, 1899, although it was reported at Disco that "in March, 1901, a steamer had been seen far off the shore in Davis straits, heading northward, which might have been the Fram."

The Russian expedition under Baron Toll was heard from in April, 1901, when it was at the Gulf of Taimyr, a part having explored the Nordenskjöld Islands.

Another expedition from Russia is that under Vice-Admiral Makaroff. His famous ice-crusher, the Ermak, or Fermak, has been fitted out for the work. "The Ermak is of massive steel and is 305 feet long, 71 feet broad, and 42½ feet in depth. She has a displacement of 8,000 tons, and her engines are of 10,000 horse-power. Propellers in the bow assist in this. She is remarkably shallow forward, so that her bow can be pushed up on the ice, and thus her great weight bearing down upon the ice helps to crush it. She has been submitted to some remarkable tests, and has steamed through sheet ice 4 feet thick and crushed her way through single floes 25 feet thick."

The Danish explorer Lieut. Andrup visited the eastern coast of Greenland in the summer of 1900 in the Antarctic, and mapped a part of that coast previously unknown south of Scoresby Sound. The same summer Capt. Naerøe reached 75° 30' N. on the same coast, the farthest point yet reached by ship. And the Swedish zoologist Prof. Kolthoff traversed the coast from Cape Broer Ruys to Pendulum island. He brought away several young musk-oxen, which are to be acclimatized, if possible, in northern Sweden.

The Canadian explorer Capt. Bernier plans to follow in part the example of Nansen, entering the ice-pack and drifting toward the pole. Much is expected from the American expedition led by Evelyn B. Baldwin, the cost of which is borne by Mr. William Ziegler, of New York. The two ships sailed early in July, the America from Tromsø and the Frithjof from Sandfjord, Norway; and after calling at more northern points to take on the dogs and complete the equipment, proceeded to Franz-Josef Land, which seems to offer the most promising route to the pole. Mr. Baldwin was a member of the Peary arctic expedition in 1893-'94. He has the most extensive transport train ever carried on such a voyage. For moving the supplies and apparatus 400 Eskimo dogs and 15 Siberian ponies will be employed, and 50 tons of specially prepared dog food is included in the equipment. In the exploring party proper there

will be 30 men; if the sailors and other men aboard the vessels be included, the total will probably exceed 75.

The main object of the enterprise is, of course, to reach the pole, but it is promised that extensive and careful scientific observations will be made; and for this purpose instruments of the newest and best designs are provided, and a specialty will be made of photographic work. The equipment includes also three portable houses.

A novel way of reaching the pole is to be undertaken by Prof. Anschuetz-Kaempke, of Vienna, whose plan is to make use of a submarine boat with a crew of five men. The vessel, which is to be driven by a petroleum motor, will be so constructed that it can descend to a depth of 160 feet, where it will be below the greatest depth of ice, and away from the influence of cold and ice pressure. It can stay under water fifteen hours, and the time can be prolonged, if necessary, by the use of compressed oxygen, which will be carried; but as continuous fields of pack-ice do not exceed a maximum diameter of about 3 English miles, it is expected that open places where it can come to the surface will be frequent.

Antarctic Regions.—Three expeditions—English, German, and Swedish—set out for the south pole in 1901.

The Swedish enterprise is under the leadership of Dr. Otto Nordenskjöld (nephew of the famous explorer Adolf Eric Nordenskjöld, who died Aug. 12), who was a member of the Danish expedition to East Greenland last summer under Lieut. Amstrup. Dr. Nordenskjöld has also shared in several Swedish polar expeditions. He sailed from Gothenberg on the Antarctic Oct. 16.

"After leaving South America, Nordenskjöld will sail to Graham Land, south of Tierra del Fuego, where a great opportunity for exploration presents itself."

The German expedition, under command of Dr. Eric Drygalski, sails on a ship named Gauss, in honor of the mathematician who first recognized the importance of the south pole for magnetic observations. "She will go first to Cape Town, and thence to Kerguelen island, a desolate spot recently taken over by the French, where some members of the party will remain to take magnetic observations simultaneously with the ship, which will proceed toward Enderby Land, where a landing will be made and expeditions into the interior organized. Explorations will continue in an easterly direction."

The British, called the National Antarctic Expedition, sailed from Cowes Aug. 6, 1901, in the *Discovery*, which is specially fitted for polar work. It is thus described in the *London Times*: "It is a remarkable fact that the new *Discovery* is the first ship ever built in this country for the express purpose of exploration. Probably no ship, at any rate of her size, was ever more strongly built. The ribs are made of what is known as English oak, though grown in Scotland, and thoroughly well seasoned. They are placed as close as they could well be without actual contact. These ribs will be covered by two skins, as they are called, one of oak and one of greenheart, all thoroughly calked. Inside these will be lined to the thickness of $1\frac{1}{2}$ inch by asbestos plates, and these again will be covered by match-boards. The beams will be such as to bear not only the loads that may be placed upon them from above, but also to resist the enormous side pressures to which the ship may be subjected among the little-known antarctic ice. The deck-beams in the living-rooms are to be covered with soft plates of felt half an inch thick.

"There will be a great sheer in the hull, for the purpose of enabling the ship to cut her way through the ice-fields which she will meet right and left, and her bow will be covered with a dark cover with steel plates. Special arrangements will be made for unshipping the rudder mechanically, and in other respects the latest appliances will be adopted throughout for saving men and labor. Her engines will be of 450 horse-power, and will be capable of steaming about 8 knots. An unusually large space will be allotted to the engine-room, by means of which, among other advantages, a considerable saving of coal will be secured. The vessel will be rigged as a bark. The *Discovery*, at the water-line, will be 172 feet in length, with an extreme breadth of 33 feet; her mean draft will be 16 feet, and her displacement 1,750 tons. She has space enough to carry stores of all kinds for three years. There will be cabins for special purposes, laboratories for the biologists on deck, and others for photographic and other purposes below. Equal care has been taken with the quarters for the crew, and with the sick-berth. A special magnetic observatory will be constructed and fitted on the upper deck to receive a pedestal magnetic instrument. Special care will be taken that no ironwork shall be used for any purpose within a distance of 30 feet of this observatory. Where metal must be used, it will consist of rolled naval brass. The cost will be about £45,000."

The instructions to the commander have the following points of geographical interest: "To explore the ice-barrier of Sir James Ross to its eastern extremity, to discover the land that was believed by Ross to flank the barrier eastward, or to ascertain that it does not exist and, generally, to solve the very important physical and geographical questions connected with this remarkable ice formation." It is added: "If you should decide that the ship shall winter in the ice, the following instructions are to be observed: Your efforts, as regards geographical exploration, should be directed, with the help of depots, to three objects—namely, an advance into the western mountains, an advance to the south, and the exploration of the volcanic region."

As the sphere of action thus lies about Victoria Land, it is a different field from those of the German and Swedish expeditions; and the Scottish, if it should be carried out, is expected to confine its operations to the fourth quarter of the antarctic regions.

The survivors of the Borchgrevink South Polar Expedition, fitted out in 1898 by Sir George Newnes, returned in 1900, having reached the farthest point south on record—78° 50'. They reported having located the magnetic pole. Following is an abstract of the account given to the Royal Geographical Society by M. Louis Bernacchi, a member of the scientific staff: "He said that extensive masses of land did exist within the antarctic circle, but whether they took the form of a vast continent, or of an archipelago smothered under an overload of frozen snow, or of islands whose shores were washed by the ocean, still remained an enigma. It was, he thought, premature to call it the 'Antarctic Continent,' for explorations on the side of America, and even on that of Australia, tended to prove the existence of a broken-up continuation of these two continents, with the most extensive masses of land lying under their respective meridians. Coming to an account of the explorations of the Southern Cross, he said the ship entered the antarctic ice-pack in longitude 158° 53' east on the last day of 1898, and was involved in the pack

fifty days, the longest period that any ship, with the exception of the *Belgica*, had been imprisoned in that pack. At noon on Jan. 12, 1899, a faint gray light sighted on the port bow proved to be land. The captain at first considered it to be some undiscovered island, but when a dull volume of smoke was perceived rising from the east end it was decided to be one of the Balleny Islands, on which Ross mentioned the presence of an active volcano. On Jan. 28 the rugged outline of a mountainous land was made out to the south, and this was with little doubt one of the Russell Islands discovered by Sir James Ross in 1841. These, it had been suggested, were identical with the Balleny Islands, but the two groups were now proved to be quite distinct. On Feb. 17 Cape Adare (latitude $71^{\circ} 18'$ south) was reached. It was of a very dark basaltic appearance, and had scarcely any snow upon it, probably owing to the steepness and smoothness of its sides and its exposure to the northeast winds. The 'Dunraven Rocks' noted by Ross as lying off this cape, over which seas were breaking when he observed them, apparently had no existence. Possibly he mistook a large, rotten, submerged mass of ice for rocks. A party landed on a platform of detritus, 20 feet above water-level and 180 acres in area, formed of boulders, pebbles, and angular masses of *débris* from the mountains. Alternate expansions and contractions, caused by seasonal and rapid daily changes in temperature—which in the middle of winter they had known to alter by 80° F. in a few hours—were the principal cause of the disintegration of the rocks. All over this platform were the bleached remains of thousands of penguins, mostly young birds, that had succumbed to the severity of the climate; thousands of years hence these remains might be available as a proof of what once existed in those regions, now just habitable, then, perhaps, not at all. The statement to the effect that at Cape Adare the intercalation of ice and lava had been observed, and that at one place the lava flow appeared quite fresh, had been widely accepted as authentic, but it was absolutely without foundation, for there was no sign of such intercalation in the old eruptive formation at Cape Adare or anywhere else along the coasts of South Victoria Land, unless it were in the vicinity of Mount Erebus. Next year, on Feb. 2, the ship steamed southward along the coast, and next morning a landing was effected on the western side of Possession Island, about 3 miles in diameter, the largest of a small group. On Feb. 6 Mount Melbourne was sighted to the west-southwest, rising gradually out of the sea to a height of nearly 8,000 feet. All the afternoon they steamed down Wood Bay, which ran much farther inland than indicated in Ross's chart. At the bottom was a long inlet which afforded a capital harbor. A better spot for winter quarters than a pebbly bank there, larger than that at Cape Adare, and occupied by penguins and skuagulls, it would be difficult to find in those latitudes. This part of the coast was actually the closest approach to the south magnetic pole, which lay almost due west of Wood Bay, 200 or 300 miles distant. On Feb. 9 they landed without difficulty on Franklin island, and then steered straight for Mount Terror; Cape Crozier and Cape Bird with the foot of Mounts Erebus and Terror were sighted on the 10th. Mount Terror was very lofty, but scarcely looked the 10,884 feet assigned to it by Ross. Its eastern side was almost free from snow, and at its foot was a rookery occupied by millions of penguins, and far larger than any they had previously seen. The foot of the mountain was low,

and there was a kind of miniature plateau, at which a party could possibly spend a winter. After passing Cape Crozier, Ross's great ice-barrier came into view, stretching away out of sight to the east. Its most surprising characteristics were its unbroken uniformity, vast extent, and the entire absence of visible land from its edge; it was a perpendicular wall of ice 100 feet to 200 feet high, rising suddenly out of an ocean whose depth was measured by hundreds of fathoms. In conclusion, M. Bernacchi dismissed as absurd the theory that this barrier was the front of a huge polar ice-cap, and suggested that it was rather a huge tongue of ice flowing eastward perhaps 500 miles, and possibly not more than 50 miles in width, so that if the party that landed from the Southern Cross on the barrier in latitude $78^{\circ} 34'$ south and longitude $164^{\circ} 32'$ west on Feb. 17, 1900, had continued their journey south, they might have come to an open sea on the other side."

America.—For the purpose of determining the boundaries of the territorial acquisitions of the United States and settling disputed points, so as to bring about uniformity of statement by the departments of the Government in their publications, the director of the census appointed a commission consisting of Walter F. Willcox, chief statistician for methods and results, Census Bureau; Andrew H. Allen, librarian of the State Department; O. H. Tittman, superintendent of the Coast Survey; Henry Gannett, chief geographer of the geological service; and M. T. Lee Phillips, chief of the division of maps and charts of the Library of Congress. Except on one point, they were unanimous in their conclusions. By a majority vote the territory west of the Florida purchase, south of the States of Mississippi and Alabama, and east of the Louisiana purchase was declared to have been in dispute with Spain from 1803 to 1819, in which latter year Florida was bought from Spain. The main conclusions of the commission are summarized as follows:

1. The region between the Mississippi river and Lakes Maurepas and Pontchartrain to the west, and the Perdido river to the east, should not be assigned either to the Louisiana purchase or to the Florida purchase, but marked with a legend indicating that title to it between 1803 and 1819 was in dispute.

2. The line between the Mississippi river and the Lake of the Woods, separating the territory of the United States prior to 1803 from the Louisiana purchase, should be drawn from the most northwestern point of the Lake of the Woods to the nearest point on the Mississippi river, in Lake Bemidji.

3. The western boundary of the Louisiana purchase between 49° and 42° north followed the watershed of the Rocky Mountains; thence it ran east along the parallel of 42° north to a point due north of the source of the Arkansas river, and thence south to that source.

4. The northwestern boundary of Texas as annexed extended up the principal stream of the Rio Grande to its source, and thence due north to the parallel of 42° north.

5. The southern boundary of the Mexican cession of 1848 should be drawn from a point on the Rio Grande 8 miles north of Paso, instead of from one about 30 miles farther north, as is the usual practise, west 3 degrees, and thence north to the first branch of Gila river.

An interesting account is given of the exploration of the Black Cañon of Gunnison river in Colorado. A party consisting of John H. Pelton, J. A. Curtis, M. F. Hovey, W. W. Torrence, and

E. B. Anderson passed through it, climbing over almost vertical walls half a mile in height—a thing never before accomplished so far as is known. From time to time adventurous persons have thought of trying to make the trip from end to end of the gorge in boats, and one attempt of this kind was actually made a few years ago by a surveying party sent out by the Denver and Rio Grande Railway to examine the cañon and determine whether a road could be built through it. On the first day out the boat that carried the expedition was swamped, all the provisions being lost, and the voyagers, fortunate to escape with their lives, abandoned the project.

The object of the recent expedition was to find out if there was not some path by which the waters of Gunnison river could be conducted out of the tunnel and made to irrigate the drought-parched farms of the neighboring region. It was a question whether a "hillside ditch" might not be built in the chasm, so as to bring a portion of the descending stream near the tops of the cliffs, and so tunneling three and a half miles through the mountains—a costly enterprise which the residents of the Uncompahgre valley are determined to undertake if it is proved that there is no other way to get water. The exploration yielded conclusive evidence of the impracticability of the ditch plan. It was found that the walls of the cañon became steeper as its depths were reached. The party was twenty-one days in making a journey of 14 miles from the junction of Cimarron river with the Gunnison, near Cimarron station, and in that distance there were only 5 points at which it would be possible for even the most expert cliff climber to scale the rocky walls and get out of the gorge. The walls, while only 30 feet apart in places, are from 2,100 to 2,600 feet high, and as a rule are nearly perpendicular. In many places there is not so much as a foothold to be had, and were a ditch to be built, the workmen would have to begin at the entrance of the cañon and cut it out of the solid rock all the way.

It was the project of the expedition to follow the current of the stream through the gorge until they should reach Delta station, beyond the farther end. They had two boats provided with extra keels to strengthen the bottoms and enable them to withstand collisions with rocks, while, for an additional precaution, the sides were ribbed with iron rods. At the bow and stern of each boat were iron loops through which a rope could be run for letting the craft down rapids. On the second day the larger boat had been successfully "whipped" through a narrow rapid, when it was hauled up on a bank, and the explorers returned to bring the other one through. They had let it down almost the full length of the cable when suddenly a cross-current caught it, swinging it around in such a manner that it fetched up fore-and-aft upon some boulders between which the current ran. In an instant its sides were crushed and the fragments of the wreck, with half of the provisions and outfit, were carried away. Not the slightest trace of the wreckage or of the lost articles was found during the rest of the voyage.

In several places the river disappears entirely, flowing under huge piles of boulders that have fallen from the cliffs. Tearing beneath the rocks unseen, the water makes a deafening roar, at times so loud that 2 men standing with hands clasped can not make their voices audible to each other. In other parts of the cañon the stream flows on in silence, the rock walls rising so steeply and so far aloft as to exclude the rays of the sun.

At the last the party came to a cataract 60 feet high, between precipitous walls of solid rock of an altitude so tremendous as to exclude the sunlight at noon. On neither side was there a possibility of gaining a footing by which to make the descent. Even if they could manage to lower the boat in safety, they would be unable to follow it.

Nor was there any certainty, if they passed the falls, that they could escape. To return the way they had come was impossible. The boat could not be forced back against the current, and it was out of the question to carry their provisions, even if they had had enough to last them on a return trip. The cañon was only 30 feet wide at the bottom, and above them loomed the nearly vertical walls. To scale one of the walls was their only salvation, and they did it. Everything was left behind. Stripped of all but necessary clothing, they began a climb that lasted from day-break to eleven o'clock at night, at which hour they had made the ascent to an elevation of 2,600 feet on a 600-foot slope. That is to say, they were but 600 feet back from the river and 2,600 feet above it. All these hours they had neither food nor water.

They tried to ascertain if it would not be practicable to approach the falls from the other end of the cañon—i.e., from Delta station. This, they learned, would not be difficult up to a point within one and a half mile of the cataract—the Falls of Sorrow, as the explorers named them—but there again was a stretch that could not be passed.

An expedition to Labrador, composed of men connected with Harvard and Brown Universities, was undertaken for scientific purposes. Some unknown territory was traversed, and two peaks of lofty mountains were named Mount Eliot and Mount Faunce, after the presidents of the universities.

A project that has been discussed for many years has taken form within the past two years, and the Algoma Central Railway, connecting the Great Lakes with Hudson Bay, is now actually under construction, plunging hundreds of miles through an unbroken wilderness, with no cities, towns, or even villages to afford traffic. It had its origin in the necessity for bringing supplies of pulp wood from the far north to the mills at Sault Ste. Marie, where the road begins, but it opens up as well a region that is rich in minerals and timber. For hundreds of miles the railway will run through dense forests of big trees, including birch, maple, hard elm, tamarack, spruce, balsam, poplar, and white pine.

A report of a lecture by Col. G. E. Church on *Some Aspects of South American Geography* gives interesting facts: "The lecturer pointed out that the contrast between the physical features of North and South America was remarkable. In the former Nature seemed to extend a friendly hand to man, while in the latter her outlines were so rugged and her forces so vigorous that he found it no easy task to contend with them. In general, when he attempted to penetrate the country he was met by formidable obstacles. The Andean massif was 500 miles from east to west, and its plateaus were from 12,000 feet to 14,000 feet above sea-level. With its arm it spanned a sixth part of the circumference of the globe, from the Caribbean Sea to Cape Horn, thus bordering the Pacific side of America with a titanic barrier. The height of its passes forbade the country from seeking western trade outlets. Eighty-nine per cent. of the continental drainage found its way to the Atlantic Ocean, 6 to the Pacific, and 5 per cent. was

absorbed by the thirsty inter-Andean section and the western part of the Argentine Republic. On the lofty table-lands barley did not ripen, and above 10,000 feet elevation the bleak valleys and mountain slopes gave no adequate response to the food quest of man, but thirsty Nature prodigally rewarded irrigation on the desert lands of the Pacific slope. A geographical analysis showed that in general man found himself confronted by severe conditions in his struggle with Nature in South America. Thus far, however, his efforts to develop and utilize its vast resources had made its commercial history an epic."

Sir Martin Conway, noted as a mountain climber and explorer, on returning from his third exploring journey in South America, reports that in the heart of the Andes are gold-fields of greater richness than those of the Klondike or the Rand. The eastern slope of these mountains is, he says, a region practically unknown, both as to its botanical and mineral resources; but even aside from its scientific interest, the commercial value of the country demands recognition. Sir Martin says that while he is interested from only the scientific standpoint, he believes the country to be so rich in minerals that American and English capitalists must soon look to that region as the most promising field for investments. In 1898 he visited the Andes region and surveyed the western slope. Returning to Peru last July, he spent several months completing a map of the mountain range. His records for exploration have extended over ten years, while for thirty years he has devoted himself to scientific research.

The pass in northern Patagonia discovered by Padre Menendez called Bariloche, Buriloche, or Vuriloche—connecting southern Chile with the great lake Nahuel Huapi, and thereby with the Atlantic, has heretofore baffled all attempts at rediscovery, although these have been made repeatedly from both sides of the range. Now it appears to have been found again by Capt. Barrios, of a Chilean engineering force. Passing up the Rio Blanco, he reached the famous warm springs of Padre Menendez. Near these the river issues from the great Tronador glacier. Passing eastward by the narrow valley of an affluent of the Blanco, he found that it widened southeast of the glacier to a broad and convenient pass opening into a long and wide valley. Here the Rio de los Nadis (formerly Arroyo Barros Arana) flows to Lake Mascaradi. It is the source of the Rio Manso. From Lake Mascaradi, M. Barrios passed easily along Lake Gutierrez to the Nahuel Huapi. Along the Rio Blanco he found ancient cut stumps, perhaps dating from Padre Menendez, and old traces of a path at Lake Mascaradi.

Prof. W. Sievers gave in Petermann's Mittheilungen a detailed account of the explorations in South America in the nineteenth century, with maps showing the known and unknown territory in each decade. In conclusion he says:

"In looking over the exploring work of the century, it is seen that it was done for the greater part by private enterprise; that not until 1875 did the states take part in the examination of their territory, and even then only the southern, especially Argentina; and that there is great inequality in the degree of knowledge of the various regions. In Argentina a large atlas of the country has been published under Seelstrang's direction since 1882, and there are geological and meteorological stations in that country, with a staff of foreign scholars engaged in scientific research; but the cordillera states, from Bolivia to Venezuela, have scarcely emerged from the stage of the first exploration by foreigners, and are

almost destitute of official surveys. In Brazil the Government as such has heretofore done nothing toward the scientific exploration of its territory, though some of the states, as Minas, São Paulo, and Pará, have taken steps in this direction. The interior is still wholly unknown, with the exception of the river-valleys, and even the northeastern states, from Maranhao to Pernambuco, have scarcely been traversed. Guiana is at the stage of the very beginnings; the great wilds between the affluents of the Amazon, throughout the system of this great stream, are still terra incognita; and other regions, as the territory at the source of the Tapajoz and of the Madre de Dios, as well as the interior of the Chaco Boreal, still await the first exploration, so that there is need there of pioneer activity, as great as in some parts of Africa. But the great obstacle to systematic scientific exploration of South America is the instability and the financial condition of the republican states, and therefore it may be that the recently discovered interior of Africa may become known scientifically sooner than the greater part of South America."

Recent explorations in South America have been made by Dr. Hermann Meyer, J. R. Hatcher, and Dr. H. Steffen, among others; and Dr. C. Sapper has made scientific observations in the Central American states during a residence of almost twelve years.

Europe.—Dr. Hugh Robert Mill, of England, in a recent address, made the first public announcement of a scheme of geographical research on a national scale by private enterprise. Sir John Murray and Mr. Laurence Pullar have decided to complete the survey of all the fresh-water lakes of the British Islands. Sir John Murray, of course, will direct the scientific work, and Mr. Pullar has made over to trustees a sum of money needed to carry out the researches in a thorough and comprehensive manner. All the lakes will be sounded and mapped as a preliminary to complete investigation. Five years, at least, will be required to make these observations and to incorporate them in memoirs, each of which will be a complete natural history of the lakes of one river-basin.

About twenty-five years ago an arm of the Zuider Zee was transformed into fertile soil, and now a step has been taken toward reclaiming a large part of the land submerged by an irruption of the German Ocean in 1282. Texel, Vlieland, Terschelling, Ameland, and Schiermonnikoog islands stretch in a semicircle from the northern extremity of the province of North Holland to the northern tip of the province of Friesland. These are the remnants of a coast line that formerly constituted a breakwater against the North Sea. Towns that had been flourishing centers of trade in the middle ages have remained engulfed since this inundation. A bill for the drainage of sections of the Zuider Zee has been introduced in the States-General, with a memorandum giving all the details of the proposal. It is proposed to enclose the Zuider Zee by a dam extending across its mouth from Wieringen in Holland to Piaam in Friesland, and to create two polders, or areas reclaimed from the sea, by constructing dikes and pumping out the water. The first reclaimed area, comprising nearly 70,000 acres, will be called the Wieringen, or Northwest Polder; the second, which may cover either 78,000 or 116,000 acres, between Hoorn and Marken, will be termed the Southwest, or Hoorn Polder. The remainder of the Zuider Zee will remain for the present, what Flevo used to be more than six hundred years ago, a fresh-water lake. It is computed that the work

will cost nearly \$40,000,000, and will be completed in eighteen years.

The following ship canals have been authorized in Austria by an act that became law June 11, 1901:

1. From the Danube to the Oder.
2. From the Danube to the Moldau at Budweis, connected with canalization of the Moldau from Budweis to Prague.
3. From the Danube-Oder Canal to the upper Elbe at Pardubitz, connected with canalization of the Elbe from Jaromirz, above Pardubitz, to Melnik.
4. A connection of the Danube-Oder Canal with the system of the Vistula and with a navigable section of the Dniester. The preliminary work is to be finished in 1904, and the whole to be done in twenty years, the cost to be borne by the provinces in proportion to the benefit received.

Asia.—The Founder's and Patron's medals for 1900 were awarded by the Royal Geographical Society to Capt. H. H. P. Deasy and James McCarthy—to Capt. Deasy for the exploring and survey work of his two expeditions in central Asia, lasting three years, and to Mr. McCarthy, who is the Government surveyor of Siam, for his explorations in all parts of that kingdom. The other awards were as follow: The Murchison award to M. Henryk Arctowski for the valuable oceanographical and meteorological work which he performed on the Belgian antarctic expedition; the Gill memorial to Mr. Vaughan Cornish for his researches, extending over several years, on seabeaches, sand-dunes, and on wave-forms in water; the Back grant to Mr. Robert Codrington for his journeys in the region between Lakes Nyassa and Tanganyika, during which he removed, in behalf of the society, the section containing the inscription from the tree under which Livingston's heart was buried; and the Cuthbert Peek grant to Mr. T. J. Alldridge for his journeys during the past ten years in the interior of Sierra Leone, during which he has done valuable geographical work.

In 1896 Capt. Deasy explored the border between Chinese East Turkestan and Tibet, from Ladak by way of Polu to Khotan; on his second journey, 1897-'98, the eastern Pamir, especially the upper course of Yarkand river, which he determined, in the face of almost insurmountable obstacles, as far as the point reached by the Russian explorer Grombtschewsky, where the river bears the name Raskamdaya. With the help of a native Indian surveyor, he triangulated the whole territory, making numerous designations of latitude and several of longitude, thus filling a great gap in the map of Asia. He has, in all, surveyed 40,000 square miles of new country. He found that the great peak Muztagh-Ata is the highest point fixed north of the Himalayas.

"The obscurity," says Petermann's *Mittheilungen*, "which reigns over the course of the Yang-tse-Kiang on the unknown stretch between 100° and 102° east longitude, because the swift current and the steep banks prevent the following of the course of the river, is beginning to lighten. Five years ago C. E. Bonin, on the journey from Tali-Fu northward by way of Likiang to Jungning, saw, a little south of that place, at about 28° north latitude, a powerful stream, which he believed must be identical with the Yang-tse-Kiang, which he had crossed at Likiang, at 27° north latitude, while the maps attributed a southeasterly course to the stream from Likiang; Grenard gave it even a wide curve eastward, turning it southward again in the lower course of the Ya-long-Kiang. Bonin's opinion is now confirmed by Edward Amundsen. While Bonin did not actually reach the river at Yungning or Yung-Lin,

Amundsen passed along the northern bank by the abrupt bend, so that doubt of the identity with the Kin-sha-Kiang, as the upper course of the Yang-tse-Kiang is here called, is excluded. But Grenard's supposition is not confirmed, for the Kin-sha-Kiang turns at 101° east longitude in an abrupt bend back to the south until nearly at 28° north latitude, where it again turns eastward."

The latest intelligence at hand from the Swedish traveler Dr. Sven Hedin is a despatch published in October, based upon a letter from him dated July 10. He was then at the foot of the Akka Tagh, in northern Tibet, and intended to proceed in the direction of Ladak in order to survey the region about the source of the Indus. He proposed to return next spring to Osh via Kashgar. Meanwhile a caravan of 15 horses has arrived at Kashgar, bringing the results of two years of the traveler's work in the form of scientific collections, maps, photographs, and diaries. Dr. Sven Hedin speaks in the highest terms of his Cossack escort, provided by the Czar, and extols their courage, endurance, and resource in critical situations. Up to the time of writing he had been in no way molested by the Chinese.

Dr. Hedin reached Kashgar on Sept. 1, 1899, and organized his caravan. He sent the bulk of it by the great north road through Ak-su and Korla to Lob-Nor, while he with a small following made for Lailik, on the Yarkand-daria, which he proposed to follow to Lob-Nor. The journey from Kashgar to Lailik occupied five days. At the latter place he bought one of the ferry-boats for carrying caravans across the Yarkand, and fitted it up for his voyage down the river. He rigged up a tent amidships for his own use, and a dark room in which to develop his photographs. Four ferry-men were engaged to manage the craft, on which Dr. Hedin spent the next three months, floating slowly down from Lailik to Yangi-kul. Only once, in the neighborhood of Maral-bashi, where the irrigation canals had drained the water from the river, was it found necessary to enlist the services of 100 natives, to drag the ferry-boat over the shallows. Dr. Hedin describes the journey along the Yarkand-daria and Yarik rivers as a delightful experience. The river wound in all directions, and in places the scenery was extremely picturesque. Dr. Hedin mapped the whole course of the river between Lailik and Yangi-kul on 60 large sheets, with great minuteness. He took 60 measurements of the volume of water, and several times every day calculated the distances by means of a special instrument, which gave the rapidity of the stream. On reaching Yangi-kul, where the caravan sent round by the road had arrived, Dr. Hedin established a winter camp. He himself, with 4 men and 7 camels, after ten days at Yangi-kul, set out across the desert to Cherchen. The journey lasted twenty days, across interminable wastes of sand, but only one camel was lost. From Cherchen Dr. Hedin made an excursion to Andere, to the west-southwest. He reached camp on Feb. 24 of last year, after an absence of sixty-six days, during which he had traversed and mapped a very large area of new country.

Setting out on March 5, he followed the southern slopes of the Kuruk-taj range and the dried-up bed of the Kum-daria, or "river of the desert," until he came upon an ancient lake bed with extensive salt deposits and dead trees and sedge. On the shores of this ancient lake bed were the ruins of a town with artistic wooden sculptures and an old road. The discovery confirms the theory put forward in his book *Through Asia* as

the existence of an ancient Lob-Nor lake not identical with the Lob-Nor of the present day. South of this old lake bed, and one day's march north of Kara-Koshun, he discovered a large new lake formed by a hitherto unknown arm of the Tarim flowing eastward through the old bed of the Shirga. The return journey was made by a new and very interesting road to Yangi-kul, which was reached early in May. He sent the bulk of his caravan to Abdal, near the entrance of the Tarim river into the Kara-Koshun, which he identifies with Prjevalsky's Lob-Nor, and himself traveled down the river to Abdal in his ferry-boat. *En route* he explored the lakes to the west fed by Tarim river. After some weeks at Abdal he followed the main part of his caravan to the Chunin-Tag, and fixed his permanent camp a little to the south of Lake Gas, in a splendid mountain region called Mandarlik. With a small caravan he left the camp on July 20, to make a round journey through northern Tibet. Oct. 20 he again reached his main camp, having traversed 965 miles along a new route, although at various points he crossed the routes followed by Carey, Rockhill, Wellby, and Bonvalot. One of his men, an Afghan hunter, died on the journey, and many of the animals perished. The farthest point reached to the southeast was near the upper Yang-tse, and for eighty-four days the caravan did not meet a human being. Intense cold was experienced, on one occasion the thermometer falling to 4° F., while storms from the west, always accompanied by snow and hail, caused extreme suffering. The heights of several mountain peaks were obtained, and an immense number of photographs and sketches were taken. Geological and botanical collections were made, and notes taken of the wild animals—antelopes, bears, wild sheep, and goats being most numerous—which were encountered. The map work of this journey alone fills 194 large sheets.

From a paper by Sir Thomas Holdich on *The Geography of the Northwest Frontier of India* is taken the following extract on the physical features of the region:

"The great level range of Sufed Koh, the dominating feature both of the Kabul and the Kuram valleys, for all its giant independence, had a distinct geographical connection with the Hindu-Kush. The Kabul basin was embraced by a long, sinuous arm of the Hindu-Kush, and the Kabul river formed no exception to the almost universal frontier rule, that the rivers of the plateau should pass through a gate of the hills hewn right across the axis of them ere reaching the Indus flats. The Kuram valley and the Tochi, too, were tied in at their exit to the plains, and their drainage passed out through mountain gates, which so restricted the outflow that past centuries of detritus had accumulated behind them; the grade of the stream had shaped itself to meet the alluvial formation, and we thus got wide spaces of cultivable land, terraced and reveted into level fields, and forming landscapes of fertile beauty with scattered orchards and half-concealed villages. But the lateral feeders of the main streams afforded quite a different class of scenery, the rough-hewn edges of the broken strata formed cliffs which looked straight into narrow, confined troughs at their feet, with the course of the mountain stream (when there was any stream at all) broken by boulders and waterfalls, amid a space so narrow that it was frequently impossible to find passable footway. The point to be noted about all this Pathan borderland, which was the country that mainly constituted the new-formed province or agency, was that it belonged to a northern moun-

tain area in its chief physical aspects. South of the Gomul river began a new mountain system, which, while it exhibited many of the essential features of the northern orography, claimed a distinct constructive anatomy of its own. Line upon line of ridge and furrow, long dominant sharp-backed ridges with jagged saw-like outlines; short, thin ridges packed in between as tightly as they can fit; here and there a huge mass of limestone upheaved in grand outlines, upsetting the regularity of minor construction—all running with a parallel trend from north to south facing India—presented about as formidable a barrier to farther advance as might well be conceived."

Explorations have also been made in Asia by Lieut. Kozloff, Dr. Richard Leonhard, Dr. Karl Lehmann, Lieut. Olufsen, Count de Barthélemy, M. G. Saint Yves, Messrs. Harrison and Whitehouse, Douglas Freshfield, M. Bogdanovich, W. W. Skeat, J. P. Needham, and Rev. Putnam Cady.

Africa.—The Royal Society this year awarded one of its medals to Dr. A. Donaldson Smith, on account of his journeys in Africa. On the first he traveled to the northern side of Lake Rudolf, and explored the lower course of the Omo, then returned over a previously unknown route by the eastern side of the lake. The second journey was from the Somali coast to the upper Nile through an unknown country. Following is an abstract of the account of this journey given to the society by Dr. Smith:

"He set out from Berbera on Aug. 1, 1899. Owing to the desertion of some of his Sikh followers, he began to cross the Haud with only 17 Somalis and as many Gorkhas and Sikhs, besides his assistant, Mr. Frazer, and a Goanese cook. The expedition marched by way of Milmil, Sesabane, and Sheneli to Shebéli river, the followers being increased to 48 on the way. The Shebéli was reached on Sept. 8 at a spot called Godi, over 400 miles from Berbera by road; and on Sept. 11 the expedition went west again, and between Gohulle and El Dere followed the line of march traversed by Dr. Smith in 1895. In the first journey he saw the worst side of the Abyssinian method of annexation, but his more recent observations showed him that the Abyssinians' treatment of tribes once brought thoroughly to submission was commendable. In the first attacks the Abyssinians were certainly very cruel, but later they restored to the natives a large proportion of their belongings and very nearly their original self-government, only a moderate tax being imposed. From the Somalis to the Boran he was surprised to find the natives quite as rich, apparently, as they were before they came under Abyssinian rule. Leaving El Dere, which is about equidistant (750 miles) from Berbera and the Nile, the expedition marched through broken and very wooded country, abounding in elephants, and here the Somali followers gave much trouble. They were never satisfied unless they had over ten pounds of camel meat or mutton a day each, and when food was scarce Dr. Smith had to be on the alert constantly to prevent them from poisoning transport animals or stealing sheep. But the Somalis were not such miserable thieves as most of the Indians; and their superb physical condition, swift-footedness, endurance, and intelligence were remarkable. After leaving Goff the expedition reached an altitude of over 5,000 feet, in the Boran highlands, when suddenly the caravan was brought to an abrupt halt by a precipice that sheered off almost perpendicularly to a broad plain 1,700 feet below. Five marches were occupied in crossing this plain, where Dr. Smith obtained a specimen of a tiny gazelle new to sci-

ence. On Nov. 26 the valley of Lake Stefanie was entered, and here the expedition endured much hardship by the burning of the camp and the shortness of water, for the water of the lake was found to be undrinkable. Lake Rudolf was reached on Dec. 10. The formerly rich tribe of Rusia was found no longer to exist, and no human beings were seen until the river Nianam was reached. Between the Nianam and the Nile there was not only a completely different set of birds, but scarcely any of the mammalia were the same that had been found in the eastern section of the journey. On Jan. 3 the Omo river was left behind. After leaving the highlands and crossing at right angles the line of march of the late Capt. Wellby, the Magois were encountered. These were quite different in appearance and customs from any tribe previously met with. They had the heavy build and large features of the Sudanese, and the lines of raised tattooing which are so characteristic of the people about the Nile. They seemed to care principally for small red beads, which they wore worked in gorgeous patterns. They were the only people, too, whom Dr. Smith had seen wearing a zebra's tail suspended from the elbow. Contrary to the advice of these natives the expedition set out into the plain westward, and here they suffered considerably from the difficult ground and the scarcity of water, and many transport animals and much valuable baggage were lost. After searching for a better route for many days, a branch of the Magois calling themselves Katua were encountered, and Dr. Smith was surprised to find them cow-worshippers. On reaching the most northern extension of the Uganda highlands on Feb. 15 the Akara were met with. Many of these natives were agriculturists as well as stock-raisers, and had substantial wooden dwellings. Villages were passed which might easily have contained 1,500 inhabitants. Dr. Smith secured at this stage of the journey the only specimens ever obtained of the spotted bush-buck. Fort Berkeley was reached on March 14. On May 5 a gunboat arrived, and Dr. Smith and his collections were carried down to Cairo.

Other travelers in this region whose explorations promise to supplement the work of Dr. Smith and the Italian explorers are the Baron v. Erlanger and Oscar Neumann, who have visited some unknown territory near the watershed between Juba and Sidama, and Hugues Le Roux, who has traced a part of the unexplored course of the Blue Nile, from the point where it leaves the province of Godjam to the mouth of the Didesa.

A little steamer, the *Scotia*, has been placed upon Lake Mweru, and the outlines of the lake can now be determined, although the swampy shores, especially those in the southwest, will offer some difficulty. Navigation for any great distance on the rivers is prevented by falls above and below the lake.

The upper Nile has been opened by the cutting away of the barriers of *sudd* by a force under Major Peake. This route when opened will save months in the time of transporting supplies to northern Uganda. The *sudd* consists of thick masses of weeds packed and matted together.

In May, 1900, came the report that Mr. J. E. S. Moore had arrived at Mombasa with the Tanganyika expedition, which had carried out the scientific investigations with which it was entrusted throughout the entire length of the great Rift valley, from the south of Lake Nyassa to the Albert Nyanza. It was found that the old marine fauna of Tanganyika did not extend to any of the

lakes northward, though there was geological evidence pointing to some former extension of Lake Tanganyika westward along the Congo valley. The same evidence confirms the view that the lake once covered a much larger area, since its peculiar fauna were found at considerable heights north and south of it. Among other pieces of geographical exploration accomplished was the successful ascent of one of the highest snow peaks of Ruwenzori, where observations and photographs were obtained.

The upper Zambesi, with its eastern and western tributaries and the lands lying between, has been minutely explored by Major A. St. Hill Gibbons and his companions, Capt. F. C. Quiche, Capt. Stevenson-Hamilton, and Mr. Weller. The regions west of the upper Zambesi as far as Cécito and Okavango are now described for the first time.

The French explorers MM. Huot and Bernard undertook a journey in October, 1900, of which the results have not apparently been yet published, to determine the watershed between the Congo and the Shari.

M. Foureau returned to France in September, 1900, having traversed Africa with his expedition from Algiers across the Sahara and Sudan to the Chad and the Shari, and by way of the Ubangi and the Congo to the Atlantic. The parts of the journey new for geography were those through the Hagar mountains from Ain-el-Hadjadj to the oasis of Air, where Barth's route was reached, and the course around the northeastern shore of Lake Chad to the Shari delta at Gulfei. His companion, Major Lamy, fell in a conflict on the Shari against Rabeh, the usurper of Bornu. Of the 314 men in the expedition, 32 fell in battle and 20 died of disease in the two years.

Other travelers who have been exploring recently in Africa are Dr. Kandt, M. Pierre Prins, MM. Hostains and D'Olloné, M. Dèce, Major Colin Harding, A. H. Sharp and E. S. Grogan, Mr. Poulett Weatherly, M. Rue, Lieut. Lencaire, Count Leontieff, M. Flamand, M. Bailland, Mr. Silva White, Mr. Percy Reid, Baron Grünan, Capt. Ashburnham, Capt. Jobit, M. Blanchet.

Oceanica.—In a lecture on British New Guinea, Prof. A. C. Haddon described the structure of that island and the geographical distribution of the population, who belong to the Melanesian or dark-skinned, black, frizzly-haired people of the western Pacific. There was no trace whatever of Malay physical character, culture, or language in the island, and he did not seek outside of New Guinea for the ancestral stock of its Papuan inhabitants. Dr. Meyer, in his great monograph on the Negritos of the Philippine Islands, had expressed the opinion that the question whether the Papuans were a mixed race was not yet ripe for decision. The lecturer expressed the opinion that there was a truly indigenous race who were the real Papuans, and that there had been several distinct waves of immigrants from the Melanesian archipelago who had saddled themselves on the preexisting population.

The Ocean.—The exploration of the sea is a work in which geographers are taking great interest. A second international conference took place at Christiania in May, 1901, and the plan drafted in Stockholm in 1899 was completed. The original program has been revised to meet the wishes of the participating governments. The governments of all the countries bordering on the North Sea and the Baltic were represented at the conference, except France, whose geographical position gives her less practical interest in the area of research—namely, the North Atlantic, the

the North Sea. The Norwegians and Danes have already provided themselves with special steamers adapted to the proposed investigations, and a German steamer is building. The arrangements of most of the smaller states are well advanced. An international laboratory for scientific ocean research is established at Christiania.

GERMANY, an empire in central Europe, composed of the federated German states. The King of Prussia is German Emperor, having supreme command of the German army, with power to make war, with the consent of the federated states and princes for an offensive war, and the right to make peace. There are two legislative bodies with concurrent powers—the Bundesrath, composed of representatives of the federated states, and the Reichstag, representing the German people. Acts on which they agree become law on receiving the assent of the Emperor countersigned by the Chancellor of the Empire. The Bundesrath has 58 members, appointed by the governments of the federated states. The Reichstag has 397 members, 1 to 124,500 of population, elected by universal manhood suffrage and by secret ballot for the term of five years. Alsace-Lorraine, the imperial province, is represented by 4 commissioners, who sit in the Reichstag without having votes. The imperial ministers act independently of each other under the supervision and control of the Chancellor. The reigning Emperor is Wilhelm II, born Jan. 27, 1859, successor to his father, Friedrich III of Prussia, who died June 15, 1888. The heir apparent is Prince Friedrich Wilhelm, born May 6, 1882. The Chancellor of the empire at the beginning of 1901 was Count von Bülow, who succeeded Prinz Hohenlohe-Schillingfürst in that office and as President of the Council of Ministers in the Prussian Government. The Secretary of State for Foreign Affairs was Baron von Richthofen; Secretary of State for the Interior, Count Posadowsky-Wehner; Secretary of State for the Imperial Marine, Herr von Tirpitz; Secretary of State for Justice, Dr. A. Nieberding; Secretary of State in charge of the Treasury, Baron von Thielmann; Secretary of State in charge of the Post-Office, Gen. von Podbielski; Director of the Imperial Railroads, Dr. Schulz; President of the Board of Accounts, Herr Magdeburg; Chief of the Administration of the Invalid Fund, Dr. Rösing; President of the Imperial Bank, Dr. Koch. The Vice-President of the Prussian Ministry of State and Prussian Minister of Finance was Dr. Johannes von Miquel; Minister of Public Works, Herr von Thielen; Minister of Agriculture, Domains, and Forests, Baron von Hammerstein-Loxten; Minister of Justice, Dr. Schönstedt; Minister and Secretary of State for the Interior, Baron von Rheinbaben; Minister and Secretary of State for Foreign Affairs, Count von Bülow; Minister of Commerce and Industry, Herr Brefeld; Minister of War, Major-Gen. von Gossler; Minister and Secretary of State for the Navy, Herr von Tirpitz; Minister of Ecclesiastical Affairs, Public Instruction, and Medical Affairs, Dr. Studt. The Emperor is King Wilhelm II of Prussia. The King has supreme executive authority, and shares the legislative authority with the Landtag, consisting of the Herrenhaus and the Chamber of Deputies. The Herrenhaus, or House of Lords, is composed of princes of the Hohenzollern family, heads of mediatized sovereign houses, 16 in number, 82 hereditary peers of the territorial nobility, 8 noblemen elected by the landowners of provinces, and 207 public functionaries, representatives of universities, burgo-masters of towns, and life members nominated

from among landowners, manufacturers, and national celebrities. The Chamber of Deputies has 433 members, elected indirectly for five years by all male Prussians twenty-four years of age, one-third by the highest taxpayers who pay a third of the taxes, one-third by the next highest who pay a third, and one-third by the lowest taxpayers paying the remaining third.

Area and Population.—The area of the German Empire is 208,830 square miles. The population at the census of June 14, 1895, was 51,770,284, divided into 22,913,691 males and 28,856,593 females. The census of Dec. 1, 1900, gave 27,731,067 males and 28,613,247 females; total, 56,345,014. The area in square miles of the different states and their population in 1900 are stated in the following table:

STATES.	Area.	Population.
Prussia.....	134,603	34,463,377
Bavaria.....	29,282	6,175,153
Württemberg.....	7,528	2,165,765
Baden.....	5,821	1,866,584
Saxony.....	5,787	4,199,758
Mecklenburg-Schwerin.....	5,135	607,835
Hesse.....	2,965	1,120,428
Oldenburg.....	2,479	398,499
Brunswick.....	1,424	464,251
Saxe-Weimar.....	1,388	362,018
Mecklenburg-Strelitz.....	1,131	102,628
Saxe-Meiningen.....	953	250,683
Anhalt.....	906	316,027
Saxe-Coburg-Gotha.....	755	229,567
Saxe-Altenburg.....	511	194,273
Lippe.....	469	139,298
Waldeck.....	433	57,913
Schwarzburg-Rudolstadt.....	363	92,657
Schwarzburg-Sondershausen.....	333	80,678
Reuss-Schleiz.....	319	138,993
Schaumburg-Lippe.....	131	43,132
Reuss-Greiz.....	122	68,287
Hamburg.....	158	768,349
Lübeck.....	115	96,775
Bremen.....	99	224,697
Alsace-Lorraine.....	5,600	1,717,451
Total.....	208,830	56,345,014

The cities and manufacturing districts have increased rapidly in population with the growth of industry, the largest gain being shown in Lübeck, Bremen, and Hamburg, due to the expansion of foreign commerce, and in Saxony, Prussia, and Baden, where manufactures have most increased.

The number of marriages in 1898 was 458,877; of births, 2,029,891; of deaths, 1,183,020; excess of births, 846,871. The number of German emigrants in 1899 was 23,740, of whom 19,271 went to the United States, 877 to Brazil, 1,099 to other American countries, 548 to Africa, 178 to Asia, and 141 to Australia and New Zealand. The total includes 1,626 emigrants to other countries in Europe, but not 1,384 German emigrants from French ports whose destination was not reported. The emigrants over sea included 12,899 males and 10,215 females. There were 2,652 families, comprising 8,564 persons. Of the total number of emigrants 13,747 came from Prussia, 2,140 from Bavaria, 1,250 from Württemberg, 1,747 from Hamburg, 1,057 from Saxony, 753 from Baden, 441 from Bremen, 361 from Alsace-Lorraine, 333 from Hesse, 269 from Oldenburg, and 231 from Mecklenburg-Strelitz. The number of non-German emigrants who sailed from German ports was 130,646. The total number of emigrants from German ports, including foreigners, from 1871 to 1899 inclusive was 4,210,742; from 1832 to 1870 the number was 1,788,380. Since 1871 Bremen has been the port of emigration for 1,178,708 Germans and 1,060,214 foreigners; Hamburg for 849,052 Germans and 1,088,062 foreigners, and 23,740 Ger-

mans and 10,966 foreigners have gone from other German ports. About 6,000,000 Germans have emigrated since 1820, two-thirds of them to the United States. Berlin increased in population from 1,677,304 in 1895 to 1,884,151 in 1900; Hamburg from 625,552 to 705,738; Munich from 411,001 to 499,959; Leipsic from 399,963 to 455,089; Breslau from 378,250 to 422,738; Dresden from 336,440 to 395,349; Cologne from 321,564 to 372,229; Frankfurt from 229,279 to 288,489; Magdeburg from 214,424 to 229,663; Hanover from 209,535 to 235,666; Nuremberg from 195,783 to 261,022; Düsseldorf from 175,985 to 213,767; Königsberg from 172,796 to 187,897; Chemnitz from 161,017 to 206,584; Stuttgart from 158,321 to 176,318; Stettin from 140,724 to 210,680; Charlottenburg from 132,377 to 189,290; Bremen from 141,894 to 176,318; Altona from 148,944 to 161,507; Elberfeld from 139,337 to 156,937; Halle from 116,304 to 156,611.

Finances.—The expenditure of the Imperial Government for 1902 is estimated at 1,912,610 marks for ordinary and 328,334 marks for extraordinary purposes; total, 2,240,944 marks. The total estimated revenue is 2,137,193 marks. The revenue from customs and excise duties in 1901 was estimated in the budget at 789,725,000 marks, of which 473,220,000 marks were from customs, 12,143,000 marks from tobacco, 102,009,000 marks from sugar, 47,810,000 marks from salt, 124,301,000 marks from spirits, 30,165,000 marks from beer, and 77,000 marks from imposts in territories outside of the customs union; from stamps, 66,483,000 marks, of which playing-cards produced 1,471,000 marks, bills of exchange 10,367,000 marks, securities, accounts, lottery tickets, and brokers' receipts 53,708,000 marks, and statistical fees 937,000 marks; for posts and telegraphs, 393,209,930 marks; interest on the invalid fund, 30,076,276 marks; revenue from railroads, 86,175,000 marks; from the imperial bank, 14,854,500 marks; from the printing-office, 7,516,000 marks; various receipts, 18,554,063 marks; federal contributions, 527,662,374 marks; sales of land and fortifications, 206,655 marks; from loans, 89,476,773 marks; other extraordinary receipts, 5,391,638 marks; balance from preceding years, 30,726,934 marks; supplementary extraordinary budget, 15,585,869 marks; total, 2,066,644,012 marks. The estimated expenditures for 1901, including supplementary estimates, amounted also to 2,066,644,012 marks, of which 1,783,753,067 marks were ordinary recurring expenditures, and 282,890,945 marks were non-recurring and extraordinary expenditures. Of the recurring expenditures 541,521,093 marks were for the army, 520,294,715 marks for the imperial treasury, 77,700,500 marks for the debt of the empire, 73,862,860 marks for the navy, 68,164,130 marks for pensions, 342,495,126 marks for posts and telegraphs, 5,304,951 marks for the imperial printing establishment, 391,910 marks for the railroad office, 38,782 marks for Kiauchau, 262,069 marks for military justice, 148,788,675 marks for the Ministry of the Interior, 30,076,274 marks for the invalid fund, 12,508,658 marks for the Ministry of Foreign Affairs, 2,119,362 marks for the Ministry of Justice, 699,250 marks for the Reichstag, 856,410 marks for the Audit Bureau, 58,435,300 marks for railroads, and 233,000 marks for the Imperial Chancellery. Of the federal contributions in 1901 Prussia paid 320,855,469 marks; Bavaria, 59,193,009 marks; Saxony, 38,144,485 marks; Würtemberg, 21,304,345 marks; Baden, 17,458,589 marks; Alsace-Lorraine, 16,608,500 marks; Hesse, 10,465,376 marks; Hamburg, 6,865,625 marks; Mecklenburg-Schwerin, 6,017,576 marks; Bruns-

wick, 4,373,539 marks; Oldenburg, 3,764,425 marks; Saxe-Weimar, 3,416,707 marks; Anhalt, 2,954,196 marks; Saxe-Meiningen, 2,356,978 marks; Saxe-Coburg-Gotha, 2,182,277 marks; Bremen, 1,978,248 marks; Lippe, 1,339,277 marks; Reuss-Greiz, 679,560 marks; Waldeck, 581,537 marks; Strelitz, 1,022,745 marks; Schwarzburg-Rudolstadt, 893,264 marks; Lübeck, 839,265 marks; Schwarzburg-Sondershausen, 786,388 marks; Reuss-Greiz, 679,560 marks; Waldeck, 581,537 marks; and Schaumburg-Lippe, 415,223 marks. The pensions of soldiers who fought in the campaigns of 1866 and 1870-71 were doubled by a measure voted by the Reichstag in 1901, which gives to veterans who are totally incapacitated for work the same pay that they received in the army, ranging for privates and non-commissioned officers from 720 to 1,044 marks a year, with an additional 324 marks for every crippled limb, and from 180 to 475 marks for care and nursing when needed. Officers receive increases in their pensions not so great in proportion, 450 marks increase for lieutenants and 600 marks for captains. The expenses of the Government have so increased that fresh sources of revenue will have to be found. The states of central and south Germany object to paying larger matricular contributions because their taxation was higher per capita than that of Prussia, being 10.98 marks in Baden, 10.80 marks in Würtemberg, 10.73 marks in Bavaria, and 9.78 marks in Saxony, compared with 8.36 marks in Prussia, which derives a large revenue from the state railroads. The special excise duties on malt, beer, wine, and meat bring the amount of taxation up to 17.64 marks in Baden, 16.51 marks in Bavaria, 16.16 marks in Würtemberg, and 11.17 marks in Saxony. The average taxation in Germany is only two-fifths what it is in France, and little over half the average rate in Great Britain, being 15.28 marks in indirect taxes and about 6 marks in direct taxes, but the incidence is greater on the poorer classes, who have to pay an income tax when they have any incomes, and to bear the heavy duties on grain, sugar, etc. The Minister of Finance in May announced a prospective deficit of 70,000,000 marks or more, the increased stamp-duties not giving the expected yield, and the lowering of postal and telegraph rates having entailed a considerable loss of revenue.

The funded debt of the empire on March 31, 1899, consisted of 1,240,000,000 marks of 3½-per-cent. and 1,057,950,700 marks of 3-per-cent. loans; total, 2,297,950,700 marks. Of the old debt of the North German Confederation 17,700 marks remained unpaid, and the unfunded debts were 50,000,000 marks of treasury bonds and 120,000,000 marks of paper money, making the total indebtedness 2,467,968,400 marks, the 3-per-cent. loans having been increased by 115,703,900 marks during the year, and the treasury bonds decreased by 20,000,000 marks. The amount of the invalid fund was 390,967,654 marks. The war fund preserved in gold is 120,000,000 marks. A loan of 300,000,000 marks at 3-per-cent. was issued in the beginning of April, 1901, at 87½ per cent., whereas the price of the 3-per-cents. issued in 1899 was 92. The new loan was required to cover the cost of the Chinese expedition. The supplementary estimates for 1901 necessitated by the expedition amounted to 123,322,000 marks, compared with 152,770,000 marks for 1900.

The budgets and debts of the individual states, in most cases for 1901, in others for 1900, are given in marks in the table on the next page.

The extraordinary revenue of Alsace-Lorraine was 3,997,754 marks and the extraordinary ex-

penditure 4,347,250 marks. Anhalt has 7,703,387 marks of invested funds. Baden's debt was incurred for railroads exclusively. Of the debt of Bavaria 1,115,394,800 marks were raised to build railroads, the profits from which are more than the cost of the whole debt, and with those from posts, telegraphs, and mines make very near half of the gross revenue. In Bremen the debt charge is the chief item of expenditure, and more than one-third of the revenue is obtained from income tax and other direct taxes. In Brunswick there is an endowment fund yielding 2,702,050 marks not included in the budget, and the ducal civil list of 1,125,000 marks is also separately provided, while the state has besides domains and forests an invested fund of 40,600,000 marks, and receives till 1932 an annuity of 2,625,000 marks for the railroads; but, on the other hand, an annuity of 1,219,740 marks must be paid till 1924 in addition to the charges of the funded debt, 80 per cent. of which was incurred for the construction of railroads now transferred to the empire. Hamburg receives considerable revenue from docks and railroads, but a third of the total comes from direct taxation, the cost of the debt, which was raised for public improvements, being heavy, and expenditure on education liberal. Hesse raises nearly a third of the revenue by taxes on land, rents, incomes, inheritances, and business, and two-thirds from domains, forests, and the imperial customs, the last balancing the contribution to the expenses of the Imperial Government, while the revenue from railroads is sufficient to pay the charges of the debt, chiefly incurred for their construction. Nearly half of the revenue of Lübeck comes from forests and invested funds, and the remainder is raised by direct taxation. In Mecklenburg-Schwerin the Grand Duke has a separate income of about 22,640,000 marks, and the railroads and public funds provide for the service of the debt. In Mecklenburg-Strelitz no public financial statement is ever made, because there is no state revenue apart from the income of the Grand Duke. In Oldenburg triennial budgets are made out separately for the grand duchy and for the principalities of Birkenfeld and Lübeck. Of the total revenue of Prussia 95,676,404 marks come from domains and forests, 198,354,600 marks from direct taxes, 83,307,000 marks from indirect taxes, 82,487,500 marks from the lottery, 2,069,300 marks from the marine bank, 368,110 marks from the mint, 167,061,876 marks from furnaces

and salt-works, 1,363,967,333 marks from railroads, 248,286 marks from donations, 354,943,862 marks from the general finance administration, 6,386,845 marks from the Ministry of State, 4,600 marks from the Foreign Office, 2,063,002 marks from the Ministry of Finance, 8,120,000 marks from the Ministry of Public Works, 5,439,914 marks from the Ministry of Commerce and Industry, 73,800,700 marks from the Ministry of Justice, 18,188,994 marks from the Ministry of the Interior, 4,662,352 marks from the Ministry of Agriculture, 5,115,055 marks from the Ministry of Worship and Instruction, and 300 marks from the Ministry of War. Of the expenditure for 1901 working expenditure amounts to 1,140,714,622 marks, of which 46,325,700 marks are for domains and forests, 124,379,190 marks for financial administration, 141,813,878 marks for mines, etc., and 828,195,854 marks for railroads; charges on the consolidated fund amount to 671,838,567 marks, of which 8,000,000 marks are additional crown donation to the King, 230,747,422 marks interest on the public debt, including railroad debt, 39,550,101 marks sinking-fund of the debt, 2,453,982 marks annuities and expenses of management, 212,315 marks expenses of the Herrenhaus, 1,672,615 marks expenses of the Chamber of Deputies, 320,314,597 the matricular contribution to the empire, and 68,887,534 marks appanages, annuities, indemnities, etc.; the expenditures of the state administration was 493,303,562 marks, of which 9,275,476 marks were for the Ministry of State, 552,500 marks for the Ministry of Foreign Affairs, 99,684,026 marks for the Ministry of Finance, 30,678,485 marks for the Ministry of Public Works, 11,987,534 marks for the Ministry of Commerce and Industry, 109,389,300 marks for the Ministry of Justice, 69,137,188 marks for the Ministry of the Interior, 22,864,482 marks for the Ministry of Agriculture, Domains, and Forests, 139,595,854 marks for the Ministry of Public Instruction and Worship, and 138,717 marks for the Ministry of War; and extraordinary expenditure amounted to 166,409,282 marks. The interest-bearing debt of Prussia consists of 3,587,090,550 marks of 3½-per-cent. consols, 1,914,100,650 marks paying also 3½ per cent., 962,397,400 marks borrowed at 3 per cent., 122,919,559 marks of railroad debt, and 5,175,444 marks taken over from the provinces annexed in 1866. In both principalities of Reuss the reigning family owns most of the land. In Saxe-Altenburg two-thirds of the public revenue is derived from domains and the reserve fund of 5,070,692 marks and one-third from direct taxes. The revenues of Coburg and Gotha are administered separately; they have domain revenues, amounting to 439,600 marks for Coburg and 1,930,028 marks for Gotha; state revenues, amounting to 1,019,120 marks for Coburg and 2,329,980 marks for Gotha, and a common budget amounting to 2,712,391 marks of revenue and 3,315,552 marks of expenditure. Saxe-Meiningen has state domains yielding 2,852,860 marks of revenue, and most of the debt is offset by productive public works. In Saxe-Weimar the forests yield a large income, and the debt is more than covered by domains and funds. Only the ordinary budget of the Kingdom of Saxony is given in the foregoing table, besides which there is an extraordinary budget of 112,783,186 marks; domains, forests, and railroads produce more than half of the revenue, the debt having been incurred chiefly for the construction of railroads, telegraphs, and other public works. The debt of Württemberg was made almost entirely for railroad construction, and the profits from the railroads considerably exceed the inter-

est on their cost, while forests, domains, mines, and metal and salt works yield nearly 12 per cent. of the total revenue.

The Army.—The whole of the land forces of the empire form a united army under the supreme command of the Kaiser. Bavaria, Saxony, and Württemberg have separate military administrations, but the Bavarian military budget must bear a fixed proportion to the expenditures of other departments and the budgets of the other two kingdoms are prepared by the Prussian Ministry of War, which directs the administration of the entire army. All German troops are bound by the Constitution to obey unconditionally all orders of the Kaiser, but in time of peace the oath of fidelity is not required from Bavarian soldiers. The strength of the imperial army on the peace footing in 1900 was 23,850 officers and 576,666 men, with 102,929 horses. The one-year volunteers, who serve at their own expense and number about 8,000 each year, are not included in the legal peace strength. There were 216 infantry regiments, containing 12,056 officers and 267,274 men; 18 battalions of rifles, 388 officers and 11,274 men; 293 district commands, 870 officers and 5,757 men; and 2,560 infantry paymasters, surgeons, etc., making the total infantry 13,314 officers and 386,865 men. The cavalry comprised 2,406 officers and 66,229 men, with 65,135 horses, the number of regiments being 93, outside of which 817 cavalry officers and men were employed in special services. The field-artillery, organized in 88 regiments, contained 2,406 officers and 66,229 men, with 32,879 horses, and there were 962 officers and men in special services. The foot-artillery consisted of 17 regiments and 1 battalion, containing 872 officers and 23,207 men, not counting 134 in special services. Of pioneers there were 25 battalions, comprising 571 officers and 14,814 men, excluding 99 in special services. There were 3 railroad regiments, 2 balloon detachments, 1 battalion of railroad troops, and 2 railroad companies, consisting altogether of 237 officers and 6,074 men, besides 47 in special services. The train consisted of 23 battalions, with 4,872 horses, numbering 322 officers and 7,963 men, besides 76 in special services. In special formations there were 544 officers and 4,682 men, and there were 2,604 officers and 381 men not attached. The peace strength of the army was fixed by the law of March 25, 1899, which continued in force till March 31, 1901, at 491,136 men, not counting officers and surgeons nor paymasters and other administrative employees. The war strength is estimated at over 3,000,000 trained men. There are 23 army corps, including the Prussian guards, each consisting of 2 infantry divisions of 2 brigades, the brigade containing 2 regiments of 3 battalions, with a regiment of cavalry attached to each division, 1 cavalry division of 4 regiments, with 2 batteries of mounted artillery; 6 field-batteries and 1 mounted battery, with a battalion of train; and 1 battalion of pioneers. The strength of the infantry battalion is 544 men in peace and 1,002 men in war, divided into 4 companies. Each regiment of field-artillery is divided into 3 detachments of 2, 3, or 4 batteries, each battery having 4 guns in peace and 6 in war. There are 494 field-batteries, including 47 of mounted artillery.

A court-martial held at Gumbinnen raised a similar question as to military justice in Prussia to the one that excited France when the proceedings of the first Dreyfus trial were revealed to the public. Capt. von Krosigk was murdered in the barracks on Jan. 22. A non-commissioned officer named Marten and his brother-in-law Häckel were suspected because the murdered officer had often

treated Marten's father with oppressive harshness, and had reproved young Marten the same morning. They were acquitted at the first trial, but Marten, who had escaped when first tried and afterward had given himself up, was condemned to a year's imprisonment for desertion, and a second trial before the superior military court. Marten was condemned to death. The German press raised a protest against this military judgment based on no further evidence than that which had resulted in an acquittal, when even the prosecuting officer did not demand the extreme sentence, but a milder one, on the remarkable ground that the evidence against the prisoner was not convincing. The public press showed that there was no evidence, direct or indirect, against Marten except the motive of enmity which every man shared with him who was subject to the tyranny of the murdered man. Newspapers friendly to the Government cried out against the retention in the army of ill-tempered and overbearing martinets, as well as against perversion of justice in military courts. The dueling code in the German army is a frequent subject of discussion in the Reichstag. Candidates for officers' commissions in the reserves were rejected if they belonged to student societies which condemned dueling. The murder of Capt. Adams at Möhringen by Lieut. Rüger, whose sole motive was to save his brother, who had a family, from the dangers of a duel which a court of honor had decided must be fought, drew the attention of the whole country to the evils of dueling procedure in the army, which the Emperor as head of the army had expressly condemned. In the autumn another flagrant case shocked all Germany—that of an officer who had assisted another who was a stranger to him to his house while the latter was so intoxicated that he did not know what he did, and in that condition struck the man who was helping him. The blow was found by a court of honor cause for a duel, in which the officer who had received it was mortally wounded.

The Navy.—The German navy in the beginning of 1901 had 1 first-class modern battle-ship and 4 building, and 6 not so new, with inferior gun protection; 4 second-class battle-ships; 1 armored cruiser and 1 building; 8 obsolete battle-ships; 19 coast-guards; 15 protected cruisers; 8 torpedo gunboats; 11 destroyers; and 35 first-class and 103 smaller torpedo-boats. A new navy was sanctioned by the Reichstag in 1898, to consist of 17 battle-ships, 8 armored coast-guards, and 9 first-class and 26 smaller cruisers, with a reserve of 2 battle-ships and 3 first-class and 4 smaller cruisers. It was decided to begin 7 of the battle-ships and 2 first-class and 7 smaller cruisers before 1905. The first of the new battle-ships is the Wittelsbach, launched in 1900, of 12,000 tons, with 12 inches of side armor, armed with 4 9.4-inch guns, 18 6-inch quick-firers, and 12 3.4-inch quick-firers, having engines of 13,000 horse-power, giving a speed of 18 knots. The Kaiser Friedrich III, launched in 1896, and the other vessels of this class, the Wilhelm II, Wilhelm der Grosse, Barbarossa, and Karl der Grosse, of 11,180 tons, are as heavily armed as the Wittelsbach and as swift, but their quick-firers are not in armored casemates. The Bismarck, an armored cruiser of 10,650 tons, also armed with 4 9.4-inch Krupps and carrying 12 6-inch quick-firing guns, 10 3.4-inch, and many smaller ones, has engines of 14,000 horse-power, capable of making 19 knots. The Freya, Hertha, Victoria Louise, Vineta, and Hansa, of 5,650 tons, carry 2 8.2-inch, 8 6-inch, and 10 3.4-inch quick-firing guns, all under protection, and there

is no woodwork in the vessels. The new large cruisers that are building will carry 4 11-inch guns and a strong quick-firing armament. The Siegfried class of coast-guards has not been discarded, these small vessels of 3,440 tons having a speed of 16 knots and an armament of 3 9.4-inch guns, with 6 3.4-inch quick-firers. German ships as a rule are armed as heavily as possible, crowded with guns and machinery, leaving scant room for the crews. The heaviest possible energy of fire is the object of German designers. The Krupp quick-firers, however, are not as easy to work as the Canet guns of the French and Russian navies or the Elswick of the British. The German torpedo-fleet is not only very large, but a system of torpedo tactics has been invented for combined action against a squadron.

Commerce and Production.—The yield of wheat in 1900 was 3,847,447 metric tons; of rye, 3,675,792 tons; of barley, 2,985,876 tons; of oats, 6,882,687 tons; of potatoes, 38,486,202 tons; of hay, 23,767,790 tons. There were 4,038,485 horses, 18,490,772 cattle, 10,866,772 sheep, and 14,274,557 pigs in 1897. About one-fourth of the area of Germany is covered with forests, and those which are public property yield large revenues to states and communes, while the private forests are under effective state supervision. Many of the richest mines are owned by states. The production of coal in 1899 was 101,621,900 metric tons; of lignite, 34,202,600 tons; of iron ore, 17,989,700 tons; of zinc ore, 664,500 tons; of lead ore, 144,400 tons; of copper ore, 733,600 tons; of rock salt, 861,100 tons; of potassic salt, 2,500,400 tons; of other minerals, 329,200 tons. The foundries and smelters in 1898 produced 7,312,766 metric tons of pig iron, valued at 378,752,000 marks; 154,867 tons of zinc, valued at 58,834,000 marks; 132,742 tons of lead, valued at 34,222,000 marks; 30,695 tons of copper, valued at 32,728,000 marks; 481 tons of silver, valued at 38,157,000 marks; 993 tons of tin, valued at 1,489,000 marks; 770,197 tons of sulfur and sulfuric acid, valued at 20,521,000 marks; 2,847 kilograms of gold, valued at 7,913,410 marks; and 35,300 tons of nickel, bismuth, and chemicals, valued at 11,808,000 marks, the total product of all the works being valued at 584,424,315 marks. The production of finished iron was 8,523,612 tons, of the value of 1,143,498,729 marks. There were 558 boats, of 36,307 tons, engaged in the North Sea fisheries in the beginning of 1900, with 3,829 men in their crews. The value of fresh herring and other fish exported in 1899 was 3,341,000 marks, while the imports of fresh fish were 21,957,000 marks and those of salt herring 25,782,000 marks, and of other dried, salted, and preserved fish 6,968,000 marks. There were 402 sugar factories in 1899, and they consumed 12,150,642 metric tons of beet-roots producing 1,627,072 tons of raw sugar and 305,869 tons of molasses. The number of kilograms of beets required to produce a kilogram of sugar has been reduced gradually from 8.23 in 1895 to 7.48 in 1899. The production of refined sugar was 1,185,922 tons. There were 28 glucose factories which made 8,196 tons of dry sugar, 36,962 tons of sirup, and 4,405 tons of color. The product of 7,312 breweries in the imperial excise district was 42,269,000 hectoliters; of the Bavarian breweries, 17,455,000 hectoliters; of those of Württemberg, 4,069,000 hectoliters; of the breweries of Baden, 2,947,000 hectoliters; and of those of Alsace-Lorraine, 1,058,000 hectoliters; total, 67,798,000 hectoliters. The production of 60,926 distilleries was 3,815,569 hectoliters of alcohol.

The special imports of Germany have increased from 4,134,070,000 marks in 1893 to 4,246,111,000

marks in 1895, 4,557,951,000 marks in 1896, 4,864,644,000 marks in 1897, 5,439,676,000 marks in 1898, and 5,783,628,000 marks in 1899. The exports of German produce and manufactures have likewise grown steadily from 3,244,562,000 marks in 1893 to 3,424,076,000 marks in 1895, 3,753,822,000 marks in 1896, 3,786,241,000 marks in 1897, 4,010,565,000 marks in 1898, and 4,368,409,000 marks in 1899. In 1900 the total value of imports was 5,557,000,000 marks; of exports, 4,414,000,000 marks.

The total value of the special imports in 1899 includes 300,532,000 marks of precious metals. The value was 5,483,096,000 marks for merchandise alone. The special exports of merchandise were 4,207,049,000 marks, and of precious metals 161,360,000 marks. The imports of merchandise have increased from 4,120,669,000 marks in 1895, and exports of merchandise from 4,246,111,000 marks. The imports of cereals in 1899 were 550,300,000 marks in value; of wool, 428,200,000 marks; of lumber, 295,300,000 marks; of cotton, 243,300,000 marks; of hides and skins, 198,700,000 marks; of silk, 165,000,000 marks; of coal, 156,100,000 marks; of animals, 186,450,000 marks; of coffee, 128,700,000 marks; of seeds, 123,900,000 marks; of iron, 114,300,000 marks; of woolen yarn, 113,400,000 marks; of copper, 106,700,000 marks; of petroleum, 97,300,000 marks; of eggs, 96,300,000 marks; of leaf tobacco, 89,100,000 marks; of Chile saltpeter, 77,700,000 marks; of rubber and gutta-percha, 76,700,000 marks; of fish, 68,100,000 marks; of machinery, 65,700,000 marks; of fat, 65,200,000 marks; of flax and hemp, 59,700,000 marks; of rice, 57,900,000 marks; of hair and feathers, 57,200,000 marks; of cotton yarn, 55,600,000 marks; of oil-cake, 54,200,000 marks; of oil-nuts, 49,900,000 marks; of meat, 49,100,000 marks; of wine, 44,300,000 marks; of tropical fruits, 43,200,000 marks. The import of rye was 64,894,000 marks; of wheat, 180,353,000 marks; of barley, 127,886,000 marks. Horses of the value of 88,791,000 marks were imported, and hogs of the value of 4,936,000 marks.

The exports of iron manufactures were valued at 280,900,000 marks; of drugs, 253,200,000 marks; of coal, 226,300,000 marks; of woollens, 217,200,000 marks; of cottons, 206,100,000 marks; of sugar, 204,100,000 marks; of machinery, 178,000,000 marks; of iron, 154,200,000 marks; of silk manufactures, 142,700,000 marks; of trimmings, 140,400,000 marks; of mixed silk and cotton goods, 113,740,000 marks; of colors, 113,400,000 marks; of clothing, 112,100,000 marks; of hides and skins, 98,300,000 marks; of paper, 97,300,000 marks; of leather goods, 94,500,000 marks; of cereals, 78,800,000 marks; of leather, 71,600,000 marks; of books and maps, 70,600,000 marks; of wool, 64,800,000 marks; of pottery, 64,100,000 marks; of wood manufactures, 63,000,000 marks; of paintings and engravings, 62,200,000 marks; of copper goods, 59,900,000 marks; of woolen yarn, 57,300,000 marks; of instruments, 53,900,000 marks; of rubber goods, 51,300,000 marks; of glass, 42,600,000 marks; of seeds and plants, 42,571,000 marks; of animal products, 40,634,000 marks; of fats and oils, 34,656,000 marks; of live animals, 19,714,000 marks; of hops, 17,053,000 marks. The export of aniline dyes was 74,925,000 marks; of coarse cotton cloth, 74,720,000 marks; of hosiery, 90,174,000 marks.

The values of imports from and exports to various countries in 1899, in marks, are shown in the table on the following page.

Navigation.—The number of vessels in the foreign and coasting trade entered at German ports during 1898 was 86,614, of 17,704,824 tons, of

COUNTRIES.	Imports.	Exports.
German free ports.....	19,300,000	78,000,000

Total.....	5,783,600,000	4,368,400,000

which 74,954, of 16,484,043 tons, had cargoes and 11,660, of 1,220,781 tons, were in ballast; the number cleared was 87,637, of 17,812,760 tons, of which 64,187, of 12,010,004 tons, carried cargoes and 23,450, of 5,802,756 tons, sailed in ballast. Of the total number entered with cargoes 55,552, of 8,747,695 tons, were German, and 19,402, of 7,736,348 tons, were foreign, including 5,365 British, of 4,440,757 tons; 4,233 Swedish, of 1,006,073 tons; 5,078 Danish, of 860,099 tons; 1,635 Norwegian, of 695,110 tons; 2,273 Dutch, of 330,558 tons; and 592 Russian, of 197,138 tons. Of the total number entered in ballast 9,462, of 778,527 tons, were German, and 2,198, of 442,254 tons, were foreign. Of the total number cleared with cargoes 50,899, of 7,659,547 tons, were German, and 13,288, of 4,350,457 tons, were foreign, including 3,044 British, of 2,035,864 tons; 2,717 Swedish, of 724,891 tons; 4,466 Danish, of 716,624 tons; 891 Norwegian, of 347,095 tons; 1,642 Dutch, of 265,143 tons; and 373 Russian, of 134,507 tons. Of the vessels cleared in ballast 15,193, of 2,024,947 tons, were German and 8,257, of 3,777,809 tons, were foreign.

The German merchant navy on Jan. 1, 1900, comprised 2,466 sailing vessels, of 587,639 tons, of which 2,066, of 548,918 tons, belonged to North Sea ports, and 400, of 38,721 tons, to Baltic ports; and 1,293 steamers, of 1,150,159 tons, of which 853, of 970,130 tons, belonged to North Sea ports, and 440, of 180,029 tons, to Baltic ports. Of the total number of sailing vessels 47 were over 2,000 tons, 202 between 1,000 and 2,000, 109 between 500 and 1,000, 306 between 100 and 500, and 1,802 under 100; while of the steamers 154 were under 100, 352 between that and 500, 251 from 500 to 1,000, 212 from 1,000 to 2,000, and 324 2,000 tons and over. Of the sailing vessels 619 and of the steamers 1,901 were built entirely of steel or iron.

Railroads, Posts, and Telegraphs.—The total length of railroads in the German Empire in 1898 was 30,950 miles, representing a capital of 12,224,549,000 marks. The gross receipts in 1898 were 1,849,094,000 marks, and the expenses were

1,123,413,000 marks. The net profit was 5.94 per cent. on the capital. The Imperial and state Governments owned all except 2,376 miles. There were 995 miles of narrow-gauge lines, and 448 miles were Government lines. The number of passengers carried in 1898 was 762,849,000, and 488,225,000 marks; tons of freight, 304,536,000, paying 1,162,017,000 marks. The total length of railroads in 1900, including narrow-gauge lines, was 31,158 miles.

The number of letters that passed through the imperial post-office during 1899 was 1,390,643,650; of postal cards, 715,099,110; of book packets, 723,457,460; of circulars, 51,393,650; of remittances, 117,409,961; of post-office orders, 5,175,760; of newspapers, 1,083,749,052; of parcels, 157,605,305; of money packets, 2,909,737; of money letters, 8,651,975; value of money sent, 23,726,074,611 marks. The Bavarian post-office forwarded 151,566,120 letters, 47,472,380 postal cards, 70,279,174 book packets, 4,453,530 circulars, 11,836,273 postal remittances, 515,751 post-office orders, 212,598,266 newspapers, 15,162,867 parcels, 412,781 money packets, 1,011,519 money letters; amount of money sent, 2,477,599,763 marks. The Württemberg post-office handled 61,063,990 letters, 30,323,670 postal cards, 36,053,051 book packets, 1,425,580 circulars, 5,679,559 remittances, 214,331 post-office orders, 54,627,438 newspapers, 8,276,658 parcels, 253,968 money packets, and 559,806 money letters; value of money sent, 1,063,328,322 marks.

The length of the imperial telegraph-lines in 1899 was 65,100 miles, with 251,615 miles of wire; number of internal messages sent, 28,731,112; foreign messages, 11,134,856. The length of the Bavarian lines was 9,885 miles, with 27,013 miles of wire; internal messages, 2,510,493; foreign messages, 1,265,199. The Württemberg lines had a length of 2,925 miles, with 7,147 miles of wire; internal messages, 1,265,199; foreign messages, 236,976. The receipts of the imperial postal and telegraph services in 1899 were 373,633,901 marks, and expenses 332,105,216 marks; receipts of the Bavarian services were 34,113,275 marks, and expenses 29,263,684 marks; receipts in Württemberg were 15,693,462 marks, and expenses 13,519,492 marks; total postal and telegraph receipts of Germany, 493,440,638 marks; total expenses, 374,888,392 marks. There were 21,774 miles of local telephone-lines with 276,330 miles of wire in 1899, over which 540,324,386 conversations were held. The length of long-distance lines was 16,710 miles, with 107,730 miles of wire; number of conversations, 81,071,442.

Legislation.—The commercial treaties approved by the Reichstag in 1891 and 1892 were vigorously opposed by the Agrarians, who in 1894 compassed the fall of Count von Caprivi, the Chancellor that carried them through, and since then the Agrarian League has kept up an agitation in favor of a more effective protection of agricultural products. The Agrarians in the Reichstag and the Prussian Landtag constitute the bulk of the two Conservative parties and a large section of the Clerical Center. Prince Hohenlohe throughout his chancellorship was frequently called to account by the Agrarians for his alleged indifference to agricultural interests. They defeated the canal bill in the Landtag session of 1899 and altered the meat inspection bill from a sanitary measure to one practically putting a stop to the importation of foreign meat. The navy bill could hardly be passed without a pledge on the part of the Government to increase the duties on cereals, and it was hopeless to attempt to secure the sanction of the Prussian Chambers for the canal bill, which the Government was de-

remained to reintroduce. The tariff had to be revised in connection with the negotiation of new commercial treaties, and the Agrarian party was strong enough to dictate the import duties on agricultural products to be inserted in the new tariff and provided for in the new treaties. Count von Bilow, who was expected to show more firmness than his predecessor, capitulated, promising adequate protection for products of German agriculture. He wished to carry the tariff bill through in time to permit the conclusion of new treaties before the expiration of the old ones. It would be scarcely possible to prolong the existing treaties for a further period of ten years or less, because other governments were revising their treaty relations, such revision being rendered necessary by technical industrial improvements. The commercial treaty with Great Britain, which expired before most of the others, was prolonged provisionally, and a further prolongation was arranged until Dec. 31, 1903, the date on which the treaties with Austria-Hungary, Italy, Russia, and other European states expire by limitation. All British colonies were admitted to the advantages of the treaty excepting Canada, which has a tariff discriminating in favor of British goods.

In the spring session the Reichstag imposed a duty of 80 marks a kilogram on saccharin, more than five times the retail price of the article, and prohibited the use of artificial sweetening substances in manufactured food preparations. This measure was intended to protect the German beet-sugar industry against the competition of chemical sweet stuffs. A copyright bill was passed which embodies a thorough revision of the law made in 1870. The international copyright convention concluded at Bern in 1886 and the supplementary articles and declaration signed at Paris in 1896 led to a general demand for more effective protection of rights of private property in works of literature and music. The new law strengthens the exclusive right of writers to authorize translations of their works, gives more efficient protection to foreigners whose works are published in Germany, forbids the republication without giving credit of scientific, technical, or literary articles appearing in the newspaper and periodical press, but not of news of the day or items of information. Some proposed to give the measure a political application by creating a copyright in speeches, such as the Kaiser makes frequently. Summaries of speeches which bear the impress of the literary style of the reporter are protected, and collections of speeches must not be published without authority from the orator. It is an infringement of copyright when melodies are taken from a work of music and made the basis of a new composition. Copyrighted music may, however, be used in automatic and mechanical and musical instruments, this being allowed in order not to place German manufacturers of such instruments at a disadvantage, but in general musical compositions must not be produced in public without the consent of the composer except in concerts free to the public or given for charitable objects. The duration of copyright in literary, dramatic, or musical works is the lifetime of the author and thirty years after his death. The international convention regarding patent rights, designs, and trade-marks, signed at Paris on March 20, 1883, did not receive the adhesion of Germany because certain important provisions of the treaty did not harmonize with German patent laws. Accepting the principle of the union, Germany sought to conform to the treaty as far as was compatible with her own

laws in conventions made with Austria-Hungary, Italy, Servia, and Switzerland. In the union a disposition was shown to remove the provisions that Germany would not accept, and in conferences at Brussels in 1897 and 1900 a complete agreement was reached, especially in regard to the priority term within which patent rights can be obtained, which the states of the union extended twelve months to suit Germany, and in regard to the compulsory execution of the treaty rights. It was agreed that a period of three years from the time of application should be allowed before an inventor is bound to utilize his patent. The amended international convention was signed by Germany and the other powers on Dec. 14, 1900.

The prorogation of the Reichstag from May 14 till Nov. 26 was announced on May 9. The adjournment for six months was due to the slim attendance of members. When the Prussian Landtag separates a great many of the Reichstag members who are also Prussian Deputies, receiving pay for their attendance, return to their homes. The Reichstag voted in favor of the payment of members, as it had done 11 times before, but the Imperial Government gave no more heed to the proposal than in former years. On the day of adjournment the Agrarians tried to rush through a measure for the benefit of the land-owning distillers, an amendment to a bill provisionally prolonging the law regulating the production and the taxation of potato and other German spirits which would increase 50 per cent. the tax on distilling, out of which the distillers of drinkable spirits receive a bounty. The Radicals and Socialists blocked their design by demanding a roll-call when there was not quite a quorum of members present. The result was that the special duty on distilling lapsed on Sept. 30, and with it the special bounties of the distillers. A bill for seamen and one providing for the construction of the railroad in East Africa, by a syndicate which held its offer open only to June 30, could not be passed. An epileptic boy made an attempt on the life of the Emperor Wilhelm at Bremen on March 23.

The Rhine and Elbe Canal project was one that the Kaiser made his own. The Agrarians on the committee wasted its time and that of the Prussian Chamber in empty discussion intended only for the purpose of procrastination. Some of the Prussian ministers, especially the Vice-President of the Council, Dr. von Miquel, were but lukewarm supporters of the scheme. The rejected bill of 1899 was laid before the Landtag with supplementary features by which all the great rivers of north Germany would be united by a canal system. It was proposed to connect by a canal the Oder and the Vistula, to regulate the Warthe from the mouth of the Netze as far as Posen, to improve the current in the lower reaches of the Oder and the Havel, to develop the canalization of the Spree, and eventually to bring upper Silesia into communication with Berlin by the regulation of the Oder, and if economically desirable, to build a canal to the Masurian lakes in east Prussia. The finances of Prussia were flourishing, if those of the empire were not. The railroads and the state coal-mines produced an increased surplus, but the commercial depression that was overtaking Germany was likely to affect these revenues. The Finance Minister, Dr. von Miquel, while debt-ridden landowners were clamoring for state assistance, was determined to maintain his policy of economy except in non-recurring expenditures on permanent improvements. The housing of the poor was a question that demanded solution, and the Prussian state intended to renovate the

poorer quarters of the cities gradually, and to promote cooperative building associations. The estimate of the cost of a canal connecting the Rhine, the Weser, and the Elbe was 260,800,000 marks, of a waterway for vessels from Stettin to Berlin at 41,500,000 marks, of a canal connecting the upper Weichsel with the Warthe and Netze at 22,600,000 marks, of a canal from the upper Spree into Silesia at 4,100,000 marks. For improving the lower Oder the Government would provide 41,000,000 marks of the cost, for the lower Havel 9,700,000 marks, and for the Spree 9,300,000 marks. The canals in the east were intended as compensation to the landowners in the stronghold of agrarianism to secure their consent to the Elbe Canal, which would benefit the industries of the western provinces of Prussia. The Conservatives feared, however, that any improvement in means of communication would endanger the market for their produce, and resented the proposal for spending large sums for any other object than the benefit of agriculture. The Catholics of Silesia joined the gentry of East Prussia in opposing the bill, fearing the competition of Westphalian and Rhenish manufactures with the industrial products of their province and of English coal with the Silesian. The opponents of the Elbe Canal were willing to accept the compensation, the canals in the east that would cost 120,000,000 marks, but would not pass the Government bill as a whole, and on May 3 Count von Bülow as Minister-President declared the session closed. A ministerial crisis was the result of the failure of the ministers to carry through the Government project. Dr. von Miquel had to give up the vice-presidency of the Council and the Ministry of Finance, Baron von Hammerstein-Loxten the Ministry of Agriculture, Herr Brefeld the Ministry of Commerce. The new appointments were announced on May 6. Theodor Möller became Minister of Commerce; Gen. von Podbielski resigned the imperial Post-Office, in which he was succeeded by Herr Krätke, one of his subordinates, to become Prussian Minister of Agriculture; Baron von Hammerstein was made Minister of the Interior, Baron von Rheinbaben being transferred to the Ministry of Finance. No new Vice-President of the Council was appointed, as Count von Bülow resolved to preside over the ministry in person.

During the vacation of the Reichstag the schedules of the new tariff bill were arranged with the federated governments. It stipulated that in concluding commercial treaties the duties on cereals should not be less than 50 marks a ton for rye, 55 marks for wheat, 50 marks for oats, and 30 marks for barley. The duties in force were 35 marks for rye and wheat, 28 marks for oats, and 20 marks for barley. The maximum or autonomous scale of duties to be applied to countries having no commercial treaties with Germany were only 10 marks higher than the minimum scale. The duties on other agricultural products were increased greatly, in some cases trebled. The duty on cattle was raised from 9 marks to 25 marks a head; on meat, from 200 to 300 marks a ton. Russia, even more seriously than the United States, was affected by the new grain duties, as was Hungary, and the latter as severely also by the duties on animals. The Bismarckian maxim that political alliances are compatible with strained commercial relations was called in question in Austria-Hungary. The unpopularity of the proposed tariff in Germany was made manifest by a remarkable increase of the Socialist vote in the elections to fill vacancies in the Reichstag. The duty on maize was increased from 14 to 40

marks; on buckwheat, from 20 to 40 marks; on beans, from 15 to 40. Clover-seed, which was free before, had to pay a duty of 50 marks. These duties made negotiations with the United States more difficult, and so also did the impost of 6 marks a quintal on packed apples and other fruits, and higher duties on dried fruit and on lard, margarin, bacon, butter, and cheese. The duty on horses was adjusted so as to produce 10 per cent. ad valorem. In the new tariff ship-building materials were exempted from duty. Coal remains free. For oil-seeds a drawback was allowed on the export of oils. The duty of 2 marks on eggs was trebled, to the detriment of both of Germany's military allies, who were affected also by the uniform duty of 24 marks on wines, some of which paid only 6 marks under the old tariff. Fish were made free of duty for the encouragement of German fishermen, except carp, on which a high rate is charged. The imposition of a duty on geese and feathers was another cause for Russian complaints. A prohibitive duty was placed on starch sugar, previously free, and as the complement to the saccharin bill an enormous duty was imposed on artificial sweet stuffs. Commercial fertilizers were made duty free. The rates on timber were greatly increased, and to the dismay of the tanners a duty was imposed on imported bark. The chemical industries, which heretofore have had no tariff protection and needed none, obtained duties on phosphorus, tartar, and various other products. The duty on pig iron was not altered, but duties on iron manufactures were made higher, and that on bicycles was increased over sixfold, a blow at American competition. The bill imposed on the Government extensive powers of reprisal to be used as a means of bringing to terms powers unwilling to accept the minimum tariff. The Federal Council is empowered to impose additional duties upon goods imported from countries which treat German goods less favorably than those of other countries up to double the tariff rates or to the full value of the goods imported, and free goods may be taxed up to half their value.

Dependencies.—The possessions of Germany over the seas comprise about 930,760 square miles in Africa, containing an estimated population of 14,200,000 (see EAST AFRICA, SOUTH AFRICA, and WEST AFRICA); the harbor and district of Kiauchau Bay, in China, with a land area of 200 square miles and 60,000 inhabitants; and in the Pacific Ocean, Kaiser Wilhelm's Land in New Guinea, having an area of 70,000 square miles and 110,000 inhabitants, the Bismarck Archipelago, with an area of 20,000 square miles and 188,000 inhabitants, and the Solomon Islands, with an area of 4,200 square miles and 45,000 inhabitants, all three protectorates under the administration of an Imperial Governor, R. von Bennigsen, who resides at Friedrich Wilhelmshafen; the Marshall Islands, with the Brown and Providence groups, having an area of 150 square miles and 13,000 inhabitants, administered by a commissioner, Herr Brandeis; the Caroline, Palaos, and Marianne Islands, obtained from Spain in 1899, having a total area of 560 square miles and 40,000 inhabitants, administered by Dr. Hahl as Vice-Governor; and the Savaii and Upolu in the Samoan group (see SAMOA).

Kiauchau has a permanent garrison of 1,500 marines and artillerists. A neutral zone 30 miles broad, about 2,500 square miles in area, is policed by German troops, and the exploitation of the Wiehsien and Pashan coal-mines, to be connected with Kiauchau by railroad, has been reserved for German capital. The Imperial Government in

1901 granted 9,780,000 marks for the expense of administration, while only 213,000 marks were raised locally.

The German New Guinea Company has the concession of the trade of *German New Guinea* and of the other possessions now united with it. The company surrendered the administration to the Imperial Government on April 1, 1899. Cotton and tobacco and coffee have been planted. Over 36,000 coconut-palms are preserved. The area and sago-palms, as well as bamboo, ebony, and many other valuable woods, grow in the country. Cattle and goats are reared. The chief exports, besides copra, are mother-of-pearl and trepang. Gold is found in the Bismarck mountains. The European inhabitants in 1899 were 58 in number. The administrative expenses for 1900 were 923,000 marks, of which sum 848,000 marks were contributed from the imperial treasury.

The *Caroline, Palao, and Marianne Islands*, purchased from Spain for 16,750,000 marks, are governed under the direction of the Governor of New Guinea, but will have a separate administration. The eastern islands will be administered from Ponape, the western Carolines and the Palaos from Yap, and the German part of the Mariannes or Ladrões from the island of Saipan. The islands cost the Imperial Government 370,000 marks a year. Copra is exported from all the islands and tortoise-shell and mother-of-pearl from the Palaos. There are 900 whites in the Carolines, which are inhabited by a Malay race with an admixture of Chinese and Japanese. On April 12, 1901, Herr Senft, the imperial administrator at Yap in the Carolines, raised the German flag over the island of *Tobi* and the adjacent Helen Riff. Tobi is covered with coconut-palms, and has a population of about 500.

Bismarck Archipelago includes New Britain and adjacent groups, annexed as a German protectorate in 1884. There were 200 Europeans in 1899, of whom 96 were Germans. There were also 64 Chinese and 68 Samoans and Fijians working on the plantations. The imports for 1899 were 1,060,000 marks in value; exports, 939,110 marks. The export of copra was 726,400 marks; of trepang, 120,800 marks.

The German *Solomon Islands*, diminished by the transfer to Great Britain of Choiseul, Mahaga, and other islands east of Bougainville, export sandalwood and tortoise-shell.

The *Marshall Islands* had 79 European residents in 1899 and exported 2,729 tons of copra.

GIFTS AND BEQUESTS. The following list comprises the most notable gifts and bequests for public purposes of \$5,000 and upward in amount and value that were made, became operative, or were completed in the United States in 1901. It excludes the ordinary denominational contributions for education and benevolent purposes, or State and municipal appropriations to public and sectarian institutions, and the grants of Congress for various measures of relief. The most striking feature of the gifts and bequests of the year is the exceedingly large individual amounts. Mrs. Leland Stanford consummated her long-planned endowment of Leland Stanford, Jr., University, which is now the wealthiest educational institution the world has ever known; Andrew Carnegie gave to colleges and for public libraries more than \$31,000,000, and at the close of the year had conditional offers pending of several millions more; and J. Pierpont Morgan, John D. Rockefeller, Dr. Daniel K. Pearsons, Mrs. Emmons Blaine, Helen M. Gould, and other men and women noted for their philanthropy, continued to promote the interests with which their names long have been

identified. The known value of the gifts and bequests here enumerated exceeds \$107,360,000.

Adams, Benjamin, Derry, N. H., bequest to the town for a public hall and library, \$10,000.

Adams, Mrs. Charles Kendall, Madison, Wis., gift to Madison Art Association, jewels valued at \$10,000.

Adams, Herbert Baxter, Baltimore, Md., bequests to Amherst College, \$2,000; the American Historical Association, \$5,000; the town of Amherst, his residence and its contents; and Johns Hopkins University, the residue of his estate.

Adams, Mr. and Mrs. Quincy. See AGASSIZ, ALEXANDER.

Adelphi College, Brooklyn, N. Y., gift from a friend to its endowment fund, \$5,000.

Agassiz, Alexander, Newport, R. I., gift to the Cole School of Science, for scientific apparatus, \$5,000.

Agassiz, Alexander, Mr. and Mrs. Quincy Adams, and Mrs. Henry L. Higginson, joint gift to Harvard University for completion of museum, \$100,000.

Allegheny College, Meadville, Pa., gift from a friend to its endowment fund, \$60,000, conditional upon the raising of \$140,000 additional within ten months.

Allen, Dr. C. R., New York, gift to the New York Botanical Garden, a collection of stone-works said to be one of the most costly in the world.

Alms, Mrs. Frederick H., Cincinnati, Ohio, gift to the University of Cincinnati for a music-hall, \$100,000.

Amherst College, gift from friends to its endowment fund, \$50,000.

Andrus, John E., Yonkers, N. Y., gift to Wesleyan University, \$25,000.

Angus, James, West Farms, N. Y., gift to the museum at Roger Williams Park, a collection of corals, polished agates, and books, valued at \$15,000.

Appley, James L., Springfield, Mass., bequests to the University of Pennsylvania, \$6,000; American Board of Commissioners for Foreign Missions, \$1,000; Springfield Hospital, Home for Aged Women, Massachusetts Home Missionary Society, Olivet Church, and the city of Springfield, each \$500.

Archbold, John D., New York, gift to endowment of Syracuse University, \$400,000, supplementing annual gifts of \$40,000 to \$60,000 for several years.

Armour, George A., Chicago, Ill., gift to Princeton University, for the maintenance and development of the classical seminary, \$2,500 a year for five years.

Armour Institute of Technology, Chicago, gift of a memorial window in memory of Philip D. Armour, Jr., value \$10,000.

Armour, Mrs. Philip D., and son, J. Ogden Armour, Chicago, Ill., joint gift to Armour Institute, for a school of engineering and a model workshop, \$1,000,000, subsequently increased by \$250,000. These gifts were in accordance with the wishes of Philip D. Armour, who made no specific bequest to the institute he had founded.

Armstrong, George W., Boston, Mass., bequests to the Massachusetts Institute of Technology and Bates College, each \$5,000.

Astor, John Jacob, New York, gift to the Cathedral of St. John the Divine, a complete set of chimes and mountings.

Atwill, Cornelia A., New York, bequests to the Protestant Episcopal Church, Poughkeepsie, \$10,000; Gallaudet Home for Deaf-Mutes, \$5,000; and the following to become operative at the death of one of the heirs: Cathedral of St. John

the Divine, Fund for the Relief of Widows and Orphans of Deceased Clergymen, St. Luke's Hospital, Home for Old Men and Aged Couples, and St. Luke's Home for Indigent Christian Females, each \$10,000.

Avery, Mrs. S. P., New York, gift to the Woman's Hospital for a permanent bed, \$5,000.

Balch, Mrs. Emeline, Manchester, N. H., bequests to the Manchester Institute of Art and Science, her residence in Manchester and \$5,000; Bates College, Lewiston, Me., and North Street Free Baptist Church, Bath, Me., each \$5,000; Eliot Hospital, Manchester, N. H., \$3,000; Franklin Street Congregational Church, Manchester, Manchester Children's Home, and New Hampshire Orphans' Home, each \$2,000; and the Mercy Home, Manchester, \$1,000.

Baldwin Locomotive Works, Philadelphia, gift to University of Pennsylvania toward the new engineering building, \$25,000.

Ballard, Stephen, Brooklyn, bequests to the American Missionary Society of New York, \$100,000; Berea College of Kentucky, \$50,000.

Barnes, Alfred C., Brooklyn, N. Y., gift to Cornell University, an observatory equipped with the latest astronomical facilities.

Bates College, Lewiston, Me., gift for the library, \$20,000; and for scholarships, \$6,700.

Bell, James A. H., Brooklyn, bequests to Brooklyn Institute and Brooklyn Library, each, sixteen of the seventy-five parts into which the estate, estimated at \$1,000,000, is to be divided; to Brooklyn Library, 2,000 books.

Benton, Everett C., Waverly, Vt., gift to Guildhall, Vt., a public library and Masonic Hall.

Bishop, Franklin H., Russell, Mass., bequest to the Commonwealth of Massachusetts, use not specified, \$7,000.

Bishop, Hubert F., South Norwalk, Conn., gift to the town, a site for a library, \$10,000.

Blackstone, Mrs. T. B., Chicago, gift to the city for a library, \$100,000.

Blaine, Mrs. Emmons, Chicago, gifts to the School of Education of the University of Chicago, \$1,000,000, and for a Northside elementary school, \$30,000.

Blaisdell, S. J., Boston, blind piano-maker, bequest to Perkins Institute for the Blind, his estate of \$10,000, for the benefit of blind pupils.

Blakeslee, Alfred E., New Haven, Conn., bequests to the Young Men's Christian Association and Welcome Hall Mission, each \$5,000; Home for the Friendless and Ladies' Seamen's Friend Society, each \$3,000; and New Haven Orphan Asylum and Young Women's Christian Association, each \$2,000.

Blessed Sacrament Church, New York, gift from friends, a new parish house, \$30,000.

Bliss, George T., New York, bequest to Yale University, \$50,000.

Borden, M. C. D., New York, gift to Yale University, \$100,000.

Boston Institute of Technology, gifts from friends, fund for a gymnasium and social center for the students, \$100,000.

Bourne, F. G., Sayville, Long Island, N. Y., gift to St. Anne's Church there, \$5,000.

Bowman, George W., gift to the People's Church of America, \$1,000,000.

Bowne, E. W., New York, gift to Syracuse University, \$12,500.

Bowne, Samuel S., New York, gift to the Twentieth Century fund of the Methodist Episcopal Church, \$100,000.

Boyle, John T., Fond du Lac, Wis., gift to the city for a sanitarium, \$50,000.

Breckenridge, George W., San Antonio, Texas, gift to the city for a schoolhouse for colored children, \$20,000.

Brick Presbyterian Church, New York, gift to extend the Church industrial work on the West Side, \$50,000.

Brockway, N. C., New Haven, Conn., gift to the Albany Hospital, Albany Orphan Asylum, Home for Aged Men, New York Homeopathic Hospital and Dispensary, and Fairview Home for Penniless Children, all in Albany, N. Y., and the Farmham Reformatory, in Columbia County, New York, each \$2,000; and for other charitable purposes, the bulk of his estate, valued at \$100,000.

Brown, A. D., St. Louis, Mo., gift to the Missouri Baptist Sanatorium, \$50,000.

Brown, John Nicholas, estate, Newport, R. I., gift to Brown University of the library of Americana collected by John Carter Brown, \$150,000 for a library building, and \$500,000, the income of which is to support the library.

Brown, Mrs. Susan A., bequest to Dartmouth College for library of philosophy, \$10,000.

Brown University, Providence, R. I., gifts to its endowment fund, \$2,000,000, which amount includes gifts from John D. Rockefeller and John Nicholas Brown noted elsewhere.

Brownell, Mary Eastman Davis, Detroit, Mich., bequests to the Presbyterian Board of Foreign Missions, \$10,000; Michigan Female Seminary, Kalamazoo, and Alma (Mich.) College, each \$5,000.

Bryn Mawr College, Bryn Mawr, Pa., gift from citizens of Philadelphia, \$50,000.

Whitney, William C., New York, gift to Yale College for its bicentennial fund, \$25,000, and to the Nassau Hospital, Mineola, Long Island, N. Y., \$6,000.

Wiestling, Marie K., Frederick, Md., bequests to the Presbyterian Board of Foreign Missions, \$30,000; American Board of Commissioners for Foreign Missions, \$5,000; American Tract Society, \$5,000.

Wilbur, Warren A., South Bethlehem, Pa., gift to Lehigh University for apparatus for its mechanical engineering department, \$5,000.

Wilcox, Mrs. Harriet, Brooklyn, N. Y., bequests to Westerly (R. I.) Memorial and Library Association, \$150,000; Hampton Industrial and Normal Institute, Hampton, Va., Children's Aid Society, New York city, New York Skin and Cancer Hospital, Home for Aged Men, Providence, R. I., and Wesleyan University, Middletown, Conn., each \$20,000; the Industrial Home for the Blind, Brooklyn, N. Y., Association for Improvement of the Poor of New York City, American Missionary Society of New York City, Home for Consumptives, New York, each \$10,000; and Broad Street Christian Church, First Baptist, Calvary Baptist, and Methodist Episcopal Churches, all in Westerly, each \$5,000.

Williams, J. P., Savannah, Ga., gift to Emory College, Covington, Ala., for a building for the department of science, \$15,000.

Wisler, Henry H., Philadelphia, Pa., bequest to the Fiftieth Baptist Church of Philadelphia, real estate for endowment of the Wisler Memorial Baptist Home.

Wolff, Bernard, Jr., Pittsburg, Pa., bequests for benevolent purposes, \$22,000, and a residuary estate of \$250,000, one-half to Franklin and Marshall College, Lancaster, Pa., one-fourth to Catawba College, Newton, N. C., and one-fourth to its Board of Home Missions of the Reformed Church.

Wood, H. Holton, Derby, Conn., gift to the town, a library building, and for books, \$5,000.

Wyman, William, Baltimore, Md., gift to Johns Hopkins University, 60 acres of land in Baltimore.

Yale University, gifts from a friend to construct a new building for the medical school, \$100,000; from a friend for the erection of a Young Men's Christian Association building, \$50,000; from the family of Robert Callender, class of '98, of Providence, R. I., \$6,000; and from the class of '96, a memorial gateway in memory of Messrs. Cheney and Ives. See also individual names.

Young, Edward F. C., Jersey City, N. J., gift to the Children's Home in that city, \$5,000.

Young, George L., Boston, bequests to the Children's Hospital, Massachusetts General Hospital, Boston Lying-in Hospital, Massachusetts School for the Blind, and American Unitarian Association, each \$5,000.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe formed by the Kingdom of England and the Principality of Wales with the Kingdom of Scotland, forming together the Kingdom of Great Britain, and this with the Kingdom of Ireland, the whole constituting the United Kingdom of Great Britain and Ireland, which holds supreme dominion over the Empire of India and of colonies and dependencies of various kinds—self-governing federations and colonies, colonies governed partly by the Crown but having representative institutions, Crown colonies, and protectorates under native laws and rulers—constituting with the United Kingdom the British Empire. The reigning sovereign is Edward VII, eldest son of Victoria I and Prince Albert, Duke of Saxe-Coburg-Gotha, born Nov. 9, 1841, who succeeded to the throne on the death of his mother, Jan. 22, 1901. The heir apparent is Prince George, Duke of York and Prince of Wales, the only surviving son of the King and Queen.

The power to legislate for the United Kingdom and for all the members of the British Empire, except in so far as the power has been delegated to local legislative authorities, is vested in the British Parliament, consisting of a House of Lords and a House of Commons. Members of the House of Lords are the princes of the royal blood; spiritual lords, who are the metropolitan bishops of ancient English sees; hereditary peers of England, of Great Britain, and of the United Kingdom; hereditary peers of Scotland, elected by their fellow peers for the duration of Parliament, and of Ireland, elected for life; and life peers and law lords. The number of peers on the roll in 1900 was 593. The House of Commons contains 670 members, elected in boroughs and counties, and in universities, by all male householders and lodgers, by secret ballot. The number of registered electors in 1900 was 5,287,285 in England and Wales, represented by 495 members—253 for counties, 237 for boroughs, and 5 for universities; 681,132 in Scotland, represented by 72 members—39 for counties, 31 for boroughs, and 2 for universities; and 764,196 in Ireland, represented by 103 members—85 for counties, 16 for boroughs, and 2 for universities. The duration of Parliament is seven years, unless it is previously dissolved. The average life of a Parliament during the reign of Queen Victoria was less than four years and five months. The Committee of Ministers, called the Cabinet, representing the majority for the time being in the House of Commons, exercises in reality the executive authority that is nominally vested in the Crown. The Prime Minister chooses his colleagues and dispenses the patronage of the Crown; he initiates the policy of the Government or approves the measures suggested by the other ministers in their several departments, and when

his policy or acts encounter the disapproval of Parliament, manifested by an adverse vote on a Cabinet question or by a direct vote of censure, he either resigns with the rest of the Cabinet forthwith, or appeals to the country by dissolving Parliament and ordering new elections. Usually a Cabinet resigns the retiring Prime Minister advises the Sovereign as to the selection of the statesman most competent to form a new Government, usually the leader of the Opposition in the House of Commons. Formerly on the death of the sovereign the ministers retired, but the law was changed, so that at the demise of Queen Victoria all officers of the Crown retained their commissions. The Cabinet formed on Nov. 1, 1900, was composed as follows: Prime Minister and Lord Privy Seal, the Marquis of Salisbury; Lord President of the Council, the Duke of Devonshire; Lord High Chancellor, the Earl of Halsbury; Secretary of State for Foreign Affairs, the Marquis of Lansdowne; Chancellor of the Duchy of Lancaster, Lord James of Hereford; First Lord of the Treasury, Arthur J. Balfour; Secretary of State for the Home Department, C. T. Ritchie; Chancellor of the Exchequer, Sir Michael E. Hicks-Beach; Secretary of State for the Colonies, Joseph Chamberlain; Secretary of State for War, W. St. John F. Brodrick; Secretary of State for India, Lord George Hamilton; First Lord of the Admiralty, the Earl of Selbourne; President of the Local Government Board, W. H. Long; President of the Board of Trade, Gerald Balfour; Lord Lieutenant of Ireland, Earl Cadogan; Lord Chancellor of Ireland, Lord Ashbourne; Secretary for Scotland, Lord Balfour of Burleigh; First Commissioner of Works, A. Akers-Douglas; President of the Board of Agriculture, R. W. Hanbury; Postmaster-General, the Marquis of Londonderry.

Area and Population.—England has an area of 50,867 square miles, Wales 7,442 square miles, Scotland 29,785 square miles, Ireland 32,593 square miles, the Isle of Man 227 square miles, and the Channel Islands 75 square miles, making the total area of the United Kingdom 120,979 square miles. The population of England and Wales increased from 17,927,609 in 1851 to 20,066,224 in 1861, 22,712,266 in 1871, 25,974,439 in 1881, and 29,002,525 in 1891. In Scotland the population increased from 2,888,742 in 1851 to 3,062,294 in 1861, 3,360,018 in 1871, 3,735,573 in 1881, and 4,025,647 in 1891. In Ireland the population was 6,552,385 in 1851, having decreased from 8,175,124 in 1841, and it has since decreased to 5,798,564 in 1861, 5,412,377 in 1871, 5,174,836 in 1881, and 4,704,750 in 1891. The islands in the British seas had 147,842 inhabitants in 1891, of whom 55,608 inhabited the Isle of Man, 54,518 Jersey, and 37,716 Guernsey and Alderney.

The preliminary returns of the census of April 1, 1901, make the population present in the United Kingdom 41,454,578, an increase in ten years of 3,721,656, exceeding by 873,582 the increase between 1881 and 1891. England and Wales had a population of 32,526,075, showing an increase of 12.17 per cent., compared with 11.65 per cent. in the preceding decennium. The natural increase of population in the United Kingdom since 1891 was 4,311,543, showing a net emigration of 589,887. The rate of increase in population for the United Kingdom was 9.9 per cent., compared with 8.2 between 1881 and 1891, and 10.8 between 1871 and 1881. There was a higher rate of increase in Great Britain than in the preceding decennium, and in Ireland a lower rate of decrease. The excess of births over deaths in England and Wales was 12.39 per cent., compared with 13.97 between 1881 and 1891. The number

of males was 15,721,728, and of females 16,804,347, showing an excess of 1,082,619 females, compared with 896,723 in 1891, the increase being partly due to the drain of men to South Africa. The population of Scotland in 1901 was 4,471,957, an increase of 446,310, or 11.1 per cent., against 7.8 per cent. in the last decennium, and 11.2 in the one preceding. The excess of births over deaths in Scotland for the ten years was 499,768, showing a loss of 53,458 by excess of emigration over immigration. The population of Ireland was 4,456,546, showing a decline in ten years of 248,204, or 5.3 per cent., compared with 9.1 per cent. between 1881 and 1891, and 4.4 per cent. between 1871 and 1881. The excess of births over deaths in Ireland in the last ten years was 218,222, showing a loss by emigration of 466,426. The population of the Isle of Man declined in the ten years from 55,608 to 54,758, or 1.5 per cent., compared with 3.8 per cent. in the previous decennium. The population of Jersey decreased from 54,518 to 52,796, or 3.2 per cent., against an increase of 4 per cent. in the previous ten years. The population of Guernsey increased from 35,289 in 1891 to 40,477 in 1901, or at the rate of 14.7 per cent., compared with 8.1 per cent. between 1881 and 1891. In Alderney the population was 2,062, a gain of 11 per cent., compared with a loss of 9.3 per cent. in the previous decennium. The island of Sark had 506 inhabitants, a decline of 11.2 per cent. The aggregate population of the islands in the British seas was 150,599, showing an increase of 1.9 per cent., compared with 4.7 per cent. from 1881 to 1891. The urban population in England and Wales was 77 per cent. of the whole. The population of Liverpool was 684,947; of Manchester, 543,969; of Birmingham, 522,182. In 9 towns of 250,000 population and upward, including London, the rate of increase was 12.48 per cent.; in 24 having between 100,000 and 250,000 it was 44.61 per cent.; in 42 having from 50,000 to 100,000 it was 14.06 per cent.; in 141 having from 20,000 to 50,000 it was 19.52 per cent.; in 219 having from 10,000 to 20,000 it was 17.20 per cent.; in 472 having from 3,000 to 10,000 there was a decrease of 3.51 per cent.; and in 215 having less than 3,000 the mean decrease was 12.93 per cent. The 1,122 urban districts, the number having increased from 1,011 in 1891 and 967 in 1881, the mean rate of growth was 15.22 per cent.

The number of marriages in England and Wales in 1899 was 261,963; of births, 928,640; of deaths, 541,824; excess of births, 376,816. The birth rate has fallen from 35.6 per mille in 1878 to 29.3 in 1899. In Scotland the number of marriages in 1899 was 32,935; of births, 130,656; of deaths, 79,548; excess of births, 51,108. The number of marriages in Ireland was 22,192; of births, 103,815; of deaths, 79,772; excess of births, 24,043. The emigration from the British islands from 1853 to 1899 was 8,695,931, of whom 5,782,654 went to the United States, 902,149 to British America, 1,421,535 to Australia and New Zealand, and 589,593 to other places. The number of emigrants, including foreigners, who sailed from British ports in 1900 was 299,238, compared with 240,696 in 1899. The total in 1899 consisted of 139,491 males and 101,205 females. In that year there were 162,111 immigrants, making the net emigration 78,585. The emigrants in 1899 of British and Irish birth numbered 146,362, and the immigrants of British and Irish birth 100,246, making the net emigration from the British islands 46,116. The number of Irish who left Ireland in 1899 was 41,232, compared with 32,241 in 1898. The total number from 1851 to the end

of 1899 was 3,796,131. The number of British and Irish emigrants in 1899 was 169,465, an increase of 23,103 over the preceding year. Of the total number 103,055 were English, an increase of 15,655; 20,502 were Scotch, an increase of 4,430; and 45,908 were Irish, an increase of 3,018. Of the number of emigrants, natives and foreigners, in 1900 the number who sailed to the United States was 189,447; to British America, 50,445; to Australasia, 15,782; to other countries, 43,564.

Finances.—The revenue for the year ending March 31, 1900, was estimated in the budget at £111,157,000, and the expenditure, including supplementary estimates, at £134,671,823. The actual revenue was £119,839,905, and the actual expenditure was £133,722,407, leaving a deficit of £13,882,502. Receipts from taxation, including customs, excise, and estate duties, the land tax, the house duty, and the income and property tax produced £98,496,312, and the non-tax revenue, derived from the postal and telegraph services, Crown lands, interest on Suez Canal shares, and miscellaneous sources, was £20,136,623, making the total net receipts £118,632,935. The net revenue from customs was £23,043,472, of which £10,885,922 were collected on imports of tobacco, £4,628,946 on tea, £2,470,802 on rum, £1,518,231 on brandy, £909,896 on other spirits, £1,729,540 on wine, £191,509 on coffee, £220,034 on raisins, £124,410 on currants, £151,220 on cocoa, and £212,962 on other dutiable imports. The net excise receipts were £31,808,704, of which £19,335,360 were collected on spirits, £11,887,923 on beer, £249,439 on license duties, £328,160 from railroads, and £7,822 from other sources. Estate and death duties produced £13,909,313, of which £9,865,538 came from the estate duty, £31,490 from the temporary estate duty on property of persons dying before August, 1894, £47,220 from the probate duty on such estates, £3,215,227 from the legacy duty, £704,030 from the succession duty, and £45,808 from the corporation duty. Stamps produced £8,429,471, of which £4,265,460 were paid on deeds, £1,431,306 on receipts, £704,023 on bills of exchange, £288,827 on patent medicines, £170,267 on licenses, £581,328 on the capital of companies, £305,284 on bonds to bearer, £237,462 on insurances, and £445,514 from miscellaneous sources. The yield of the land tax was £8,429,471; of the house duty, £739,493; of the property and income tax, £18,867,336. Of the non-tax revenue £13,192,020 came from the post-office, £3,389,746 from the telegraph service, £459,708 from Crown lands, £834,003 from interest on Suez Canal shares belonging to the Government, £947,244 from fee stamps, £815,452 from the mint, £176,368 from the Bank of England, and £322,082 from various other sources. The expenditure under the three main heads was £25,951,406 for consolidated fund charges, £69,600,000 for the army and navy supply services, and £38,171,000 for the civil and miscellaneous services, including the cost of collection. Of the consolidated fund charges £23,000,000 were for the national debt, £216,657 for interest on the war debt outside of the fixed charge, £409,060 for the civil list, £272,869 for annuities and pensions, £78,897 for salaries, £518,654 for courts of justice, and £305,330 for miscellaneous payments. The cost of the army was £43,552,900, and £47,100 besides for ordnance factories; cost of the navy, £26,000,000; civil services, £22,530,000; customs and inland revenue, £2,800,000; post-office, £8,480,000; telegraph service, £3,601,000; packet service, £760,000. The extraordinary expenditures under various acts of Parliament were £150,000 for barracks, £290,000 for telegraphs, £1,034,000

for the Uganda railroad, £1,093,216 under the military works act, and £820,000 for expropriation of the Royal Niger Company; total, £4,847,216. The balance in the treasury on April 1, 1899, was £8,919,173, and the gross receipts for the year were £154,012,351; while the gross issues out of the exchequer were £159,414,477, leaving on April 1, 1900, a balance of £3,517,047. Of the expenditure on the national debt £15,242,192 were for interest of the funded debt, £7,290,491 for terminable annuities, £272,577 for interest of unfunded debt, £174,864 for management of debt, and £19,876 for the new sinking-fund. The original estimate of expenditure on the army for 1900 was only £20,617,200. Supplementary estimates were presented on Oct. 17, 1899, for £10,000,000; on Feb. 8, 1900, for £13,000,000; on June 22, 1900, for £11,500,000; and on Dec. 3, 1900, for £16,000,000. For 1900 the budget estimate for the army was £61,499,400. The estimate for the navy in 1900 was £26,594,500, and in 1901 it was £27,522,600. The army estimate of 1901 for effective services was £14,908,800 for regimental pay and the general staff, against £5,654,450 in the estimate of 1900; £69,100 for chaplains, against £62,350; £32,100 for military prisons, against £31,200; £190,000 for the regular army reserve, against £761,000; £555,000 for medical establishments, against £305,800; £2,288,000 for the militia, against £571,000; £144,000 for the yeomanry, against £75,000; £1,230,000 for volunteers, against £624,200; £10,000,000 for transport and remounts, against £790,000; £13,100,000 for provisions and forage, against £3,425,500; £4,680,000 for clothing, against £2,531,000; £2,670,700 for works and buildings, against £1,211,900; £8,000,000 for stores, against £2,531,000; £113,800 for military education, against £111,100; £66,900 for miscellaneous services, against £60,200; and £275,000 for the War Office, against £251,500; total effective services, £58,323,400, against £17,553,000 in the normal budget framed before the Boer war; pensions and other non-effective services, £3,176,000, against £3,064,200. The civil service estimates for 1901 amount to £22,838,808, comprising £2,347,341 for salaries, £1,951,427 for public works and buildings, £3,817,764 for law and justice, £12,563,455 for education, science, and art, £1,513,875 for diplomatic, consular, and colonial services, and £588,051 for non-effective and charitable services. The rate of income tax in 1900 was 8*d.* per pound sterling, yielding £18,750,000, against £18,000,000 in 1899, when the gross amount of the annual value of property and profits assessed to income tax was £758,571,709, compared with £465,594,366 in 1871. The amount in 1899 was £653,686,806 in England, £71,753,602 in Scotland, and £33,131,301 in Ireland. The annual value of railroads assessed to income tax in the United Kingdom in 1899 was £40,033,665; of mines and quarries, £10,367,705; of gas-works, £5,636,205; of water-works, £4,537,135; of canals, £3,505,682; of iron-works, etc., £114,091,214. In pursuance of a series of acts of Parliament additional beer and spirit duties, excise licenses, and a share of the probate and estate duties are collected by imperial officials for local authorities. The amount thus collected in 1900 was £10,000,381, and the payments made to local taxation accounts were £9,964,661. Of the total revenue collected in 1900, amounting to £128,633,000, including local taxation revenue, £103,755,500 were collected in England, £13,633,000 in Scotland, £8,664,500 in Ireland, and £2,580,000 from imperial sources. Of the total expenditure, £143,687,000 in amount, £97,519,000 were expended for imperial purposes,

and £34,215,000 on English, £1,973,000 on Scottish, and £6,980,000 on Irish service.

The exchequer revenue, aside from receipts from new taxation, increased £16,000,000 over the exchequer revenue for 1896, which was £102,000,000. The expenditure has increased in the five years £28,000,000, the naval estimates growing from £18,701,000 to £30,876,000, the army estimates from £18,000,000 to £30,000,000, the civil service estimates from £19,297,000 to £23,630,000.

The expenditure for 1902 was estimated at £187,602,000, of which £27,800,000 are for debt and other consolidated fund charges, and £159,802,000 for supply services. The estimated receipts on the basis of existing taxation are £132,255,000. The estimated yield of customs is £23,600,000; of excise, £33,100,000; of death duties, £14,000,000; of stamps, £8,000,000; of the land tax and house duty, £2,500,000; of the income tax, £30,000,000; of the post-office, £14,300,000; of telegraphs, £3,450,000; of Crown lands, £475,000; of the Suez Canal shares, etc., £830,000; from miscellaneous sources, £2,000,000. The new taxes authorized by Parliament were an increase in the income tax of 2*d.*, estimated to yield £3,800,000; a sugar duty of $\frac{3}{4}$ *d.* a pound, which was expected to give £5,100,000; and an export duty of 1*s.* a ton on coal, of which the estimated yield was £2,100,000, making £11,000,000 of revenue from new taxation, which reduces the estimated deficit of £55,347,000 to £44,347,000, and it is further reduced by the suspension of the sinking-fund of £4,640,000 to £39,707,000, but interest on the fresh debt already issued amounts to £1,125,000, making the final deficit to be covered by new debt £40,832,000. The income tax with the additional 2*d.* is 14*d.* in the pound. The taxes on beer, spirits, tobacco, tea, and the few other articles of general consumption that are taxed had already been augmented to the limit. The revenue showed no evidence of expansion. There was a falling off of death duties and stamps; the consumption of beer was diminished; the customs receipts were unsatisfactory. Wine was taxed so high that the revenue fell. Tea, a product of India and Ceylon, where the growers were suffering from the effects of overproduction, was already taxed up to 75 per cent. of its value. The tobacco duty, which had been changed twice in three years, could not be again increased without disturbing the trade. The whole of the additional burden could not be thrust on the small class that pays the income tax and the death duties. Petty taxes on dogs, horses, theater and railroad tickets, auction sales, etc., were rejected by Sir Michael Hicks-Beach as likely to cause disturbance and vexation without yielding much revenue. He selected sugar as an article of universal consumption, taxed in the United States and in every Continental country, and pronounced by all economists an article suitable for taxation. The consumption of sugar in the United Kingdom is 90 pounds a head, but the household consumption is estimated to be not over 56 pounds. The tax is imposed on raw and refined sugar, on molasses and glucose, and is so graduated as to amount to $\frac{3}{4}$ *d.* a pound on refined sugar, both domestic and imported. Saccharin, which is used as a substitute for sugar in manufactures, is taxed at a high rate, almost prohibitive. The coal duty reversed the policy of Great Britain and of most advanced countries, an export duty being an anomaly in modern taxation. The export duty on coal was taken off in Great Britain when the corn duties were abolished, but coal in England is a natural monopoly and belongs in a separate class. The coal exports amount to 12 per cent.

of the total exports, and the duty of 1s. a ton is not expected to diminish the export of Welsh coal, which goes all over the world, or of coal from the north country, which goes to Baltic ports, because English coal is the best in Europe for steam-engines, and is nearest to seaports. If any diminution of exports results the country will retain so much of the wealth on which the prosperity of England depends. Coal will either be sold more cheaply to the consumer or will be husbanded for future consumption. Mines which can be cheaply worked are being exhausted rapidly, and though the coal-fields are not likely to be totally exhausted in any measurable period, dear coal has come already. The expenditure for the year ending March 31, 1901, amounted to £198,246,000. In five years the growth of expenditure had been £28,000,000 exclusive of the war in South Africa, and the growth of revenue only £16,000,000. The war-taxes yielded in 1901 about £12,000,000, and were expected to yield £11,000,000 in 1902. The debt raised for war expenses requires an expenditure of over £3,000,000 a year for interest. The war debt was already £13,000,000 of treasury bills, £10,000,000 of three-year and £14,000,000 of five-year exchequer bonds, and a war loan of £30,000,000. An additional debt of £60,000,000 was authorized, to be raised by the issue of consols, etc., making the war debt £127,000,000. This was more than the actual deficiency caused by the war. The war expenditure in 1901 amounted to £68,620,000, one-third of the total expenditure of the exchequer, which was £183,592,000. The war in South Africa cost during the year £65,120,000 and the Chinese operations £3,500,000. Of the war expenses £15,413,000 were paid out of revenue and the remainder was raised by borrowing. The total revenue collected by the Government in 1901 was £140,019,000, of which £9,634,000 went into the local taxation, leaving the revenue of the exchequer £130,385,000, being £2,865,000 more than the estimate, but £55,000,000 less than the expenditure. The budget estimate of expenditure was £150,061,000. The estimated expenditure was augmented by £30,704,000 of supplementary estimates for the wars in South Africa and China, £578,000 for interest on new debt, large additional expenditures due to wars in Ashanti and East Africa, and £2,519,000 for naval guns, ammunition, and stores, offset by £1,586,000 of savings on the original estimate. Including the sum contributed in relief of local taxation and £4,915,000 borrowed from the national debt commissioners for capital expenditure on naval and military works, the Uganda railroad, telephones, etc., the total disbursements amounted to £198,246,000. The excess of revenue beyond the estimate was due to forestallments on dutiable articles, which exceeded those of 1900, amounting to £3,250,000. The receipts from customs were £26,262,000, exceeding the estimate by £2,642,000, the duties on tea being £1,050,000, and those on tobacco £1,680,000 more than the estimate. The duty on wine yielded £1,492,000, a decrease of £238,000 compared with the preceding year. The revenue from beer was £13,500,000, which was £470,000 less than the estimate, the vendors having recouped themselves for the increased tax by diluting both beer and spirits. The death duties yielded £17,090,000, of which £12,980,000 went to the exchequer and £4,453,000 to the local taxation fund. The total capital value of estates paying death duties in 1901 was £262,000,000, a decrease of £30,000,000 compared with 1900. The yield of stamps was £7,825,000, falling off £675,000, business on the stock exchange being checked by the war. The yield of the income tax
